another quarter, the fish will feed better no doubt. The salmon nets, which were through the flooded state of the river lying idle, have been at work again, but so far the take of fish has been very poor indeed, not sufficient to pay the men for their labour. What fish there were have, no doubt, gone up the river some considerable distance, and I trust will give joy and gladness to anglers and netmen in the upper part of the Severn, who should have the pleasure of catching many of them; certain it is, if salmon fishing in the upper reaches of the Severn is not good this year it never will be again. There has been no netting in the estuary, a long continuance of high water, and nothing to obstruct the passage of the fish up the river. Several meetings have been held at many of the clubhouses in the city, but with one exception they have been of an ordinary business character. A new club has been formed at the Albion Hotel, Bath Road, Worcester, and at an enthusiastic meeting on Thursday last, it was determined to call it the "Westward Ho!" Mr. Maurice Shipway was unanimously elected chairman, Mr. G. Gibbons, hon. secretary, and Mr. Hornidge treasurer; the first general meeting has been fixed for 6th March, and continued the first Monday in every month afterwards. This looks like making a strong club; they have already a large number of members with a goodly array of hon. members, which will be a backbone to the club. I stated in last week's issue that the annual dinner of the Worcester United Working Men's Club would take place on Monday next, which was an error, it is down for March 6th.

FROM YORK AND DISTRICT.

Angling prospects have greatly improved with the change of weather, the flood waters in the rivers having subsided considerably, and the streams resumed to a large extent their natural colour. There have been several days of almost perfect spring weather, and fishing, if not in a very large measure successful, has on this account been most enjoyable. Spinning for pike of late has yielded the best results. In a few instances large catches have been made, as many as thirty fish, one of which weighed 14lb., having been taken by two rods in private waters. If only the weather continues favourable for a little while trout fishing will open under cheering auspices. The fish are numerous, and, after the floods, are strong enough to boot, so that excellent sport may be anticipated. Angling visitors to Harrogate may expect to find first-class trout fishing on the Nidd and the Crimpe. The Harrogate and the Knaresborough Clubs have done much to improve the Nidd waters, and both societies are flourishing. Altogether the Knaresborough Club has placed nearly 500,000 yearling trout and fry in the Nidd; and also bought 1000 yearling rainbow trout, and proposes to lay down 3000 rainbow ova in the hatching boxes. Mr. W. H. Ashford, fishery officer, reports to the North-Eastern Sea Fisheries Committee that during the quarter ended Dec. 31 throughout the whole of the district there was a considerable increase in the quantities of fish landed, and a corresponding increase in the value thereof. The Board of Trade returns show that the quantity landed during September, October, and November reached the enormous total of 1,173,293cwt., of the aggregate value of £729,161, against 1,000,066cwt., of the value of £674,403, for the corresponding period of 1897. The members of the Fulford (York) F.A.S. held their annual dinner at the Bay Horse Inn a few nights ago, when Capt. Key, J.P., president, occupied the chair. Various complimentary toasts were honoured. The York North-Eastern A.S. have held their yearly meeting in the city, when the secretary presented a satisfactory report. Mr. O. S. Wake was re-elected chairman, and spoke approvingly of the recent action of the Yorkshire Fishery Board in presenting 500 trout to the York Amalgamation and other coarse fishing societies.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

THAMES RIVER AND LOCK KEEPERS' ANNUAL DINNER.

DEAR SIR,—May I ask for the usual half-crown or so towards the cost of the annual dinner to the river and lock keepers and others who have assisted in the preservation and protection of the fishery during the past year.

The dinner (which it is again intended to hold in London), at the Criterion, Thursday, March 23, is of great service in bringing many working friends of the society together, and affords an excellent opportunity for clubs, anglers, and others, who are not regular subscribers to its funds, of showing an appreciation of the good work done by so many volunteer helpers. An increased number have now to be entertained, and as the society's moneys cannot be used for the purpose, but are exclusively devoted to the objects for which they are subscribed, I feel sure you will cheerfully aid us with a donation on this social and special occasion. By kindly returning the enclosed form to me with a remittance at your earliest convenience you will greatly oblige.—Yours faithfully,

H. W. HIGGINS

(Hon. Sec. and Hon. Treas. T.A.P.S.)

12, Regent-street, W.

[We hope all who are interested in Thames fishing will respond to Mr. Higgins's appeal. We shall have much pleasure in giving each of the keepers a briar pipe as in former years.—Ed.]

LAKELAND NOTES.

DEAR SIR,—In your article, headed "A Few Lakeland Notes," in the *Fishing Gazette*, 11th inst., I notice that

the water between Lakeside and Newby Bridge is described as the river Leven; whereas Newby Bridge is the actual foot of Windermere Lake and on the same level. Wordsworth describes it as the river lake, as it narrows considerably. The river begins below the bridge at the weir. It is necessary to mention this, otherwise the information is misleading to anglers who wish to fish Windermere Lake, the entire lake being free as far as Newby Bridge—a 2s 6d. licence only being required, obtainable at the post-office across the bridge, opposite the hotel.

Your correspondent states he only saw visitors trolling with artificial minnows. That may be so. And I have known some grand fish, up to 6lb. 4oz., taken that way. Still, a lot of fly fishing is done. One instance that I remember was 13lb. weight of trout taken, varying from 5lb. to 1½lb., during two hours in the morning, and the same in the afternoon, and all with the fly.

A good spring fishing is anticipated after the extremely mild and open winter. The fish are reported as being in forward condition, and even now are constantly rising.—Yours truly,

W. T. R.

Swan Hotel, Newby Bridge, Ulverston.

LANDSCAPE AND FISHING.

DEAR SIR,—In answer to "F. W.," Kelvedon cannot be correctly described as an old thatched village, although there are some old thatched cottages in the place, nor is there any trout fishing in the neighborhood; there is, however, excellent pike, roach, and perch fishing in the Blackwater here. The landscape scenery is also good, and for health I do not think it can be beaten. There is no difficulty in obtaining comfortable lodgings here. Kelvedon is forty-two miles from Loudou.—Yours very truly,

M. BEDFORD.

BIG FISHING MATCH.

DEAR SIR,—We are having a big fishing match here on March 24th and 25th, when about £100 worth of live fish is to be given in prizes. The match is confined to clubs in Lancashire and Yorkshire.—Yours truly,

ANDREW HENRY, Secretary.

The Wyresdale Fishery,
Scorton, Garstang, Launce.

FISHING BEYOND MID-STREAM.

GENTLEMEN,—I write to you asking if you can give any information as regards the following:

The Carlisle Angling Association have a certain stretch of water rented on one side of the river only. Can we or any member cast over to the far side of the water on that stretch, or only half-way or mid-stream, or is there such a point as mid-stream? Your kind information on this point will extremely oblige.—Yours very truly,

X.

[If you have only one side, and the opposite owner objects, you must not fish beyond the middle of the stream. The law looks at the bed of the river, and you must stick to your half of the bed. This point has been settled in the courts.—Ed.]

THE STONE FLY AND ITS LARVA.

DEAR SIR,—Enclosed please find bottle of Stone Fly larva I found in the Yore to-day. From your description it is evidently that of Pictet's *Perla cephalotes*. You will notice the various sizes of the larva, the smaller ones are those just hatched out, the larger, as far as I can judge, are insects from six to eight weeks old, and large enough to use as bait with a small double hook usually employed in creeper fishing. The larva of the Stone Fly is greedily taken by trout, grayling, chub, &c., from its first small creeper stage, and the fish continue feeding on it as it increases in size, and then rise freely at it when it has undergone the metamorphosis as fly. Some of the creepers are very forward this year, doubtless owing to the open winter and the wonderful mild weather we have experienced lately. Amongst the old school of Yorkshire anglers the Stone Fly is called the "May Flea." Even Jackson, who, of course, was more a practical than a scientific angler, describes it on page 22 of his excellent work, "The Practical Fly Fisher," as "May Fly." His dressing for it is as follows, viz.: Wings, feather from the inside of a grey goose's wing; body, two strands of yellow and one of drab ostrich herl, neatly ribbed, tie with brown silk; legs, brown hackle; horns and tail, rabbit's whiskers. But it is only in a high wind and coloured waters that any imitation of so large a fly will kill well, besides, there is no need to fish anything else but the natural fly, as during the ten or twelve days it is on there is no great difficulty in obtaining an ample supply. I purpose sending you a month to-day another bottle of larva, and others on April 21 and May 21; also some flies, both male and female. I can also send you a few alive, you will then be able to judge what progress they make. Pictet says: "That the larva of the Stone Fly are found in the roughest parts of swift streams." This may be the case in rivers of which his observations have been made, but certainly not in ours. We find them in shallow waters, amongst stones, at the bottom of a "dub" or pool, and at the sides of streams. If one gets in the rough in attempting to escape, it is quickly washed out into more shallow and quieter water. Some of the larva emerge from the eggs, in mild winters, in January, but the majority are not hatched until February or March; it therefore takes them about twelve or thirteen weeks to attain their full growth. The general change from larva to fly takes place usually during the last week in May. Much, however, depends on the season, and I've known it as late as June 7 and 8. The male fly predominate in numbers, there being ten gentlemen (locally called Jacks) to one lady. The fish feed

TO SPORTSMEN—Barberrys, of 20, Haymarket, London, will offer (till the 24th inst.), at half price, their 1898 model and stock sporting garments, viz.: gabardine (unlined) shooting coats, 21s.; long overcoats, 21s.; long leggings, 7s. 6d.; gaiters, 5s. 3d.; golfer caps, 2s. 6d.; gabardine combination shooting coats, 26s. 3d. and 31s. 6d.; K. B. breeches, 21s.; knickerbockers, 15s.; long overcoats, 31s. 6d.; kilt coats, 21s.; Highland capes, 21s.; Barberrys capes, 31s. 6d.; rain-proofed tweed shooting coats, 26s. 3d. and 31s. 6d.; Highland capes, 26s. 3d.; weatheralls, 31s. 6d. Sent on approval on receipt of cheque covering.

on both, but prefer the female fly, and being much the largest it makes the best bait and floats better when impaled on the hooks. The Stone Fly is seldom seen on the wing; if dropped from off a bridge, and there be no wind, it falls perpendicular on to the water, very rarely indeed taking flight, and then only for a yard or two. They certainly do not deposit their eggs "as they fly over the water;" the eggs are dropped from off stones at the water's edge. I frequently pick up the female fly with a bunch of eggs attached to her.—Yours truly,

J. E. MILLER.

Northern Anglers' Depot, 19, New
Station-street, Leeds.

ANGLERS' ASSOCIATION RE-STOCKING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt of £2 2s., first donation from the West Green Angling Society towards the above fund.—Yours truly,
ALEX. WRIGHT (Hon. Treas.).

FISHING AT EXMOOR.

DEAR SIR,—I should be much obliged if you can give me some idea as to where to find out about Exmoor fishings. Is it possible to get any free streams on the moor, where fair fishing can be had at Easter; and, if so, how can I find out about them? Do you know if there are any free waters at Simonsbath or near Dulverton?—Yours truly,
JOHN G. A. NICHOLSON.

[In reply to Mr. Nicholson, there is plenty of fishing up on the moor free, or can be fished for the asking:—Simonsbath: Mr. Fry, The William Rufus. Exford: Mr. S. Baker, White Horse Hotel. Winsford: Mr. D. Evans, Royal Oak. Wythpool: Mr. Count, Royal Oak. Dulverton: Mr. W. Woodbury, Lamb Hotel; Mr. J. Moyle, Red Lion Hotel; Mr. Babb, Higher Marsh Farm. Any of these will give Mr. Nicholson any information he may wish for re lodgings, &c.—ED.]

FISHING IN SWITZERLAND.

DEAR SIR,—Will you or any of your numerous readers kindly tell me where I can get any decent trout and grayling fishing in the rivers and lakes of Switzerland, especially in the neighbourhood of Thun and Interlaken, during the months of April and May (excluding the Rhone Valley), near good hotel accommodation, as one of the party is an invalid?—Yours very truly,
AN OLD SUBSCRIBER.

FISHING BAG WANTED.

DEAR SIR,—In reply to "Wrentail's" query re trout bag, I beg to suggest an "Improved Freke Bag," with movable rubber lining, which Carters' supply at about half-a-guinea.

As a rule the bad point of a bag is the difficulty of keeping it free from slime after having had a few weeks' wear. The movable rubber lining overcomes this difficulty, and is in many other ways most convenient.—Yours truly,
A. S.

DEAR SIR,—If "Wrentail" will communicate with us, we think we can send him a bag that will suit him.—Yours truly,
D. AND W. H. FOSTER.
Ashbourne, England.

DEAR SIR,—I observe "Wrentail's" letter to you. In my own humble opinion, all fishing bags, especially in hot weather, and if fairly full of trout, are quite a mistake. The fish will rub together, and soon get a very unmistakable look, and they are apt to get limp and flabby too, quite unfit for the taxidermist.

What is wanted is a pannier or creel where the fish are kept in the dark, and where, whilst sufficient air gets in to admit ventilation it does not shrivel up the trout till they resemble dried haddock.

I confess I know nothing better than my own invention, and which I hope you, sir, can speak for. It is a lining of black glazed India rubber. To attach it to the inside of the creel a split cane is first inserted within the inner rim. The lining is then fitted with large hooks (curtain hooks I fancy they are), and, of course, the glazed side of the rubber lining is kept next the fish. Further, a free lid of India rubber (two thicknesses, glazed on both sides) is cut out roughly to something like the inside measurement of the creel, and this is placed over every fresh layer of trout. Now and then I give it a wash in the cool stream, and replace it over the trout to keep them sweet and clean.

I can have no possible object in puffing it up. I simply say I know, and I wish, nothing better, and it has stood with me the test of years and of hundredweights of trout, "for bye."

It costs quite as much as the basket itself, but these are its advantages:

1. A specimen trout does not shrivel up—skin and fins—till it is hideous.
2. The trout do not rub together, as in a bag, till all their glorious markings are lost.
3. They keep cool, and come out bonny and fresh.
4. The slime from the skin of the trout does not work its way any longer into the basket-work and decompose there, and so one can take one's creel into a railway carriage, even after a few consecutive weeks' fishing, in hot weather, and not have all the inmates looking at you and wondering if you were one of the great unwashed or a savage!
5. Any fool of a servant (and there are many knocking

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

(about) can lift the hooks off the split-cane attachment, sponge the bag clean, and fix it up again in two or three minutes.

6. The basket lasts twice as long, as it never needs to be washed at all, and never gets foul.

Its worst fault is that it is not patented, and all the world are free to use it. It could possess no greater fault. Ask fishing tackle makers if you doubt me.—Yours truly,
E. M. TOP.

THE IRON BLUE.

DEAR SIR,—If it is not asking too much, I should like you to answer the following, or rather to help me.

I have been much puzzled in trying to find, get, or make a really killing imitation of the little Iron Blue Dun (May) and little Yellow Dun of May.

I may say that I have tried all best known tackle shops, including Foster's, Ashbourne, &c., &c., but without success. On the streams where I have fished (Mid and North Wales) I find that the natural flies (Iron Blues) have not the olive colour legs or body, but seem to be a beautiful deep iron blue throughout, with perhaps the exception of the body, which has a slight purple tint.

I should consider it a great favour if you would tell me where I should be able to get a pattern, also descriptions of, say, one or two dressings for same. Or, if dressing and pattern could be had, I would gladly pay for same. Wishing you F. G. every success.—Yours truly,
IRON BLUE.

[If our correspondent has not tried Mr. F. M. Walbran's Iron Blue, we advise him to do so. The body is a steel blue, with a little purple in it. We have found it kill well in Hampshire when the Iron Blue was on. Mr. W.'s address is 10, Infirmary-street, Leeds.—ED.]

TROUT FISHING IN SPAIN.

DEAR SIR,—Would it be trespassing too much upon your courtesy to ask you if you or any of your readers can put me in the way of getting information about trout fishing in the west or north-west of Spain, say, in May, either by referring me to back numbers of the *Fishing Gazette*, some book, or through your correspondence column? I am desirous of getting what information I can in regard to the best headquarters, size of fish, tackle, accommodation, &c.—Yours truly,
MORGAN J. M. WILLIAMS.

DEATH IN THE OIL LAMP.

DEAR SIR,—The grave announcement that the Home Office intends to introduce a Bill in the present Session which, without raising the flash point, will place further restrictions upon the oil and lamp trades, induces me to trouble you with the following considerations.

It is hardly necessary to point out that this action of the Home Office officials will prevent any legislation taking place this Session in the direction which you, in common with the Press of the whole of this country, have asked for.

The Government, having a Bill of their own, will be bound to oppose Mr. Reckitts' Bill for raising the flash point, which has secured a very early date, and there is very little doubt that they will be compelled to withdraw their own Bill by the opposition of these two powerful trades.

The cardinal fact upon which we should all insist is that, if the flash point be raised, it will be found that no further legislation whatever is necessary, and trade interests will not be harassed.

I hope you will see your way to take this matter into consideration, with a view to making some reference to it in your columns.—I am, dear sir, yours faithfully,
THE EDITOR OF THE "STAR."

[We hope that the Government will do something to prevent the terrible waste of life caused by the use of bad oil in bad lamps, now so common throughout the country. The *Star* deserves the thanks of the community at large for the great efforts it has made, and is still making, in this matter.—ED.]

WHY DO WE PAY FOR TROUT LICENCES?

DEAR SIR,—Can any of your readers tell me why we pay a rod licence?

For my own part I have taken out a licence for thirteen years or more, because I was taught to do so when a boy, but never once have I been asked to produce it, though I may say I have fished as much as most enthusiastic fishers do, both north, south, east, and west of our little island.

The following case came under my notice last year. Some very fine trout collected in a pool near the mouth of a small stream. The men who were lucky enough to take one or two were naval officers without a licence. A local police officer was put up to ask these gentlemen for their licence, but was promptly told he had no authority to do so!

In another district where I frequently fish, the boys go out and take as many as 100 to 200 small trout (about thirty to the pound) from streams which they have previously stirred up to colour the water. In the same district night lines are frequently set for the large trout, many of which, no doubt, are caught. In other parts of England I not only know, but have seen cross-lines and "otters" used.

Why should we pay for a licence to witness the wholesale destruction of the precious trout by those who pay nothing, or rather, I should say, why, having paid (presumably to have trout protected), should we have the opportunity of seeing such things and be perfectly powerless to stop them? Why have not the police authority, nay, orders, to demand a rod licence, and why is not a limit put to size of fish to be taken?

Is it not time the matter was taken up to prevent the wholesale destruction of our favourite fresh-water fish?—Yours faithfully,
FLY.
Hayle, Cornwall.

BREAD CRUST AS BAIT FOR ROACH.

DEAR MARSTON,—Mr. Alfred Jardine writes that the discoverer of bread crust for roach bait deserves a tomb in Westminster Abbey. Now I think I can give the straight tip. We had as a member a Mr. Straight, who fished at Richmond, and weighed in large roach; one of his is in a case in our museum, which weighed 1lb. 14oz., caught on Feb. 7, 1874. I was with him at the time he caught all his big roach with bread crust, my gentles only enticing the smaller fish. We baited with bread and bran, and as the scraps of bread floated down, the big fellows were at the end of the swim having a feast. It was the first time I saw bread crust used, or even heard of it being tried, and think Mr. Straight was the pioneer. McIntosh, the waterproof maker at Charing Cross then, and our late friend Mr. Klastenberger, declared that a monument should be erected to his memory in Trafalgar-squares for his useful invention.—Yours truly,
T. R. SACHS.

FISHING IN THE LAKE OF PATRIA.

SIR,—The following note is taken from Colonel Maseroni's memoirs (Vol. I., pp. 366-7), and may be interesting:

"Should any of your readers have the good fortune to sojourn at Naples, I particularly advise them, if they are anglers, to visit Patria, and take up their abode for a week or two in Pagliara. In the lake of Patria, which is six miles round, they will find plenty of 'spinoli,' in England called bass, in natural history *Perca punctata*. These fish are very like trout to the taste, are very voracious, and take a bait like a large trout or pike. Many of them are ten and fifteen pounds weight, but an average may be struck at five. The angler must be furnished with spinning tackle; the artificial baits sold at the tackle shops will catch them well, provided they be all white and silvery, and about four inches long. The bass will also take a worm, but it is only accidentally that he will be caught in that way, in which I never took more than two."

"Proceeding from the lake up the river Patria, which I have already described, the angler fond of float fishing will find a satiety of sport with large tench and roach. In order to fish this water, which is about eight miles long and fifty yards wide, he must have a small punt of the country, there called a *londra*. In fact, he must, at first, have one of the people of the place to take him about the intricacies of the little canals, wilds of reeds, and forests of myrtles. The river has, properly speaking, no banks, there being twenty feet of water under the floating masses of reeds that form the apparent margin of the water. Here and there are solid masses on which a man, or several, may stand. It is well to fix upon and keep to a 'post,' as we used to call our fishing stands, a due regard being had to the depth of water, absence of weeds, &c. This spot being ground-baited with boiled grain, &c. (probably wheat or barley), every day, thousands of fish will congregate around it, and you will have no interruption to your sport."

I might observe in passing, that, in spite of ground-baiting so constantly with 'grain,' he nevertheless says:

"The best baits are 'gentles' for roach; for the tench I used either a large lob worm or a lump of paste, properly worked up with cotton wool, of the size of a large cherry."

Personally, I do not like to use paste "worked up with cotton wool." He continues:

"Williams, Gill, and myself, being each furnished with his canoe or 'londra,' used to take our stations with the canoe beside us. I fished with three rods, one in hand for roach, which were usually caught three at a time as fast as you please; a long rod on each side of me for tench, of which we have each caught a hundredweight in a day." MARKIT.

FISHING AT ANGOULÊME, FRANCE.

DEAR SIR,—Can you or your readers give me any information as to whether there is good fishing at Angoulême (Charante), France; and, if so, whether free or otherwise?—Yours truly,
"ANGOUË."

THE *Architectural Review* for February is a truly magnificent number. "Disappearing London" is again a feature, the photogravure plate, "Davies-street, West," being one of the finest drawings Mr. Emanuel has yet done. An article on the work of Chas. Price-Boyce, R.W.S., is fully illustrated; and there are other fine articles on "The Arts of Ancient Egypt," "Cyprus," and other subjects specially interesting to artists and craftsmen, and full of information for the general reader.

THE *Spalding Free Press* reports this week that Mr. Brown, of Pote Hole, bailiff of the Spalding Angling Association, on Saturday caught a monster eel in the North Drove drain. He was using a pilger, and brought up an eel weighing 6lb. 2oz., and measuring 4ft. 4in. This is the largest specimen ever caught in the district, and is believed to be a record for a fresh-water eel caught anywhere in the country. The eel was skinned, and the skin has been sent away to be preserved.

BACKING THE FAVOURITE does not always bring pleasure or profit to those concerned in it. Frequently the horse no one thinks much about wins, and those who gain anything are few and far between. This cannot be said with reference to Holloway's Pills and Ointment, for they never disappoint those who place faith in their merits. With reference to the Ointment, medical men are so convinced of its merits that they recommend it to patients as the best remedy within their experience. The Pills, also, have a marvellous effect upon the system; and it can be truly said that whatever the cause of the trouble may be the combined medicines will restore the patient to health.

SOME RECENT DISCOVERIES CONCERNING SEA FISH.

As is familiar to most of our readers, the great bulk of our marine food fishes do not deposit their eggs on the sea bottom. The ova, when extruded, instead of falling gradually, commence to rise, and eventually remain suspended, like Mahomet's coffin, not, however, in air, but in water. The exact level at which these eggs float differs with the species of fish and the specific gravity of the water.

The fish whose floating eggs have been studied are the following: The grey and red gurnards, the lesser weaver, the mackerel, the skulpin, the cod, the haddock, the pouting or bib, the whiting, the coalfish or saithe, the ling, the rocklings, theorsk or tusk (the last eight forms all members of the cod family), the halibut, the long rough dab, the turbot, the brill, the sailflake or carter, the Norwegian or Eckström's topknot, the plaice, the flounder, the dab, the smear dab, the long flounder, the sole, and the solonette (all members of the flounder family). Of the herrings, the herring proper deposits its eggs on the bottom, while those of the sprat, anchovy, and

pilchard float. This flotation seems in all these fish to be due to the lessened specific gravity of the eggs themselves, although the earlier observers were of opinion that it was due to the presence of a large globule or two of oil within the egg sphere. This has been disproved by the fact that many free-floating eggs have no oil globules, while some which rest upon the sea bottom are so furnished. Moreover, there is one important fish, the angler (*Lophius piscatorius*), whose eggs do not float separately, but are imbedded in a mass of mucus which, to a great extent, acts as the floating agent. It is not to remind the readers of this paper of well-known facts such as these that this article is written, for by no stretch of the imagination can the discovery of the pelagic or free ocean-floating eggs of the cod be described as a recent discovery, seeing that it dates as far back as the year 1864, when O. Sars, the great Scandinavian naturalist, came across it while making an investigation into the Loffoden Islands cod fisheries. It is only, however, since the matter has passed into the hands of practical embryologists of the school of which the late George Brook was such a brilliant example, that the science of the matter has been carefully worked out. In parenthesis it may be here said that upon many people the word "science" has a most repellent effect; they look upon all science as dry, unintelligible, and useless for practical purposes. The word has, however, no such meaning; "science" is only "knowledge," and we all know that "knowledge is power"; further, curiosity is natural to every created sane healthy being, and the acquirement of knowledge is attained by the practice of disciplined curiosity. The only reason then apparent why scientific information should be dry, unintelligible, or useless, is that the reader has not sufficient preliminary training to grasp the technical matter, or else the writer has not sufficient mental perspective to enable him to make himself understood of the people. All purely scientific works and treatises are, or ought to be, written in such language as to enable them to be understood by the specialists of all other countries; but at the same time it is the duty of some person to endeavour to boil down, simplify, and communicate to the public generally such "science" as may aid the average citizen intellectually and practically.

We in Great Britain have at the present moment a band of scientific workers investigating the wonders and secrets of the sea. The results of their labours to a great extent lie hid in the pages of the Journal of the Marine Biological Association and in sundry Blue Books, whose awesome official colour deters even the boldest from attempting their perusal.

Yet within these pages are recorded the results of many an investigation having the greatest practical bearing upon the future welfare of our sea and fresh-water fisheries.

Thus, for instance, although it has been known since 1880 that the eggs of most of our food fishes were pelagic, and that the reason why they floated was that their specific gravity was equal to that of the surrounding sea water, still the manner in which they became so much lighter than those of other fishes had not been described. It must be remembered that a cod's roe is a pretty solid substance, and not at all likely to float.

Numerous theories were started to explain how the eggs absorb water after they are extruded, thus accounting for the change in size. Dr. Wemyss Fulton, the scientific superintendent of the Scottish Fishery Board, decided to investigate the matter for himself, and the results of his investigations were published in the last annual report of the Fishery Board for Scotland.

Before the publication of this report the following facts were known:

1. That the floating eggs of our food fishes were lighter than the immature eggs of the same species, and were much more transparent in colour.
2. That the marine food fishes, having floating ova, deposited many more eggs than their fresh-water brethren.
3. That in the cod, plaice, &c., only a portion of the eggs were ripe at any one time, and that, therefore, the period during which spawning is carried on is much longer than in the fresh-water fishes.

Dr. Fulton devoted his research to an investiga-

tion of the eggs while developing in the ovaries of the fish, while Dr. T. H. Milroy, at the request of the Board, investigated the chemistry of the subject.

The results may be given as follows. The floating eggs of the food fishes were found to undergo a certain change in the ovary immediately before becoming ripe. This change consists in the absorption somewhat suddenly by the egg of a quantity of fluid secreted by the ovary, which distends the ovum to three or four times its previous size, dissolves the yolk globules, and thins the capsule. This change only takes place in a few of the eggs at one time, and occurs at that period of development when a rearrangement takes place in the contents of the egg, rendering it able to be fertilised. As Dr. Fulton says, this stage "has, so to speak, in the pelagic egg, been seized upon and exaggerated by natural selection for another purpose, namely, to enable the eggs to float and to become widely dispersed." This absorption of fluid also takes place in the demersal or non-floating egg, but to a much less degree.

The effect of this absorption is:

1. That the egg just before extrusion becomes three to four times larger.
2. That it becomes transparent.
3. That it is greatly lessened as regards specific gravity.

Take for example the egg of the plaice. From definite observation it was found that the immature egg, with a diameter of 1.21 millimètres, of a volume of 0.9276 cubic millimètres, and of a specific gravity of 1.084 became, when thus suddenly matured, 1.88 millimètres in diameter, 3.764 cubic millimètres in volume, but of a specific gravity of only 1.025. Of course, there are slight individual differences, but these figures may be given as the mean.

With the non-floating or demersal eggs of the herring the mean diameter was for the immature opaque eggs 1.18 millimètres, with a volume of .86 cubic millimètres, and a specific gravity of 1.087—1.090; whereas the mature eggs averaged 1.33 millimètres in diameter, had a volume of 1.23 cubic millimètres, and a specific gravity of 1.066.

In plain English this means that the mature egg of the plaice had got four times larger than the immature, and at the same time was practically reduced to the same specific gravity as the surface of the sea, instead of being about 5 per cent. heavier. With the herring ova, however, the egg only increases about half as much again in volume, and the specific gravity remains still more than 3½ per cent. above that of sea water.

The question then arises as to what the fluid is that is absorbed. At first it was thought to be sea water, but as the specific gravity of that fluid is 1.025—1.026, it is difficult to account for the reduction of a specific gravity of 1.084 by that means. Drs. Fulton and Milroy have set the matter at rest by testing the fluid which they find to be secreted by the follicles of the ovary of the ripe haddock, cod, and plaice, and found that the specific gravity ranged from 1.015—1.017.

There is but little doubt that the same changes take place in all ova, but, as Dr. Wemyss Fulton has said, they are specially modified and magnified in the floating eggs of our marine food fishes.

What, then, is the practical outcome of this investigation? When all is said and done, that is the query of the average man in the street. Many points hitherto obscure have been cleared up by this research, thus:

1. It explains how it is that cod and other sea fish can contain millions of eggs against the few thousands shed by fresh-water fish.
2. It explains why most sea fish have a protracted spawning period, and, therefore, why they, unlike those forms which, distended with ripe eggs, are unable to feed, migrate in search of food, and, aided by the surface currents, distribute their ova far and wide.
3. It explains why the young are buoyed up by the yolk sac until it is gradually absorbed in the feeding of the infant fish.
4. It explains why the young, fed with a watery yolk, containing but little nutriment, are at first not so brisk and vigorous as are those of our fresh-water fishes.

The large number of ova contained in the cods and the flat fishes is necessary, owing to the many

enemies, including man, which prey upon them. In this last investigation it was calculated that of twelve forms which deposit their ova on the bottom, the average is 24,700 eggs per female; while of thirty species with floating eggs the average per female is 2,388,000. A female cod (the diameter of the unripe egg of which is about one-third to one-quarter that of the salmon) weighed 14lb. 10oz., and had a total volume of 6250 c.c.; the ovaries, partly emptied, weighed 3lb 3oz., and were of a volume of 1682 c.c. "It was calculated that the number of eggs present was 4,560,000, which, in the mature distended state, would occupy a volume of about 6261 c.c., or considerably greater than the bulk of the fish." Again, a flounder, which weighed close upon 2lb., had a gross volume of 951 c.c., and the roe weighed 6½oz., and had a volume of 170 c.c. The number of eggs was estimated at 2,733,000, the volume of which, when matured, would be 1114 c.c., that is to say, a quarter more than the total bulk of the fish, roe and all.

But when it is remembered that only a few eggs become ripe at a time, it is understood that the spawning is greatly protracted, that the fish continues feeding during that period, migrating gradually into deeper and deeper water, many obscure facts in the history of the cod, haddock, and flat fish bid fair to be explained.

The reason for migration will then be sought for through the food supply rather than by accounting for all the movements as being due to that wonderful sexual instinct which is so well marked in the salmon and the herring. The day may perchance come when popular science books, such as the Royal Natural History, will no longer disfigure their pages by misstatements such as that of the cod coming inshore to breed during the winter months. As all sea anglers know, he comes inshore to feed, and gradually works northerly and into deeper water as the spring approaches and the spawning season arrives.

As to the buoying up of the young or larval fish; this is a most practical point. When the first descriptions were written on the development of the floating eggs, it seemed to be taken for granted that the young remained at the top because they were lighter than the water; this is quite an error, the young developing fish is heavier than sea water and would sink were he not buoyed up or able to keep himself afloat. Before he is able to aid himself, the yolk bag keeps him floating until his own organs grow into usefulness.

One extremely practical point remains to be dealt with, depending entirely upon the result of the application of the facts here described. Space will not permit of more than a reference to it here, but it is necessary that some notice should be here taken of the subject. It should be remembered that money is being spent yearly in the endeavour to artificially hatch and rear sea fish, especially plaice, at the Marine Hatchery at Dunbar, presided over by Mr. Harold Dannevig. At present the eggs have to be got by collecting ripe fish from the trawlers. Owing to the fact that each fish has but few eggs ripe at any one time, and that the fish are liable to be injured by the trawl, this has been weary work. Nevertheless, from 1894 to 1897, both years inclusive, 117 millions of fry have been hatched and turned out into the sea. What is asked for is sea water enclosures in which to retain adult fishes till they have shed all their eggs, and also to shelter the young till able to find for themselves.

At the same time the investigation at present appears to throw a doubt on the value of artificial hatching as a method of counteracting the destruction of immature fish. We stand but little chance of getting anything like an increased stock by artificially stripping fish whose eggs only mature a few at a time, and whose young must have a superabundant supply of food almost within a day or two of their being hatched out.

Much has been lately done in discovering the food of the young fish, and this I hope to deal with in a further article.

CHARLES S. PATTERSON.

ROD TO LET ON THE ITCHEN.—Price £25 for the season.—Rod to let on the Upper Itchen, below Alresford; nearly one and a half miles of water; limited to three rods. Apply by letter only to "Colonel R.," care of R. B. Marston, St. Dunstan's House, Fetter-lane, London.

THE MAY FLY (*EPIHEMERA* *VULGATA*).

In some parts of England the May Fly is known as the "Cadow"; it is also called the "Green Drake," "Grey Drake," "Death Drake," "Spent Gnat," &c.

These names all refer to the same fly. When the insect first leaves the water and emerges from its larval coat (as will be described presently) it generally has more or less of a green or olive green appearance about the wings, which (*i.e.*, the wings) become of an iron grey colour after the fly has thrown off its light overcoat and nearly finished its existence.

Nearly all the old books on angling refer to two kinds of May Fly, viz., the "Green Drake," which appears first, and the "Grey Drake" following it. Cotton says: "His tail turns up towards his back, like a mallard—from whence, unquestionless, he has his name of the green drake."

I should think it was much more likely that the fly became known as "green drake" and "grey drake" because our earliest fly fishers and writers on the art almost always recommended that the wings of the artificial green fly should be made of the white grey feather of a wild drake mallard dyed an olive green or yellow colour, and the grey fly with the black or dark grey feather of the wild drake mallard.

Some of the old writers make a great point of the feathers being from the *wild* mallard, and from the *drake* and not the duck, and it seems to be a pretty general rule that feathers from male birds are to be preferred as being stronger in colour, gloss, and fibre than those from hen birds.

To Charles Cotton belongs the honour of giving the best description of the out of water life of the May Fly which had been given by an angling, or perhaps any, writer up to his time, though he appears to have supposed its larvæ live in a case. He describes how the fly emerges from the larval coat, or case, on rising to the surface of the water, but does not mention the second change of garment when the whole covering of the wings, body, &c., is cast off.

On pages 167 to 169 of Bagster's 1808 edition of "The Compleat Angler" there is a note by the editor, Sir John Hawkins, in which he says that when he was preparing his first edition of the "Angler," he found in Bowler's "Art of Angling" an account of the history of the May Fly, which, Bowler said, had been "communicated to him by a gentleman." Sir John tells us that he afterwards discovered that the same account had been communicated to the Royal Society by Mr. Peter Collinson, a London tradesman, well known among botanists and collectors of natural curiosities. Collinson's account of the May Fly was read before the Society, and published in the "Philosophical Transactions" for 1746, page 329, No. 481.

Hawkins says the account is "miserably written, ungrammatical, and otherwise obscure." All the same, it is valuable as a description from personal observation, and interesting as being an account of the rise of May Fly on the Itchen more than 150 years ago.

Mr. Peter Collinson describes how, when walking by the side of the river at Winchester on May 26, 1744, he "was shown the May Fly, which lives all the year, except a few days, on the bottom or sides of the river, and rises, when mature, to the surface of the water, splits its case, and appears an animal (he means fly), having a slender body and three long hairs at the tails, and four blackish veined transparent wings, the under much the smaller, and the upper having four black spots. Having disengaged itself from its exuvia or skin (of which he saw 'innumerable floating on the water'), the next business of the creature is to fly about to find a proper place to fix on, as trees, rushes, &c.; and that, having fixed on one, it waits for another change, which in two or three days is completed. The first hint I had," he says, "of this wonderful change I took from the appearance of their exuviae hanging on the hedges." He collected many of the flies, and "could easily discover when they were ready to put off their old clothes though so lately put on."

"He says he had the pleasure to show his friends one of the flies that he held on his finger all the while it performed this great work, and that it was surprising to see the back part of the fly split open and produce a new fly, which left the case of the head, body, wings, legs, and even the three-haired tail of the old one behind it. He adds that after it had reposed itself awhile it flew abroad with great briskness to seek a mate."

At this point Hawkins, who evidently has no notion that he is dealing with the observations of

a most accurate, though not, trained, observer, says:

"After an enumeration of some particulars, which I choose to omit, Collinson goes on with his account stating, 'He observed when the females were impregnated they left the males and betook themselves to the river; where, darting up and down, they were seen to eject a cluster of eggs, which seemed a pale bluish speck, like a small drop of milk, as they were sinking to the bottom of the river; and that then by the elasticity of their tails the flies sprang up off the water and darted down again, and continued to do so, till having exhausted their stock of eggs, together with their strength, they were able to rise no more, and became an easy prey to the fish. This is the end of the females.' Of the males he says that 'after they have done their office, they drop down, languish, and die among the trees and bushes.'" (The males die on the water also.)

"The conclusion of his (Collinson's) letter, I give in the author's own words, for I am tired of abridging it," says Hawkins:

"The flies appear at six o'clock in the evening. On the 26th of May I perceived a few; but on the 27th, 28th, 29th, and 30th it was a sight very surprising and entertaining to see the rivers teeming with innumerable pretty, nimble flying animals, and almost everything near covered with them: when I looked up, the air was full of them, as high as I could discern. And yet this wonderful appearance totally disappeared in three or four days after the last of May."

The rise of May Fly on the Itchen now lasts much longer than to the 3rd or 4th of June, as for many years past I have looked on the 3rd of June as about the first day for the trout to feed steadily on the fly, which continues to appear for a fortnight or more. The date of Collinson's observation was May 26 to June 4, 1744, or eight years before the "new style" of reckoning time was adopted in this country. Our new or Gregorian style of reckoning time being eleven nominal days in advance of the old or Julian style, makes the actual time of year when Collinson saw the May Fly rise of 1744 coincide much more closely with our experience than the nominal dates do. This also may account for the name of the fly, as in the Julian Calendar—the calendar of the old angling writers—it was more of a "May" fly than a June fly. Now it must be considered chiefly a June fly. Ronalds, for instance, heads his list of "Flies for June" with it. Of course, the time of its appearance varies in different parts of the country, and in Ireland, on the lakes, it is much earlier than on our South of England streams, and they are not the latest.

The following account of the life history of the May Fly is taken chiefly from Pictet's "*Histoire naturelle des Insectes Neuroptères—Famille des Ephémérides*," unless otherwise stated.

THE EGG OF THE MAY FLY.

As described by Collinson, the impregnated female May Fly flies to the river and drops her eggs on to the water, where they sink to the bottom. They are left completely to chance, for the Ephemeridæ do not show the remarkable instinct exhibited by some of the Phryganidæ (sedges), which, although aerial insects, go down to the bottom of the water to lay their eggs, thus sacrificing their own lives to ensure the safety of their posterity. Not that the May Fly gains much by her maternal indifference, for she does not survive her egg laying, and both sexes die very soon after fulfilling their reproductive duties.

Mr. Frederic M. Halford, in his splendid work, "Dry Fly Entomology," quotes the Rev. A. E. Eaton's account of the methods of egg depositing among the Ephemeridæ as follows: "Others extrude them gradually, part at a time, and deposit them in one of the following manners, viz.: either the mother alights upon the water at intervals to wash off the eggs that have issued from the mouth of the oviducts during her flight, or else she creeps down into the water (enclosed with a film of air, with her wings collapsed so as to overlie the abdomen, and with her *setæ* (tails) closed together) to lay her eggs upon the underside of stones, disposing them in rounded patches, in a single layer evenly spread, and in mutual contiguity."

This would appear to contradict Pictet's remark

* It is a pity he abridged it at all, for I believe this is the earliest detailed English account of the life of the May Fly out of the waters given from actual observation. However, it is doubtless still to be seen in the "Philosophical Transactions" for 1746, No. 481. An English translation of Dr. Swammerdam's "Life of the Ephemerion," from the Dutch, by Dr. Ed. Tyson, was published in 1681.—R. B. M.

as to the Ephemeridæ not entering the water to deposit their eggs.

The May Fly eggs having been deposited in the water in May or June, how long do they require to hatch out? I do not think Pictet answers this question, and I believe Mr. Halford was the first to answer it by actual experiment, as, with the assistance of Mr. T. P. Hawksley, he kept some eggs laid on June 9, which hatched out on Aug. 15 following, and he adds that a Test river-keeper of great experience has collected thousands of May Fly eggs in large bottles, and says they hatch out in about three weeks. Mr. Halford gives the number of eggs laid by one May Fly as averaging 6500.

How long the larva lives in the water before changing to the fly is uncertain, probably from two to three years. Pictet says that as soon as hatched their first care is to construct a house to live in. This takes the form of a tubular straight, or slightly arched, gallery, which it digs out horizontally in the clay or mudbanks of the river. This hole is excavated by means of the mandibles and front legs, and is slightly larger in diameter than the body of the larva, but not large enough for them to continue to live in all their larval life (two or three years). So a new hole is made when the old one gets too small. In some places the rise or fall of the water may make them shift their quarters, for they like to be near the surface, and yet they must be under water. Some of the rivers of Holland and France, which run over a solid bed of clay, have their banks pierced by a multitude of these little holes or tunnels, the present or former homes of an enormous quantity of these larvæ.

As to the distance to which the larva will burrow into a mudbank, I remember many years ago Major Turle telling me that when getting larvæ for transplanting they had in cold weather to follow them sometimes two or three feet. This would refer, I imagine, only to soft muddy banks, and not to solid clay. As the time for their change to the fly stage approaches, they leave their holes, and crawl about in the mud at the bottom of the river. I have often scooped out quite a number with a net in April and May, and also caught trout and grayling full of them. They will live for days in a tightly-corked bottle of water, and are beautiful objects. Pictet says it is difficult to get an exact idea of the life of the larva as he found the common May Fly (*Ephemera vulgata*)—the only one of the digging division of the kind he had been able to observe—very difficult to keep alive long. He could never do so more than for a few months.

The only difference between the larva and the nymph larva is that the latter, being older, is larger, and shows the dark wing cases on the back. These wing cases hold the wings folded up, but growing inside them to be ready for use when the little creature leaves the water to change into a fly. Pictet says that he has found the remains of little insects and water worms in the stomachs of May Fly larvæ. Pictet gives the above figures as being twice the natural size. They seem to me to be rather more than twice as large as any I have seen alive.

CHANGE FROM THE NYMPH STAGE TO THAT OF ITS FIRST STATE AS A FLY.

The nymph of the May Fly may often be seen, says Pictet, swimming up to the surface of the water, and there promptly changing into a winged insect. This operation, which has often been described, is analogous to that which takes place in the case of the Stone Flies, &c., only it is more rapid in the case of the Ephemeridæ, and instead of having to find a rough surface on which to claw on to while pulling themselves out of their larval coats, the May Flies can change theirs while floating on the water and sitting on their old skins, which serve the purpose of a boat, keeping the fly dry while it is unfolding its wings. This old skin is like a mackintosh suit, covering the insect completely, and when the fly emerges and the waterproof is no longer wanted it is left behind on the surface of the water. Anglers call these transparent empty skins "shucks," and on rivers where there is a big rise of May Fly they may be seen coming down on the surface in thousands, and piled up in the corners and eddies in little heaps. Pictet says that the supple, soft, and delicate nature of the May Fly's body enables it to squeeze out of its old skin more rapidly than

FIG. 1. PICTET'S LARVA OF MAY FLY (*Ephemera vulgata*).
(Rather more than twice the natural size.)

FIG. 2. PICTET'S LARVA OF MAY FLY (*Ephemera vulgata*) IN ITS NYMPH STAGE.
(About three times the natural size.)
The two dark pieces on the back are the wing cases.

FIG. 3. MAY FLY. GREEN DRAKE (*sub-imago*).
As it is when it first leaves the water. Wings are more opaque and tails shorter than after changing the skin. The wings also have little hairs on them, easily seen with a glass; these are wanting on the perfect fly.

FIG. 4. MAY FLY. GREY DRAKE (*imago*).
As it is finally, after shedding the *sub-imago* skin. Wings are more glassy and tails and legs longer.

FIG. 5. ORANGE DUN.
This is only given to show the general resemblance in shape between the May Flies and the smaller Duns.

the Stone Flies and Sedges, which are stiffer and harder, and less supple in their bodies. Anyone who has held a newly-hatched May Fly by the wings knows how the yellow wax-like body squirms and bends about in all directions.

CHANGE FROM THE FIRST OR IMPERFECT FLY STAGE (*Sub-imago*) TO THE STATE OF THE PERFECT FLY (*Imago*).

English authors, says Pictet, in order to distinguish between the two states of the fly, call it *pseud-imago* before the fly changes its first fly skin, and *imago* after, when in the perfect state, but he prefers Burmeister's suggestion of *sub-imago* for *pseud-imago*, as indicating better that that state will be followed by that of the *imago*. I think so, too. You know that a sub-lieutenant expects to become a lieutenant, and a sub-inspector an inspector, but if you called a naval officer a pseudo-lieutenant it would be at your own risk!

Unless one has seen and noticed them, the difference between the May Fly in its last but one and its last state are not very noticeable in illustrations or easy to describe. It is the same fly, and yet not the same. If the larva skin may be compared to a mackintosh, then the *sub-imago* skin may be compared to a dust coat. Pictet says that when first hatched and in its *sub-imago* state, which lasts some hours, sometimes less than an hour, the fly is more sluggish in its movements and heavier on the wing than when in the perfect state. When the change is about to take place it seeks a firm place, like the trunk of a tree, a wall, window, stone, &c., where it undergoes something analogous to its previous change out of the nymph skin. The skin distends, heaves up, and opens on the back of the fly, which disengages itself by drawing its feet out of their skin, getting a fresh foothold, and then drawing out its abdomen and tails from their envelope. Then it draws out its wings, and as soon as they are released the old skin, which so lately covered them, shrivels up, and the old skin now resembles the "shuck" or skin of the nymph, which, as we have seen before, was left floating on the water. These shrivelled wing remains appear to be entirely rudimentary.

Under the eaves of a straw thatched fishing hut near the river is a sure find for these cast off "dust coats," as I have called them. Except that the winged cases are shrivelled up and collapsed like a child's punctured air balloon, the skin is a perfect hollow cast of the fly, even to the cornea of the eye (not "corner of the eye" as the printer slyly put it last time—evidently looking out of the corner of his eye at a fisherman's tale).

"And now," says Pictet, "Ephemera has no farther change to undergo, and merits the name of 'perfect insect.'"

THE PERFECT INSECT.

The Ephemeridæ having arrived at the perfect state are entirely aerial beings, and the short life of some species often passes quite without rest. Their usual flight is vertical, up and down. You see them ascend in a straight line, and on getting to a certain height, they descend by spreading out their wings and long tails, which act like a parachute; then with a rapid side movement some of them change their positions and recommence rising and falling as before. Being but little heavier than air they require but little exertion to keep afloat in it. This last remark applies more to some of the smaller Ephemeridæ than to the May Fly.

There can be no difficulty in distinguishing the sexes in the May Fly and other Ephemeridæ, as the male is provided with nippers at the end of his body, like those on the business end of the earwig, only much less formidable. Their object is to clasp the female fly in the act of impregnation, which takes place in the air, and the female fly then makes a bee line for the river, and drops her eggs, not all at once, but, as Collinson describes, by flying down to the water, just touching it, then springing up again, and so on, until both her eggs and her strength are exhausted. This action must not be mistaken for that of the newly-hatched fly, which often flops down on the water and floats down a bit, then rises and flops down again, and so on, until it gets stronger in its wings, or a trout takes it. The male fly continues his dance in the air, waiting until another female comes his way.

What anglers call the "Spent Gnat" is the May Fly of both sexes exhausted; its work is done, and

it can no longer rise from the surface of the water, but flutters along. Soon one wing gets wet, and lies flat on the surface, and then the other, both stretched out at right angles; and so it floats down, often motionless, then, with a quivering motion, sending little rings away from it. "Spent Gnat" is, as Mr. Halford says, a misnomer for so large a fly as the May Fly. "Spent May Fly" would be better, and lucky are you if you are on the spot when the fish are taking it, and have a good imitation, and the difficulty is to get the fish to see your imitation when hundreds and thousands of the natural flies are coming down. The magic time is when the spent fly is beginning to come down, and every trout can take every fly which comes over him; and the best place is in a strong stream, where the fish remain in one place, as in the pools below they go roaming about, sucking in the flies, all over the place.

The male fly is smaller than the female, and in both the legs are larger and the tails much longer, and the wings much more transparent than in the *sub-imago* state. Exposure to air and sun seems to bleach the flies, and makes the nervures or markings of the wings very dark, and the wing material more glass-like, brittle, and shiny than in the first stage.

It is difficult to say why May Flies have deserted some rivers, but I firmly believe that the removal of bushes and trees is one great factor.

Major Turle's successful experiments in transplanting the May Fly, and Sir Wm. Pearce's in transplanting the grannom, are to me two most encouraging facts for us fly fishers. Trout we can easily stock suitable waters with, but if there are few or no flies for them to rise at, where do we as fly fishers come in?

I am glad to say that, as I have noted elsewhere, a new edition of Mr. Halford's "Dry Fly Fishing" is in the press, and I hope some day a new and cheap edition of his admirable "Dry Fly Entomology" will be published.

R. B. MARSTON.

THE "FISHING GAZETTE" LEAD (REGISTERED).

THE "Fishing Gazette" lead, invented by Mr. R. B. Marston (the editor of the *Fishing Gazette*), can be taken off or put on to a trace without unfastening the trace or anything but the curved wire pin of the lead. To use it, unfasten the pin as you would the safety-pin of a brooch, pass the trace into the curved eye, then wind it into the

LEAD FITTED TO LINE.

1 1/4" INCH.

LEAD OPEN.

1" INCH.

curves of the pin and secure the latter in the catch—the lead cannot slip—the wire loop or eye should hang uppermost on the trace. This lead is made in large and small sizes.

The only makers of the "Fishing Gazette" lead are Messrs. S. Allcock and Co., of Redditch, who have recently improved the manufacture, and now supply it on a neat card with directions for use.

MCCALL'S "RACING CHRONICLE."—We have received from Mr. Wm. McCall (Turf Steam Press Works, 7, Hunter-street, Liverpool) a copy of his very neatly got up "Racing Chronicle and Pocket Turf Calendar Steeplechase Supplement." It gives particulars of all the steeplechases and hurdle races run from Nov. 29, 1898, to Feb. 25, 1899, and will be found a most valuable addition to McCall's "Racing Chronicle, 1898," which contains full returns of last year's events, both on the flat and "between the flags."

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

THAMES ANGLING PRESERVATION SOCIETY.

At the monthly meeting of the executive, held on Tuesday last, the president (H. L. W. Lawson, L.C.C.) reported that he had been in communication with the Lord Chamberlain, respecting the reduction of the number of swans generally and the removal of the barren swans during the coarse fish spawning season, and regretted to say that the swans belonging to the Queen, the Dyers and Vintners' Companies, if removed would, as stated on previous occasions, on account of the expense, have to be paid for. That in the interests of the "humble angler" he had notified his intention of paying the amount, and the swans therefore, he hoped, would be removed this season. The society also had before it an application to subscribe to a proposed fish hatchery on the Thames, but having in view what in the past, under the ablest of supervision, had proved so abortive, it did not feel justified in promising any of its funds for the purpose. A quantity of technical work absorbed a considerable amount of time, and the executive adjourned after an abnormally lengthy sitting.

HON. SEC.

JAPANESE FLY FISHING.

THE Japanese are old hands at the art of fly fishing, and as those who know them are aware, very deft and skilful in the use of their hands. They have no close seasons; most of their streams are therefore fished practically every day in the year by men who depend for their livelihood largely on their catch with the fly.

Many, if not most, of their trout streams are as clear as crystal; and this, in connection with the constant education of their trout by uninterrupted fishing, make their fish extremely shy and wary, and should be almost enough to prove that whatever method they successfully employ under the difficult conditions existing is a good and worthy method.

Now I shall proceed to try to describe their method, and in doing so shall doubtless ramble and be rather lengthy, so prepare yourself, and use your discretion as to cutting and curtailing.

I shall begin by saying that three of us—all old residents of Japan—finding feathered game greatly reduced by its constant pursuit in the small radius of twenty-five miles in which we foreigners are allowed the use of the gun near the "treaty ports," were led to go in for trout fishing.

We had often, in the country districts, eaten trout in Japan; had occasionally seen a Japanese fisher take one; but had been led to believe that they could not often be caught on the artificial fly. Many fishermen—some English and some American—of varying degrees of skill, had tried in their own way to catch trout with the fly; but reported, almost to a man, that it could not be done, and that the Japanese depended on nets for their main supply. Not deterred by these reports, we began a careful investigation and found that, while netting and trapping are, I am sorry to say, much used, still a very large part of the catch was made by the artificial fly. Thus encouraged, we ventured on a trial. By some travelling we discovered a stream which, after a rain, grew quite discoloured, and offered conditions apparently favourable to taking trout in the regular method as practised in England and America.

One of our trio is an Englishman and a very fair fly fisher, having fished with good results, as compared to those fishing at the same time as himself in the streams of England, Scotland, and Wales. He soon began, in discoloured water after rain, to take a few fish in the regular wet fly style of fishing. But to his surprise, and on occasion after occasion, he found that after he had "whipped a pool" in the most approved style without result, his Japanese attendant would step on the same rock he had left, and take, in the Japanese style, several good fish from the water he had gone over. This occurred not once, but always. The unvarying result of this competition of varying methods led me, who am a novice at fly fishing, to suspend my practice at the regular method, and holding myself open to conviction, to study and practice the Japanese style. I followed and carefully watched the Japanese

fishermen; and shall try to give you, from my observation and carefully made notes, a description, and, I hope, an explanation of their method.

First as to tackle. The Japanese fisher selects from a grove of growing bamboo a dry shoot of the straightest and lightest growth, trims the leaves and gets a rod of about 10ft. to 13ft., with a top tapering to the fineness of a small cord, and just as impossible to break at the end by bending as it would be to break a fishing line by simply bending it. This rod is fitted to a lower joint of bamboo about 6ft. to 8ft. long, chosen so that the upper joint fits snugly into the hollow end of the lower piece. This gives a rod of, say, 16ft. to 18ft., weighing about 7oz. to 9oz. The rod is stiff to within a short distance of the top, where it is as pliable as a light whip. To the upper end of the rod is attached a light line, usually of three horsehairs, or an equal thickness of silk, some 12ft. to 15ft. long; to this is tied the thinnest of gut leaders about 5ft long; and to this is fastened a single fly. Both gut and line are light and delicate. The flies are always plain hackles, and only two shades are used, greyish yellow and reddish brown. The bodies vary greatly, and at the individual caprice of the tyer, who is expert at fly-tying, and can usually sit by the brookside and tie a fly in a very few minutes.

The Japanese fly has very few bristles or hackles, and these are tied to stand perpendicularly to the shank of the hook, not dropping as ours do. The appearance of the Japanese fly is something as here shown as compared to ours.

The method of casting is to stand at the brookside or in the brook, and cast up and across directly at the hole, rock, or ripple where the fisher, who knows every likely lurking spot, thinks the trout is lying. The cast is made by a quick, strong motion of the wrist and forearm, the rod not going back beyond the perpendicular and sharply brought down and forward to almost the horizontal; a slight twist of the wrist prevents snapping the fly off. This cast shoots the line, with the fly at the end, straight out across the water. As the fly drops the tip is slightly raised so that the fly, and the fly alone, alights on the stream literally as quietly as the often talked of "thistle-down." At once the fly touches the water, the tip of the rod is agitated quickly, but slightly and gradually elevated, the fly making a series of little jumps and struggles, so life-like as often to be taken by the onlooker for a live insect. Only a few feet of water are covered, and then the fly is quickly picked off with another cast to nearly the same spot. The fly is never allowed to sink under water, but is kept on the surface and in almost constant motion. The cast is repeated again and again at well-known or likely places, and seems to me to resemble closely Mr. Taylor's "teasing," as described by you.

It is difficult to describe in words the operation of the fly, and probably only an actual witnessing of it can fully convey the true style and the life-like looks of the struggling insect. Its leaps are very short, and it probably never moves above an inch at a time, and usually much less. The slight struggling motion is difficult if not impossible to convey to the fly with our rods, owing to their "whippiness" and pliability, extending, as it does, from tip to butt. The length of our trout rod also prevents the cast extending above 20ft. to 25ft., as the rod must be lifted so that no line is in the water; but with the Japanese tools a cast of 30ft. to about 40ft. can be successfully made.

This roughly outlines the method. It cannot be mastered at the first effort, but requires much practice and patience, as all good methods do.

I may say that after watching the successful Japanese fishers, and then faithfully practising, I have arrived at a degree of skill which (while far short, as is natural, of the long-practised and really professional Japanese fishers) enables me to catch not only more fish, but larger fish than my friend who used the wet-fly method.

Careful study and comparison of results have now led all of us to adopt the Japanese method, at least for the clear water and middle hours of the fishing day.

We have noticed that the Japanese fly-fisher takes most of his fish between the hours of 9 and 4.30, and he almost invariably rolls up his line as it grows dusk. This seems to agree with the dry-fly fishing, which is reported as successful largely, if not entirely, in the "middle hours."

I think the Japanese method is superior even to the dry-fly style, and for the following reasons: On a bright day in clear water even a single link of the finest gut floating and turning in the moving stream is clearly visible to the fisherman's skilled eye, and its shadow on the white sand of the brook's bottom often resembles the size and contortions of a sea serpent. It seems probable the trout's eye is at least as sharp and quick as the human eye. The line and gut must usually pass over the feeding fish in dry-fly-casting, while in the Japanese style the fly only touches the water, and the line and gut are often (always when possible) pointing in a straight line from the fish into the fair, and visible practically only in cross section and behind the fly; while the shadow of the line in the air is infinitely less than lying upon the surface surrounded by globules of the water, which increase the size of shadow.

As to the wet or drowned fly method, I can only say that in the clear water in which we fish the few fingerlings which, among the wary inhabitants of these constantly fished waters, are found to take the wet fly are too small and too few to make it worth practising. As yet the smallest English midges on the finest of dry-fly gut have failed to deceive the feeding fish in our clear water. They pick out the invisible (to us) floating gnat within an inch of our flies, but, except for a very occasional impressive fingering, leave our daintiest lures severely alone. Still, we feel that in water a bit discoloured and late in the day there may be chances for the wet or dry fly.

I could give instances without number of trials of the methods side by side. One of the most marked was witnessed by our party of three. Our English friend carefully whipped a fine pool without a rise. After he finished, I, who am as yet but a duffer, stepped to the bank, cast some dozen times over the best part of the pool, rose, struck, and landed the largest trout we have yet caught in our stream. This is but one of numerous cases, and is mentioned, I suppose, largely from vanity—still, it helps to support my arguments for the new method.—J. O. AVERILL, in *Forest Stream*.

(To be continued.)

THE NEW EDITION OF MR. HALFORD'S "DRY FLY FISHING."

WE are glad to announce that, after long being out of print, Messrs. Vinton and Co., Ltd., will publish early in April an entirely new and revised edition of "Dry Fly Fishing," Mr. Frederic Halford's standard work on the subject. All matter in the book will be brought up to date, and it will be dedicated

In Memoriam,

GEORGE SELWYN MARRYAT.

All dry fly anglers will look for the appearance of this new issue with much interest.

THE NATURALIST'S DIRECTORY FOR 1899.

MR. L. UPCOTT GILL, 170, Strand, has just published the fifth annual revised edition of "The Naturalist's Directory," at the popular price of one shilling.

In this edition an attempt has been made to include all British naturalists, as well as foreign and colonial lists, and the work is invaluable to all collectors and students of natural history. There is also a trade directory, list of societies, field clubs and museums, natural science magazines, books of the year on the subject. Anglers have to ransack the world for feathers, and we advise those who want scarce feathers to make a note of this most carefully produced Directory.

MESSRS. FARLOW'S NEW CATALOGUE.

THIS new catalogue is the best we have seen from the well-known firm in the Strand. We notice that it has again increased in number of pages, and there are some novelties, which we shall refer to next week.

EARLY SEA TROUT ANGLING.

WITH the advent of March comes the early sea trout season; not that there is any run of heavy fish (two, three, and four-pounders), but shoals of lithe, lively, silvery finnock, averaging from $\frac{1}{2}$ lb. to 1 lb., and sometimes a little over. March and April are the best months for these maiden *Salmo trutta*, or grilse sea trout.

After the first run of the early spring salmon these lively little fish are found plentifully enough in the estuaries of our salmon streams all round the east and north coasts, and give delightful sport on the fine tackle with which they must be looked for. From the constantly increasing demand for early finnock and sea trout quarters, it is evident that the game qualities of this most acceptable little fish are by no means overlooked, and that their value as a sportive and edible fish are by no means on the decline. It is rather the case that the popularity of early finnock fishing on such streams and rivers as afford reliable and certain sport is in the ascendant, and that the demand in the near future for such favoured spots will be as keen, comparatively speaking, as good salmon angling is at present.

True, there is a run of finnock in the autumn, but then they are not nearly so sportive as a rule, nor so readily creeded as those of the early spring migration. In some rivers the autumn run is even more abundant by far than the early spring run, yet the same baskets are seldom made unless in exceptionally wet and spatey seasons.

The sea trout proper, i.e., the adult fish, usually put in an appearance with the June and July grilse. They are often found together on the nether half of such rivers as the Dee and Spey, and especially in the tributary streams running into them. In some later streams it is August till the sea trout make their appearance, and even later should a timely flood not come to help their inward progress. When grilse and sea trout run simultaneously, the former may form the angler's objective during the early hours of the morning, and the latter during the night, especially if a bit of a breeze spring up, when at such times sport comes fast and furious, the like of which there is no parallel to in the realms of angling.

From now right on to the end of April the finnock will be working out and in with every tide that flows and ebbs. They go in shoals of various sizes, from the small dribble of a dozen or so tiny half-pounders to the myriads of all sorts and sizes, working in and out over the mussel scalps and shingle beds, growing in size and improving in condition as the season advances and disappearing up stream as mysteriously and suddenly as the rising flood or the favouring wind suits their inclination. Sometimes they seem to hang about the estuary for weeks and weeks on end, and sometimes they disappear *en masse* in a night's time, and their favourite haunts seem deserted till another shoal or two takes their place.

During the early spring months of March and April the finnock rise freely to the fly. In the early days of the season there is nothing to beat the March Brown as the taking lure, and especially in a slight breeze of wind. If the water is clear the tackle must be of the lightest sea trout order, but the flies themselves are usually of the largest patterns, and about double the size in the early days of March compared with those which will be found most acceptable again towards the end of April. Here the temperature seems to rule the order of the day as to the size of the iron, much after the same fashion as in spring salmon angling, and as the thermometrical readings rise from 38 degrees to 43 and 45, so must the sizes of irons decrease in a like ratio. The most popular finnock flight of three hooks in these northern parts consists of a March Brown as a trail, which is seldom if ever changed. It may be renewed. In fact, sport is very slack indeed if one does not go through a good half dozen in a day; but they are all duplicates. As droppers, Lord Saltoun holds an easy first, and as a third fly or a fourth, as the case may be, if the angler prefers four of a flight, Greenwell's Glory, Zulu, Blue Jay, Bumble, and all the range of named sea trout flies are at his disposal to choose from, according to his fancy or local leanings.

There are upwards of 150 named sea trout flies, but of the whole range of these the most popular

for early sea trout angling are the half dozen or so referred to above, and the March Brown in preference to all others. So deadly is the March Brown, and so popular with finnock fishers, that when fish are rising freely to it they very often have three of them at the same time on their flight.

When the finnock has taken to the fresh waters out of the tidal reaches, he affords as brisk sport as when chasing and feeding on the crustacea below, but may be a little shier to rise. The best baskets are then made overnight, and the tackle need not be of the same delicate character. Less law, and so stronger stuff. The finnock, like its progenitor, comes with a jerky pull. He continues the jerk, dashing here and there, and tearing out a few yards of line at every dash. When the series of dashes and jerks have been expended, and the winding in or tightening up process commences, then the surface gyrations so characteristic of the tribe have their sway, indicating the determination to die hard and game to the very last. It is at these surface floppings that the tyro at finnock and sea trout angling loses nerve and head too, and, thinking he is playing the fish too tightly, yields up line—a most fatal proceeding usually, and in nine cases out of ten results in the hold giving way, and the loss of the fish. With little experience, however, which of course is usually dearly bought, he soon learns that when the gyrations and lashing on the surface has been performed for the space of a minute or two on a tight, or even tightening, line, the sooner the landing net is under the quarry the better; or, if fishing from the bank, he backs easily, yet steadily, and safely brings his unwilling guest ashore.

When fresh from the sea, there is nothing in nature to rival the sheen of the armour with which the finnock and sea trout are so thickly coated, but they soon lose their dainty colour in the fresh water, much more so than a fresh run salmon or grilse would do in the same time, although there are differences here, as in many other details, according to the nature of the river they affect.

On Saturday last, the 25th ult., the last batch of salmon rivers in Scotland were freed of the legal fetters of the close season, including the Ythan, Ugie, and Cruden Burn in the north, and the Solway streams in the south, of Scotland.

The Ythan and Ugie are minor salmon streams compared with the Tweed, Tay, Dee, and Spey, but they are *par excellence* the finest early sea trout and finnock streams in the kingdom. There may be better autumn reaches in the Kyles and insular fisheries, but it will take a lot of beating to get any to come near the Ythan, and especially the Ugie, as sea trout and finnock fisheries on the mainland. The Findhorn is good, and the Lossie yields a considerable amount of sport, to which may be added the Deveron, Don, and such like, when there is a bit of flood on; but the Ythan, with its miles of estuary and tidal influence, and the Ugie, with its long winding sandy course, seem specially marked out as the favourite haunts of this second cousin to *Salmo salar*, as far as average size is concerned, and full brother when its game and edible qualities come into play.

It is very gratifying to notice that while the interests of many splendid salmon streams are being, and have been, so sadly neglected, that their rentals are not now worth half or even the quarter of what was easily got a few years back, such as many reaches of the Don and Spey, those interested in the success of such famous finnock and sea trout waters as the Ugie are alive to the signs of the times, and have been quietly, but surely and effectively, putting their house in order against the growing popularity and increasing demand for early sea trout angling.

Colonel Ferguson, of Piffour, in East Aberdeenshire, has been most approachable in the matter; and a brief summary of what has been done to enhance the value of this little river may be a help to others similarly situated, and a stimulus to go and do likewise. But, in addition, as the benefits are to be open to all, such public-spirited beneficence should be as widely known as possible, in order that tourists, anglers especially, and those at a distance, who have a preference for such royal sport as the sea trout and finnock afford, may know where to pitch their tent.

The fishings extend from the village of Longside to the sea, a distance of over eight miles.

The former tacksman's lease having expired, a gentleman, a native of Peterhead, now in Edinburgh, secured a lease for a term of years wholly for angling purposes. He has placed the management in the hands of a local committee to let them by day (2s. 6d.), month, or season ticket, as may be desired. The nets being removed, and the pools properly staked against poaching, additional watchers have also been placed, trees removed, and dykes and weirs improved, so as to provide easy access for the fish to the pools above; 30,000 eyed ova, partly *S. levenensis* and partly *S. ferox levenensis*, are in the hatchery at Inverugie House, and these will be distributed throughout the river when fry are ripe for removal. Under the new and improved conditions of treatment the Ugie promises to be one of the most popular streams, along with the Ythan, for early sea trout angling.

G. M.

FRONTISPIECE TO "THE ANGLER'S COMPANION."

ONE of the most charming illustrations we know in any book on angling is that entitled "A Day's Fishing," which formed the frontispiece to the 1847 edition of "The Angler's Companion," by the late Thomas Tod Stoddart. It was drawn

FRONTISPIECE TO "THE ANGLER'S COMPANION."

By Thomas Tod Stoddart.

by James Giles, R.S.A., and engraved by Thomas Steuart. Of course our reproduction is not so good as the original, but will give a good idea of it. We lent the block for the menu and toast list of the Fly Fishers' Club's annual dinner.

SOME NOTES ON THE OLD RIVER, ETC.

So soon as I could hold a rod—or, rather, willow-withe, for this was my first rod—and land a fish, I gave up that back-aching job catching stone loach in the village dyke and carrying about a glass bottle three-parts full of water, in which to put my much cherished red throats. In spring, summer, autumn, and winter I was never more happy than when I was wandering along the banks of the famous old river, or wading and swimming in its waters. What have I not gone through for it? The meals I lost, and the thrashings I suffered! I have seen it under many conditions. When, for instance, it has been bank full, and the broad and mighty torrent sweeping onward in all its strength and glory to the sea. *Per contra*, like a sheet of glass, and calm as a wayside pond. When the crested waves have

come curling on its sandy flats like a miniature sea. I have seen it peppered with hailstones like peas; and I have seen it as thick as soup, and clear as crystal. In a passing thunderstorm I have seen it look as black as ink; anon, gleam in the sun like molten silver, too bright to gaze upon. I have seen a fog lift from it, revealing a fairy scene such as no theatre ever displayed. I have listened to its murmurs at all hours, and once I saw it a mass of ice as far as the eye could reach, with not a hole large enough for a waterfowl to dip in. I have crunched along across miles of frozen snow on its banks, and speared eels in its muddy depths; in short, for years, in every aspect and every charming change, it was to me a companion and a friend. And to sit by the old river's bank in the still quiet of a summer's evening, with rod in hand watching my quill, with nothing to disturb the stillness but the splash of a leaping barbel or the peculiar cry of a moorhen, when cattle might be seen standing in the shallows cooling themselves, quietly flicking the flies off with their tails, and the swallows skimming the surface, was the greatest happiness of my life. The old grandad would bring home some beautiful barbel; another relative, a splendid take of bream; the fat exciseman, a grand lot of roach; or old Jack Sharp, the sweep, a lovely dish of sparkling dace. Enough! This was more than

from experience, not only where the various fish were to be found at certain periods of the year, but the best baits with which to catch them, always, of course, taking into their calculations the state of the water and the temperature; and although their rods, reels, and lines could not be compared with those of the present time, I noticed that they always made a point of using the finest gut they could obtain consistently with safety. Another thing I was struck with was the trouble "ode Jarge" always took with his worms, all of which he and his grandsons gathered. He would never have more than a certain quantity in each tub or pancheon. There is no doubt that if too many are put in a pancheon or tub without sufficient moss, they soon become heated and turn sickly. He would have about 400 in a largish tub, with plenty of moss, and in the height of summer, about every fourth day, he would turn out all the worms and moss from each tub, put in a fresh supply of damp moss pressed pretty well down, and then put the old moss with all the worms on the top, and all those worms, except the half dead and sickly ones, soon worked down into the fresh moss, the stale moss was then removed, and so his worms were always clean, bright, tough, in good condition, perfect in colour, and a treat to look at. In gathering, say, 2000 lobbs, dew, or squirrel-tailed worms, as they are sometimes called, the young angler will be certain to find a considerable number in his pail or can much smaller, shorter, and brighter in colour than most of the remainder, every one of which are without the knot or clitellus, and there may be from twenty-eight to thirty-two rings in front of the clitellus, and 106 behind it. Those worms, then, that do not possess the knot or smooth glistening brown part so different in appearance from the rest of the worm, are commonly called maiden-lobbs, and should be picked out from the others, and kept in a vessel to themselves, with plenty of damp, clean, well-washed moss, with the water squeezed out of it like a sponge, and they should be used for the hook alone. This will save him no end of bother and trouble.

General remarks.—If the novice wishes to become a clever angler, he should take every opportunity he can, and carefully watch experts at the game, be they pegging for bream, paying out one for dace or barbel, Lea roaching, ledgering with or without a float, &c. Books may be all very well in their way, but seeing a thing carried out in a clever, finished style, with the most perfect appliances, creates a greater interest in the mind, a more intense desire as it were to learn, than the most carefully and cleverly written dissertation.

When he has spotted his man, let the tyro rivet his eyes upon him and mark his every movement, from baiting his hook to striking a fish 40yds. off. Not only will the observant novice, desirous of becoming an expert, carefully note the baits used and how they are put on the hook to the best advantage, but he will make any sacrifice and never rest until he possesses similar articles, without which all his striving after excellence will, to a very great extent, be thrown away. By comparing one angler's style with another, even a novice may soon see whether a man be a bungler or not. I mention this in passing, because I have been surprised at the number of so-called anglers I have met who have been unable to perform the very simple operation of baiting the hook with a worm. Other anglers, again, have been as helpless as children when they have caught an eel, coolly holding it off the ground and so allowing it to tie the gut in any number of knots instead of dropping it on the ground and severing its backbone with a penknife. Others, again, have been as much abroad in the kneading of ground-bait to a proper consistency to suit the current or shots; casting a bait, ledger, float, or pellet, striking either when ledgering or floating, plumbing the depth, and even in unhooking fish, &c. Therefore, to the novice I say spot your man, and whether he be a Woodard, Wheeley, Walbran, or Wallis, watch him intently; and, let him never rest until he has mastered every difficulty and every drawback, and it is just possible that in course of time he may become as clever as any of them.

OLD ANGLER.

I could stand, and the very next day I would absent myself from school at all risks, and try and emulate these clever anglers, for it goes without saying, they were clever. Sometimes I escaped, but frequently I did not. That malicious, sharp, cruel "Snuffy Gray" would question me very closely, and on one unfortunate occasion, I was fool enough to say that I had been getting carrots for the cow, at a period when one could not have obtained a carrot for love or money.

This man, whom I detested from the very bottom of my soul, who had made striking the hand with a long, rather thin ruler a special study, never said a word, but called on the governor and told him the excuse I had made for being absent. "Carrots, carrots," said the pater; "I have not a single carrot in the place; give the little d— a good hiding." Accordingly, for days I suffered the greatest pain in my fingers—but I am digressing.

In due time I saw that the anglers referred to above were clever, for they studied everything in connection with their beloved sport, and they made the most of every opportunity. The river being in what they termed "good ply," they left no stone unturned to ensure success. The fact is, all these men being born anglers, they had learnt

THE AUSTRALIAN WHALING INDUSTRY.

At one time it was anticipated that whaling would become a staple Australian industry, but the almost universal use of kerosene for domestic and other purposes has so decreased the demand for sperm and other oils, that not even the heavily-enhanced price of whalebone, occasioned by its scarcity, affords much inducement for the prosecution of whaling in Australian waters, despite the abundance of the animal during certain periods of the year. The Australian whaling industry dates from the earliest years of settlement, but, according to Mr. Coghlan, Government Statistician of New South Wales, it was not until 1823 that Australian whale oil was mentioned in British official records. In that year entries were made in the English Custom-house of sperm oil imported from the colonies, chiefly from Sydney, although the whole quantity so introduced was only 6083 tuns, the colonial oil being partly the produce of vessels fitted out for the trade from Sydney and Van Diemen's Land. In all probability this oil was that obtained from the black, or right whale, the breeding-grounds of which animal were to be found in Cook's Straits, where what in whaling parlance were termed "shore parties" established themselves for the purpose of killing the whale, the produce of which was sent on to Sydney. The value of the trade in whale oil may be appreciated from the fact that during the year 1827 the total quantity imported into England was 5552 tuns; and in 1828 the total produce of the New South Wales fisheries alone was 298 tuns of sperm oil, 50 tuns of black oil, 118 tuns of the oil of the sea-elephant, and 7647 sealskins. The English import fluctuated considerably, but reached its maximum in 1831, when it was recorded as 7605 tuns. In 1830, no less than seventeen ships belonging to Port Jackson were engaged in whaling, a number which had grown to thirty-five in 1833, and in 1834 to forty, the largest vessel being of 365 tons, and the smallest of 80 tons burthen. In the first years of the colony's history the sperm and black oil fisheries, particularly the former, presented a fair field for the investment of capital on a large scale; but by this time the sums embarked in the industry were so considerable that further enterprise had little encouragement. Moreover, the immediate returns were of so precarious a character, and the risks and losses so serious, that a speedy and steady return for capital invested could not be expected, and speculators preferred to put their money into pastoral pursuits; wool always paying better than whale oil. The value of the whale fishery to Australia in 1834 may be seen from the fact that while the vessels sailing from Sydney numbered forty, the total number engaged from English ports in whaling in all parts of the world was ninety, of from 300 to 400 tons burthen. In 1839, no less than 1229 tuns of black oil, valued at £41,341, were exported, principally to Great Britain; and 1279 tuns of sperm oil, valued at £111,280. In 1840, the importation of sperm oil into Great Britain was 5,722 tuns, of which quantity 1719 tuns were from Australia, exceeding slightly the importation from America, which was 1717 tuns, but the latter had to pay the high duty on foreign "take" of £24 10s. per tun. With the reduction of the duty, the Australian industry began to suffer, being handicapped by expenses and difficulties from which American and other whalers were free. The practice of Australian whalers of killing the calves, in order to secure the capture of the mothers, did great damage to the fishery by wastefully thinning out the product, and in 1843 the animal was remarked as becoming somewhat shy and scarce in the Southern seas. By the year 1847, when the industry had died out entirely in Tasmania, it was noted that it was likewise declining in southern waters generally, and that Australian shipping was engaging more exclusively in colonial trade, although many craft were still at work in whaling on different parts of the coast; and the "take" for years afterwards comprised an export of much value. In 1850 this amounted to 576 tuns of sperm and 16 tuns of black oil, and nearly 14 tuns of whalebone, together of a total value of about £29,000; while during the following year the export was 588½ tuns of sperm and 13 tuns of black oil, and

nearly 67 tuns of whalebone, together of a value of close upon £26,000. The value of the total quantity of whale oil exported from New South Wales has been estimated at about £3,000,000, and from Tasmania at about £1,200,000. Early in the fifties the whaling industry gravitated to New Zealand, which was found to be central to the fisheries in the south seas, and a convenient position for the establishment of "shore" parties. Indeed, to this day it is usual for old whalers to animadvert on the New Zealand method of securing the cetacean as having, more than anything else, conducted to the diminution of the animal in southern seas, although it is as abundant as ever in the Antarctic ocean. The New Zealand fishery was initiated by Captain Eames, from Auckland Harbour, early in the year 1852; but the decline in the industry was henceforward very rapid. In 1850 there were upwards of 400 whaling vessels in the southern seas alone; while in 1872 there were but seventy-two ships in the middle ground. In fact, the fishery totally died out; but of late years it has again attracted attention, and a small number of vessels prosecute the industry during the season, their general success showing what might be done, if a means could be devised for extending a market for whale oil, the falling off of the wholesale slaughter of whales having led to their increase in number in various places most free from the intrusion of man.

JOHN PLUMMER.

Sydney, New South Wales.

PISCATORIAL SOCIETY.

MR. C. BUTLER presided most genially over Monday's meeting, and was supported by a goodly company of members. Angling experiences were related by those who had been sufficiently venturesome to brave the frost and cold. Mr. W. T. Gomm, who sent up a fine shaped pike of 17lb., reported that he had done well amongst the "scourge and tyrant of the watery plains" at Christchurch, having taken, besides the one exhibited, others of 13lb. 8oz. and 12lb., with several smaller below those weights. It may be mentioned, by the way, that the otter which Mr. Gomm was good enough to present to the society a short time since, has been received. It has been beautifully preserved, and will form a handsome addition to the museum. Mr. C. H. Bywaters had good news for trout fishers, inasmuch as he stated that there was a nice lot of fish showing in the Moor stream at Newbury. Indeed, he had "marked down" several for April! Dr. Patterson, at Tring, had creeled any quantity of pike, but, strange to say, all were comparatively small in size, the biggest being a fish of some 6lb. odd. One fish he opened had no fewer than eleven small roach inside it! *Quel gourmand!* Mr. J. W. Zaehnsdorf had taken a 7lb. pike in the Kennet, and as regards the Society's new water at Uxbridge, both Mr. R. Bradford and Mr. A. R. Matthews gave flattering accounts of it, the last named gentleman having made a heavy bag of fine roach when last he visited the fishery. Mr. C. H. O'Dowd intended to have treated the members to one of those splendid displays of chub which have so often been the admiration and envy of his brother Piscatorials. *L'homme propose, &c.* He fished till midday at Datchet on Monday, but the water was running at such a terrific pace that chubbing had to be abandoned. He only had one small fish, and afterwards tried for perch and roach. He had some good specimens of the former, and any number of roach which were madly on the feed. In three hours 20lb. weight of the red fins fell to his rod, though none were of any particular size. Mr. H. H. Brown was responsible for a small pike. He gave some amusing items of news from *La pêche moderne*, and told a funny jack story which was warranted to be absolutely veracious. Mr. Evans was soon on his legs with a real "banger." So the evening passed in a most pleasant and enjoyable manner, and was fittingly closed with the never omitted toasts of "absent friends," and the chairman.

M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

The usual ordinary meeting of this society was held at the Cannon Street Hotel, on Wednesday, March 1. Mr. Henry J. Moore in the chair. Reports from stations were read. Mr. Croft Handley reported the pier fishing at Southend as very poor. Mr. Wood reported that at Southwick, on Sunday, one local man made a small catch. Mr. Tucker reported fishing at Dover, but only small catches of pollack. He found the new bronze wire lines snapper, especially while raining. The water, especially in shore, was most unusually cold.

A general discussion ensued, and the chairman gave notice that on Wednesday next, March 8, Mr. C. O. Minchin would lecture on lobsters, crabs, and shrimps, and requested members having sons to bring them as visitors.

The usual vote of thanks to the chairman closed the meeting.

CHARLES S. PATTERSON (Hon. Sec.)

CREWE No. 1 ANGLING SOCIETY.

The members of the above society held their annual dinner at the Royal Hotel on Saturday evening last, Feb. 25, when about 170 members and friends sat down to an ample repast provided by Mrs. Welch, which was of the

usual standard of excellence. At the conclusion of the dinner the cloths were removed, and a meeting was held, which was presided over by the popular president of the Society, Mr. Wallace Lumb, J.P., who was supported by Messrs. J. Edwards, C.C. (Hastington Hall), R. Cole (secretary), Abram (Crewe), E. Bowers (Nantwich), L. Boyle (Nantwich), J. Harding (Nantwich), Atherton (Wigan), Gibson (Wolstanwood), Bolderstone (Wolstanwood), G. Welch (Harleston), J. Welch (Worleston), H. Price (secretary Free Anglers'), J. Wright (chairman Izaak Walton), A. Butt, W. Jones, R. Blore, and E. Speare. The following free life members were also present: Messrs. P. McCluskey, J. Fotherby, J. Kilshaw and J. Settle. Several letters apologising for the absence of various gentlemen were read, including the ex-Mayor (Councillor Pedley), J. W. Wilding, A. N. Hornby, W. Eardley (president Izaak Walton A.S.), Poole (Marbury Hall), C. P. Roberts (president Northern Anglers' Association), Mr. Redford (secretary Northern Anglers' Association). A telegram was also received from Mr. Sutherland, J.P. (Wigan), regretting his inability to attend. The chairman proposed "The Queen and the Royal Family," which was enthusiastically honoured. The chairman next submitted "The Army, Navy, and Reserve Forces," which was responded to by Mr. E. Evans, chairman of the society. Mr. J. Wright (chairman of the Izaak Walton A.S.) in proposing "Success to the Crewe No. 1 Angling Society," said it was a source of great satisfaction to them to know that such a good feeling existed amongst the different angling societies in the town. They all recognised that it was only by joining together and assisting one another that they could increase the privileges they at present enjoyed, and promote the best interests of their respective associations, and he coupled with the toast the name of the President (Mr. Wallace Lumb). Mr. Lumb, who had an enthusiastic greeting, said for the twenty-third successive year it fell to his lot to appear before them as the President of the No. 1 Angling Society. There had never existed the slightest friction between himself and the other officers of the society, and, speaking for the other members generally, it was most gratifying to be able to say that during the whole of the twenty-three years there had not been a single abuse of the privileges which were granted to them to fish in various waters in the immediate neighbourhood of the town, as well as in the out districts. He did esteem it a great honour to be permitted year after year to occupy the position of president. He also gave a brief history of the society for the benefit of the younger members, which was very much enjoyed. Mr. Lumb afterwards distributed the prizes to those who had been successful in the club's competition, the recipients being as follows: Mr. W. Butt, champion prize for the year for roach (a copper kettle), with second and third for roach, third for chub, and third for dace. Mr. G. Capel, first and second for trout, and an extra prize of 10s. 6d. for best trout, given by J. W. Wilding, and second prize for chub. Mr. H. Leigh, first for chub, and an extra prize given by Mr. Kettell, and second for dace. Mr. J. Hughes, first for bream, first for gudgeon, first and second for ruffe. Mr. J. Shenton, first and second for pike. Mr. J. Dunn, first for dace, and an extra prize of 10s. 6d., given by a friend. Mr. F. Martin, first and second for rudd. Mr. T. Latham, first for perch, also Mr. Manley's sealed prize, which fell to best perch. Mr. R. Ford, second for perch. Mr. Jackson, third for pike. Mr. F. Talbot, third for trout. During the evening a capital musical programme was gone through, and was much enjoyed. Mr. Atherton, of Wigan, acquitted himself most successfully in the two popular songs, "Down in the Deep" and "In Cellar Cool," and other songs were given by Mr. Townly; and the meeting closed by the company singing the National Anthem.

G. CAPEL.

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

A MEETING of the general committee was held on Monday last, when arrangements were completed for the Central's annual smoking concert, which is to take place at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday, March 20th, when Mr. Walter Emden, J.P., L.C.C., has kindly consented to preside. A capital list of talented *artistes* was submitted, and the programme arranged, will, it is confidently anticipated, prove worthy of the high merits of the association. An application was received from Mr. H. W. Higgins soliciting a donation towards the River-keepers' Dinner Fund, and it was unanimously agreed to recommend the usual donation. A new society, called the Twickenham Piscatorials, applied for affiliation. From the statement submitted it appeared that a very influential list of members were supporting the new venture, and to have the prospect of a most successful future. The committee decided to provisionally enrol the society, subject to the confirmation of the delegates at the next meeting. Several other important matters received consideration, detail of which it is unnecessary to publish at present. A very hearty vote of thanks was accorded the chairman, Mr. C. A. Medcalf. The usual monthly meeting of delegates will be held at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday next, March 6, at 8.30 p.m.

THE 8th Annual Fisheries Exhibition will open on Wednesday next, at the Royal Aquarium. It will be a representative and good display, and anglers will be much interested in a number of frozen trout which are on their way from New Zealand, forwarded for exhibition by the Waitaki and Waimate Acclimatization Society. The usual facilities to angling societies are offered, and secretaries can obtain tickets at 4s. per dozen for their members, by applying to Mr. Ritchie or Mr. Wilkinson.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
Add 40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

		Morning.	Evening.
Saturday, March 4		5.45	6.6
Sunday, " 5		6.25	6.56
Monday, " 6		7.27	8.4
Tuesday, " 7		8.49	9.39
Wednesday, " 8		10.29	11.15
Thursday, " 9		11.54	—
Friday, " 10		0.26	0.53

HIGH WATER AT AMBERLEY AND PULBOROUGH.

		Morning.	Evening.
Saturday, March 4		6.25	6.46
Sunday, " 5		7.9	7.36
Monday, " 6		8.7	8.44

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—We are fast drifting into another close season, and with little prospect of getting much further sport before the general angling season comes to a termination. There has been lately but disappointment to the anxious anglers who have been floundering amongst fog, flood, filth, and furious water in the hope of getting a favourable interval. I always find the first intimation of the close time is the heading up of the dace, and this was received last week in the Hampton Court report from the pen of the venerable and honest William Milbourne, and then the greatest care and watchfulness is necessary in the Teddington district to prevent any illegal means being adopted at the time they are massing up for their final move to the upper waters. There is no law against the ordinary process of angling for them, but then the fish are rough and unclean, and are not worth the trouble of catching. The next fish which gives the greatest cause and anxiety to the officials of the T.A.P.S. is that of the perch, as it really requires the housing and removal of the swans, for which the committee are at the present using every effort to accomplish. And I expect, if the Lord Chamberlain and the Vintners' and Dyers' Companies refuse to be at the expense, it will be done out of the large balance the society has now in hand, and can only be allowed in the housing of the barren birds, as the removal of the nesting ones would not, under any circumstances, be permitted. At one time it was considered necessary to make some protection for the roach at their spawning time in the tidal waters, and especially at Twickenham; and this was generally carried out under the personal superintendence of the late Mr. A. J. Little, who then took an active part in the work as a member of the committee. His plan was the placing of boughs or sticks in the spawning places, and protected the ova thereon deposited from being eaten by the swans and ducks by means of wire netting, which was found very effective.—B.

—(Datchet).—John Keene writes: "I have been out three days with Mr. Walter Back, who has during that time creoled 90lb. weight of chub, roach, and perch, many of the roach weighing from 1lb. to 1½lb. each, and the largest chub 4lb.; another day, with Mr. Dawson and friend, 26lb. of roach and chub; and another day, with Mr. Thomas, 40lb. of perch, many of them up to 1½lb. each."—B.

—(Datchet).—The river is in first-rate order—looks fit for anything—but still the fish are very fickle. I am in hopes with the change to-day the jack will move. I was out on the 26th ult., and had six dozen perch; on the 27th, a few perch and a few roach, the two largest roach weighing respectively 1lb. 13oz. and 1lb. 9oz., one jack 3lb., one chub 3lb.; out to-day, had a miscellaneous bag—two chub, one over 3lb., the other 2½lb., and a few roach and perch.—G. LUMSDEN.

—(Eton).—The water is now in first-class order. The only drawback is that there is too much stream, but the weir tackle will now be replaced in a day or two, when the angler who wishes to float his line down again for the chub should be at once on the warpath. Some good fish have been taken during the past week. Mr. F. Sharratt, of Surly Hall, accompanied by Mrs. Sharratt, who is a keen angler, and as well able to manage a punt as Frank himself, took, in two hours, four and a half dozen very fine roach and dace and one good jack. That genial and enthusiastic angler, Mr. Amplett, and friend were here on the 27th ult., when I had the pleasure of starting them on their way to fish down to Staines. I hear they found a few chub at home in one or two favourite swims before they reached Old Windsor, and I hope they succeeded in securing a good heavy bag before they finished up.—CECIL HOWLETT.

—(Mallford).—My old fisherman, and now assistant river keeper, Edward Rosewell, writing to me on Monday last, says: "On Friday last I put on my knee boots and took my landing net, and went down to Walton Bridge and caught from the Thames meadows fifteen jack out of the small inlets where the flood had left them,

weighing from ½lb. to 2lb. each, which I put back into the river above Walton Bridge, and also some small roach and chub left in some of the holes. I am going round the Eyots to-morrow at Halliford to see if I can find any more. I think if all were to do the same thing we should save a lot. I shall do my best." Bravo, Rosewell! It is a good example to all fishermen, and especially to those holding deputations, and their clients will appreciate the value of the work.—B.

—(Hampton).—Mr. and Mrs. Palmer, of London, fishing with J. Longshaw, in one day creoled four dozen of splendid perch, weighing altogether 26½lb., having been weighed at the Red Lion Hotel, the largest scaling 1lb., the greater portion were returned to the river again.—B.

—(Hampton Court).—William Milbourne, writing on Tuesday, says: "The water is in good order for all fishing. I have been out two days with Mr. Sturges, who caught five dozen nice perch, and out of those he returned about three dozen to the river again. There was a great number of bank anglers out on 26th ult., and most of them had done well with roach and dace. Mr. Gunn took yesterday (Monday) a fine perch, 1½lb.; and the same angler, out with a friend to-day, took eight dozen of dace."—B.

—(Henley (March 1)).—The water is now in splendid condition for all-round angling. The weirs are shutting down, but there is still a strong stream running. Some good bags of roach and perch have been made, and plenty of small jack between 3lb. and 4lb. The largest I have seen was one of 8½lb., taken by Mr. Norman, fishing with W. Vaughan, on the 24th ult., which topped a bag of roach and perch weighing 26lb. On the 23rd ult., Messrs. Read and Ward had a nice bag of perch weighing 26lb.; Messrs. Tod Pulling and T. Riggs, out with G. Arlett, four jack (best fish, 4lb.) and two dozen perch; and Dr. Jeston, fishing with Bob Young, eleven jack (best fish, 3½lb.) and fifty-one brace of perch, retaining twenty-nine brace weighing 20lb. On the 24th ult., Mr. Escombe, out with G. Arlett, four jack (best fish, 5lb.) and one dozen perch (best perch, 1½lb.); and Mr. Carter and friend, out with J. James, 10lb. of perch (best fish, 1½lb.). On the 25th ult., Mr. Escombe, out with J. James, three jack and 20lb. of perch; Messrs. Coborn and Jones, out with G. Arlett, four dozen roach and six brace of perch; Mr. Ross, out with W. Vaughan, four jack (best fish, 5lb.); Mr. Batt, fishing alone, four jack and five chub (best chub, 4½lb.); and Dr. Jeston, fishing with Bob Young, thirty-eight brace of perch, weighing 30lb., and nine jack (best fish, 3½lb.), besides returning fifty of the first named fish. On the 26th ult., Messrs. Carter and Hooper, a nice bag of perch; Mr. Clements and friend, out with G. Vaughan, three and a half dozen perch and two jack; Mr. Holloway and two friends, a good bag of perch (best fish, 1lb. 8oz.); Mr. Batt, thirty-three perch and two jack; Mr. Moore and friend, out with J. Sargeant, had a good bag of roach and perch; Messrs. Coborn and Jones, fishing the back eddy of Beggar's Hole with G. Arlett, had a good bag of roach, weighing close on 40lb. A great many bank anglers were down on this date, but did little good among the roach. On the 1st inst., Mr. Elliott, out with J. James, a bag of roach and a 4lb. jack, weighing 20lb.; Mr. Martain, out with W. Vaughan, three jack (best fish, 8½lb.); and Dr. Shields, out with J. Sargeant, thirteen jack, weighing 40lb., and 7lb. of perch (best jack, 4lb.). Other anglers have been taking some roach, perch, and jack, up to 4lb. One thousand trout are to be turned into the river to-day.—STANLEY MEAD.

—(Kingston).—John Johnson, one day with Mr. Gunston, landed twenty-nine bream, and on other days with other anglers a few bream and some roach and dace. John Knight, one day with Mr. Wells and friend, four dozen of good roach and dace; and another, with Mr. Wells, two dozen of roach.—B.

—(Richmond).—The fishermen report generally they have been getting some roach and dace.—B.

—(Richmond).—The river is now in good condition. Job Brain, jun., out with his patrons, took in four days fifty-two bream, largest 2lb., and six dozen roach, largest 1½lb. Three anglers in another punt twelve dozen dace.—GAYNOR AND SONS.

—(Teddington).—W. McBride, one day with Mr. C. Merton Orme, seventeen bream and ten brace of fine perch, many of them ½lb. each; two half-days with Mr. Port, of Teddington, four bream and ten brace of perch, the largest perch weighing 1½lb.; another day with Mr. Hedsup, of Wimbledon, forty-three bream, of which thirty were returned, and eight brace of perch, four of the best perch weighed 4lb. 2oz.; and another day, with Mr. J. Hollyman, four bream, five brace of perch, and a chub of 1lb. There is an unreported take of the previous week with Mr. Clay and friend, of the Holloway Angling Society, of twenty bream, a tench of 2½lb., and four brace of perch. The water, on Wednesday, was described as being in good condition for perch fishing.—B.

—(Twickenham).—C. Browne, one day with Mr. Carter and Mr. Cox, 110 dace, and in three other days, with other anglers, 20lb. of dace and one bream. R. Moffat, in one day, nine dozen of roach and dace and two bream. R. Spong, in two days, 20lb. of roach and dace, and one bream.—B.

—(Weybridge).—Mr. C. H. Wheeley has been successful in landing a nice pike of 7lb. at Walton, and other anglers are reported as having done well with the perch.—B.

Ancholme District.—The coarse fishing season is now coming to an end. It has been a good average year. The largest pike taken so far was 16lb. I saw the water bailiff on Saturday last, and he tells me he has seen some very large king carp about the Cake Mills, Brigg; and some fine large trout of several pounds weight have been observed at the same spot, and also near Brandy Wharf.

The close time for coarse fish also shuts out the trout, which would be more likely to capture during the spring than at any other time. The commissioners should allow angling for them under certain restrictions.—THOMAS FORD (Caistor).

Arun (Pulborough).—Only a few anglers visited here on Feb. 26, who found the river in good order; the sport was disappointing. Mr. Randall, Great Northern Brothers, took three jack, the largest about 4lb., but other takes were small. This (Tuesday) night, the river is in good order and well clearing [after recent floods].—W. G. HOLLMAN.

Bottisham Locks (Waterbeach).—During the week from last report, up to March 1 (time of writing) pike are still on the move, and are just on the dock. Numerous, but not over 4lb. each, as a rule, at present had. Bank angling clean, and to-day (March 1) W. wind; spring weather; no frost. Live baits on the spot. Fifteen minutes' walk from G.E.R. station. Comfortable lodgings.—J. O. GEORGE, Beche-road, Cambridge.

Coln, Leach, &c., Bibury (East Gloucestershire).—The warm weather at noon during the past week has caused several Duns and Gnats to hatch out. On Saturday, Feb. 25, I had a live May Fly sent me from Bibury, on the Upper Coln; it was caught in the Swan Hotel gardens, right up amidst the Cotswold Hills. I think this is a record. The fly (a Green Drake) caused considerable interest at Cirencester on Monday, where it was on view. Mr. Warn, of Tetbury, reports some excellent sport from the Estcourt lakes with pike, a brace of fifteen pounders being amongst them. Some fine pike have been recently got in the Churn, and several small ones from the Thames and Severn Canal. The Gloucester Angling Club are about to restock the Robinswood Hill reservoirs with trout, and they are to be fished for with fly only.—PAN.

Dart (Totnes and District).—A number of rods were on the river to-day (Wednesday) for the opening of the season, but at time of writing only a few reports have come in. The weather, however, is too bright for much sport, and the frosts are very severe. Mr. Holmes secured one and a half dozen nice trout; Mr. E. Distin, fifteen; and Mr. Parnell, a dozen. Several other takes of about a dozen were made in the waters up to Staverton. Buckfastleigh anglers, too, met with fair success. Flies recommended are Blue Upright, Edmond's Palmer, and Half Stone. Ten fine salmon were netted at the weir. A number of salmon are lying in the well-known pools between Totnes and Buckfastleigh, and anglers have been trying their luck. The conservators this week decided to grant no free licences, understanding that they have no legal powers. As much of the fishing on the moor is understood to be granted by the Duchy on condition that tenants have free licences, it will be interesting to see how this decision will affect anglers who patronise the moorland waters.—DEVONIAN.

Devonshire Streams.—Most of the streams are now in capital trim, but the frosts and bright days have been drawbacks to good sport. Salmon fishing should have a better season than last year, as reports show that a number have ascended. Several rivers opened on Wednesday. The Tiverton Fishing Association are affected by the bad season of 1898, their receipts having considerably diminished. Only fly fishing is now permitted on the Otter, the artificial minnow and worm being both prohibited. Many of the riparian owners on this river have announced their intention of controlling their own fishing, and consequently a big stretch of water is preserved for the first time.—DEVONIAN.

Dove and Tributaries.—Water is now in good condition for the fly, though somewhat low and clear for this time of year. A few fish have been taken by the February Red. Trout are not in good condition, though forward for this time of year, and another week or ten days will make a difference in this respect.—D. AND W. H. FOSTER.

Exe and Canal (Exeter).—Salmon fishing opened here yesterday, March 1, but on the lower lengths of the river little sport was met with, the waters having dropped in very rapidly, and the day being bright throughout. The same bad conditions have also kept trout down, small bags being the general experience for past week. Mr. A. J. Roberts secured another brace of pike near Thorverton, largest 9lb.—RED PALMER.

Fen District (South Lincs. and Cambs.).—Winter angling is returning to its normal conditions, and sport in both departments is described as good. Those following the fresh-water shark have no reason to complain, whilst those seeking roach are credited with good baskets. In some of the drains the water is still running very fast. From Surlfleet I hear that roach are feeding in earnest. One visitor the other day caught 28lb., and had besides six tench, weighing 11lb., and a fine perch, 3lb. 3oz.—LIMPET.

Idle District (North Notts).—Very few reports come this week from the Idle. The river and drains in the lower portion have scarcely yet settled down. Some few chub are noticed as taken from the upper lengths, and an odd catch or two of roach and dace have been obtained about Bollam. The Ryton has also furnished a few roach and dace, and also a few chub, one of the latter weighing 2½lb. Canal fishing at Clayworth has been fairly good.—L.

Lea.—The water has run down and fined very nicely, and there is a favourable stream running now for all-round angling. Roach have not fed as well as was expected, but in some parts nice takes have been secured. The Rye House district has furnished a roach of 1lb. 10oz., and some good roach have also been landed at Waltham, St. Margaret's, Ware, and Hertford. Large numbers of anglers were out in the upper reaches early in the week. A fine dace of 14oz. has been taken in the Hertford district, and Mr. Shelsey, at Dobb's Weir, Hoddesdon,

has brought to bank a pike of nearly 16lb. Mr. Taylor has taken a pike there of 4½lb. Here and there other fair sized pike have been secured, while a rnmour reaches me that two heavy specimens have been captured in the Broxhorne district. Peich up to 1½lb. have been landed at St. Margaret's, where a fine trout has been seen to feed. Roach, perch, and pike have been taken in the Stort, but no heavy baskets are reported. The river is in good condition.—IZAACK WALTON.

Lugg and Arrow (Leominster).—Both these noted trout streams are now gone down, and have cleared nicely, and are greatly improved, and in good order for fishing, and there is every prospect of some good sport being had amongst the trout on both streams. Thursday was the opening day, and there were a fair number of anglers getting ready. There has been some flies on the water during the warm parts of the day, and the fish have been rising. The best flies for use will be the Blues, February Red, and Palmers. The Pinsky is in good order, and some good fish will be caught in it.—GWYNNE.

Lugg, Arrow, and Pinsky (Kingsland).—Rivers are fishable, yet still on the heavy side. We have had beautiful fine and warm days, followed by very sharp frosts at night, and these will keep both trout and insects back. Flies to commence with should be Blue Dun, February Red, Red Palmer, Cowdngg, and Male Willow.—R. T. WILLIAMS.

Nene (Peterborough).—Great improvement in fishing prospects can be reported this week, for the water in the river has been considerably reduced, it having ran off so rapidly that the water gauge shows a difference in height this week as compared with last of about 2ft., and, besides, the colour of the water is materially improved. The weather to-day (Wednesday) is spring-like, and if it continues our anglers now may be induced to turn out. Some have had good sport hream fishing at Alwalton, and several large ones have been landed, one scaling over 6lb.—about the largest this season.—E. A. S.

Otter (Budeleigh Salterton).—To-day (March 1) the Bicton Estate water and other important parts of the Otter opened their season under very unfavourable conditions. There was a sharp frost last night, and a bitter north-east wind was blowing to-day. At midday, the sun came out powerfully, and made things cheerful for everything but fishing. The few anglers who plied between this and Ottery did next to nil, and grumblings on all sides are the order of the day. The few fish taken were in bad condition, and everything points to an unusually backward spring fishing. The river is very clear and rather low. South winds and warm showers must be waited for. Flies for the next few weeks should be Blue Upright (wingless for choice), February Red, Iron Blue, and Hare's Flax Upright.—HERON.

Ouse (Great Paxton, St. Neots).—Pike are well on the feed. Good baskets are still made. The water perfect.—W. DUCKER.

Ouse (Holywell Ferry).—Jack have been right on the feed for a fortnight now, and still mad on, so anglers should avail themselves of the chance. The water is in splendid condition, and six or seven good fish coming home with each punt, and ranging from 3lb. to 9lb. I quite expect to have to report a record fish before March 15, when our season closes here. The frosts have done us a deal of good.—A. SCARD.

Ouse (St. Neots).—The water is now in first-rate condition, and large numbers of jack have been taken during the last few days. They have, however, been principally small ones of 4lb. or 5lb., and up to 7½lb. The weather is all that can be desired.—WM. NASH.

Plymouth.—March 1 is on us again, and the fishermen are eager to be on the river to renew their acquaintances of last year. From reports I have received from all rivers, they appear to be in very good condition, and there are plenty of fish up. The mildness of the climate has brought on the fly much earlier than usual, therefore the trout will be in better condition than is usual at this time of the year. I have received the licences and tickets for the Tavy and Plym district, the Dart, and tickets for the Avon and Erme Fishery Board, and I have issued several to fishermen who always go out on the first. One thing I notice with the Dart, which is a great advantage to fishermen coming for a few days' fishing, that he can get a day ticket to fish for salmon or trout at 2s.; if for trout only, 1s.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—All these rivers are in the best possible condition for the fly, and the water little above the summer level, and although the nights are somewhat frosty, the sun shines brilliantly throughout the day, so that anglers in pursuit of grayling are having good sport, but these fish are now getting out of condition, yet anglers are allowed to take them from the Tanat all the year round, as they are said to master the trout when too abundant. There is every prospect of a good season for trout fishing, as for some time past they have been rising greedily at the fly, and two have been landed at one cast on the Tanat, which, of course, were returned to the river. Several good sized pike have been taken from the Severn and Vyrnwy, and it is to be hoped that trollers will persevere and make as much havoc amongst them as the pike do amongst other kinds of fish. The close season for coarse fish will commence shortly, and although they are now in poor condition, they continue to afford good sport. It is most gratifying to hear that several salmon have been seen in this neighbourhood, but none as yet have been captured, for the simple reason that they have been so scarce in recent years that it was a waste of money to take out a licence to angle for them, but perhaps brighter days are in store for the salmon angler in this neighbourhood.—VYRNWY.

Stour (Bures, Suffolk).—The water is now in splendid condition for angling, but fish are not well on the feed. Sport on the 26th nit. was very slow, hardly a fish of

any sort being taken—the wind being in the east no doubt being the cause. A few good fish have been taken since, and bags up to 10lb. in weight, gentles being the best lure. The water is in good condition for jack fishing, and some good fish ought to be taken as soon as the wind alters.—W. T. BAINBRIDGE.

Sussex Rivers and Chichester Canal.—Frost in the early mornings and summerlike days have been the order of the week. Rain has held off, and rivers are all in excellent order. Good sport has rewarded visitors to the Ouse, and pike especially have been to the fore. Mr. Shaw, of Tofield, recently captured 32lb. weight of nice fish, the heaviest turning the scale at 10lb. Chub have been well on; the heaviest recorded weighed 3½lb. Roach have taken gentles, but are not feeding freely. The Cuckmere has not fished well in the fine water. The best angling is found here after a flood. The Rother is in good trim, and is well worth a visit, especially to the artist angler. The scenery is grand. Pike up to 6½lb. have been taken by spinning and paternoster. Gudgeon seems the favourite bait, and are easily obtainable in this water. Chichester Canal fishes well. Pike of 4½lb., 3½lb., and 3lb. are the largest I hear of, but several fish have been taken with hand-lines and bank runners, which the pot hunters' basket, and say nothing about. Live gorse is here the leading mode of capture.—GEORGE F. SALTER.

Teifi (Lampeter, Cardiganshire).—After several weeks of flood, the river is again running low. Trout fishing commences to-day (March 1). Prospects good, but water low. Only two salmon have been taken here as yet.—H.

Teme (Ludlow).—The Teme in this district has now gone down to a nice level, and has cleared, and is now running in good order for either fly or bottom fishing. The weather has now turned fine, and with sharp frosts at night and the sun shining all the day it has brought a good few flies out on the river; and there is an excellent prospect for the opening days of the trout season, which commences on Thursday, and the best time to fish for the present will be between eleven and three in the day. The best flies to use will be the February Red, Blue Dun, Iron Blue, and Palmer, and good dishes of fish should be landed. During the past few weeks a very large otter has been seen fishing the water under Whitcliffe. This is one evidently missed last year by the hounds, and along the bank can be seen where he has had fish and left the scales. During the end of last week a few coarse fish were taken with paste. The Ony, Corve, Clun, and Ledwyche are all running clear and a nice level, and in good order for fishing, and some good trout will be taken with worm.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part has now gone down and cleared, and is running a nice level, and has got into good order for fishing, and is in a better condition than was expected a few weeks back for the opening of the trout season on Thursday, the 2nd. Angling up to the present has been very slow, and anglers have been getting ready for trout, and there is a good prospect of some good sport being had in this district, as there are plenty of good fish in the district, and good baskets of fish should be landed. A good few flies have been out on the water. The Rea, Kyre, and Ledwyche are running in order.—WORCESTER.

Welland and Gwash (Stamford District).—Mr. Harden, a member of the Stamford Angling Association, has secured as his own property the challenge cup of the London Piscatorials (for grayling), having won it three years in succession; his last catch was six fish, totalling 9lb., the largest weighing over 2lb. It is announced that 500 yearling trout have been turned into the Gwash. In both rivers sport has been, on the whole, satisfactory during the past season.—E. A. S.

Witham, &c. (Mid-Lincolnshire).—The drains about Boston are said to have yielded some good roach lately, and especially in the Mount Pleasant district. A few rudd have also been taken. Sport about Bardney and towards Lincoln, on the river, has fallen off, but those who have visited the Sincil Dyke have done fairly well with yellow paste. Sport on the Bain, about Coningsby, has been good, and roach takes have usually been topped with chub. Some of these have run up to 3lb. Some good pike have been taken at Flnsby, and a few decent fish have come from the Witham end of the Horncastle Canal. The best fish reported was 12lb.—LUCR.

Wye (Herefordshire).—On Saturday last Messrs. Costage and Bradbury, two well-known anglers, had some excellent sport at Ross. In two and a half hours they caught twelve fine pike ranging from 3½lb. to 13lb. each. The total catch weighed 89lb. This is believed to be a record for the Wye.—PISCATOR.

Yore, Swale, Wharfe, Nidd, Derwent, &c.—With the exception of a dense fog on Monday we have had a week of brilliant sunshine. Two or three of the night frosts have been very keen, but the weather, for either pike or grayling fishing, has been what is often termed typical, but the water in the upper reaches of all the Yorkshire angling streams has run down to summer level, and could not possibly be filtered brighter than it is now. This, with the fact that the larger grayling are going off in point of condition, has prevented many anglers turning out, and matters will be quiet now till the opening of the trout season. I have not seen or heard of anyone being on the upper Yore. A Harrogate gentleman had an exceptionally good day on Saturday last, his basket containing twenty-eight splendid grayling. The smaller grayling are in fine condition, yet many of them about 4oz. being apparently barren fish. A few pike have been caught in the neighbourhood of Borough Bridge, and on Saturday Mr. Thomas secured a nice fish of 4½lb.—the only one caught out of four rods. Little has been done in the way of grayling fishing on the Swale at Catterick Bridge, but I am pleased to hear prospects for the trout from this point

up to its source are reported good, and some fair dishes of roach and a few pike have been caught in the lower waters. The Derwent is at last in good trim for fishing. There are plenty of pike in the neighbourhood of Malton, and we should hear of some good captures soon. At Yeadingham, on Tuesday, Messrs. Pickersgill and Gunny had respectively 10lb. and 8lb. baskets, among the former being three roach turning the scale at 4lb. On the Wharfe, on Friday last, some nice perch were caught by Messrs. W. G. Royston, R. Boston, and J. E. Miller, jnn., five of the perch weighing over 4lb.; and on Wednesday, on the same water, Mr. Boston again had good sport. From Nidderdale I hear some decent sport has been met with on the waters of the Harrogate Angling Association by several anglers, the best basket being one of twelve grayling, ten dace, and four chub; Mr. Hinchliffe securing half a dozen nice grayling. Several pike have been caught in the lower reaches below Hunsingore. Trout and grayling anglers will be pleased to hear that the fresh-water shark has been practically exterminated from the upper reaches of this water. There are a few vacancies in this club. The water extends over twenty miles of good fishing, and contains a large number of both trout and grayling, beside all kinds of coarse fish, from the gudgeon to the pike. The annual subscription being only one guinea, and no entrance fee, intending subscribers should not lose time in sending in their application to the secretary, Mr. R. Fortum, Harrogate.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAM.—The Yorkshire rivers are very low in the upper waters, but the lower reaches are in fine trim for pike fishing. Weather brilliantly fine, but a boisterous north-westerly wind prevails.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk.—Although fly fishing opened on the Border Esk in the middle of last month, little has been done up to the present; indeed, few anglers have been out. With the advent of fine weather the river has been in order for fishing; but, with the exception of Dr. Anderson's (Esk Bank, Canonbie) 19½lb. salmon, which he killed in the mid reaches after a splendid run of some duration, nothing worth recording has taken place. The spawned fish are still numerous, and the doctor had good sport with them, landing no fewer than eight kelts, which were, of course, returned to the water. There is little yet doing in the upper and lower reaches. The Esk is very clear of fungus this spring, and if the present fine weather holds good, fair sport may be anticipated.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—King Frost still holds land and water under its iron grasp. Curriers are busy, and anglers idle, as they have thrown up the rod with despair until a change comes. Not a fish caught yet on the Carron this season.—B.

Deveron (Banffshire).—For some time neither rain or snow has fallen in this district, and the water in the river Deveron is now almost fallen to its normal condition. Keen frosts have been pretty prevalent, which has interfered somewhat with the rod fishing; but during the evening of Monday, and on Tuesday, the weather appeared to be undergoing a change, a slight shower of rain falling on the morning of the latter day. Except on the Huntly Lodge section, which does not open until April 1, and several other sections, anglers have been out, and fish of 6lb. to 10lb. grassed, one beautiful clean run salmon of 19½lb. being killed by the keeper on the Avochie section (Mr. Wm. Walker) on Saturday last. Although the net fishermen have been plying the nets night and day on the river beside the Raik cottages, they have scarcely got a fish, and very few trout. Matters are similar on the sea. There are some half a dozen bag nets on this part of the coast, and, although the weather permitted them to be examined several times daily, not a dozen salmon have been taken from them for the week past, and for the first half of this week only a small box was sent to the market from the Deveron district, and one on Tuesday from the Gardenstown coast.—H. W.

Loch Ness (Foyers Hotel), N.B.—On Feb. 22 Miss Tilston killed a nice salmon of 29lb. On the 23rd Mr. R. T. Annan killed one of 21lb. and one of 16lb.—S. TILSTON.

Loch Tay (Kenmore, Perthshire, N.B.).—On the hotel water, on the 22nd, Mr. D. Carson killed two salmon, 22lb. and 16lb. On the 22nd, on the reserve water, Mscdiarmid, the keeper, killed salmon, 20lb. 25th, on the hotel water, Mr. W. Herring killed salmon, 17lb. 27th, on hotel water, Mr. W. Herring killed salmon, 16lb. 27th, on the reserve water, Mr. Montague Campbell killed salmon, 16lb. Loch in good ply.—W. KNIGHT.

Loch Tay (Killin, N.B.).—On Feb. 22nd Mrs. Midwood had a salmon, 15lb.; Mr. Kessler, one, 17lb. On the 24th, Capt. Williams, one, 15lb. On the 27th, Mr. Clegg, one, 20lb. On the 28th, Mr. Clegg, one, 16lb. Only one boat out. Loch in good play.—H. J. MAISEY.

Naver Bettyhill (Thurso, N.B.).—No sport got on this river since last reported, although several anglers, including Gen. Hume (Syre Lodge), Col. Frier (Dalvina Lodge), and others, have arrived. The weather could hardly be worse for angling—keen frost by night and a blazing sun by day. On Tuesday there were indications of a change.—B.

North-East of Scotland.—Owing to the falling in of the river, heavy frosts over night, and excessively bright sunshine during the daytime, sport has not been so brisk during the past week as in the preceding one. On the Ballater and upper waters there are few fresh fish as yet. On the South Cambus O'May water, Col. Eddis and party have had one, two, and three daily, scaling from 6lb. to 8lb. On the Glentana waters, Lieut.-Col. Brinckman had one of 9lb., on Monday, and one of 8lb. on Tuesday; while Mr. Merry (from Profits Hotel), had one of

8lb. on same water. On the Aboyne reaches, Mr. Crawshaw had one of 6lb.; Mr. Borwick, two, of 8lb. and 8lb.; and Mr. Hebburn, one of 7lb. On the Ballogie water, Mr. Edward Drummond creelred one of 6½lb., and three, 6lb., 6½lb., and 20½lb.; while Mr. Corbet had one of 9lb.; and Mr. L. H. Crake, one of 8lb., on same water. On the Borrowstone water, Nicoll, keeper, has landed one and two daily; while Dunn, on the Carlogie section, has had similar success, all running from 6lb. to 9lb. On the Dess water, Major Davidson creelred four, of 6lb., 6½lb., 7lb., and 8lb.; three, of 7lb., 8lb., and 9lb.; and one of 8½lb., making twenty-five fish on this small water since the season opened. On the Lodge water, Mr. Deverell creelred one of 10lb., one of 7lb.; while Sir John Gladstone had several of average weights on the Commonby and Upper Blackhall waters. On the Cairnton, Mr. Farley creelred two and three daily, while Mr. Duncan Davidson, on the Inchmarlo, the Hon. Otto-Powlett, on Blackhall Castle, and Mr. McKin, on Durris, have only had fair sport. On the King-Causie section, Miss Fortescue had "first blood" for the season the other day in a beauty of 8lb., while Mr. Irvine Fortescue creelred four, scaling 6½lb., 7lb., 7lb., and 9lb. The Ythan and Ugie opened on Saturday last, when Mr. Gordon, Ellon Castle, had a fair basket on the Ellon waters, and several other anglers similar results on the tidal reaches. On the Kingcausie water, Mr. Irvine Fortescue landed one of 7½lb. on Monday, and two, of 19lb. and 8lb. on Tuesday. Sir John Gladstone, on the Commonby and Woodend waters, creelred twenty-one fish in four days' angling; and Mr. Farley is getting six, seven, and eight fish daily on the Cairnton. On the Aboyne waters, Mr. Sharp had one of 20lb. on Tuesday; Mr. Crawshaw three, of 6lb. each; and Mr. Borthwick two, of 5lb. and 7lb. On the Monaltrie water, on Monday, Mr. Herbert landed one of 8lb.; while Mr. J. B. Millar had one of 7lb. on the Ballater water; and Lundie, Her Majesty's keeper, three, of 7lb., 8lb., and 12lb., on the Balmoral waters, which were duly despatched to the Queen at Osborne. With the advent of fresh weather sport has revived all over, and the prospects on the Dee are brighter than ever. Plenty of fish on the lower and mid sections, and now rising freely.—G. M.

Shin (Inveran, N.B.).—The weather still continues very frosty, with clear sunshine; in fact, angling conditions could hardly be worse. During the past week the angling tenant, fishing from the Sutherland Arms, only landed two salmon, one weighing 9lb. on Tuesday, and a 10-pounder on Saturday. No sport expected until after a thaw, of which, as yet, there is no appearance.—B.

South of Scotland.—The Border rivers opened for angling on Saturday morning under most unfavourable conditions. There was sharp frost for two or three nights prior to the opening, and the waters were very clear and a trifle low for salmon fishing, nevertheless a few rods were out, but nothing was done on any of the waters. Very few salmon have been seen moving since the floods of a fortnight ago, and none are running in the Solway. Since the nets opened in the firth not a single spring salmon has been caught at two of the principal netting stations. The Eden gave a number of spring fish to the rods at the beginning of last week, but the sport has now fallen off again. One trout has been caught. In the Nitb and Annan nothing was done by the rods on the opening day, and anglers are of opinion that there cannot be any sport until some rain falls to heighten the rivers. Any fish landed have been kelts, which were put back to the water. Yellow trout have been caught in some of the waters, but these fish are still in poor condition, and should not be taken for another month. The weather is mild, with no immediate signs of rain.—HEATHERBELL.

Tweed, Teviot, and other Border Rivers.—During the past fortnight the rivers in the Borderland have been running in very poor angling form, and a good many disciples of the rod and line are out trying their luck in various ways—some for salmon, others for trout, while the pike fishers have not been idle. The weather has not been the most favourable on all occasions, however, and many blank days have been recorded on all the waters. At the same time a few catches of salmon have been made, but those have all been killed in the lower waters, and even in that district the reports are to the effect "that salmon are very scarce in the river, and apparently none coming up the main stream—Tweed—further than Norham, in the meantime. There has been no salmon angling on the Floors Castle famous waters as yet, nor yet on the Hendersyde casts, and the same remark applies to the Makerstoun and Rutherford fastnesses. Of those who have been most successful since the season opened we may mention the Right Hon. Lord Dundas, the Hirsell (son of the Earl of Home), who, on the Birgham water, belonging to his father, killed, yesterday, three fine salmon, of 14½lb., 14lb., and 14lb. respectively; on Feb. 16, Mr. James Steel, Kelso, had a grand clean run salmon of 17½lb., killed on the "Bushes" cast on the Sprouston water. Capt. P. M. French, on Feb. 16, on the Till, had one salmon of 8lb.; on the 18th he killed a beautiful 14lb. salmon on the Tweed; on the 21st, on the same river, he had a nice 9lb. salmon; and on the 27th, on the Till, he killed a fine fish of 11½lb. The above are all the fish recorded as being killed up to date. Of those who have been on the pike killing job, Mr. Alexander Hogarth, Heiton Mill, Kelso, had one of 2lb. on the Teviot on Feb. 18; and yesterday (Tuesday), on the same stream, Mr. Richard Ormston, Haybank House, Kelso, with spoon bait, killed three of these fish, weighing respectively 2lb., 3½lb., and 4lb.—two of these having been got in the Gogram Pool, and the other in the cast known as the "Room." There has not been much done in the way of trout fishing, but a few nice small baskets have fallen to a few of the Waltonians, the weights of which ranged from 3lb. up to 6lb., the latter including one trout of

1½lb. The net fishings for salmon in the Tweed are very poor as yet, the yield being most unsatisfactory, the river not being in good fishing trim. Salmon are very deficient in quantity, and only some twenty to thirty trout are being caught daily. One day last week half a dozen salmon were landed in the nets, and that is the largest number got any day since the season began. On Tuesday, at the Yarrow fishery, a clean salmon of 2lb. weight was caught, and this is said to be the smallest salmon on record, but if I remember aright there was one got in the Kelso district some years ago which only weighed somewhere about 1½lb. A seal was also got in the nets on the Yarrow fishery the same day as the small salmon. Prices are: Salmon, 2s. 8d. per pound; trout, 2s. 9d. per pound. Last year at same time prices were 2s. 3d. per pound.—MAXWHEEL.

IRISH REPORTS.

Bandon River (co. Cork).—Sport very indifferent for past week, very few salmon being killed by any of the rod anglers. Mr. H. E. Stanley had a good fish of 10lb., killed on the Woodlands water; and McCarthy, a local angler, one of 8lb.—W. HAYNES AND SON.

Blackwater (co. Cork).—Sport has slightly improved for past week. On the upper Kilbarry water, Mr. M. Dennehy, Feb. 23, one, 25lb.; 24th, one, 10lb.; 25th, one, 17lb.; 27th, one, 26lb. Some good fish were also taken at Mocollop and Careysville Fisheries.—W. HAYNES AND SON.

Boyne (Navan Section).—The fishing so far has not been equal to that in February of the past two seasons. Heavy and continuous floods in the latter part of January and early part of February, combined with high temperature, carried the first run of heavy fish past this section, and since the season opened on Feb. 12 hard frosts and bright sunny days have kept the fish back. Far as I can ascertain, the best sport has been had in the Slane Castle Water, where the tenant and friends have caught fifteen or sixteen fish, the weights of which I did not hear. On Upper Black Castle water, Mr. Francis Ley and friend had thirteen fish—10lb., 14lb., 15lb., 15lb., 17½lb., 18lb., 18lb., 19lb., 19½lb., 20lb., 21lb., 23lb., 26lb. On the Blackwater, Mr. Boylan had four, 17lb., 18lb., 23lb., 24lb. On the Stacellan water, Messrs. Jamieson had four or five fish. On Ardmulchan, Murphy, the fisherman, had two. On Lower Black Castle, Mr. Fletcher's guests had several fish from 9lb. to 20lb. each. I also hear that some good fish have been caught at Trim, including one of 23lb. Sport will not revive until we have rain, as the river is at low summer level.—CLARET FLY.

Bundrows River (co. Donegal).—This river got into nice fishing order towards the end of the past week, when Mr. T. Feely succeeded in landing three very handsome fresh run salmon of 10lb., 10lb., and 9lb. respectively, on the 23rd, 24th, and 26th ult. Capt. Austin, of the 2nd Dorset Regiment, also took a salmon on 25th ult. A good show of fresh run salmon in the river during the past week, and prospects of sport seems at present very good.

Lough Melvin.—The Rev. Wm. Verner tried this lake during the past week, and took four splendid brown trout, in fine condition, of 7lb., 3½lb., 3½lb., and 3lb. respectively, on 23rd and 24th ult. Mr. Verner also hooked a heavy fresh run salmon on 24th ult., but unfortunately lost same after some ten minutes play. Should the weather continue as mild as it is at time of writing, good sport will be had on this lake from this forth.—M. ROGAN AND SONS.

Cork Rivers.—The weather being favourable, and the waters generally in fair order, sport has shown up somewhat since last report on the rivers open for angling, and is expected to be good later on if the conditions keep favourable.—T. J. D.

Kerry Rivers.—Sport is still very backward on the Kerry rivers. In fact, it has seldom or never been so poor at this time; but the prospects for the next few days are somewhat better.—T. J. D.

Killarney.—Sport has shown a slight improvement since last report, though it is still very poor. It is quite unaccountable how matters have been so backward, as there were good grounds for supposing that spring salmon were numerous even at the commencement of the season. On the mountain lakes brown trout fishing has given fair sport on many days, the best baskets being had on Lough Quittane.—T. J. D.

Lee (co. Cork).—Salmon fishing for past week has been anything but good. Numbers of fish are to be seen in every pool, but they refuse to look at anything. On Ashton Fishery, Col. Rock had two, 9lb. and 8½lb. On Mashonoglass, Mr. F. Barry, three, 10½lb., 9lb., 8lb. On Lord Bantry's water, Rev. Canon Archdall, two, 11lb., 9lb.; Mr. G. M. Ievers, two, 7lb., 9lb. On Ballineadig, Capt. Richards, Hampshire Regiment, one, 6lb. On Fargus, Capt. Douglas Pennant, 60th Rifles, one 8lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—There has been a complete absence of sport in the line of salmon since last report, and only a very few sizeable brown trout were taken. All the most approved lures were tried, but all to no avail, as the salmon would not look at anything in the shape of either fly or minnow. Spring salmon continue to arrive in fair or average numbers.—T. J. D.

Lough Mask (Clonbur, co. Galway).—The preservation of Lough Mask in the past three years is now bearing its fruit. Notwithstanding the rather unfavourable weather since the season opened, trout fishers have had fair sport latterly. On Saturday a local gentleman, Mr. Gavan, killed 21lb. of brown trout on the fly, the largest being 3½lb.; and other local anglers since have had good bags, clearly proving that improvement on sport on what was formerly one of the worst poached waters in Ireland. March, April, and May are the best fly fishing months on this lake, and Joyce's Mount Gable Hotel, Clonbur, the best station for fishing it. The Mask trout

run up to 7lb. and 9lb., but these are generally killed by trolling during the summer and autumn months.—J. A. B.

Lough Neagh Pullen Fisheries.—In the past week Messrs. Alan Hornsby and Cecil Roche, H.M. Inspectors of Irish Fisheries, held inquiries at Antrim, Tootbridge, and Stewartstown, re an application to have a limit set on the number of pieces in the trammel nets used by the Lough Neagh pullen fishers. From the evidence adduced, it seems that the nets—for which £1 licence is paid—consist of from seventy to a hundred pieces, and sometimes extend over 5000 yards, or almost three miles. A net of thirty pieces of 1500 yards was suggested, and a proposition was also made by the conservators that a licence of 5s. should be placed on each section. The inquiry terminated at Stewartstown.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport has been good, considering the early stage of the season, on all the above lakes. The weather has been favourable and the waters in nice order; and the fish took the flies well throughout each day—the best killing flies being small Claretas. The mountain lakes in the district contain brown trout only, natural obstructions preventing the passage of sea trout up beyond the lower levels of the mountain little plateaus.—T. J. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—The river is in good order, but frost and cold east wind has prevented fish from taking the fly. Captain Palmer on 25th ult., lost a good fish after twenty minutes' play; Mr. Benson on 28th lost a fish almost ready for the net. The loughs are coming in to order.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—In consequence of the long continued stormy weather along the south coast of Ireland comparatively few spring salmon have up to the present ascended the Shannon from the Atlantic. The ever welcome beautiful fish are, however, now beginning to show in greater numbers, thanks to the mild weather which has prevailed inland for the last week or ten days. In the Killaloe section of the river Sir Daniel Gooch, Bart., who has rented Mr. Robert Twisse's Parten water and residence attached for a term, has within the last few days killed three very handsome spring salmon, weighing respectively 33lb., 16lb., and 14lb. Mr. R. W. Rickards, The Priory, Usk, Monmouthshire, who has been fishing my preserves for some days, went out on the river on Saturday at 10.30 a.m., and before 11 a.m. he had in the boat a nice springer of 17lb. I am fully confident that March and April months will turn out very satisfactory, because when fish do not run up early they invariably come later on; such, at least, has been my experience for very many years on the Shannon. We shall have amongst us in a few days (here at Killaloe) a good many English gentlemen anglers, who have spent many seasons on the beautiful salmon, grise, and trout reaches, both above and below the bridge.—S. J. HURLEY.

Ulster Rivers.—A large batch of rivers opened for angling on Wednesday, the 1st inst., in Tyrone, Antrim, Derry, and other parts of Ulster, in beautiful weather. These included the Bann, Upper Bann, Maine, Blackwater, Moyola, Erne, Ballinderry, &c. Most of these are in fair order after the spell of dry weather of the past week. The nightly frosts, however, are against trouting.—J. A. B.

SEA FISHING.

The following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, March 10. Neap tides. Lowest on Tuesday.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.
	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.	a.m.

Deal (The Pier).—A few anglers have patronised the pier daily during the past week, but their catches have proved very meagre. The codling seem to have moved

farther south, and a few dabs and plaice have constituted the only returns. Sunday's visitors were Messrs. Gareau, Upton, Smith, and Linton, but the day proved quite devoid of sport, the only catch being a small dab taken by a local angler. Mr. Bushnell and Mr. Chittenden each fished for several hours on Monday afternoon, the former getting five small dabs and plaice. Tuesday's fishermen were Messrs. Meacock, Filmer, Cooper, and Bushnell, but the day's catch only totalled eight small flat fish. The same anglers put in an appearance on Wednesday afternoon, when sport again ruled very slow indeed, only six small dabs being taken.—J. RICHARDSON (B.S.A.S.).

Deal.—Although the weather has been very fine lately, nothing worth mentioning in the way of fishing has been done. It looks as if the fish have left for deeper water, and any gentleman wishing to try his luck close to the Goodwin Sands, I advise him to bring some fresh herring for bait, as we have none here. Tides suit the latter part of this week and early part of next, but, of course, fine weather is required for this kind of fishing.—EDWD. HANGER (Agent, B.S.A.S.).

Plymouth.—The weather at the time of writing is very springlike, and makes one anxious to see their boats afloat. Pollack and bass are coming closer inshore again. There is not so much fresh water coming down the rivers, and the sea is clearer. Some fine bass have been taken at the Great Western Docks. They seem to take better at dusk, or after the lamps are lit. Mullet are still being caught near the dock gates and inner basin, but they are very spasmodic in their feeding. Mackerel are making their appearance to the westward. This is early, and it is to be hoped that we have a much better season with them than we had last year, which I believe was the worst on record.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—March 1.—The weather here has been superb; fishing good. Flounders are just now at their best—full of roe—but they should be gutted and cleaned as soon as caught. The best bait is lug worm. The barometer is unusually high, to-day's reading being 30.7 in., steady; wind S.W., very light; sea smooth; weather clear. May I once more ask brother anglers who have had good sport to drop me a postcard to Bramford, Westcliff, so that their successes may be duly recorded. Week-end prospects very favourable.—CHARLES HUSSEY (B.S.A.S.).

Angling Fixtures.

March 5.

Battersea Friendly: Consolation match.
Campbell United: Match at Bourne End.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 15s. 7½d., proceeds of the Cambridge Heath Brothers' Bohemian concert; £1 1s., J. Trowers, Robinson Crusoe, Earl-street, W., as a life member; and £23 16s., proceeds of the Windsor competition. At the last meeting £17 were voted for three applications. The next committee meeting will take place on Friday, March 10, at 8.30.—R. GHURNEY.

Anglers' Association (WESTERN DISTRICT) Visiting List.—The next visit will take place on Thursday, March 9, to the Royal George Angling Society, held at the Queen's Arms, Bateman-street, Soho. Messrs. Gibbons and Steptoe promise some good talent.—J. HARRIS.

Acton Piscatorial Society, George and Dragon, Acton.—Fifth punt competition of the above took place at Twickenham on Feb. 26, twelve competitors taking part in same; the weather, also the fish, were not so kind as they might have been, but each member tried his best to gain the prizes given by donors. Upon weighing-in at clubhouse the following were returned winners: Special prize, by Mr. Carrington Smith, Mr. G. Sizmar, 1st; prize value 21s., by F. E. Blake, Mr. Vollmer, 2nd; prize rod, winch, line, by Mr. C. Brown, Mr. C. Palmer, 3rd; prize by Mr. Chick, value 10s. 6d., won by Howell, 4th; prize by Mr. T. Parlett, cruet, won by Mr. N. Cbick, 5th; prize by Mr. J. Spong, tackle case complete, won by T. P. South, 6th. Punts by Mr. J. Spong, Twickenham.—W. HOWELL.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Feb. 26 several members were out for prizes, Mr. King taking Mr. Allright's prize for gross weight; Mr. C. Osborn taking Mr. Coventry's prize, also winning first sweepstakes; and Mr. Andrews, second sweepstakes; Mr. Smith had two nice chub; Mr. Thompson, two good bream; and Mr. Pearce, several nice dace. On March 5, the clock, by Mr. Sparrow, for gross weight of roach, also 5s., and 5s. gross weight of perch from Coventry's, and two dace prizes of cash. All members of the association are eligible to compete for the cash prizes, but must show their card before signing the book at Coventry's.—C. J. KING.

Allason United Brothers' Angling Society. Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The members met on March 1st, and the previous minutes were confirmed. Messrs. Shepherd, Abbott, and Ben Abrahams had roach, chub, &c. Ben had one roach, 14½oz. Several other members' reports of fish were heard.—BEN ABRAHAM.

Alma Angling Society, Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On Feb. 26 the members fished a match at Windsor for six prizes. The following were the winners: Mr. Drew, perch and dace, first; Mr. Hall, perch and dace, second; Mr. Chambers, dace, third; Mr. Butlin, perch, fourth. Mr. Hall won the special prize for the heaviest fish with a perch 10½oz. There is one prize left to compete for on March 5; roving. I hope to see a good muster.—J. CHAMBERS.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—Our next match will take place at Cookham on March 12, from Cookham Church to Bourne End Bridge; towpath only; all to go by first train on the morning. On Feb. 26 we fished our match at Egham, when the prizes were won by the following: Mr. G. Taylor, first, with perch; Mr. G. Rich, second, with perch; and Mr. G. Pope, third, with dace.—J. R.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The outing of the above for a series of prizes was a great success, some fine shows of fish being the result, the following members having the best takes: Lambarth, roach and dace; Payne, roach; Hutchings, jack; Millin, roach and dace; Nunn, sen., roach. Several other members also had shows of fish. Some good prizes for the next two Sundays; members go where they like.—G. MERRY.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—Our roving match at Reading on Feb. 26 proved very successful, the prizes being taken by the following members: Messrs. A. Ansty, first; F. Ireland, second; A. Jenkins, third; W. Thomas, fourth; W. Hersant, fifth. Also weighed-in, Messrs. E. Guy and F. Apin. The consolation match for non-prize winners this season is fixed for March 5; open, roving; jack barred. Can go overnight.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since last report several of our members have weighed-in fish. Mr. C. Harris, perch; T. Tringham, perch and bream, Mr. S. Death being first in consolation match. Remaining prizes to be fished for on March 5. Members to go where they like, from bank only. We had much pleasure in nominating Mr. F. Simpson a working member, and have more to follow.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—On Feb. 26 Mr. J. Hobbs weighed in 13lb. of roach, and Mr. J. Smith 13lb. of roach. On March 1, Host G. H. Shepherd weighed in 33lb. of perch, and Mr. J. Martin 12lb. of jack, from the Thames. The competition for the remaining six prizes will be fished for on March 12, place and conditions to be decided at the

meeting on the 8th. There is also a half guinea prize for the largest roach caught on Sunday from any waters (open), from this date until the last Sunday in March.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Several members out on Feb. 19. Messrs. Whiley, Farmer, Stump, and Wheelhouse, grand show of roach and dace; J. Foster, roach, dace, and perch; G. Howard, roach and dace. On Feb. 26, Mr. Wheelhouse, dace, roach, and bream. We have decided to fish our March series of prizes (roving) anywhere. Mr. Cope, our host, has kindly offered us another guinea for our last outing, when I hope to see all members weigh-in from anywhere.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On Feb. 26 Mr. J. Taylor weighed-in perch, bream, and roach; Messrs. F. W. Stocker, W. Bray, F. S. Parett, roach; C. Davis, perch. On March 1 Mr. W. Taylor was elected a working member.—T. PATERNOSTER.

Bomere Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—On Feb. 26 several members were out with the following results: Messrs. P. Harley, 5lb. 10oz. roach and dace; H. Cowan, 3lb. 14oz. roach and dace from Pangbourne; Messrs. H. Dagworthy, H. Hamilton, sen., and H. Hamilton, jun., had a splendid show of roach and dace from Petersham. Our A.B.S. concert takes place next Tuesday, March 7, at 8 p.m. The chair will be taken by Mr. J. W. Harris, faced by Mr. Ben Abrahams. Pianist, Mr. G. Charlton, of the Elgin Angling Society.—H. DAGWORTHY.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—On Feb. 26 Mr. Billings had a nice take of chub; also Mr. A. Jones, chub; Mr. Jennings some good roach. On Wednesday, March 22, at 9 o'clock p.m., Messrs. Ward and Jones will give, with the assistance of the lantern, to the members of the society and their friends, an original production of "Facts and Fancies." The vocal and instrumental music will be under the direction of Mr. A. Jones.—J. H.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—Our sea outing on Feb. 19 turned out a complete failure, only seven or eight fish being taken. On the same day H. C. Canton, roach, two large 11b 2oz. each; A. Field, roach, largest 14lb.; H. Bodien, 13lb. 11oz. of roach, largest 11b. 9½oz. On Feb. 22, H. Bodien, roach, 3lb. The match on Feb. 26, at Cookham for five prizes, four being won by the following: H. C. Canton, first, 8lb. roach; C. Smith, second; J. Dean, third; W. Veecham, fourth.—HY. TAME.

Cambridge Friendly Angling Society, Fountains Abbey, Praed-street, W.—A peg-down match at Henley on March 12, usual conditions. Members wishing to compete please attend next Wednesday concerning prizes. Mr. Hutchins won the last prize remaining. Mr. Fitzgibbons, roach; Mr. Scutt had roach and chub on Feb. 26.—W. SUTTON.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We had a good show of fish on Feb. 26. Messrs. White, some good jack and roach; Cook, perch and roach; Fuller, jack and roach; Taylor, jack; Golding, jack. We have a concert in aid of the A.B.S. on March 13; admission by programme.—E. BOXALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On Feb. 25 Mr. A. Bowater weighed-in a nice show of roach, 17lb. 9oz.; and Mr. Geo. Cook, 3lb. 14oz. roach. Result of match at Windsor on Feb. 26: First, C. Ball; second, J. Thorne; 3rd, H. Moore; 4th, T. Ree. A consolation match will take place on March 5, at Woking, for six prizes; boundary from iron fence to wooden fence; all to cease fishing by 6.30; train from Clapham Junction 8.44; return from Woking by 7.56.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—On March 5 we fish a match at Weybridge, all fish to weigh; train, Clapham Junction, 8.40.—T. PASMORE.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Feb. 12 we were saved a blank by Mr. E. Hunt with small jack. Wednesday, March 1, committee arranged prizes for outing on the 12th. Members will regret to hear that Mr. W. Browning, our esteemed chairman, has been dangerously ill with an attack of pleurisy; we wish him a speedy recovery to health.—T. FAULKNER.

Central Association Visiting List.—The return visit on this list was paid to the Peckham Brothers A.S., at the Windsor Castle, Cator-street, Peckham, on Tuesday evening, when a very large company assembled, and thoroughly enjoyed the excellent programme arranged by this society. Mr. G. H. Shepherd occupied the chair in his usual genial manner, and was accorded quite an ovation on the toast of "Health of the Chairman" being submitted, with musical honours. Mr. T. Gibbs ably occupied the vice-chair. On the roll-call, representatives from twenty-four societies were found to be present. Next visit goes to the Phoenix A.S., Tavistock Arms, Stebbington-street, N.W. Date in next issue.

Clerkenwell and District United Visiting List.—A visit on the above was paid to the Queen's Piscatorials on Tuesday evening, Mr. Andrews, of the Camden, in the chair, faced by Mr. Moore, of the Brompton. The following thirteen societies answered the roll-call, viz.: Lincoln, Eustonian, Bloomsbury Brothers, Alma, Camden, Phoenix, Queen's Piscatorials, Prince of Wales, Didden, Harcourt, Brompton, Royal George, and Golden Barbel. The next return visit will be to the Prince of Wales; date later.—F. CASTELL.

Cobden Angling Society, Kensal-road, W.—On the 26th the following members were declared the winners of the nineteen prizes fished for at Henley: Messrs. E.

Baxter, T. Collins, J. Dunn, W. and C. Walker, J. Reddel, G. Perham, A. Duncan, A. E. Newell, J. Brown, T. Twyman, C. Scrafield, W. Buck, T. Marsh, F. Hannabus, J. Barnfather, A. Howland, E. Baker, E. Morris. Also weighed-in, A. E. Fisher, who did not take a prize. Twenty-six members competed and twenty members weighed-in. Will members attend early next Tuesday, as I want to get away to the Bomore A.B. concert?—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—The result of our match at Woking was as follows: Mr. Arron, with chub, first; Mr. Ash, with perch, second; Mr. W. Beames, roach and dace, third. Members wishing tickets for the Fisheries Exhibition at the Royal Aquarium should apply for them as soon as possible.—W. H. STAFFORD.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On Feb. 26 Mr. Curtis had a splendid show of roach.—W. MASSEY.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On Feb. 26 a few of the members were out. The only gentlemen who weighed-in were Messrs. T. Swain, G. Davies, and H. Poor, who had a very handsome show of roach, perch, and jack. Members please note that the financial year is drawing to a close, and I wish to present a clear sheet to the auditors. Some prizes in hand to be competed for.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—On Feb. 26 members went to Bures, Windsor, Uxbridge, and Twickenham. The following weighed-in: W. Elton, roach; A. Edwards, chub; T. Coltman, dace. Wednesday, D. Ansell, jack; R. Bennet, roach and perch from Medway. Quarter night, good muster.—JOHNNY EDWARDS.

Drayton Park Piscatorialists, Stanley Arms, Landseer-road, Holloway-road, N.—On the 5th outing. All particulars of—GREG.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Some of our members were out, when Mr. Beamy weighed-in 18lb. 6oz. of roach, from Henley; Mr. Barns, roach; Mr. Tucker, roach. Our match will take place on March 12, not the 5th; roving; usual conditions.—W. JENKINS.

Eagle Angling Society, Red Lion, Tottenham.—On Feb. 23 Mr. Dumbleton weighed-in jack, best fish 4½lb. On Feb. 24 Mr. G. Baynton also weighed-in jack up to 4½lb. A committee meeting will be held on Wednesday next, 8th inst.; special business.—W. S. PRICE.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—On Feb. 26 Mr. Marter took the cup with perch and chub; the other two prizes were not taken. We have arranged another outing for March 5; first prize, a silver cup, presented by Mr. Geo. Adams; second and third prizes, the balance left over from last outing.

Members are requested to attend the supper on Tuesday next, 7th inst.—A. T.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting-hill, W.—We fished our match at Henley on Feb. 26, and nine out of the ten prizes were taken in the following order: Messrs. Ryell, Bayliss, Wilson, Drury, Bridge, King, Carroll, Cox, and Billett. I beg to remind all members that next Tuesday, March 7, will be the end of the quarter. I hope all will try to attend. We shall have a short meeting, and then go to the Bomore concert.—G. KING.

Forest Gate Piscatorialists, Forest Gate Hotel, Godwin-road, Forest Gate.—On Feb. 26 Mr. Willett weighed-in jack, and Mr. Durell, chub.—H. F. C.

Globe Angling Society, Earl Russell, Isledon-road, N.—We have had some good shows of fish lately, Mr. Stebbings and C. Ellis weighing-in roach; Messrs. R. Sharpless, A. Hoggett, and R. Sharpless, jun., some fine perch; and H. Evans, dace and roach. Monday, March 6, being quarterly night, all members are requested to attend and clear up arrears in contributions.—W. LAWRENCE.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Mr. Thompson brought in roach and perch, and Mr. Maybury roach, on Feb. 26. Our members will fish for fourteen prizes on the 5th inst. at St. Margaret's; all start by the 9.8 a.m. train; leave off fishing at six o'clock; pegged-down; jack and perch fishers to have the roach.—R. MURPHY.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—The first competition for the handsome silver cup given by Mr. Osborne will take place at Broxbourne and Rye House on March 5.—J. A. FITCH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a poor show of fish on Feb. 26, only a few roach and perch being weighed-in. There are still several prizes to be taken at Shiplake, so I hope the members will go for them on March 5.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—On Feb. 26 Mr. Russell won a prize—the only fish shown in the club. Members to go where they like for remaining prize. To sign on at clubhouse at six o'clock or after. All members not signing on Saturday night will not be eligible.—C. SMITH.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—Our meeting of March 1 was well attended, Mr. F. Clay in the chair. Several members have recently had good sport with the roach and perch. Messrs. Caines, Stockton, and Horner, fishing the Colne at Drayton, had a fine show of roach, dace, and perch; Mr. F. Hawes, fishing with Vaughan at Shiplake, had several good perch and jack. Mr. A. Stevens, on Friday last, had good sport with the roach. Amongst his take were six fish over 1lb. Our outing on March 5 will

take place at Teddington. The arrangements are in the hands of McBride.—A. CLAYTON.

Hoxton Brothers Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Feb. 26 members competed for special prizes at Ware. Only four were won, by Messrs. W. Bishop, jack and perch; H. Bailey, jack; T. McGrath, roach; S. Gillett, perch. A grand Bohemian concert, in aid of the A.B.S., will take place at the above house on Tuesday evening next (March 7). Chairman, Mr. G. H. Shepherd (Host Bermondsey Brothers), faced by Mr. G. Armstrong in the vice. Mrs. L. C. Pendry will preside at the piano in place of Mr. Bert Ingram, as announced on tickets. A grand array of talent has promised to attend. Ladies cordially invited.—JOHNNY.

Isaac Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—The members competed for three special prizes on Feb. 26. Only two were taken; the remaining one, with two added, will be competed for again on March 5, at Pangbourne. The two special prizes offered for competition on Wednesday last were not taken. They will be fished for again on Wednesday next, March 8, on any part of the Lea or Thames; private waters barred.—H. B.

Jolly Butchers Angling Society, George the Fourth, Walnut Tree-walk, Lambeth, S.E.—We fish our next match at Chertsey on March 5, members to leave by the first train from Waterloo; to cease fishing at 6 p.m. Our supper on Feb. 22 proved a success. I beg to tender Mr. Flowers, of the Wellington Angling Society, our thanks for his prize.—G. EDWARDS.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had two shows of fish weighed-in by Messrs. Bence and Gilder from the Thames. I hope members will attend next week, and clear themselves on the books.—G. BENCE.

Kingston Piscatorial Society—On March 5 and 6 a roach competition will be held on the Thames; one rod only; two largest individual fish only to take the prizes. The chub competition on Feb. 26 and 27 resulted as follows: Mr. M. Gunn, first; Mr. F. H. Amphlett, second. Members intending to be present at the annual dinner on March 20 are requested to send their names to the hon. secretary as early as possible.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—On Feb. 26 we fished our outing at Sunbury, the prizes being won by the following: Messrs. Cook, 1st, 3lb. 1oz. of perch; R. Watling, 2nd; T. More, 3rd; W. Bowdrey, 4th; Holmes, 5th; Clark, 6th; Palmer, 7th. Messrs. Johnson, Gilbert, Rackham, and Bowley also weighed-in roach and gudgeon. There are some consolation prizes to be fished off on the last Sunday; particulars to be obtained at the club.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—Our twentieth annual dinner was held at

NOW READY.

THE

NINETEENTH CENTURY

A MONTHLY REVIEW. EDITED BY JAMES KNOWLES.

(No. 265.)

MARCH, 1899. Price 2s. 6d.

The Largest Selection of Furniture

For Libraries, Offices, Board and Committee Rooms, Banks, and Consulting Rooms in the World.

TOTTENHAM COURT ROAD LONDON & PARIS

the Bee Hotel on the 23rd ult. Capt. McNab presided, and he was assisted by the president, Mr. Veale. The function passed off successfully, though the attendance of members was somewhat meagre. By invitation the representatives of the East End, the West Derby, and the Central Associations were present. The usual toasts were given, honoured, and replied to. Messrs. Harber and Heard rendered some good songs, and Mr. Oxford was first-class as an able accompanist. After an enjoyable evening the proceedings were duly brought to a finish at 11—a reasonable hour. A severe frost has prevailed for the last few days, which has brought the pike on, and Mr. White has had some nice takes of dace and roach, with here and there a lusty trout.—RD. WOOLFALL.

Lychnobite Angling Society, Ben Jonson, Shoe-lane, E.C.—Next competition takes place on March 11th and 12th, at Waltham. "Champion" concert takes place on March 25, at Champion Hotel, Aldersgate-street. Tickets now ready. Mr. W. Eady, on Feb. 24, weighed-in some nice fish, among them being a 1lb. roach, and four others, weighing together 3lb.—SID RANSOM.

North-East Brothers' Angling Society, Star and Garter, Green-street.—On Feb. 26 Mr. Thorn took seventh prize. Out of match: E. Lamb, Richards, sen., H. Hart, H. Collings, and J. Eaton. Members may go where they choose for the prizes left over on March 5, and start on the day and fish from bank only. 2s. 6d. was voted to the Thames river and lock keepers' dinner fund. Mr. J. Eaton also gave 2s. 6d., making 5s. together. Mr. H. Collings gave 5s. for largest perch during the last two Sundays. Special meeting March 8, to take into consideration a special prize outing for March 12.—A. LEWIS.

North Lambeth Angling Society, Newcastle Arms, Hercules-road, Lambeth, S.E.—On last match of the season will be fished at Bures on March 12. Members may leave on Saturday if they please. Five prizes to be fished for.—E. ROWLES.

North London Angling Society, Tap House, Holloway-road.—On Feb. 26 the following weighed-in: Messrs. Ayton, Elston, S. Harris, perch; and Hayes roach. Mr. T. Harris, jack fishing in the Lea at Broxbourne, had a run with a jack, as he thought, but, after an excitable five minutes, brought his fish to bank, which proved to be a trout of quite 6lb. The hook was carefully extracted and the fish returned to the water. We fish for lapses prizes in the tidal at Teddington on March 5.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—We were saved from a blank on Feb. 26 by R. Brockett with one roach. Our second Bohemian concert in aid of the A.B.F. took place at the above on Feb. 28. It was fairly attended, and the box was well patronised. We were honoured by the presence of Mr. G. H. Wood and members of the Hoxton Brothers. Also a good muster of the Good Intent and the Cambridge Heath Brothers, as usual; and members from the Hearts of Oak, &c., for which I beg to return sincere thanks. Our next concert will take place in the latter part of this month.—E. BROCKETT.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several members were out on Feb. 26, the following having fish: Messrs. Thompson, Carter, Reitz, Coldwell, Tracy, Vyell. Hopton, jun., had a nice show of roach and perch (13lb.).

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham, S.E.—The return visit of the Central and S.L.U. List was a great success. In answer to the roll twenty-four clubs responded for the Central and thirteen for the South London List. Mr. G. H. Shepherd was in the chair, supported by several well-known anglers. Our house was packed from top to bottom. The Peckham Brothers return their sincere thanks to the visiting clubs. The vocal and instrumental talent was perfect.—G. ETHERINGTON.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On Feb. 26 we had a big show of roach, chub, and dace by Messrs. Bouffier, Austin, C. E. Sherlock, and Carter. The next visit on the Central Association is to us, on Monday, March 20.—R. C.

Queen's Piscatorial, Queen's Arms, 1A Chapel-street, Edgware-road, N.W.—On Feb. 26 the following weighed-in: Messrs. C. Strayton, J. Reeve, C. Brett, W. Shepherd, C. Shepherd, and J. Winsby. Our visit on the Clerkenwell List on Tuesday last was an absolute failure, only for two or three clubs showing up the room would have been quite empty.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—The following returned with fish on Feb. 26: Messrs. Webber, Pope, Holder, Davis, Burrell, and W. Allport. Mr. Webber showed a grand tray of perch. We fish a competition at Bourne End on March 5; usual conditions. Hope to see all members on that occasion. On March 9 we take a visit on the Western Visiting List. Will all clubs take this as an invitation?—J. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow.—On Feb. 26 the following weighed-in: Messrs. Dornford, one jack, 9lb. 12oz.; E. Perry, 3lb. 3oz. roach, largest 1lb. 4oz.; Tishaw, perch; J. Payne, perch. All members to book from Coborn-road Station for match on March 5.—F. PIGNATELLI.

St. John's Angling Society, The Empress, St. John-street-road, Clerkenwell.—Our outing to Shiplake on Feb. 26 was not a success, as only two prizes were taken. All the remaining prizes are to be fished for on March 5th and 12th; any waters. Members are reminded that Wednesday, March 8, is quarterly night, and end of financial season.—F. THORLING.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—At our outing on Feb. 26 Mr. W. Wright was the only successful member, he taking first prize with roach and dace. Messrs.

Richards weighed-in dace, and W. Bignell, jack. We fish remaining prizes at Datchet under same conditions.—W. ANSTY.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—A few of our members were out on Feb. 19, when the following were successful: Messrs. W. Roach, 8lb. 12oz., roach; Campbell, 5lb. 6oz., roach; E. Burden, 1lb. 4oz., roach; B. Smith, 3lb. 15oz., roach. On Feb. 26 our competition was fished, when the following members were successful: Messrs. J. Barnes, 1st, 2lb. 6oz., roach; S. King, 2nd, 2lb. 2oz., roach; W. Roach, 3rd, 2lb. 2oz., roach; Campbell, 4th, 1lb. 5oz., roach; Wells, 5th, 7oz., roach; B. Smith, 6th, 7oz., roach; Arrigoni, 7th, 4oz., roach.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On Feb. 26 our outing at Hertford was not very successful. Mr. Smith took first prize with dace, the largest 6oz.; Mr. Woolton caught a nice trout in good condition, but, of course, it was returned to the water. Tuesday next is quarterly night.—W. BRADSHAW.

South London United Anglers' Visiting List.—The return visit on the above list took place on Tuesday last at the Peckham Brothers' A.S., Windsor Castle, Cator-street, Peckham, when thirteen clubs were represented. The next visit goes to the St. Alban's A.S., Rising Sun, Princes-road, Kennington Cross; date later.—ALF. PAINTER.

Stockwell Angling Society, Old Queen's Head, Stockwell, S.W.—Since my last report several members have been out, all having fish, but as we have no gross weight prize they were mostly returned. The concert and sports committee have the programme fully arranged for the grand evening concert, to take place on March 20, at Gresham Hall, Brixton. We fish a sweepstakes match on the Thames on the 12th inst. Time of train and conditions will be fixed next meeting night.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—The following weighed-in on Feb. 26: Mr. J. Friend, perch and jack; F. Humphrey, roach; and F. Sandilands, bream. Will secretaries please note change of address of the secretary of the above club: No. 12, Maldon-terrace, Millias-road, Leyton, Essex.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—We have an outing to Bourne End on March 5. Members to go by the 8.40 from Westbourne Park, and return by the 7.42; all fish to weigh. There are six club prizes, and several private prizes.—C. E. LOCK.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—Members report having had very bad sport. Messrs. Ogden Smith and G. Barrow, however, had taken a few good perch. Mr. W. Beard was elected a vice-president, and one new member elected. Half-a-crown was voted to the T.A.P.S. Keepers' Dinner Fund.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—On Feb. 26 Mr. G. Marsh, pike and chub; H. Richards, pike; H. Tyler, pike; J. Oakley, J. Payne, roach; H. Fordham, roach; S. Drage, chub; W. Harvey, roach. We fish a roving match on March 12 for several prizes. 10s. 6d. has been voted to the T.A.P.S.—H. TYLER.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On Feb. 26 Messrs. W. Toothill, roach and perch; J. Toothill, roach and perch; C. Bathke, perch. Last prize outing on March 5, at Taplow.—W. H. B.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On Feb. 26 Mr. Duffield weighed-in perch, 2lb. 2oz. Mr. Elmore has promised to bring his prize up to the club-room on Wednesday next. He will also bring with him Mr. Wade's prize—a jack rod—so I hope members will do their best to be present. Please do not forget our last match of the season on March 12; open; roving; two rods; bank or punt. We have one gross weight prize, given by Mr. Coombs.—W. H. BATCH.

Walthamstow Brothers' Angling Society, Essex Arms, Forest-road, Walthamstow.—Mr. J. Skelsey was fortunate enough to capture a very fine jack, which scaled 15lb. 2oz. Messrs. Howel, Johnson, Knight, Riley, and Thompson also weighed-in.—H. WIGG.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—Messrs. W. Wray, J. H. Risdon, and A. Piolaine were first, second, and third respectively in our last competition. A competition will be held on March 5, at Yalding, for our pictures; no member clear of the books barred. A competition for three prizes (bank only) is on for Wednesday next. Mr. W. Sparrow weighed-in a nice bag of fish from the Thames, including some fine chub.—W. WRAY.

Wellington Angling Society, Prince George, Hillingdon-street, S.E.—Our supper at the Jolly Butchers' A.S. club was a great success; all our members who went had a most enjoyable time. Since my last report Mr. Papworth has weighed-in a fine show of roach; gross, 21lb.; heaviest fish, 1lb. 10oz. We fish for our con-

solation prizes on March 5, where and how you like.—F. WESTOBY.

West Green Angling Society, Black Boy Hotel, West Green, Tottenham.—Mr. James Tayler ("Red Palmer"), of the Junior Fly Fishers' and Gresham A.S., will give us a reading on "Rain and Rivers" on March 8, at 8.30 sharp. We shall be pleased to see any visitors. On Feb. 26 Mr. P. W. Brooks had a nice chub; Mr. Sparling, a pike and perch.—A. G. HILL.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—Since my last report the following members weighed-in fish: Messrs. John Newton, James Newton, C. Miller, T. Miller, F. Horner, all weighed-in roach; Mr. R. Lowther, jack. We have a peg-down match (the last for the season) on the Forty-guinea water on the Lea, on March 12, for six prizes; one rod only to be used; all to go down with the first train on the morning, which leaves Stratford at 7.44 a.m.—R. LOWTHER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—Our match at Hampton Court fell through, no member having enough fish to take a price; but Mr. Eccarius (not competing) weighed-in roach and perch.—S. J. H.

White Hart Angling Society, The Volunteer, Chesnut-road, Tottenham.—On Feb. 26 the following had fish: Messrs. W. Butler, roach and dace; W. Bragg, jack; D. Knight, jack. On March 5 we fish for Mr. Hoy's prize, two oil paintings; all fish; open. I should like to see all members attend next meeting night, on very special business.—W. E. BEAUMONT.

Wimbledon Piscatorials, 28, Alexandra-road.—Only one prize was won on the 26th ult., Mr. C. Pain being the successful competitor. Mr. Enever reported the catch of several perch in the Thames, including a fish of 1lb. 4oz.; and Mr. W. Bovie, roach. A roving match is arranged for the 5th inst. on the Thames; weigh-in at headquarters by 9.30 p.m. Three prizes are offered.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—Our match at Amberley, on Feb. 26, I am sorry to say, was a failure, no prizes being taken. We purpose fishing at Windsor, on March 5, for the same three prizes.—N. LINDEN.

YORKSHIRE ANGLERS' ASSOCIATION.

THE members of this association held their annual meeting recently at Powlony's Rooms, Leeds, Mr. J. W. Reffitt, the retiring president, in the chair. The annual report and statement of accounts, which were read by the hon. secretary (Mr. F. W. Branson), showed that during the year an important length of the Eden, at Edenhall, had been acquired by the association, and that leases had been arranged for this and also for the Brongham, Carleton, and Winderwath fishings. During the year the total expenditure had amounted to £431 8s. 1d., including £48 15s. for yearling trout from Scotland, Surrey, and the Wharfe. On Dec. 31 the membership was at its full limit of one hundred, and the list of candidates for the next vacancy contained over twenty names. At the dinner, at which covers were laid for fifty, the president, in responding to the toast of the "Yorkshire Anglers' Association," said he did not hesitate to say the association was the best in Great Britain, taking the salmon and trout fishing together. He viewed with pleasure the adoption by the Eden Fishery Board of a by-law shortening the trout season to Oct. 1, the date which had been adopted by the Yorkshire Anglers' Association and the Yorkshire Fishery Board for some years past. In speaking of the qualifications necessary in the angler, the president said that he must know not only the habits, but, what was equally important, the habitat of the trout, and he must persevere and master all the technical details of the art, before he could hope to return in the evening with a full creel. Referring to the different styles of fly fishing, the chairman alluded to the dry fly, which was very suitable in its home—the deep slow-running southern streams—but, in his opinion, out of its place in our rushing northern rivers, except in certain situations and conditions of the water. In conclusion, the chairman spoke of the growing popularity of the sport, and contrasted the numbers thirty years ago with those known to practise the art at present—10,500 trout licences having been issued last year in that portion of Yorkshire controlled by the Yorkshire Fishery Board. His reason for this ever-growing popularity was that the sport seemed to retain its attractiveness, and the loyalty of its votaries long after middle age had caused other sports to be relinquished. The other toasts were given and responded to by Messrs. J. H. Davis, H. E. Dewhurst, J. A. Godwin, J. D. Johnstone, and E. H. Tetley. An excellent programme of songs, &c., was contributed by Messrs. G. W. Atkinson, C. Bedford, H. Denison, J. A. Godwin, B. Hess, J. Hess, B. Johnson, and W. Nicholson.—Yorkshire Post.

HASTINGS.—Smooth; N.W.

Mr. W. H. BURROWS, one of the hon. secs. of the Cardiff Piscatorial Society, delivered a lecture before the members on "Sea Fishing," on Feb. 23. The chair was taken by Mr. R. Harris. A most enjoyable evening was spent.

SOW THE SEEDS of good health, prune and strengthen sickly and weak branches of the tree of life, with the aid of Holloway's world renowned pills and ointment. The pills improve the appetite, strengthen the digestion, and regulate the liver. Under treatment with the ointment, bad legs become sound, scrofulic skins cast off their scales, and scrofulous sores cease to annoy. When rubbed upon the abdomen, it checks all tendency to irritation in the bowels, and averts diarrhoea, and other disorders of the intestines frequently prevailing through the summer and fruit seasons. Heat bumps, blotches, pimples, inflammation of the skin, and enlarged glands, can be effectively overcome by using Holloway's remedies, according to instructions given to each purchaser.

Doings by the Way.

THE monthly delegate meeting of the Central Association will be held on Monday evening, March 6, at the Bedford Head, Maiden-lane, Covent Garden.

MESSRS. HARRY DAVENPORT, Frank Lincoln, and Leslie Stiles, of the "Belle of New York Co.," with Mr. Dyson Lacy, have been taking some good pike from the Lea, at Broxbourne. Mr. Davenport landed a fine fish of 10½lb., and several others from 6lb. and under were caught. Mr. Lacy also caught one of 6lb., and two others were taken, the smallest 3lb.

MR. W. L. RENWICK, of Templemore, Yorkshire, relates the following curious incident: "On Tuesday, Feb. 21, I was fishing for perch in a lake near Templemore. I landed three, and again cast my line. Noticing that the float did not 'sit' properly in the water, I drew it out, and discovered that both hooks (with worms on) had disappeared. I searched the ground and bushes around me, but failed to find the books. The following day I again visited the lake, and commenced fishing at the same spot (a favourite one). Imagine my astonishment to see a blackbird suspended from a tree near me, and almost touching the water. With a friend's assistance I reached the bird, and removed bird, books, and branch. It would appear that one of the hooks had become entangled in the tree, leaving the other hanging or resting on a branch. The bird saw the worm, swallowed it, and with it the book. The other hook, being fastened, the bird was 'hooked,' and so met its death in a very curious manner. The bird, hooks, and branch (as found), are still in my possession."

A CORRESPONDENT sends the following: "Anglers on the Dart are much interested in a proposal to purchase the salmon net fishery at Totnes Weir, and therefore improve the salmon rod fishing of the river. On one hand it is stated that the fishery association exists for the benefit of the river, and it was recently announced that £100 would be probably set aside by them for re-stocking the river and providing ponds for the rearing of salmon from the ova. The statement that the fishery association exists for the benefit of rod fishermen has been adversely criticised in many quarters, reference being made to the fact that the season following the great storm of a few years since, when the passes at Totnes Weir were washed away, the pool was netted as persistently as ever, with the result that salmon were scooped out by the hundred, without a chance to ascend to the higher waters. If the fishery could be purchased, and all netting stopped after the bare expenses had been paid, it is thought that the Dart would provide the best salmon rod fishing in the west of England."

It's always the way, if I tell a little tale or nursery rhyme, some readers are sure to want to go one better. Last week I wrote about "a young fellow named Tate," and my indiscretion, if I may so term it, has brought a shoal of letters. Many thanks, dear boys. I wish I had room for all your effusions, but as I have said more than several times, this is not an indiarubber paper, and therefore must content myself by giving only one. Here it is:

"A tutor who tooted the flute
Tried to tutor two tutors to toot.
Said the two to the tutor, 'Is it harder to toot or
To tutor two tutors to toot?'"

MR. R. W. VERNON writes from lovely Ilfracombe re "Monsters of the Past":

"The *Plesiosaurus*—monstrous fish—you tell us in your columns, is found amidst the marl and clay geologists call *lias*; But where, 'Dragnet,' I prithee tell, are found the monstrous fishes Of which we hear, but never see, from fishermen or *liars*?"

Where are they found? Well really! hang it! blow it!

I think that if you asked my youngest daughter, That she, though but a child, would prove to know it, And would reply "They're found, Sir, in the water."

"TALKING about patience," says "Halcyon" in the weekly supplement to the *Leeds Mercury*, "reminds me of a good tale which the late Mr. Pritt was wont to relate. He said that a Preston friend of his was commencing fishing one fine summer's morning on the Ribble, about ten o'clock, and noticed an individual intently watching one of those ingenious mechanical engines termed a dredger at work. When he was returning home in the evening, about six, he found the man still sitting in the same place, and then his curiosity was somewhat aroused, and he approached him, and gently tapped him on the shoulder. 'My friend,' he said 'I do not wish to be inquisitive, but what makes you take such a great interest in that machine?' 'Well,' quoth the man, 'I have watched here all day, and I shall stop all night, and if I stop for a week I am going to see the end of that chain and those buckets.' And that, my dear friend, is the exemplification of that cardinal virtue, patience. By the way, is there not another old adage—viz., that 'virtue brings its own reward?' Well, all I can say is, sometimes it does, and sometimes it doesn't."

Two of the finest pike taken from Milford lake, in Highclere Park, for many years have been captured this

week. One of them scaled upwards of 23lb., while the second weighed 18½lb. The latter was secured by a party of three anglers from Newbury—Messrs. Stanley Hickman, Frank Metcalf, and W. Skinner—who had a tough struggle with the fish, which, in its endeavours to escape, almost upset the boat. Both fish are in the hands of Mr. Ralph Alder, of Bartholomew-street, for preservation.

ANOTHER of those Bohemian concerts for which the Hoxton Brothers are becoming so famous will be held on Tuesday evening next, March 7, at the Spread Eagle, Kingsland-road, N. Mr. G. H. Shepherd will be the chairman, and Mr. G. Armstrong vice. Bert Ingram at the piano; commence at 8.30; and ladies invited.

MR. G. H. DOWSETT, president of the Greenwich A.S., is to preside on Wednesday evening next at a special smoking concert at their headquarters. Secretary Dryden sends me an invite, and also a copy of their rules. From what I can see of them (the rules) you must be a bit of a fisherman to take a prize in the Greenwich. "No fish under Thames measurement to be shown in the club-room, except for the purpose of bait." Another item is that "salmon not less than 6lb." shall be taken from the Thames! Bravo Greenwich! I can't quite remember whether my name is on your books, but if I cannot get to your whitebait dinners, I must have a go at the salmon—and we shall have Thames salmon soon.

THE grand smoking concert in aid of printers' charities, to be held at the Champion Hotel on March 25, will be one of the best ever held under the auspices of the Lychnobite anglers. Tickets 1s. each, should be secured as possible. Messrs. Sid Ransom and T. Pedley will be pleased to send them on application to the Ben Jonson, Shoe Lane.

MR. W. HOWES, of Barton Mills, says that jack fishing is pretty good just now. Mr. Gardner has taken ten, and Mr. Marshall five. Roach and dace are well on feed. The annual dinner and meeting of this flourishing society (the Lark) will take place on Thursday next.

"THE May Fly is up!" So runs the report from East Gloucestershire. "Pan" says: "On Feb. 25 I had a live May Fly sent me from Bibury on the Upper Coln; it was caught in the Swan Hotel Gardens, right up amidst the Cotswold Hills!"

ANGLERS will be glad to hear that their brother angler, Rudyard Kipling, is, according to a wire from New York (March 2) "gaining strength every moment. His temperature and pulse are nearer the normal. . . . The doctors are almost certain of his recovery." [Bravo!]

MR. H. BUTT, hon. sec. of the Izaak Walton Angling Society, The Old King John's Head, Mansfield-street, Kingsland-road, N.E., informs me that on Feb. 26 Mr. F. Baker (a member), at Broxbourne, succeeded in capturing a fine pike weighing 20lb. It was beautifully marked; length 27in., girth 21½in. It was landed unaided, and has been sent to Mr. Cooper, Radnor-street, St. Luke's, for preservation.

MR. T. W. GOMM, fishing the Dorsetshire Stour subscription water at Iford, on Feb. 24, 25, and 27, took the following pike: 17lb., 13lb., 13½lb., 12lb., 11lb., 11lb., 9lb., 8lb., and twenty under 8lb. Mr. Bristowe, on Feb. 28, 19lb., 9lb., 9lb., 8lb., 4lb., and two under 4lb. Pike fishing closed on Feb. 28.

THE Welsh National Festival, which is annually held at St. Paul's Cathedral on the eve of St. David's Day, was duly celebrated on Tuesday evening last, when upwards of 14,000 persons, chiefly Welsh, were present, as well as Englishmen, Scotchmen, and Irishmen. The service was in Welsh throughout, and the singing was a treat seldom enjoyed. The only thing to be regretted was that Mr. Ben Davies, the celebrated Welsh singer, was unable to be present, owing to a severe cold, which prevented him from singing two Welsh solos, as he had kindly promised to do.

Hand and Heart is responsible for the following: In one of the many picturesque little hamlets which stud the banks of the river Ayr, one of Her Majesty's Inspectors was examining a class on Scottish history, and, wishing to elicit the historical fact of James the Fifth's quarrel with his queen, Mary of Lorraine, asked the question: "Why was Mary Queen of Scots born at Linlithgow?" When up starts a bright little fellow, and shouts: "Because her mother was there." This wee laddie evidently has a logical mind. There is no arguing with such an incontrovertible answer, and the boy should evidently be hoard of again; doubtless, he will be.

"THERE is a popular idea that fish," says the *Westminster Gazette*, "being cold-blooded animals, are immune from tuberculosis. Whether fish are or are not often consumptive remains to be proved, but in the meantime, and in view of the present anti-tuberculosis war, it may (writes a correspondent) be interesting to recall two proved cases of tuberculosis—one in carp and the other in trout. As to the first: In 1897 some tuberculous matter from a consumptive patient was thrown into a pond in France, in which were some carp. The fish were observed to sicken, and some of them to die. On being microscopically examined, the fish were shown to be tuberculous. Further experiments with healthy fish from other ponds tended to show that fish could be infected in the same

way with the tubercles from the carp of the pond first affected. In this way certain French *savants* claimed to have discovered that fish were not immune from tuberculosis.

"THE discovery, however, was not a French, but an English one, and was made in 1890, as the result of some investigations into the nature of the disease from which some very attenuated and strange-looking trout in a lake in the Hebrides were suffering. The fish in question were long and lank, and had a most prominent paunch. They were used as bait for lobster creels until one of them happened to attract the attention of an angler, who discussed their condition with some medical men, and with their skilled aid first formulated and then verified a diagnosis of the disease from which the fish were suffering. The fish at first appeared to be affected merely by the presence of large ovarian cysts, but a closer examination revealed diseased livers, while microscopic inspection resulted in the discovery of the deadly tubercle, and proved that the fish were consumptive."

UNFORTUNATELY, I was not able to be present at the first ladies' night held under the auspices of the Hastings and St. Leonard's Angling Association on Feb. 24, but I see from the very tasteful programme to band that they must have had a most enjoyable time. Dr. Travers presided, and the evening commenced with a quick trip by lantern to Paris, personally conducted by Mr. A. Brooker and Mr. Jules Mastin, and illuminated by means of the oxy-hydrogen limelight. Among the artists who contributed to the pleasure of the company were: Messrs. A. A. Barker, J. B. Guy, W. G. Scott, Wilding, J. Harvey, P. T. Bridgen, and Madames Tupper, Addie Love, Gertie Ball, and Peplow. This is the first, but will not be the last, ladies' evening held by this prosperous association.

"A DISPATCH to the *New York Sun* from Delavan, Wis.," says *Forest and Stream*, dated Jan. 29, says that "while fishing through the ice, Tim Smiley hooked a 22lb. pickerel. Attached to the fish was an aluminum tag, fastened by a ring through its tail. On one side is stamped, 'The Fisheries Building'; on the other, 'From the Fisheries Exhibit at the World's Columbian Exposition, 1893. Age, five years. Weight, 14lb.' The tag has the appearance of oxidized silver, but is very hard. The edges are worn away, but the engraving is clear and distinct. Smiley intends to have the fish preserved, with the medal attached, and may present it to the Field Columbian Museum. Fishermen here think the dates and weights will be valuable in determining the age of fish of this species."

THE natives of Kottiar are in the habit of digging every year in the summer-dry banks of the Vargel river for fish, which they dig out by hundreds, just as they would potatoes. The mud lumps are broken open, and the fish, perhaps 8in. or 10in. long, will always be found alive, and often frisky, as if just removed from its supposedly native element—the water. In the dry bed of several African rivers a similar practice is often pursued. A kind of mud fish buries itself whilst the bottom is still moist, and remains there all the summer, waking up when the rains commence again.

ONE of the latest developments in the art of angling was recently revealed in the police courts. It appears this enterprising individual professed to fish with a walking stick, or rather flat lathe, instead of the usual orthodox article. He used no line, but the rod was baited with some stickphast article, and his happy fishing grounds were the bars of public houses. In one of these one day he entered, and after having a drink, ordered another, and, in paying for it, let the money slip over the counter on to the feet of the barmaid. Whilst she was stooping to pick up the coin, he continued to hand two other coin from the shelf behind the bar, and which were two sovereigns. He departed rather abruptly, which aroused suspicion, and the loss was discovered in a short time. The landlord was, about an hour afterwards, explaining the affair to some friends, when who should walk in again but this identical angler, and he was at once recognised, and, after a sharp struggle, himself got landed in the lock-up.

Last Saturday evening a festive party to the number of thirty odd sat down to an admirably-served leg of mutton supper provided by the host of the St. Ann's Tavern, Carter-lane, Ludgate-hill—the occasion being a "send-off" to two of the leading members of the Lychnobite Angling Society, both of whom have for some years past been members of the *Times*' companionship. The late hon. sec. of the Lychnobites (Mr. J. E. Griffiths) was in the chair, faced by Mr. Fred Jones. During the concert which followed, at which there were about eighty present, the guests—Messrs. Pullam and Williams, who are about to try their fortunes at the Cape, sailing per the *Norham Castle* from Southampton on the 4th inst.—were each presented with a case of pipes as a slight token of the esteem with which they were regarded by their friends. "When two such dear old bosom chums call round to say 'Good bye,' it somehow puts you in the 'glums,' and makes you blink yer eye; and when they show yer round the ship it kinder makes yer bot, and then to say, 'Good-bye, old Pip!' Well—that's what touches the spot." These two good boys have the best wishes of every angler with whom they have come in contact, and none wish them health, wealth, and prosperity more heartily than their brother member DRAGNET.

Notes from the North.

KEEN frosts over-night and brilliant sunshine during the day have reduced sport somewhat all over from what it was during the previous week on the Dee. The pools, however, are more come-at-able, and wading practicable on most of the more favoured reaches.

The Ythan and Ugie opened on Saturday along with the latest batch of salmon streams, when anglers were forward in fairly large numbers, and some really good baskets of finnock made on the tidal reaches. Most of these waters were free to the finnock and sea trout angler, but now a daily ticket is issued at charges ranging from 2s. 6d. to 5s. per day, according to the value of the water. Many of the old hands are resenting this innovation, and according, did not turn out on Saturday.

"Baggots" or unspent autumn fish are very common in the Dee this spring, and some of the heavier weights got about; Aboyns and Glentana are of this class. The fish were disturbed too much during the late autumn on the spawning redds on the lower reaches, and got separated, and hence the large percentage of baggots.

The question of the disposal of distillery sewage occupied the attention of the Banff Sheriff Court during all last week, when Messrs. Cowie and Son, distillers, Mortlach, raised an action against the Commissioners of the Burgh of Dufftown, claiming the right to empty their effluent into the village sewers, which the defenders have refused to grant. A very large number of experts, including Dr. Macadam, Edinburgh, were examined, and the sheriff took the case to Avazandum.

The Aberdeen Rock Fishers' Association held their annual dinner on Saturday, in the Northern Hotel. Kindred associations were represented from Newtonhill, Stonehaven, and other places. Mr. Cables, the secretary, was made the recipient of a handsome marble timepiece, and Mrs. Cables a gold brooch, "as an appreciation of valuable services in the promotion of the healthy sport of rock angling."

The association numbers between 200 and 300 members on its roll, and has been in existence in promoting sea angling for over a dozen years.

Duncan Murray, while fording the Shin near his mother's house, in Sutherlandshire, on Saturday, was carried away with the heavy current then running, and drowned. Young Murray, although only twenty-one years of age, was well known as an obliging and active gillie to gentlemen visiting that part of the country for sport.

Ninety fish have been got on the Kincardine O'Neil section of the Dee since the opening, twenty-five of which has fallen to the rod of Major F. Davidson and friends on the little water of Dess alone.

Tourists' tickets are now to be issued between London and Aberdeen all the year round. The question of week-end returns between the metropolis and the north is presently under consideration.

The Cruden Bay Hotel—one of the finest in the north, if not the finest—was opened on Wednesday. Anglers, golfers, tourists, and seekers of health generally, will be glad to know that the house is at last in working order.

There is not much angling in the Cruden Burn *per se*, but the bay fishing is as prolific of sport as any spot in the kingdom, and there is also excellent rock angling. The Ugie is being put in trim, and, as it is only an easy few miles drive from the New Hotel, the tourist angler, who is willing to pay reasonably, will have a chance of health and sport which cannot be matched elsewhere.

John Harvey, "a gentleman from the corporation lodging-house, Aberdeen," as he described himself, was discovered salmon poaching on the Dee, the other evening, by the bailiffs. Mr. Harvey was accordingly introduced to the sheriff on Friday last, for about the twentieth time, and fined £5, with £1 19s. 4d. of expenses, or thirty days. Immediate payment was asked for by the prosecutor, while Harvey asked delay; but his lordship, seeing "the gentleman" had no effects, refused to grant any indulgences, and accordingly Mr. Harvey, shaking hands with his friends, went into "spring quarters" for a month.

Nothing has been done on the Don, and the fears that there is a single head of fish in the water are being daily realised. The Don used to be one of the best tidal finnock fisheries in Scotland; but as far as I can ascertain, not a single fin has been got since the season commenced. So much for pollution.

The preserved gudgeon was much in evidence last week. In fact, since the fish have shown signs of going off the take, almost every conceivable lure has been requisitioned. Some sport was got, but chiefly with kelts. One gentleman went through two dozen baits, and had to do with as many kelts in the course of two days without touching a single clean fish. A friend coming immediately after him killed three fine fish to the fly. Such is anglers' luck.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

We are to have a trades' exhibition at Bingley Hall, Birmingham, which will open on March 20 next and remain open until May 13, and the manager, Mr. G. Stanley, in order to make the exhibition as attractive as possible, has made arrangements for the Birmingham angling clubs to place on view their specimen and rare fish. A small committee have been appointed, and Mr. C. White is acting as hon. secretary to the affair. As an inducement to the clubs and the members, the manager of the exhibition has offered the sum of £20 for prizes, and also offered to pay the costs of printing and postage, &c., so that the prize money may be given in full, and also that the Birmingham Association will be put to no expense. A judge will be appointed from outside Birmingham, so that absolute impartiality may be assured. The presidents and secretaries of clubs sending fish will be allowed a free pass during the run of the exhibition, and each individual exhibitor will also be supplied with a free pass. Prizes will be given to the clubs who exhibit the largest collection, and prizes will be given for rare specimen fish. Special books of tickets will be issued to all the clubs belonging to the association, which will admit the members at half-price. The show of fish will no doubt be a large one, and it will be an inducement for clubs to preserve specimen fish, taken by their members in the future. One grand collection of fish is promised by the Midland Piscatorial Society, which will be for show and not for competition, this is very kind of the society, as they could clear the board of all the prizes. As it is, the smaller clubs and their members will have the full benefit of the prize money. The change in the weather has brought with it a good time for the anglers, as from all parts reports are coming to hand of good sport. On the Severn, pike, roach, and dace are being taken, all the fish being over the average size. Mr. W. Mounds, of Kidderminster, keeps up his reputation as a pike fisherman and has been having some good fish from the Severn. Mr. H. Cane caught one over 18lb., just above Stourport Bridge; from Lincombe Lock up to Hampton Lode a large number of pike are to be found just now, and anglers should not miss the opportunity of trying this part of the river, as the water is just in prime condition, and the fish are well on the feed. Good sport is also being had in the Trent, in the Alrewas district, now that the river has gone down to its normal level. Several of the Midland Piscatorial members have had some good pike and roach from the water. On the Anker, at Tamworth, the members of the Birmingham Heath and St. George's Club have had some very good catches. Mr. Griffiths, of the latter club, caught six very nice perch, the largest weighing over 1½lb. From the Avon and Arrow good sport has been had with the pike, roach, and dace. The Mease, which is rented by the Hearts of Oak Club, has been fished well by the members, and some very fine roach and dace have been taken, the largest roach being over 1½lb., which has been weighed in at the club. The Midland Canals have been well patronised, the best report coming from Tenny Compton, where several good catches of roach have been had during the past week. Mr. A. Lacey had a nice show of fish from the Blythe, and Mr. Dare took a nice pike of 14½lb. from the Trent at Alrewas, on Friday last; the fish was taken on one of Allcock's salmon gut bottoms. The Anglers' Pride Society, which hold their meetings at the Royal Oak, Barr-street, Hockley, intend to keep up with other clubs in the district. They have now gone in for a silver challenge cup. Several donations have been promised, and in order to make the cup as valuable as possible, they intend holding a special concert on March 7 next, at their clubhouse, the proceeds of which will go toward augmenting the cup funds. The Aston Britannia Society's dinner takes place at the Holte Hotel, Aston, on the 17th inst. next.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

So far as the general conditions are concerned, the closing weeks seem to be more favourable than any previous period of the angling season. The waters are now in fine trim, and pike fishermen especially are having a good time of it. The fish are showing increased activity, and some nice specimens have been captured during the week. A brace fell to one rod in the Tattershall district of the Witham, on Saturday, weighing 17lb., and another sportsman secured, amongst other fish, three fish, below Dogdyke, weighing, respectively, 9lb., 6½lb., and 6lb. Other good bags are also mentioned, one of the best lots for enumeration being five and a half brace, which averaged close upon 4½lb. Subscribers also continue to land some sizeable fish from the Forty-foot. One rod, on Monday, secured, south of Donington Bridge, three fish, which turned the scale at 14½lb. Nothing exceptionally large, however, has been captured on this water, the average weights being from 3lb. to 5lb. Roach fishing is still affording excellent sport, and both the worm and paste baits have accounted for some satisfactory bags from the Witham, the drains in the Boston district, and the Glen at Surfleet.

FROM HULL AND DISTRICT.

Our roach anglers have had a splendid time of it during the past few weeks, for the weather in this district has been all that could be desired for successful operations at this time of the year, and our local waters have all more or less fished down to their normal level and condition, causing sport to be plentiful, and catches of roach going from 3lb. to about 29lb. have been shown at the different anglers' rendezvous in the city, the latter catch being a splendid sample of fish, taken by Mr. Arthur Marshall, a member of the Central Hull Angling Society, from the

top stretches of the river Hull. Mr. T. Oliver, of the Victoria Angling Society, has also had a very meritorious catch from above the lock, weighing, in the aggregate, 11lb. 8oz., his two best fish scaling 1lb. 3½oz. and 1lb. 3½oz. respectively. Mr. T. Downsworth has also had a take of 12lb., and Mr. William Henry Barker a very good catch of roach, eight of his fish weighing close upon 6lb., the heaviest scaling 1lb. 1½oz. From Hull Bridge, Aike and Arram beck-ends, and Leven Lock some nice mixed bags of roach and perch have been made, weighing up to 5lb. each in the aggregate. Some fine dace up to 10oz. each have also been shown from the upper waters, and a chub of 2lb. 8½oz. The Brunswick Angling Society fish their first match of the season at Snakeholme to-day (Saturday), and, as the river is in fair condition in this neighbourhood, some fair sport among roach, dace, and perch should be the result. Mr. J. Cheeseman has secured a few good roach in the Wawne and Cicey district, the heaviest going 1lb. 2½oz. and 1lb. 1oz. respectively. As the lower waters at Weel, Wawne, and Dunswell are in fair condition for bottom fishing, and the flounders and eels are now more on the run, a few decent catches having been made during the past week, our early match fishers will no doubt give a good account of themselves, especially if the weather continues anything like it is at present. The Bowling Green A.S. open their match fishing season at Weelferry, on Saturday next, March 11; whilst on March 31 the Waltonians and the Starr A.S., of Stoneferry, both open their season on the river, the former at Weel and the latter at Figham. The Market Weighton Canal has also furnished our local pike fishers with a fair amount of sport during the fine weather, and several good sized fish have been creelied both from the neighbourhood of Newport and Sod House Lock; and the top ponds are in first class condition, either for pike, perch, or roach fishing, and from near the Foulness Dam some very nice perch have been taken with worm, and one angler secured a nice chub of about 2lb. The Duke of York A.S. have a smoking concert at the Gainsborough Tavern in High-street, on March 7; and the annual supper of the Bowling Green A.S. has been postponed to March 10.

FROM THE LAKE DISTRICT.

There has not been much successful angling during the past week on the few rivers yet open for trout fishing. Although the weather may be described as, on the whole, very fine for the time of year, it has not, at the same time, been such as to induce a large turn out of anglers. The days have been bright and sunny, with sharp frosts at night, although on Wednesday a change for the better took place, the air being milder. The near approach of the open season was made apparent by the holding of the annual meeting of the Kent Angling Association, on Tuesday evening, in the Museum Library, Kendal. Mr. W. Evershed presided, and there was a fair attendance of members. The statement of accounts showed: Balance from previous year, £8 8s. 0½d.; subscriptions for 1898, £13 1s.; bank interest, 8d.; the expenditure being represented by £10 for 1000 yearling trout; hire of room and printing, £1 7s. 5d.; secretary's and treasurer's expenses, 8s.; leaving a cash balance on general account of £9 14s. 3½d. Donations to the re-stocking fund amounted to £12 5s., and the outlay on this account has been—1000 yearlings, £7; carriage and expenses, £1 3s.; leaving a balance in the bank of £1 2s. A quarterly meeting of the local board of conservators was held on Thursday, further details of which must be left until next week.

FROM LANCASHIRE.

The Tyldesley and District Anglers' Association have completed arrangements for winding up the present coarse fishing season by a contest in the Worsley Canal, at Astley, to take place on March 11 next. The membership of this society has been largely increased since the New Year, the two names added to the roll-call at their last meeting on the 26th ult. bringing the total to sixteen new members. Good progress is also recorded in other directions in club life. The Wigan and District Amalgamated Anglers' Association recently held their thirty-third annual meeting at Crofton Arms, Hallgate, Wigan, under the chairmanship of Mr. Councillor Levi Booth. The agenda was an extensive one, and included several motions which were successfully passed. It was also decided to fish an All-England contest in the Worsley Canal in the coming season, when £10 will be offered. The auditors brought some very satisfactory statements before the notice of the members as to last season's working, and the secretary also reported the recent affiliation of several Wigan Clubs, together with some from Newton, Golborn, and Skelmersdale. It was also stated that several of the clubs already members of the association had lately been largely strengthened numerically. These two reports were very well received, and there is every prospect of success attending them in the coming season. The new season's travelling cards will shortly be ready for circulation. At the usual monthly meeting of the Victoria Angling Society, Warrington, the prize list for specimen fish to be weighed in during the coming season was brought before the notice of the members, and confirmed. The secretary reported that already some very fine roach, dace, perch, and pike had been registered on the books this year. Continual steady progress is being made towards making the club thoroughly efficient in every way. Our Liverpool friends seem to have no limit to their enthusiasm, as all through the winter they have kept things lively. Late reports credit Mr. S. Wainwright with a perch, 1lb. 2½oz. Sixteen members of the West Derby Angling Society fished a match in the local canal, but only had moderate sport. Members of the Centrals report good sport, strange to say, in the same canal. Several members of the Leigh Angling Society have been doing good things in the canal near to that town amongst roach and gudgeon.

ANGLERS' HOTELS, FISHING QUARTERS, &c.**FORTINGALL HOTEL,
GLENLYON, PERTSHIRE.**

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay. This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." For all particulars about hotel and fishing write for the illustrated prospectus, sent post free. Inclusive pension terms 4s. 2d. a day.

Proprietor, A. HECK.

FROM MANCHESTER.

The County Palatine Angling Association on Saturday last received about 600 mature fish, which were safely turned into their canal in Derbysire. The liberal stocking done by this association is bearing fruit, only a week or two since the Good Intent Society reported favourably of a visit, and now the Clarendon Society say the same, one of their members, Mr. J. Roston, a few days ago took a fine roach of 11lb. 9oz. in the very best possible condition. The Lancaster Angling Society have decided to pay a visit to the Worsley Canal Fishery next week end by way of winding up the season. Some little mistake has been inadvertently made in reference to the trout to be dealt with in a forthcoming lecture; they have been described as sea trout, but it should have been lake trout, as they were taken in Lough Corrib, a place well worth a visit just now, for March and April are splendid months for fly fishing. A nice fish of 6lb. was taken last week, the 25th, by Mr. H. Smith. The Levenshulme Angling Society added 200 rudd to their private waters last week end, which are now well stocked and doing well. The Welcomb Angling Society have decided to wind up the season with a visit to the Worsley Canal Fishery, when they will fish a match. Two important meetings are to be held in this city in the present month—viz., that of the Manchester centre of the Northern Anglers' Association, and the other the annual of the board of management of the Worsley Canal Fishery. It is an open secret that all difficulties have been now overcome with this movement, and that it is now an assured success. A little more support is needed from Manchester, and then a liberal programme of stocking could be adopted. It is well understood that all waters controlled by either local associations or clubs are to be rigorously closed from March 15th to June 16th. This will give the fish a chance to replenish the stock. Mr. Furness, of the County Anglers' Association, writes that they have received over one thousand fine roach and perch, ranging from 2lb. to 14lb., and that all have been turned into their waters at Edgeley Park. Under anything like favourable conditions the members are certain to have good sport in the coming season, as they have plenty of waters, and all well stocked with fish.

FROM NORFOLK.

Some fine catches of pike have been secured during the past week. On 26th ult., three anglers fishing on a private broad took thirty fish, largest 11lb. On Monday, two rods had fifteen fish, largest 9lb., private water. Another party, fishing two days, had twenty-two fish. Fishing on the Waveney, near Beccles, Mr. A. W. Jordan took a nice fish weighing 13½lb., and on the same water on 26th ult. some members of the Working Men's Angling Club, Beccles, had three ten-pounders. All waters are perfect, and good sport may be had almost anywhere. The annual general meeting of the Yare and Bure Preservation Society will be held on Monday, March 6, at the Bell Hotel, Norwich, for the election of officers for the ensuing year, passing accounts and other business.

FROM NOTTINGHAM.

Chub anglers could not possibly have the Trent in better condition for the enjoyment of sport, with such seasonable baits as pith and brains and greaves. Numbers of experts have patronised the lower waters; and fine samples of fish have been shown at the various clubs, from Gifford, Wilford, Home Pierrepoint, Stoke, Hazleford, Fickerton, and Averham. At Shardlow, Mr. F. W. K. Wallis has excelled with a trio weighing over 9lb., though these fell to bread paste. From some cause or other coarse fish will scarcely look at a worm on the Shardlow stretch, and a like remark applies to the fishing at Rolleston, Staythorpe, and Averham weirs. Last season, on both fisheries, scores of grand roach were creelred with the cockspur; this season good bags have certainly been few and far between. Last Saturday afternoon, at Staythorpe, members of the Shoulder of Mutton Association (lessees) engaged in their final match prior to the advent of the close season. Seventeen took part, but the whole experienced a terribly bad time. Mr. W. Bellfield carried off first prize, and his brother, Mr. S. Bellfield, secured the second. Other prizes were not won. Before the contest Mr. J. Truman, the president, landed a pike of 6lb. odd, and Mr. A. J. Wootton creelred, with the tail end, a brace of chub scaling over 5lb. Six handsome chub were got with pith by Mr. F. J. Lindley and Mr. H. Coxon on Tuesday. Members of the Nag's Head Society decided their closing pegged-down match at Girtton, below Collingham, on Thursday. There were fifteen competitors, and the chief awards fell to the prowess of Mr. W. Packer and Mr. W. Stevens. In the early days of last week a pike of 20lb. odd was caught in Weston Cliff Pool by a visitor from Derby. It is highly satisfactory to learn that several salmon have been seen during the week "pitching" in the streams at Wilford and below Beeston Weirs. They were fresh run fish, and thus early the season's prospects for the rod are exceptionally bright.

FROM SHEFFIELD.

With the improvement in the weather there has been a gratifying improvement in sport, and numbers of anglers from Sheffield have availed themselves of the opportunities for a little fishing. The Trent has gone down considerably, and is now practically at its normal level. Pike fishing is, to all intents and purposes, at an end in all parts of the river, although during last week several nice fish were taken at Thrumpton. Pike fishing will be carried on at Weston Cliff until the end of the month. In various parts of the river female pike are beginning to be heavily laden with ova. Anglers after bream have fared very well at Sawley, whilst the sport obtained amongst these fish at Beeston and Barton has left no room for complaint. At nearly all the well-known spots roach have been well on the feed, taking cockspur worms with great eagerness,

and many heavy fish have been landed, whilst here and there several capital chub have been secured. The Rytton has been moderately well looked after, with the result that a few lots of dace have been taken, whilst a small number of chub have also been obtained. The river Bain has recently been providing first class sport, roach having been followed with splendid success. With maggots a lot of fish have been killed, and at Coningsby Mill the takes have been augmented by several weighty chub. The Lincoln anglers have had their best recreation in the Sirel Dyke, where dew worms have proved very killing with roach. The middle Witham, between Bardney and Lincoln, is now showing signs of recovery after the floods, and more attention is being devoted to it. The Boston district has been the haunt of very many fishermen, and the Mount Pleasant drain has been especially prolific in sport, yielding large quantities of fine roach, worms having proved to be the most effective bait. The Glen, at Surfleet, has now fished down, and a few days ago a Sheffield rodster had a very heavy basket of roach, as well as a fine perch and some nice sized tench. Another week or ten days will see the end of grayling fishing in the Chatsworth Club waters, and if the weather will only continue fine anglers are hopeful of accounting for some heavy specimens. Between Matlock Bridge and Matlock Bath a few nice trout have been taken, whilst at various places on the river coarse fish anglers have done fairly well. The Amber has provided a few heavy trout, which have generally been secured in the deep holes. Re-stocking operations are being carried out by the Matlock and Cromford Angling Association, and some fine trout are being put into the river. The trout season is promising well. The Sheffield Anglers' Association recently carried out a much needed reform in revising their rules, and every one of the 12,000 members will now be able to understand them.

FROM SHROPSHIRE.

Severn trout fishing has rarely opened under more favourable conditions so far as weather and state of water are concerned, and there is every probability of good sport being obtained among the big fish by those anglers who are skilled in the use of spinning tackle. Minnow spinning is an art very much in vogue among local anglers, and it is usual for some heavy fish to be taken by this means during the opening months of the season. Trout weighing between 5lb. and 6lb. are occasionally met with, and, as big pike are numerous, stout tackle is essential. A larger number of salmon than usual are in the upper waters of the Severn and Vyrnwy this season, and, as the water is now low enough for both net and rod, some satisfactory captures will no doubt be recorded at an early date. A Shrewsbury angler, while pike fishing last week, hooked a fine salmon near Atobam, but the fish smashed his tackle and escaped. Anglers generally will be doing good service if they take advantage of the present favourable state of the river to capture some of the large pike and chub which are to be found in almost every part of the water.

FROM WORCESTER AND DISTRICT.

We have been favoured with a week of glorious weather—sharp frosty nights and days of unclouded skies and glorious sunshine—which has tempted numerous anglers to the waterside. The rivers are down to a nice level, and of good colour, and in the Severn a nice lot of roach and chub have been taken, and some good pike, but the latter are far advanced in spawn. The Avon has also afforded good sport, in the Pershore and Evesham part of the river in particular. Mr. F. Champkins, of Pershore, had a fine lot of roach, and some chub up to 3lb. in weight, and some good pike; and Mr. Baynes and others had some fine pike in the Evesham water; and Mr. Rock, chub up to 2½lb. with the worm. It is much to be regretted that illegal netting has been resorted to in the Fladbury district. A few days ago some forty jack were taken with the trammel net, and were hawked about Evesham streets at a few pence per lb., and these nets are being used continually, and destroying an enormous quantity of fish, and must be very injurious to sport in the river. Two fellows were summoned a fortnight ago by the Evesham Fish Preservation Society for illegal netting in the portion of the Avon rented by them, but through some miswording of the summons were discharged. It is to be hoped that those interested in the fishing in this portion of the Avon will unite and put a stop to these destructive proceedings. Salmon fishing in the Worcester district has improved, and some good sized fish have been taken. The largest I have heard of was taken in Webb's net, and weighed close on 28lb. Price still keeps high.

FROM YORK AND DISTRICT.

Capital pike fishing has taken place of late, the fine, bright, and frosty weather having been very favourable to angling. Waltonians have pursued the favourite pastime under delightful conditions, wintry nights in succession being followed by glorious spring-like days, and with fish well on the feed more than ordinary pleasure was experienced. At the time of writing the frost has disappeared, and mild weather prevails. First class sport with trout is anticipated, the fish being plentiful and well forward on most of the Yorkshire rivers. The Anglers' Association of the county held their yearly meeting a few days ago, when the report read showed that during the year an important length of the Eden, at Edenhall, had been acquired, and leases had been arranged for this and the Brougham, Carleton, and Winderwalk fishings. On Dec. 31 the membership was at its full limit of 100. The president, Mr. J. W. Refitt, spoke of the association as the best in Great Britain, taking the salmon and trout fishing together. Speaking of the qualifications necessary to the angler, he said he must know not only the habits, but, what was equally important, the habitat of the trout, and he must persevere and master all the technical details of the art before he

could hope to return in the evening with a full creel. Alluding to the different styles of fishing, he spoke of the dry fly as being very suitable in its home—the deep, slow-running southern streams—but it was out of place in our rushing northern rivers, except in certain situations and conditions of the water. He spoke of the growing popularity of the sport, and contrasted the numbers thirty years ago with those known to practise the art at present, 10,500 trout licences having been issued last year in that portion of the county controlled by the Yorkshire Fishery Board. His reason for this ever-growing popularity was that angling seemed to retain its attractiveness and the loyalty of its votaries long after middle age had caused other sports to be relinquished.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

STONE FLY AND MAY FLY.

DEAR SIR,—*Perla bipunctata* is the one we have on the Coquet. They are thick at Weldon. In the Aln I have only seen a specimen at long intervals. The Aln, I think, is too muddy for them. I have seen a decent rise of May Fly on the Aln, but not on the Coquet. So there you are. The May Fly likes the mud, the Stone Fly the gravel.—Yours truly, JNO. J. HARDY.

Alnwick.
[Several anglers have kindly promised to collect water flies and larvae, and we have sent them bottles.—Ed.]

SALE OF IMMATURE SOLES.

DEAR SIR,—Don'ts have been thrown on my statement that soles could be bought at 1d. per pair. I venture to send you herewith a sample of those sold at 4d. per dozen. It was bought of a fishmonger, and I think is stronger evidence than any word of mine can be of the urgent necessity of a Marine Mundella Act.—Yours faithfully, CHARLES HUSSEY.

[The specimen Mr. Hussey sends is just 6in. in length. It is a great pity something cannot be done to stop this wholesale slaughter of what in the fish market are called "slips." We believe trawling is responsible for the death of the fish, and if you cannot trawl without killing immature fish they may as well be sold as thrown into the sea. We say if, as we believe no practical method has been found by which immature fish can be saved from death in trawling.—Ed.]

BREAD CRUST AS BAIT.

SIR,—I am able to assure Mr. Sachs that the bread-crust bait was known long before 1874. About five years ago I asked J. Spong, of Twickenham, with whom I fish occasionally, how long he had used bread crust for bait. His reply was, "for twenty-five or thirty years." This would bring the date down to 1869 or 1864. Between 1855 and 1858 I was staying with a Mr. Gregory, at Iwer, near Uxbridge. An old angler, of nearly seventy years of age, named Tew, used to pass our window every morning, about nine o'clock, and proceed to fish the West Drayton water. I soon got into conversation with him, and found that his favourite bait for roach was bread crust. In 1847 and 1848 there were a good many anglers in Chelsea, the town where I lived. The bait was then well known, and we boys used it, and paste (for gentles could not be procured so easily then as now) in the Serpentine, Eel Brook, Black Sea, Brent, and, surreptitiously, in the "Enclosure," and Chelsea Hospital ponds, where there were some very heavy roach. Also, I remember a Lea fisherman, named Williams, who lived in Radnor-street, Chelsea, who used to provide me with (i.e. give) hair lines for my outings, and his opinion was that it was superior as a lure to all others. There were about a score of us boys, who constantly used the bait, but where we gained the knowledge I could not say; but it seems to me that we fished as "fine" then as they do now, with our hair tackle, which tackle we made up for ourselves. For ground-bait we used ebowed bread; but very sparingly. I hope to use the lure on Monday next, piloted by J. Spong, in waters where I have never taken a roach under 1lb. When a lad I have made the carp in the Hampton Court ponds follow me round by throwing in a few pieces of broken bread crust. I was glad, however, to see Mr. Sach's letter, as it will effectually dispose of all professors' claims of invention. I am personally unknown to Mr. Sach, but I believe that I am, by marriage, a connection of his, upon the Helm side.

I may mention that Mr. J. L. Toole, when an amateur, once cuffed my ears soundly for sneaking off to the Serpentine to fish, and poor William Hill stood by and laughed at it.

Trusting that you will be able to find room for this rather long epistle.—Yours truly,

J. JEFFERY ("Straw Hat").

Epsom, Feb. 28.

"BREAKING OF THE SHROPSHIRE MERES."

DEAR SIR,—In the *Fishing Gazette* of the 11th ult. a correspondent asks for a satisfactory explanation of what is known as the "breaking" of the Shropshire meres. Mr. W. Phillips, F.L.S., of Shrewsbury, has very carefully studied this phenomenon, and I am indebted to him for a reprint of an article which he contributed to "The Midland Naturalist," in the year 1893. He states "The phenomenon consists in the periodical appearance of a turbid condition of the water of certain meres, arising apparently from some material of a green, or yellowish

green, matter floating in it, or collecting as a scum upon its surface, and usually, after a time, emitting a putrid odour. When in this state the water is altogether unfit for domestic purposes, and the effect upon the fishes is so pernicious that they become disinclined to take the bait, and fishing has to be abandoned. The usual time of its appearance is in the autumn, but it occasionally occurs in the early spring, and lasts from a few days to a month. The Germans speak of it as 'Wasser-blüthe,' i.e., water blossom, and the French name is of similar meaning, viz., 'Les Fleurs d'Eau.' The real cause of breaking is the extension and rapid growth of certain very minute water plants belonging to the algae, whose entire brief existence passes while submerged in water." Mr. Phillips gives the names of seven species of algae which cause the breaking of the Shropshire meres. The species oftenest met with seems to be *Anabaena Hassallii*, which occurs in at least nine of the thirteen meres enumerated by Mr. Phillips.

Of course the "breaking," or "working" of ponds is not confined to Shropshire, but has been observed in Scotland, Ireland, and the Continent.—Yours faithfully,
G. R. JEBB.

[Curiously, the notice about "Breaking of ponds, &c.," which we printed some time ago as from the New York *Forest and Stream*, was a notice, which appeared originally in the London *Field*, of an interesting paper by Sir Thomas Wardle, F.G.S. The paper is entitled "The Breaking of Copmere," and is published by Vyse and Hill, Chesham-street, Stoke-on-Trent. Sir Thomas Wardle has kindly sent us a copy, and we hope to refer to it shortly. We note Sir Thomas refers to the account of the matter given by Mr. Phillips.—Ed.]

FROZEN SEA TROUT FOR THE ROYAL AQUARIUM.

The following letter has been sent to Mr Josiah Ritchie, managing director of the Royal Aquarium:

Waitaki and Waitake Acclimatisation Society, Parnara. Jan. 18, 1899.

DEAR SIR,—By the New Zealand Shipping Company ss. *Waikato*, which leaves New Zealand about the end of this month for London, the Waitaki and Waitake Acclimatisation Societies are sending to your address three cases of frozen trout. Thirty of these fish, weighing 67lb., were caught in the Waitake, in South Canterbury, on 4th and 5th of January, by a number of members of the society, who formed a fishing bee, with the object of obtaining a supply of fish to send to the Fisheries Exhibition. The four larger fish were caught in the Waitaki river on the 5th by the following gentlemen: Mr. T. Y. Duncan, M.H.R., one fish, 10lb.; Mr. John Duncan, one fish, 10lb.; Mr. John Young, one fish, 15lb.; Mr. John Sinclair, one fish, 14lb. The fish are fair samples of those that are taken in New Zealand waters, and the society hopes they will prove acceptable as exhibits to the Aquarium authorities, and of interest to the public.

Thanking you for the interest you have taken in previous exhibits, and anticipating a like interest for the present shipment.—I remain, faithfully yours,
(Signed) HENRY MACINTOSH, Sec.

A FEW LAKELAND NOTES.

SIR,—In response to Mr. W. H. Pearsall's inquiry in last Saturday's issue, I may say that I only tried wet flies on June 27, and then only late in the evening in the private water. They killed fairly well. What they were I am unable to say. They were lent to me by the keeper, and seemed to be Snipe Hackles. The light was failing, and I had not a good opportunity of judging, as I returned them when I left the water. The experience of previous years taught me that wet flies in the open water were useless, at least in June, July, and August.

I used the natural minnow on a Chapman Spinner for the pike. I also tried it just above the bridge, and twice I tempted a large trout from under the bridge with it; but he was content with following it for a short distance and then returned. He was very conspicuous, as a third of his body was a patch of white, probably fungus. I wanted him out for the sake of other fish.

On June 28 I was trolling with a small perch when I hooked and lost the fish between Lakeside and Newby Bridge.

I am much obliged to Mr. Pearsall for the hints as to Cholmondeley Pennell's Hackle. If dressed rather small it makes a very excellent dry fly, and I hope to give it a trial later on.—Yours truly,
B. E. F.

THAMES RE-STOCKING ASSOCIATION.

DEAR SIR,—Will you allow me to state that I have received a donation of one guinea from the Gresham Angling Society, per Mr. Alex. Wright, hon. secretary, on behalf of the T.R.A. The cheque I have handed over to Mr. Hanks, hon. secretary of the T.R.A., who will forward receipt.—Yours truly,
F. H. AMPHLETT.

LOBSTER FISHING.

DEAR SIR,—The article on the above by E. Milliken, in your last week's issue, is very interesting for those who have not seen this class of fishing.

It is by no means restricted to the east coast; they are used almost everywhere. We use the same kind of net here, but with smaller mesh (with which we take prawns, shrimps, whitebait, and smelt), and we work them in the same manner.

With regard to the lobster and crab ones, of course, the mesh is much larger—sometimes as much as 3in. We also have what I think is an improvement upon the plain ring. We sometimes use these about 4ft. to 6ft. in diameter, with two hinged joints across the diameter, so that the hoop can be closed up like the mouth of a purse. It is slung in such a way that it falls flat on the ground,

but the moment you tend to raise it the two sides fold up, and you pull it up like a bag, and it is impossible for any fish to escape.

This is very desirable when you get flat fish, pouting, or whiting.—Yours truly,
WILLIAM HEARDER.
195, Union-street, Plymouth.

A TWENTY POUND LEA PIKE.—FISHING BAGS.

DEAR MR. MARSTON,—I have just had the pleasure of inspecting a beautifully-shaped pike taken from the Lea between Broxbourne and King's Weir by that veteran angler, Mr. Francis Baker, of Bethune-road, N.

The fish just pulled down the scale at 20lb., was 37in. long, and 21½in. in girth. It was taken with a live bait, and gave three-quarters of an hour's play, having been hooked on very fine tackle.

It was the best of about forty pike taken from the Lea this season by the same angler, and has been sent to Cooper for preservation.

I note that some of your correspondents are exercised in spirit because their fishing bags become unsavoury after use. Why not try a simple plan I have adopted for years, viz., to carry half a dozen small bags of close canvas, about 6in. broad by 10in. deep, and each holding a pound or so of trout comfortably. It is very little more trouble to slip a fish into one of these than to drop him loose into the large bag, and the latter is thus easily kept clean, and the fish brought home in good condition, as even when all your small bags are full there is air space round each as they lie in the large one.

Of course, they should be washed each time of use, and will be found useful to hold other things besides fish.—Yours truly,
J. P. WRIGHT.

[Glad to hear of such a good fish being taken from the Lea.—Ed.]

SIR,—We have a speciality in bags that we think will meet your correspondent "Wrentail's" want. It is a bag much used here, and we call it "The Dove Anglers' Bag." It is made of a thick, washable material, white, gusseted;

dimensions, 19in. by 12½in.; two rows of stout buttons, rings, &c., and one large division inside to the front, and two at the back inside.

The price is 9s. 6d. net; 4d. extra parcel post.—Yours truly,
J. C. PERFECT.
204, 205, Station-street, Burton-on-Trent.

TROUT LICENSES.

SIR,—"Fly," in his letter to you, published in your issue of Feb. 25, does not specify the board or boards of conservators of whom he complains, neither does he say whether he has made any remonstrance to them on the subject.

If he has done so ineffectually, I should recommend him to make a formal complaint to the Board of Trade, pointing out how the conservators have neglected their duty, and at the same time requesting that an official inquiry may be at once instituted.

My slight experience of the courteous officials of the Fishery Department of the Board leads me to believe that any well-founded complaint would receive their immediate attention, and their action would do more to remedy the state of things than any amount of magazine or newspaper correspondence.—Yours faithfully,
A WHITE-HEADED NOVICE.

TROUT FISHING IN SPAIN.

DEAR SIR,—A few years ago I wrote to the *Fishing Gazette* on this subject, but cannot now refer to the letter.

I advise your correspondent to try Vigo, in Galicia. It is an out of the way corner of Spain, but there is a good steam service there from Liverpool, and I believe also from London. It is some years since I was there, but the character of the country is, I believe, unchanged, and, excepting for railways, much as it was in the days of Gil Blas.

There are several streams that can be reached from Vigo, some of them tributaries of the Minho; and you can get fair accommodation at the Hotel Nacional, and at a cheap rate, say, six or seven pesetas a day, or about 5s. The currency has, however, changed in value lately, but the sterling value, I suppose, is much about the same, or, if anything, less.

I was called away before I was able to do any fishing, but I saw men who had very good sport, the trout being numerous and fine up to 3lb., 4lb., and 5lb. and some larger, but of course a good many much smaller.

I must add, that excepting in the towns there is no accommodation, the village inns being detestable, but from the radius of Vigo you can select your headquarters. I was told that any of the ordinary larger flies were suitable for the water, as the fish had not been rendered over-wary by constant fishing, and I should try an ordinary selection, though I should think Parlow has had some experience on the subject. I speak with the more confidence about this

place, as the Duke of Edinburgh fished it for some time, and had excellent sport. I must add that outside the principal towns, no Spanish hotels are first-rate nor even second-rate according to English ideas.—Yours truly,
CHAS. T. BULKELEY-JOHNSON.

SIR,—Together with a friend or two I have tried during the two past years many of the rivers in the north and west of Spain, and with almost uniform success. We fished in the provinces of Oviedo, Santander, Coruña, Vigo, Orense, &c. The months were March and April. May and June would be too bright and hot. The fish have been all poached out of the rivers. Nets, lime, and dynamite are used everywhere.
FULANO.

FISHING IN LAKE GENEVA.

DEAR SIR,—Can you or any of your readers tell me if there is any trout fishing in Lake Geneva during August and first part of September? I shall be very glad to receive any particulars about the fishing.—Yours truly,
SPINNER.

[We think that "Spinner" will get some fly fishing in the streams, and by spinning blue and red phantoms in the lake, fished deep, he may get some of the big lake trout. We have seen them up to 30lb.—Ed.]

FISHING IN NORMANDY.

DEAR SIR,—I am going to Avranches (France) for April, can you tell me anything about the fishing there?—Yours truly,
EPHEMERA.

[The "Anglers' Diary" says: "The rivers Léez and Celune fall into the Bay of Mont St. Michel at Avranches. The trout fishing close to the town is not good for much, but by going a few miles up either river good sport can be had. On the Léez, Tirpiéd (six miles from Avranches), Bricey (ten), and Caves (twelve), are the places to put up at, though the accommodation is very rough. On the Celune, Ducy (seven), and Les Biards (thirteen); accommodation very bad at the latter place, but the fishing good. The diligences run close to all these places. Leave is easily obtained. Salmon may sometimes be taken."—Ed.]

FISHING NEAR LUTON.

DEAR SIR,—Can you give me any information as to the fishing at or between Chiltern Green and Luton, whether free or subscription, or who to get permission of for coarse and general fishing? An early answer in your valuable paper will be esteemed a great favour by—Yours truly,
J. A. KIRKHAM.

[Luton-on-Lea; Hotel, Red Lion. These is little fishing in the Lea in the county of Bedfordshire, except in the Luton Hoo Park, which is strictly preserved, leave being most difficult to obtain.]

FISHING AT INGLETON.

DEAR SIR,—You will see from an account of our annual meeting, which took place recently, that the Ingleton Angling Association is in a very flourishing condition. We have about eight miles of very fair mountain stream fishing, which anyone can fish at the nominal sum of 5s. season, 2s. 6d. for fourteen days, and 1s. per day; and there are plenty of good lodging-houses in Ingleton, where accommodation can be had very reasonably. The fish do not run very large, but I have occasionally got one or two up to 1lb. I have seen that people in your excellent paper inquire where they can get a few days' fishing for a moderate sum.—Yours faithfully,
Geo. H. PADGETT.
Ingleton, Kirkby Lonsdale.

FISHING NEAR ANDOVER.

DEAR SIR,—I should feel very much obliged if you or any of your readers could give me any information as to what free fishing could be obtained in, or near Andover? I would not mind paying a small premium for really good trout fishing.—Yours truly,
BLACK GNAT.

[Andover, Hants, on the Anton, trout and grayling. Hotels: Star and Garter, White Hart. The Anton joins the Test at Testcombe Bridge, and — Dupresse, Esq., of Lymington, holds most of the water, once forming the Anton Club, from whom information might be obtained. If a letter to this gentleman fails, "Black Gnat" must try and get permission from the principal land owners.]

FLOAT LEDGERING.

DEAR SIR,—I have been reading a popular work on "Angling for Coarse Fish," which contains a method of fishing for roach, viz., "tight corking," or ledgering with a float. I understand by what I read no shot are used on the line to make the float cock. Consequently the same will lay flat on the water, as bait and bullet are on the bottom; and if there is much of a current, would not the float be drawn under? I should esteem it a great favour if you or any of our correspondents would explain this method of fishing for me.—Faithfully yours,
A BEGINNER.

[The mere fact of "A Beginner's" float going under shows that it was too near the bullet. If the water is 4ft. in depth, the bullet must be put, say, 4ft. 6in. from the float in a gentle eddy or stream, and from 18in. to 24in. deeper in a moderately fast stream, and so on. The nose of the float can then be easily held above the surface, the stream aiding the angler in this operation.]

YORKSHIRE FISHING QUERIES.

DEAR SIR,—Perhaps you or some of your readers would be kind enough to answer the following questions: Is it necessary to take out more than one trout licence to fish Yorkshire rivers near Bradford, Sheffield, and Hull? What is the cost of the licence? What trout fishing there is to be had near Bradford, either free or by daily or weekly ticket?—Yours truly,
SURREY.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
"Six Months ditto	5s. 4d.
"Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

SATURDAY, MARCH 11TH, 1899.

SALE OF BAIT DURING THE CLOSE TIME

(MARCH 15 TO JUNE 15).

As usual at this time of the year we have inquiries as to whether it is legal to sell as bait live or dead fresh-water fish protected by the Acts 1878 and 1884.

Mr. Willis Bund, one of the best authorities on fishery law living, says in his last edition of "Oke's Fishery Laws" that "The sale of fish for bait or for scientific purposes during the close term is illegal. Thus those tackle shops that offer live bait for sale could clearly be prosecuted, even if they only sold minnows; the persons who hawk eels about the streets are also liable to prosecution, unless they can prove the eels were bought in a place to which the Act does not apply; and it is very doubtful if the persons who sell fish for the birds in the Zoological Gardens are not liable to be prosecuted."

It is not illegal to catch bait for use in trout fishing, only you must not buy or sell them, so that a professional Thames fisherman can supply bait to his customers who go out with him live

baiting or spinning for trout, but he must not sell them.

One fishing tackle maker asked us recently if he could supply a customer with bait which he (the fishing tackle maker) had bought before the close season commenced. We can see nothing in the Act to prevent his giving the bait to oblige a customer, but sell he must not. Another writes to say he has several hundred bait in his tanks, and wants to know if he will have to destroy them. We have advised him to dispose of the fish before the 15th of this month if he can do so.

There are many absurdities in the Fisheries Acts, such as protecting eels which are always in season in fresh water, and are greater destroyers of fish spawn and fry than all other agencies put together.

THE "BLOOMING" OR "BREAKING" OF LAKES AND PONDS.

(WASSER-BLÜTHE—FLEURS D'EAU.)

As this "Blooming" or "Breaking" of Lakes and Ponds often has very important effects on fish, we are glad to give the following very interesting extracts from a paper read by Sir Thomas Wardle, F.G.S., F.C.S., on Feb. 17, 1897, entitled "The Breaking of Copmere," and published in the *Transactions* of the North Staffordshire Field Club*:

"Copmere is a small lake of about 44 acres, about 2½ miles from Eccleshall, beautifully situated in a natural and shallow depression in the New Red Marl. Whether this depression has been gouged out by glacial action, which is probable, or caused by dissolved salt deposits, is somewhat uncertain.

"Copmere nowhere exceeds a depth of 9 feet of water; its average depth is about 6 to 7 feet. It has probably 15 feet of mud below. It is almost square, very picturesque, and clothed on all sides by a dense fringe of tall lake-sedges and bulrushes, in which the sweetly-sunged sedge-warblers enjoy an undisturbed summer's stay. Copmere bears a close resemblance in miniature to Fritton Broad in Norfolk, having in addition to its deep fringe of tall aquatic plants, picturesque and well-wooded steep banks on its east and west sides.

"It is a great resort of wild ducks, coots, water-hens, the crested grebe, herons, swans, and sedge-warblers.

"We noticed two species of ducks, the Mallard and Dun Duck (a local name for the pochard), of which there were a considerable number.

"Besides these we counted about 100 coots, six crested grebes, and twenty swans. The coots are excellent fliers.

"Stafford lies to the south of Copmere about six miles away. The River Sow runs through Copmere before it passes through Stafford, receiving on its way an excellent trout stream named the Meece.

"The flow of the Sow through Copmere may have some influence, not yet known, upon the production of the phenomenon of 'Breaking,' which it is the object of this paper to describe, for, singularly enough, in a lake at Pershall occupying a smaller depression in the same valley, and separated from Copmere by a distance of only a quarter of a mile, but through which the Sow does not flow, no such phenomenon exists. Its water was perfectly clear and fresh, whilst that of Copmere partakes of the peculiarities I am about to describe. Singularly enough, the Sow flows through a water called Walk-Mill Pool only half a mile before it enters Copmere, and this pool never breaks. Strangely enough, about two miles higher up the river the Sow flows through a small mere, called Bishop Offley Lake. This water breaks like Copmere, and about the same time of the year.

"On a previous visit to Copmere, and not long before our pleasant Field Club excursion of Aug. 20 of last year, I saw nothing abnormal in the water, it was pellucid, containing the ordinary water plants, of which the American *Anacharis* was conspicuous, and the lake bottom covered in places with ordinary green algae of the usual and larger species.

"The lake abounds with fish—pike, roach,

perch, and eels being predominant, also fine tench are taken.

"But the lake presented quite a changed, and to all of us a novel and unexpected appearance on this our autumn visit. Its colour was a bright emerald green, but not that of green colouring matter in solution.

"By a close inspection with our lenses, we saw the water to be permeated through its entire depth by minute bright green particles, so numerous and pervading as to give the appearance of a green liquid, even when a glassful was held up to the light. With the pocket lens the appearance was decidedly pea-soupy, and invited closer microscopic definition.

"George Faulder, the Water Bailiff, furnished me with an old physic bottle which I filled and brought home, determined to unravel the mysterious appearances. I say appearances, because in addition to the permeation of these bright emerald particles, there was also a green scum floating on the surface, thickest amongst the sedges, where it had been drifted by the wind, also unresolvable by the unassisted eye, evidently possessing points of difference, mainly of specific gravity, from the particles suspended below the surface; besides this, the green was of a darker tint. Each single drop contained a number of these green specks.

"Before describing what the microscope revealed, I will now first say something about the phenomenon itself, as indicated by the title of my paper, 'The Breaking of Copmere.'

"The term has no meaning in a scientific sense. It is simply a colloquial expression, best known and used in Shropshire where meres occur more frequently than in our county, and where the phenomenon is well known to the mere-dwellers. It is also called "cruddling," no doubt from a resemblance to the breaking of milk into curd and whey on the introduction of rennet. But the term 'breaking' is said to be derived from an analogous appearance in brewing, when fermentation takes place.

"In Germany it is called Wasser-blüthe or water-blossom, and in France, Les Fleurs d'Eau.

"At certain times in each year, generally in autumn, the Shropshire meres become turbid with these green particles, the water becomes unfit for domestic purposes, and it defies the powers of filtration, soon clogging up the pores of filters. Fish become sickly in it, and in some instances die, and in others are easily caught.

"A Mr. Southwell relates that in a lake of about five acres, in very hot weather in June, the lake broke, and there shortly appeared on the surface large numbers of eels, which attracted the attention of the villagers, who took to the boats, and with spears and other implements many were captured, quite in a sickly and stupefied condition.

"This condition of things continues in varying periods from a few days to months. After a time the water emits a very putrid odour from the decomposition of the green particles. In Copmere last year the turbidity commenced about the middle of July, and it was not until the middle of October that it subsided, after which the mere cleared and seemed to have undergone a veritable purification by the process, so much so that it conveys the impression of being a sanitation of Nature to purify the silted organic deposits which almost fill these meres.

"Copmere was about fourteen days before the decomposition of the green scum set in; the surface of the water then began to give off a putrid odour.

"The prevalence of these green appearances is variable. They disappear and reappear, and occur in greater quantities in various parts of the Shropshire meres, but in Copmere last year they were generally diffused throughout.

"Copmere did not break in 1895, it remained very clear all summer and autumn; but a very singular fact is connected with this exception of breaking, in that a great quantity of fish died that year of a fungus-growth disease, whereas in 1896 none died, notwithstanding the mere broke badly.

"It is said of Blake Meer, one of the meres near Ellesmere, that this phenomenon does not occur, and the water there is selected for drinking purposes whilst the other meres are in the breaking state.

"In times past it was thought that the shedding

* Printed by Vyse and Hill, Church-street, Stoke-on-Trent.

of the seeds of the aquatic plants which grow on the borders of the meres was the cause of the breaking; but some years a commission of inquiry of three members of the Caradoc Field Club was appointed to investigate the subject, and much as I had hoped botanically to have had something entirely new to communicate, I have to confess that the murder was out before I knew of the phenomenon. The effect was traced to its cause, and in a paper read before the annual meeting of the Midland Union of Natural History Societies at the Quinta, Shropshire, by Mr. William Phillips, F.L.S., a scientific and explanatory account is given. I have the pleasure of acknowledging my indebtedness to this paper and also to Dr. McDowd, our encyclopedia of natural history, for telling me of its existence.

"I happened also to have a copy of Dr. Cook's voluminous work on British freshwater algæ, which helped me to identify what the microscope revealed.

"You will now be prepared to know that this breaking of the meres is due to microscopic algæ, of which various species cause the phenomenal appearance.

"Dr. Drummond found the green colour of the water of Lake Glaslough in Ireland owing to vast quantities of a flocculent oscillating alga.

"In Loch Hainining in Selkirkshire a rich purple colour occurs on the surface owing to the presence, according to Dr. Greville, of an alga of the genus *Lynghya*. In a loch near Aberdeen a species of *Rivularia* caused the peculiar appearance; another species, *Anabaena flos-aquæ* was also present.

"In the north-west of Shropshire occur, as is stated by Mr. Phillips, an extensive series of lakes interspersed with marshy land and peat-bogs drained by several small rivers, tributaries of the Severn. It is supposed that this lake region was, until post-glacial times, the site of one continuous inland lake through which the Severn flowed.

"In the Shropshire meres, upwards of half a dozen species of algæ cause the 'breaking.' I will briefly mention the meres and the species which severally cause the breaking, and later on I will show the magnified appearance of them in the lantern. The broken water is characterised by various colours, sometimes green, brown, purple, or red.

"In Marton Pool, the source of the River Rea, a tributary of the River Severn, *Clathrocystis æruginosa*.

"In Betton Pool, *Aphanizomenon flos-aquæ*.

"In Loch Hainining, Selkirkshire, it is *Lynghya vulgaris*.

"In Apley Pool, near Wellington, it is *Oscillaria ærugescens*.

"In Blake Mere, near Ellesmere, *Anabaena Hassalli*.

"In Berrington Upper Pool, near Shrewsbury, *Anabaena Hassalli* and *Cœlosphaerium Kutzingianum*.

"In Ellesmere, *Rivularia echinata* in July and August, but in November there occurs *Anabaena Hassalli*.

"In Newton Mere, the mere that breaks most in Shropshire, near Welshampton, 21 acres in extent, on Aug. 25, 1881, *Nodularia Harveyana* caused the breaking.

"In the Arctic Regions, *Protococcus (Palmella) nivalis*, red snow, gory dew.

"Most probably these minute algæ, having been born of last year's spores, remain at the bottom of the lakes during the winter and until they find a need for further growth and development, and for this, according to Mr. Blunt, they begin to absorb carbonic acid which they find dissolved in the water; and, in Mr. Blunt's words, 'under the influence of light the carbonic acid is decomposed, the oxygen is set free, and, thus liberated, adheres in globules to the algæ, causing them to rise into a fuller and stronger light,' and consequently growth.

(To be continued.)

WILLING'S PRESS GUIDE.—We have received from Messrs. James Willing, Jun., Ltd., a copy of their Press Guide. We remember this being started twenty-six years ago as May's Press Guide, and, having used it ever since, can recommend it as one of the best and handiest of all the guides to the newspaper and periodical press.

THE LATE JOHN HORROCKS.

AN APPEAL FOR THE WIDOW OF THE LATE JOHN HORROCKS, THE PIONEER OF FLY FISHING IN GERMANY AND FORMERLY ONE OF THE ETON ELEVEN.

In the *Fishing Gazette* for Sept. 18, 1897, I gave some account of a great sportsman, both with rod and gun, the late John Horrocks.

I was sorry to receive the other day an appeal from his daughter, Miss Minnie Horrocks, now a governess in Ireland, for help for her mother, widow of John Horrocks. The letter will speak for itself, and all I can say is that I am sure it is a genuine appeal, that I shall subscribe myself, and shall be glad to receive subscriptions from anyone who cares to send them to me for the widow. They should be addressed:

John Horrocks' Widow Fund,
c/o R. B. Marston,
Editor *Fishing Gazette*,
St. Dunstan's House,
Fetter-lane, London.

I shall ask German anglers to help also, as John Horrocks did so much for the sport of fly fishing in Germany.

Here is the letter of Miss Horrocks:

DEAR SIR,—In September, 1897, you published a portrait of my father, John Horrocks, with an account of his life, which I am sure has been read with interest by many fishermen. On this account I venture to ask you to make known to your readers that his widow and daughter are in very straitened circumstances. Last year my mother succeeded in starting a small boarding house, but she is in very great want of a small sum to furnish it properly, and thus enable her to support herself. I, their only daughter, alas! am not able to contribute much, as I am only earning a little as a nursery-governess. If there are any among your readers who remember my father and would help us, it would be most gratefully received. Apologising for trespassing on your kindness.—I am, yours truly,
MINNIE HORROCKS.

The following extracts are from the article by R. B. Marston on John Horrocks in the *Fishing Gazette* for Sept. 18, 1897:

"During the past twenty years I have occasionally referred to John Horrocks in the *Fishing Gazette*, and have often intended to give some account of this fine sportsman, whose name is honoured wherever fly fishing is practised in Germany and Austria.

"In 1874 Horrocks published his 'Art of Fly Fishing for Trout and Grayling in Germany and Austria,' the only work ever published in German which is almost entirely devoted to fly fishing. It contains five coloured plates, and a few illustrations of tackle in the text.

"Horrocks tells us in his preface that his work was written at the instigation of his friend, Count Münster, at that time German Ambassador in London; that his excuse for writing on the subject is that, although an Englishman, he had lived for thirty years in Germany, and had, in fact, almost become a German. 'But,' he adds, 'I am still English enough to regret that the art of fly fishing, so highly esteemed in England, is so little known in Germany,' and that to make it better known is the object of this book. In addition to his own experiences he gives translations of valuable practical hints from Ronalds, Ephemeræ, Francis Francis, &c., and makes most cogent appeals for the protection of German salmon, trout, and grayling rivers from the evils of poaching, over-fishing, and unfair fishing of all kinds, and the encouragement of fish culture and fishery laws and regulations.

"Having fished and hunted in England, Ireland, Canada, where he was stationed as an English officer, and many years in Germany, when he settled down at Weimar, in the Grand Duchy of Saxony, he devoted himself

strenuously to the improvement of the fishery laws of the Duchy, in which good work he was fortunate enough to enlist the sympathies of the Grand Duke Charles Alexander, to whom his book is dedicated.

"Every English fly fisher who has visited Weimar knows what splendid practical results Horrocks achieved in the way of improving the trout and grayling fishing in his stretch of the Ilm. Writing in 1877, in his invaluable 'Guide for Anglers in Germany, Austria, and Switzerland,' Max von dem Borne says (page 158), 'At Weimar, Herr John Horrocks, an Englishman, author of the excellent handbook of the art of fly fishing, rents a length of the Ilm, extending from Mellingen to Tiefert (about twelve miles). As a result of careful preservation and abolition of all netting, the stream is very well stocked with trout and grayling. The trout run up to 5lb., and are not allowed to be taken under 1lb.' In other places, in many works on fishing and fish culture, the greatest of German anglers and fish breeders refers in terms of high praise to the work of Horrocks.

"Horrocks was a good all-round sportsman, and writes with true enthusiasm on the subject. In one place he remarks: 'Well does the writer of these lines remember his feelings of pride when, as the best player in the Eton eleven, he was carried in triumph three times round Lord's cricket ground by his side after a match with Harrow. Even now, in my adopted Fatherland, I feel the greatest interest in the course of the game, and am deeply hurt when Eton loses.'

"I wonder if there are any traditions of John Horrocks' prowess at Eton still—he must have played for his college early in the century.

"Horrocks was born at Tullichewin Castle, Loch Lomond, in 1816; educated at Eton and Glasgow University. Entered the army, served in Canada, where he nearly succumbed to fever and malaria, having to be left behind when the regiment returned home. On his arrival in England went abroad to recruit his health, and, from the sheer accident of making an acquaintance en route, visited Weimar, which destiny seems to have marked out for him as his anchorage for life, for, with the exception of a few occasional visits to England, he lived here, ranking, by his wonderful popularity, as one of the first sportsmen in Germany, and an authority on all questions of a sporting nature."

FRENCH SEA FISHING BOOMS, &c.

In shallow water fishing, a great deal of latitude is allowable in the form of gear for salt water use, and as I have said in my work "The Sea-Fisherman," p. 33, fourth edition, "The methods of fitting gear for ground-fishing differ much in different localities, much more, in fact, than necessity requires, the truth being simply this—That any tackle which will work clear, and place the bait fairly within reach of the fish, will be sure to catch them, the form of the gear being bound, as far as success is concerned, by no arbitrary rules." In deep water other conditions arise for which provision must be made, in order that the gear may arrive at the bottom without fouling, and offer the minimum resistance possible in its passage upwards to the boat.

In fishing from piers and quays, the length of line is generally moderate, owing to the small depth of the water, and assimilates itself closely to fresh water angling on that account, so that the snood or trace soon arrives in sight, is quickly brought to hand, entanglement cleared, and the bait renewed; but in deep water fishing, as "Mr. John Bickerdyke" says, "we are met with the boom question," and even in shallow water it cannot be ignored in a tideway, and the tackle should be so arranged that the boom should point down the tideway by the action of the current, which I apprehend both the French and Mr. John Kirby's booms are intended to do.

If you fish in any depth beyond three or four fathoms, and look over the side down into clear water, you will often observe when two dabs are hooked, that they are apparently chasing each other in a spiral course towards the surface, putting turns into the hook link of gut, whether single or twisted.

It appears to me that a brass swivel is requisite at the eye of the boom to meet this contingency, which is therefore shown in the improved Kentish Rig in my work "The Sea-Fisherman," p. 38, fourth edition, in Fig. 2, b; in the Guernsey Rig, p. 35; in the Dartmouth Rig, Fig. 4, p. 39; in the Grapnel or Creeper Sinker, p. 40; and in the Snood or Sid Strap of the boat-shaped rig, Fig. 7, d, p. 42; also in the Kentish Rig, Fig. 44, in "Angling in Salt Water," p. 56, by Mr. John Bickerdyke, and in "Sea Fish," by Mr. F. G. Aflalo, in connection with the boat-shaped rig, p. 197, where he represents three swivels, one in the sid strap, and two in the snood or trace.

Mr. A. also says, "My friend 'John Bickerdyke' recommends above all other tackle the paternoster for whiting, but, personally, I have found nothing

beat, especially when after the large deep-water fish, the sheering tackle used by the Cornishmen, and described as a 'sid-strap' whatever that may convey." The sid-strap I have described above, it is also known as the fore-line, as it precedes the snood and hooks. The fore-line is the name at Padstow, and possibly elsewhere in Cornwall. It may also interest Mr. Aflalo to know that I used the boat-lead over sixty years since at Budleigh Salterton, Devon, and that the sheering lead was used by my man in my little 6-tonner the *Fairy* in 1857, who worked the two forward lines, whilst I worked aft a pair of brass boomed boat-leads, of which Mr. Aflalo has given as perfect a *fac simile*, p. 197, as if we had passed a day on board my little *Fairy* all those years ago.

In this connection I would mention that my "ancient mariner" always bent the stocks or booms to port or starboard, each time before casting the leads overboard, to ensure the sheering to either side, the stocks (a Fowey name) being formed of four parts of fishing line, or rope yarn, served or hitched over with tarred twine, and sometimes dipped in hot coal tar to preserve and further stiffen them. For over ten years we have been able to go one better than this, by adopting the half-breadth boat-lead, which was introduced, I believe, by a fisherman named "Easton," and has been adopted by all the Plymouth whiting boats in this fishery, developed to an extent for many years which makes it a very important feature at Plymouth, and in less degree as far east as Exmouth, and even to Beer, and westward along south and north Cornwall, and east as far as Port Isaac.

The cut Fig. 9, p. 45, shows how the half-breadth boat-lead may be cast by screwing a piece of wood against the half-mould. Brass moulds are used by C. and R. Brooks, 62, South-side-street, and Mr. W. Hearder also showed his own patterns at the Imperial Institute Fisheries Exhibition, whilst I showed two of this form from C. and R. Brooks, vide also eleventh line from bottom, p. 45, in "The Sea-Fisherman."

Regarding the effectiveness of the French booms, I see no objection in shallow water fishing to their use, but if you use wire stiff enough to remain unbent by good sized fish, and you have three booms on the paternoster, you will find that the obstruction the rectangular position of the booms involves to the upward course of the gear is unpleasantly evident in fifteen to twenty fathoms, and is increasingly felt in thirty fathoms of water which is the depth of the whiting grounds off Plymouth and Dartmouth, although the fish come into less water in autumn and winter, in fact, at times quite close to the shore.

The paternoster is especially a form of gear made effective by the angling rod, because the rod keeps the line clear of the side of the boat, but is not nearly as pleasant to use on a handline, as the hooks are liable to catch the side of the boat, and the lead being below the hooks gives less freedom of action in baiting than either the boat-lead gear, the Dartmouth Rig, or the gear used with the Banker's or Newfoundland lead, and all these descend spreading their gear as they sink, assuming a nearly perpendicular position when the whole of the line has run out.

The strong point of the paternoster appears to be that given a bottom clear of obstacles, the conical or other lead can rest on the bottom, and a bite can be quickly felt on that account, but if the bottom is foul, i.e. rocky, as on pout ground is often the case, or sometimes even craggy, leads will be often lost in the endeavour to fish low down. On the whole the half-breadth boat sheering lead is, I think, the best, for all the thousands of whiting landed at Plymouth are taken with it, except those caught by Teignmouth or Dartmouth boats who come to fish for Plymouth market, and use their local rigs as before mentioned.

J. C. WILCOCKS.

A TROUT NURSERY ON THE ITCHEN.—This is the title of a very interesting illustrated article which appears in the current number of the *Sketch*. Mr. Edgar Valentine Corrie's fine Itohen River Trout Breeding Establishment at Chilland, Winchester, Hants, is the one described, and much useful information about it is given. The illustrations are entitled "The Fry Ponds at Chilland" and "The Yearling Ponds at Chilland" (from photographs by H. W. Salmon, Winchester).

JAPANESE FLY FISHING.

(Continued from page 151.)

Now, having sketched the method, I must go into some theoretical considerations.

First as to flies. I was surprised and delighted to find an old favourite, the brown hackle, also the favourite of the Japanese. (By the way, I remember good old Cotton says when you are in doubt as to what fly to use to fish with a dun hackle until you catch a trout, then cut him open, see what flies he has been eating, and tie accordingly. Why not continue to use the good hackle to catch other trout?) But I digress. I only wish to show what all know, the standard and long-known killing qualities of the hackle.

Thinking of this almost universal fly, and watching the Japanese use it in their life-like way, I was led to compare its looks with the natural insect while flying, and I think if anyone will look at a lightly feathered hackle and then at the appearance of an ordinary river fly in

motion the great similarity will be apparent. A fly while flying does not look to me like Fig. 1, but like Fig. 2. The wings do not appear as clear outlines, but as a gauzy haze on all sides of the body.

I should much like to see a photograph of an insect in rapid flight, or with wings in rapid motion, and one of a well made hackle, tied as I have indicated the Japanese tie their flies. I hope some time to make these photos. The theory of the fly in motion is my own, and I have never heard or seen it. The Japanese do not seem to know of it; but both they and their foreign fellow fishers use the hackle.

I submit this theory for consideration. If the theory of the flying insect is correct, it is easy to see why the two shades (yellowish gray and reddish brown) will practically cover about all insects likely to be taken by trout. Watch the river insects while flying, and the gauzy halo of their buzzing wings will almost always fall into the two shades mentioned. (A most interesting article on the colour sense in trout's eyes in the *London Field* occurs to me here, but it is too lengthy to go into.) If this wing theory is correct, the bodies only need change to represent about all the needful flies. The Japanese fish the year round with these two shades, for what I claim as the wing effect of the insect in flight, and their method evidently represents the fly alive and struggling to get off the water, using his wings to the utmost.

The theory that the hackle represents the buzzing wings of an insect may be held to be true only while the insect is on the surface or above it; but who can say that the trout can tell, from his position, just where water ends and air begins; and may he not misjudge a bit or take even the submerged hackle for a buzzing, winged insect? I find one can theorise endlessly on this subject, and if anyone knows positively about such things, I trust to be enlightened.

Please do not think I attempt to make light of the success of either wet or dry-fly methods. The drowned insect in a faint light, in discoloured water, or to the voracious trout of a wild or little fished stream, is no doubt an attractive lure, while the beautiful English imitations of flies (some with their fish-scale wings, so real as to be practically indistinguishable from the true article) must, if dissociated from a line and gut, deceive any trout; still I think this new method, or rather this old one, is worthy of careful consideration.

Numerous points in favour of the Japanese method suggest themselves to me.

The absence of disturbance in the water by gut

or line seems a very important thing, at least we know it is in our crystal streams.

The struggling motion of the fly seems as if it must tease a trout which is supposed to be a bit "touchy" and combative. Mr. Taylor thinks he "teases them out"; and I have seen a Japanese fisher tease out a fish which I believe to be one he had actually touched at an early cast, and after a dozen more casts finally land him. In watching an expert Japanese I have been almost irresistibly tempted to seize a stone, and kill the teasing, struggling fly. I have had frequent experience of fish coming out after dozens of casts had been made in the same spot.

I find that I have not mentioned that important point, the strike. This, in the Japanese style, is sharp and very quick; but what I wish to claim is that the line, being always taut, enables the strike to be given most quickly, while the motion being down stream and the rod invariably below the fish puts the fisher in the best position to hit a fish rising, as I think they do, from down stream up at the fly, which is losing ground at about the speed of the current. This is a point which the fisher in this style must carefully practise, viz.: to have his fly always going down stream, or but slightly across, and not to have its speed much if any above that of the current. It must struggle to escape, but continue to be swept down stream.

I wish also to submit a few theories and guesses at concealment in fishing. I have seen, and doubtless all anglers have, a wary trout dart frightened from a pool even when approached from behind a huge rock, and with the sun directly in front of the fisher, so that almost no shadow could touch the pool even from the extended rod. In such a position I have had a startled trout dart to within a few inches of my feet at the first slight movement of my rod in the air, showing that he observed the least motion, but was unaware of the direction of the maker; on the contrary I have, within a few minutes, taken three fair fish in succession from a rock in mid-stream, on each occasion floundering across the stream to the shore to land my fish and having my shadow as well as that of my rod go right across the pool.

These things seem rather contradictory, but I have a theory which brings them somewhat nearer to agreement than at first seems likely.

I have noticed, by experimenting on gold fish in a globe, that the first sudden motion alarms the fish greatly, and they dart quickly about; the next motion of the same kind alarms fewer fish; and finally, if the same motion is kept up, the fish gradually cease to notice it at all, lying quiet. Now, if the motion be changed, say from a quick movement of the hand to a sharp tap on the globe, the same process is again gone through with. I have tried this with trout in a pool. On a hot, still day, with the water like glass, I have carefully worked my way close above a fine pool, in the "still deeps" of which were lying some twenty or thirty trout of all sizes. The first cast startled every fish, and a few of the very largest left the pool. The next cast alarmed the fish less, and finally all ceased to move as my fly lit on the surface. It was a hot, still day, with not a fish feeding; all lying in the deeps. The water below me was as clear as air. I stood perfectly still in plain view of the fish, which I could see perfectly clearly, and kept on casting. Finally a fingerling grew interested in my fly, followed it once or twice, and at last made a shy snap at it.

I detail this at such length because I think it bears on the subject of concealment and "teasing." While perfect concealment is undoubtedly the best of all modes to throw the wary trout off his guard, he is so very quick and cunning that it is very difficult to get into a position of complete concealment.

Now, while I have little doubt as to the teasing nature of a bold trout, I think that, aside from his combativeness, he gets used to a frequently repeated movement of a not too violent nature, and that a fisher standing perfectly still (of course, taking all possible pains as to sun and shadows, background, &c.) can, by a series of casts made with as little motion of the arm and rod as possible, and each movement as nearly as possible alike, accustom a trout to the movement—interest him in it; and if his fly is well worked and has a lively natural look, at last tempt him out.

Probably the largest and most knowing fish often run away; but I have several times found

they only sank well out of sight under some cavernous rock, and were at last tempted out to take the fly within 15ft. to 25ft. of the fisherman.

I have spun out a length of yarn which will, I fear, exceed even your ideas when you told me to write you at length; but you know the enthusiasm of a brother of the angle, and will be lenient, or cut as you see fit.

I wish the season of my short stay in this country was such as would permit me to have a day with you on our home waters, where we could practice a bit together, and give me a chance to test our "snagging," as we call it, beside your skilful work in the orthodox mode; but that day must be postponed for a while. It shall come, though, one of these days.

I must add in closing that while using the Japanese method of casting, their length of rod, line, and leader, with the single fly, I have put line guides and reel seat on my long Japanese rod, and thus take the advantage of the many delights and benefits of using the reel as in the usual method of fishing.

I feel that I have imperfectly explained this method, and should be glad to answer any questions which may occur to you on reading my letter to the best of my, as yet, rather imperfect knowledge; but I must say that my success, the great similarity between the Japanese and the Taylor style, together with the unvarying good results observed in the practice of these modes of fishing, give me great confidence that the method which I should like to call "snagging" (in imitation of a devoted brother of the angle and dear friend), has points worthy of the best thought of our thoughtful fraternity.—J. O. AVERILL (in *Forest and Stream*).

A DAY'S FISHING IN NORMANDY.

"HOLLOA!" said the cheery voice of Prince Michel Stourdza, as he drove up to my hotel in Dieppe. "The May Fly is on the water, and I am off fishing to-morrow. Will you come, too?" The next morning was beautifully fine, and about ten o'clock I find myself behind a spanking pair of horses, spinning along on the way to the fishing ground through some of the loveliest scenery in Normandy, past the golf links, and down the long, winding hill into Pourville, at which village the little river Scie runs into the channel. Turning to the left, we followed the course of the stream for some miles until we reached our destination. The horses were soon put up in an old stable, and when the Prince had arranged his fishing gear he made his first cast just above an old mill dam, and worked his way slowly up the stream. When we had gone some few hundred yards Henri, the coachman, joined us, and the fisherman standing well out of sight, made a pretty cast. A fine trout rose and took the fly, but not finding it exactly what he expected, rushed across the river, and, after several minutes' play, managed to get the line entangled in some sticks. "Quick, Henri," cried the Prince, "the landing net, or he will get away." Henri, net in hand, leant as far as he could over the bank, but alas! the fish was just out of reach. So, like a true sportsman, he jumped in up to his waist in water, and amidst breathless excitement a fine trout was landed. Up to luncheon time not another rise was to be had. The fish absolutely seemed to be laughing at the vain endeavours of the angler. Nothing would induce them to look at the fly, when just as we thought it was time to be starting home a fish of $\frac{3}{4}$ lb. was hooked and landed. In the course of half an hour thirteen more—none under $\frac{1}{2}$ lb., and all in splendid condition, as firm as rocks—were lying on the sward. We drove home well satisfied with the day's sport. In the evening I dined with the Prince, and helped to eat the trout, which had been deliciously cooked by his chef. I may here state, for the benefit of fishermen who do not know Normandy that excellent fishing is to be obtained almost for the asking, especially round Dieppe, where sportsmen are welcome. P. H. BENICKE.

A COMPLIMENTARY DINNER is to be given to Mr. T. J. Hamp, managing director of the Holborn Restaurant, in the King's Hall, on April 6, to commemorate the twenty-fifth anniversary of the opening of the establishment he has during that time so successfully controlled.

BARBEL IN MOROCCO.

WE had arranged to start on our trip at night, and accordingly, at about 11 p.m., our cavalcade made a move from the front door of the Continental Hotel, Tangier.

It was a very hot time of year, being the middle of July, and as the ground we were making for was some sixteen miles distant—to be reached only by a bridle-path over hills and dales in that roadless region—night travelling was by far the most convenient and comfortable style of locomotion for man and beast.

My friend Cavilla, my constant guide and counsellor in all our sporting trips, had said that he knew there were lots of fish in a certain river, though of what sort he was quite ignorant, and that quail and hares were to be shot in the neighbourhood, so we started with the highest expectations, as well as good store of creature comforts, guns, fishing rods, and requisites.

The party consisted of Cavilla who rode a donkey; two Spaniards, Antonio and Bastian, who also rode donkeys; an Arab boy, whose name sounded like *Boomright*, a cheerful and useful lad whose knowledge of English was very limited, but who rang the changes on his small vocabulary of English words with a fluency and volubility marvellous to listen to; and myself, who was mounted on a mule. There were also two baggage donkeys laden with all our things, which were under the guidance of "Boom," as we called him for short, and on which he rode alternately throughout the journey.

Each of the Spaniards carried a double-barrelled muzzle-loader, so that with these and our breech-loading guns and revolvers we were a fairly well armed little band, and this is a very necessary precaution when travelling in Morocco.

There is something very weird in riding through the streets of Tangier at night. You pass through dark and narrow alleys scarcely 12ft. wide paved with stones worn as smooth as billiard balls, and every now and then almost trip over some sleeping Arab mendicant, who is lying enveloped in his cloth by the side of the wall, or else charge full tilt into a lot of Moors coming out of a mosque. At night the streets are fairly clear of animal traffic, though during the day they are crowded with horses, mules, and donkeys; but there are still a good many drinking shops open, where Spaniards and Frenchmen are smoking and card playing; and the market-place, dimly lighted with the electric light, always has a lot of strangely garbed natives, chiefly Arabs, moving about it. These and the group of dozing camels and donkeys which are all around make a strange spectacle when first beheld by European eyes.

Some twenty minutes' riding took us out quite clear of the town, and well on to the track through the country. On all sides were endless fields of corn, chiefly in ear, but some of it in stubble, as the reaping season had just begun. A very rugged track it was, and one far better suited for a donkey or mule than for a horse.

In fact, for travelling on a sporting trip, as distinguished from a mere ride for pleasure, commend me to a mule. They are absolutely sure-footed, and can amble, if necessary, six or even seven miles an hour with ease.

The donkeys are, no doubt, very good for those who can ride them, but one needs to be "to the manner born." The saddle is a ponderous affair, weighing, roughly speaking, 40lb., so broad that sitting astride on it is next to an impossibility; it is, in fact, as Mark Twain with quaint truth says, like "straddling a dining table."

The correct mode of riding is to sit side-saddle fashion, and this is not easy. The way in which Cavilla, or the men, or young "Boom" could hop off and on, and steer the donkey with the ragged little bit of string which does duty as a bridle, was simply a wonder to behold, and excited the greatest envy within me. Donkeys are, of course, the cheapest beast to hire. The equivalent of two English shillings will hire one for a day; a mule is charged at about 5s., and a horse at 10s. a day. These points are worth considering when one intends to go on sporting trips to any extent from Tangier.

The track was bad, the night dark, and the donkeys slow, so we could not travel fast, and it was not until an hour before dawn that we called a halt.

The animals, in charge of "Boom" and Antonio, were sent on to a convenient place on the banks of the river we intended to fish, and C. and I, taking Bastian and the pointers, started as soon as it was light enough to shoot quail. We had capital sport, bagging twenty odd brace, besides a few hares and rabbits which were found among the bushes bordering the river, and by 11 a.m. we reached our camp, which was pitched under a fine, large fig tree on the banks of the stream, and found a good breakfast awaiting us.

As may be imagined, the heat was very great, and after breakfast we were glad enough to take a *siesta* under the shade of our tree. Towards the cool of the afternoon we began fishing. The stream was a sluggish, muddy ditch with high banks covered with scrub, and having a great deal of a kind of water lily growing in it. It struck me from the first as having a "pikey" look, not that it contained any of the species *Esox lucius*, but it simply teemed with barbel.

We baited with worms, which C. had procured at Tangier before we started. They were beastly looking things, not a bit like any I have ever seen in England, but they appeared to tempt the fish amazingly.

From the way in which they bit I should imagine that they had never been fished for before, for anything like the ravenous manner they attacked the bait as soon as it was put into the water, it has never been my lot to witness before or since.

All the tackle was supplied by me. Luckily, I had brought out with me a lot of useful gear in the way of gut, hooks, stout casts, and a couple of reels with lines. Thus I was able to supply Cavilla with everything except a rod. There is no place in Tangier where fishing tackle of any kind is sold, at least, I could not find any. The sea fishermen make a primitive kind of hook and line for their own use, and a long stick does duty as a rod.

However, C. managed to borrow a fearfully and wonderfully made thing, which, having two or three rings at wide intervals upon it, might be called a rod, so with my reel and line and hooks, he was quite happy.

I used a favourite old rod, with which I have killed many hundredweights of trout with fly, worm, and minnow during the last ten years. It is one of Gillett's whole-cane rods, and, although it has done the roughest work, including mackerel, pollack, and bass fishing, in addition to its legitimate duties, it is still as useful as ever. But to return to our Morocco barbel. We baited with worm, and, using no lead nor float, flung out into the middle of the pool. No sooner was the worm near the bottom, than away would run the line. A slight pause to let him get it well into his mouth, and then—a strike, and there was a barbel kicking and tugging for all he was worth, and a few seconds afterwards he would be on the bank.

Voracious though they were, however, we noticed that after catching three or four out of a pool, the other fish became shy, and would not take the bait with the same confidence. Then we moved on to another pool, and the same scene was enacted. They were game fish, and showed good fight, but they were small; the greater part of them averaged about $\frac{1}{2}$ lb. weight, but we got some over 1lb., but not one that reached 2lb. Once I hooked and lost a big fellow which may possibly have been a 3-pounder, but, of course, it is impossible to say.

For my part I soon got sick of catching them, but fishing was a new experience to Cavilla, and he stuck at it all that evening and again next morning, while I went after the quail. I could not help thinking what a paradise this place would seem to the Stoke Newington or Ponders End sportsman, who bobs away so patiently for little dace or gudgeon.

Such a pile of fish, considerably over 100, as C. and the men arranged on the grass in front of the camp, the Arabs in that locality had never before seen. C. could speak Arabic, and asked them if they ever caught any for themselves, but it appeared that they never attempted such a thing.

We tried to eat these fish, but they were not nice, and we were very glad to give them all away to our Arab friends. The women carried them off in baskets.

HERON.

DAPPING AS AN ART.

Necessitas non habet leges. This old maxim is not quoted to show my learning, but having had the sentence well whacked into me in my school days, it always comes uppermost in my mind when I am entering on any subject which some people at first sight may consider encroaches on "art."

"Art," says a reader, "this is not an art journal. What brick wall is 'P. T.' running his head against now?"

"Is it not an art journal? Well, then, what the dickens is it? If fishing in all its branches is not an art, I fail to know what is, therefore I will proceed to carry out my intention of describing what I have not the least hesitation of calling "Dapping as an Art."

Most of you will no doubt have, in your minds, only associated "dapping" with the pastime, as so admirably illustrated by Furniss in Burnand's "The Incomplete Angler," called the "Tour de Nail," when Venator stitches the beetle to his finger, but the mode I will attempt to teach you has no stitching connected with it, so you may dismiss that horrid dream and listen to my explanation.

That "circumstances alter cases" cannot be denied, and I would beg to put forward that the plan of fishing with which I am about to deal may conscientiously be employed if the seasons continue to remain in the same arid state that they have been for the last four years, because it is not to be expected that men who only have their month (and I fear many much less) "off" in which to indulge in trout fishing, should be content to go day after day back to their "diggings" with an empty basket. Yet there must be many sufficiently enthusiastic sportsmen who will not care to catch fish by the old game of what I will call "common dapping," which I do not think can be permitted to rank in the category of true and artistic sport.

The manner of fishing to be described is not practised on many streams, nor by many modern anglers, but where it is it has proved most killing, and is an excellent way of circumventing some of those overgrown cannibalistic trout who do so much damage to our streams, and whose *habitat* is only to be entered by this means. Not only do these monsters devour all the small trout that come within their reach, who have been foolish enough to leave their weedy shelter, but they are most arrant bullies of the first water, and a more "dog-in-the-manger" brute does not exist. Though they may often not require much of the food which is continually passing down, by, through, or over their "holt," nevertheless, no fish not their own size dare venture to take one morsel from their richly supplied domain. I fear I am digressing from my subject to a great length, and unless I had the object in view of showing to what great advantage the "art" may be serviceably applied I would not have trespassed so far on the reader's patience, but now I will continue to carry out my purpose. First I will show you how the "art" is performed, and then tell you how to dress your hook so that it will retain the bait in its proper position, and not slip off during the work it is called upon to undergo. I will also give you the names of those insects which always have been found, and are, no doubt, most killing, and the best means of carrying them so that they may come easily to hand when required.

The rod to be used is an ordinary fly rod, but it is better that it should be of the stiff kind rather than of the flexible nature. The line and reel are of the usual description. The cast, or, as it is sometimes called, the collar, should be about 2ft. long, and the hook No. 5 (new series), of the round bend kind. The rod is held in the usual manner, that is, above the reel at the balance (the balance of a fly rod is a matter which, though, of course, known to the "old division" to be of the greatest importance, is seldom taken into consideration by a tyro, so when found make a note of). Now take the cast, which should reach the reel, in the left hand, holding it 6in. from the hook. Then place the rod in a horizontal position by bringing the right hand (unless you are left-handed, then all must be done *vice versa*) close against the hip joint on the same side, the knuckles turned downwards. Now raise the left hand in a line with your left eye, and draw the cast which it is holding back until opposite the ear,

thus curving the top of the rod, at the same time taking sight at the place in which you wish to place your "dap." Having done this, let go your hold on the cast and the bait will fly to its destination. This necessarily will require some practice to get perfect, but when it is learnt makes it pretty work, enabling you to "reach" many spots in which it would be impossible to place an artificial fly, cast you never so skilfully. But this is not the only position from which it can be used. Hold the rod in the same position as described, only leaving the knuckles turned outwards, and draw the cast at arm's length, which should slope at an angle of some forty-five degrees from the shoulder, as far back as the left hip joint. Now let go, and the bait will travel round the segment of the circle, by which means you can place it under bushes nearly touching the water.

Let me now tell you how to properly dress the hook. For this there are two methods. The first is by (I am naturally supposing, of course, the reader knows how it is usually done) using a silk generally called "button-hole twist," and when you have brought it up the shank from opposite the barb, go down again in the same way, continuing until you reach the middle of the bend—that is to say, half-way round towards the barb—and you will find that the bait thread on this will "stick fast." The other mode is better for the softer insects often used. This is done by cutting some of the bristles from a clothes brush, and now, using the usual tying silk, lace one of them to the back of the shank, commencing opposite the barb, to half-way towards the head; then turn the bristle back, holding it between the thumb and finger of the hand in which you have the hook, and continue to wind the silk up the shank, finishing off in the general manner. Now release the bristle from your hold, and it will fly up parallel to the shank. To bait a hook dressed thus, take your "dap" and thread it (head downwards) on as far as where the gut joins the hook and until the loose end of the bristle shows; then pull that from the shank and push the bait down as far as where it is tied to the shank. Now, thrust and throw as you may it cannot slide off.

The best and most commonly used insects for this work are the Bluebottle, Grasshopper, Tab Fly, and Oak Web. The first is good, the second better, and the third best. The last named is most excellent in wooded districts. These may be carried in a large-mouthed glass bottle having a metal top, fitted with a small sliding disc working on a screw pivot (which can be tightened or loosened as the case may require), covering a hole sufficiently large to admit of their egress. A round tin box, with the inner rim fitting tight up to the lid, is also a handy receptacle. Cut a piece out of both the lid and box, and by twisting round the former until opposite the aperture in the latter there will be an opening through which they will crawl as soon as "daylight does appear."

Reaching thus far reminds me that I have not told of another time when dapping may be employed in the manner described above with a clear conscience. Sometimes you will come across portions of a river where, from the amount of timber growth and waterstave lining both banks, it is impossible to throw a fly even by a "past master." Yet, by wading upstream, all such places may be thus fished with great success.

PHEASANT TAIL.

A 4LB. GERMAN PIKE.—The *Allgemeine Fischerei Zeitung*, of Munich, in its number for March 1, reports that a giant pike was caught by Mr. Fishmaster Weber in the Szinkuhner Lake on Feb. 16. It was 1½ metres long and 38 German pounds in weight. This would make it a little over 58in. in length and a little over 4lb. in weight by our measures.—ED. F. G.

GOOD TROUT FISHING WANTED.—Mr. K. Douglas, Prestonbury, King's-road, Clapham Park, London, S.W., is advertising in our columns for a house with some good trout fishing in a bracing place. If any of our readers want to let such a place they will find further particulars in Mr. D.'s advertisement.

GRANT'S CHERRY WHISKY.—This attractive "pick-me-up" is a pleasant combination of Kent Cherry Juice and very soft old Scotch Whisky. This and Grant's Morella Cherry Brandy are sold by Wine Merchants.

THE RAINBOW TROUT.

MORE INFORMATION FROM MR. LIVINGSTONE STONE.

MY DEAR MR. MARSTON.—Since writing you last I have been in communication with two men, both of them famous fishermen, who have had a good deal to do with rainbow trout. One of them is Mr. Myron Green, who, for several years, was superintendent of the United States Trout Station on the McCloud river in California, from which station all the rainbow trout that have been distributed over the world by the U. S. Fish Commission, were originally obtained. The other man is Mr. M. L. Dunning, who has not only fished many of the streams of California containing rainbow trout, but has also been in the employ of the U. S. Fish Commission at Baird Station on the McCloud for several years. Both of these men have had opportunities for handling and studying rainbow trout that few others have had, and being fishermen to the backbone, they can hardly be excelled as authorities on the subject.

Both Mr. Green and Mr. Dunning agree that the rainbow trout are not cannibalistic in their habits. They also both agree that at certain times and at certain ages the golden band is absent, that the smaller variety of rainbows inhabiting the smaller streams very often do not possess the golden band at all. Mr. Green does not wish to express a decided opinion concerning their tendency to go to the ocean, as he has never been among these trout near the ocean. Mr. Dunning is quite of the opinion that they do go to the ocean under some circumstances.

Please allow me to quote a little from the letters of these excellent authorities. Mr. Dunning writes as follows, from Baird, California, under date of Jan. 30, 1899.

"Three years ago, about 300,000 young salmon were fed here in the troughs until the latter end of May, when they were planted in the McCloud river. For the next seven or eight days after the planting I caught over forty trout, of 1½lb. and upwards, and opened most of them immediately, and in no instance did I find any of the fish or remains of the fish that we had planted. At other times while fishing I have often examined the stomachs of trout caught, and it was a rare exception that anything was found that would indicate that they were feeding principally on young fish. My opinion is that rainbow trout are not natural cannibals, though when driven to it by hunger they might become such."

Mr. Dunning continues: "In fishing the waters of Hatchet, Roaring and Montgomery creeks, mountain streams and tributaries of Pitt river, (the Upper Sacramento), I have caught as high as twelve dozen in a day, many of them fully matured and parent fish, and none of them showed the golden band. If these are the real rainbows, my opinion is that they do not show the golden band in all waters."

In regard to these fish going to the ocean, Mr. Dunning says: "I was sent to Olema, Marin Co., Cal., about one year ago this month, to assist in hatching out 2,000,000 salmon eggs. While there, we spent part of our time seining in Paper Mill creek at a place called White House. This was in tide water (we often having to wait until the tide went out, in order to seine), about four miles from the ocean. We caught a large variety of fish, but by far the largest number were rainbow trout, which I should say were about a year old. As these trout were miles below their spawning beds, I was strongly of the opinion that their course was downward, and that they were on their way to the ocean, and in quite large numbers."

Mr. Green writes as follows on the same subjects: "I have opened a great many rainbow trout on McCloud river, but have never found any fish in them except young salmon that were very young. I have never seen the large trout trying to eat the small ones, and I do not think that they are destructive to other fish. I have kept large and small trout together in the same pond, and the large ones did not disturb the small ones, but if they were starving, perhaps they would."

About the golden band on their sides, Mr. Green says: "I do not think it shows much on the young fish at one year old. I think it shows but

very little at two years, and not very much until the fish is full sized. Full-grown trout carry the golden stripe all the year round, but it shows plainest and is brightest at the spawning season. The trout in small streams do not grow as large as in the river, and show the red stripe but little.

In the river, the large males show the stripe the most, but I have seen large females that did not have the stripe at all.

As mentioned above, Mr. Green gives no statement of opinion about the rainbows going to the ocean.

I hope you will kindly pardon the length of this letter. I did not mean to make it so long when I began, but I thought you would like to have this testimony that I have just had an opportunity to gather, in regard to the much-talked-of rainbow trout. Very truly yours,

LIVINGSTONE STONE.

Cape Vincent, New York, Feb. 20, 1899.

[This is very interesting information, because it certainly bears out the experience of those German fish breeders who say that, after being in the river some time, the rainbows drop down stream, and disappear in the sea. For this reason we believe this fine fish will do best in waters from which they cannot escape.—Ed.]

"SPRING FEVER."

THE lilac buds are bursting, the primroses and violets are welcoming the sun; the birds are trying their voices and putting on their company manners with a view to matrimony; all nature is awakening; and once more—as it always does at this time—the fever is upon me.

Ah, that fever, need I name it? That intense longing to be at work once more, to be up and doing. Nature cries out to me with irresistible voice, and my whole being thrills in answer.

Yet the path is beset with difficulties. Unfeeling people, dull soulless clods, place innumerable obstacles in my way. The chief offender is the partner of my joys and griefs; alas! that it should be so, but I must be generous, for how can those whose hands know not the feel of the round, smooth handle, appreciate the joys of wielding it in the glorious time of spring? As I take my favourites from the corner one after the other—the long and sturdy one (the searcher-out of inaccessible places), the medium one, and the light, short, dainty one, fit for a lady's delicate hands—I finger them lovingly and longingly. Methinks I can almost hear the splash and bubble of water, feel the perspiration beading my brow and the dampness penetrating my boots. In imagination I gaze on the newly awakened flies, the elegant tracery of the spider's web, the softly hovering dust that sparkles in the sunlight, while all round waves the graceful yellow broom. The blood courses through my veins, the fever is strong upon me. What care I for the black looks and wrathful words of my better half! Nothing shall stop me; to-morrow I shall. I must, begin the campaign. What! Fishing! Who was talking of fishing. Rods? Why, I never mentioned such a thing. I was talking about my brooms, you stupid man. Fishing fever, indeed! It's only you men that have complaints like that. I was talking about spring cleaning.

MRS. OYSTER.

SOME ITEMS FROM FARLOW'S NEW CATALOGUE.

For a rod, reel, or any other article of fishing tackle to bear the name of "Farlow" is as good a guarantee of its sterling quality as it is possible to get. The new catalogue just published extends to over 150 pages, with hundreds of well-made illustrations, and a good index. Being only 3½ in. by 5 in. in size, the little book takes no space in the pocket of the fishing bag or creel. Among many items to which we are glad to call attention are the following:—

THE PENNELL "PERFECT" SPINNING FLIGHT.

Reg. No. 260,952. Made in two sizes. For pike suitable size bait should be 4½ in. to 5 in.; for salmon, 3 in. to 3½ in.

Mr. H. Cholmondeley-Pennell writes: "I enclose the Flight; it will spin either of the baits en-

closed, 4½ in. to 5 in., 'excellently well, brilliantly, in fact.'"

Method of mounting: Flanges should be opened, then lead pushed down through the mouth of bait into its belly, well down, so that the hooked flanges can be thrust through each side by the gill cover, as illustrated; one hook of middle treble should then be inserted in the back to give the bait a slight twist, as illustrated.

It is certainly one of the lightest and most effective natural bait spinners on the market. So many of these spinners are so heavy, that except by being drawn much too fast, they will hardly turn round in the water when baited.

THE "PORTMAN" FISHING BAG.

Invented by the Hon. E. W. B. Portman.

Mr. Portman writes to Messrs. Farlow: "The fishing bag you made me was far superior to anything I have had before."

It is made of tanned extra stout waterproof

instantly be got at when required, and jerked open ready for use with one hand.

LEATHER CUP AND STRAP.

This is for holding the butt end of rod. The pattern was given to Messrs. Farlow by Mr. E. Oakley, who has fished the "Alten" river in Norway with great success. It is made of the best leather procurable. The cup has a supporting frame of metal, which so strengthens it that for the heavy work for which it is intended it is invaluable.

We strongly recommend this little affair to all who have to press the butt of the rod against the body, as is so often the case, especially in spinning. Serious injury may result from the continued pressure of a heavy rod on the groin or side.

PRAWN BOX.

This box is made of japanned tin, black outside, white inside, divided to take eight prawns on

THE PENNELL "PERFECT" SPINNING FLIGHT.

THE PENNELL "PERFECT" SPINNING FLIGHT. (Mounted.)

LEATHER CUP AND STRAP FOR HOLDING BUTT END OF ROD.

PRAWN BOX.

FOLDING STEEL GAFF, WITH SLING AND CARRIER.
Invented by the
Right Honourable Sir Herbert Maxwell, Bart., M.P.
Registered No. 300,736.

THE "PORTMAN" FISHING BAG.
Invented by the Honourable E. W. B. Portman.

canvas. The back bag, which is intended to carry fish, is removable, and can be thoroughly cleansed. The front bag is so arranged that it contains two pockets expanding, attached to the back part, which can be utilised for holding flask, sandwich case, fly box, &c., and the main part is most commodious, also expanding. The size is 19 in. wide, 15 in. deep, and it certainly is one of the best fishing bags we have ever seen.

FOLDING STEEL GAFF WITH SLING AND CARRIER.

A very portable and convenient gaff for gentlemen who prefer to gaff their own fish; is carried in a leather shield slung over the shoulder. Length of gaff when folded, 18½ in.; open, 36 in.

Sir Herbert Maxwell, who invented it, happened to look in when we were writing this notice, pointed out that the illustration, though very good in other respects, represents the sheath of the carrier as too big—it is really flatter, and not at all inconvenient or bulky to carry. The gaff can

tackles for immediate use, a great convenience when so much fishing impedimenta has to be carried. It was designed by a thoroughly practical salmon angler, and is made in various sizes, a vast improvement on having to fish a prawn out of a glass bottle containing glycerine and bait it on a bitter day. The crayfish being common on some mahseer rivers, we should suppose that prawn fishing for mahseer might be found as killing as it is for salmon.

There are many other things in this list to which we should like to call attention but for want of space; we can with full confidence recommend all who have not done so to obtain it.

AN unpublished and very important letter of Daniel Webster appears in the March *Scribner's*, in Senator Hoar's *Reminiscences*. It is the last anti-slavery utterance of Webster, and is dated Aug. 23, 1848, and addressed to Hon. E. R. Hoar.

THE FISHERIES EXHIBITION AT THE ROYAL AQUARIUM.

THE eighth annual exhibition of fishing tackle, &c., opened on Wednesday, March 8, and will remain open until April 5. Although not quite "settled down" to business on the occasion of our visit, the various stands made a grand show. A full account will appear in our next issue (March 18).

Amongst the exhibitors we noticed (in order of the catalogue):

Stand 3 and 3A.—Messrs. Hardy Bros., Alnwick. Branches: 61, Pall Mall, London; 12 to 14, Moultrie-street, Manchester; 5, South St. David-street, Edinburgh.

Stand 13.—A. Carter and Co., 137, St. John's-street Road, London, E.C. Factory, 1, 2, and 3, Myddleton-place. Timber stores, Martin's-place.

Stand 15.—Messrs. King, Malcom, and Co., 19, Leicester-square, London, W.C., practical water-proofers, wader, coat and cloak makers.

Stand 20.—Ogden and Scotford, Pittville-gates, Cheltenham, and at 19, Leicester-square, W.C.

Stand 21.—The Army and Navy Co-operative Society, Limited, 105, Victoria-street, S.W.

Stand 24.—David Slater, Newark-on-Trent.

Stand 28.—John Enright and Son, Castleconnell, near Limerick.

Stand 29.—J. W. Martin, "The Trent Otter," of J. W. Martin and Co., 8, Seymour-street, Euston-square, London, N.W.

Stand 30.—T. Bowater Vernon, inventor and patentee, 16, Brook-street, London, W. The Ceres letter and card files, cabinets, &c., illustrating the Ceres system of keeping letters and papers.

Stand 37.—F. J. Ogden Smith, 7, London-road, Twickenham.

Stand 38.—Geo. Hoyle, 31, Vincent-road, West Green, N. Cases of feathers, &c., used in fly dressing.

GRAYLING IN THE EXE BELOW DULVERTON.

WE take the following extract from a letter received recently by us from Mr. Robt. S. Austin, of Tiverton, a very old correspondent of the *Fishing Gazette*. In a subsequent letter Mr. Austin says he hears from Mr. Langdon that anglers were catching lots of grayling as high up as Mr. Nelder's house at Dulverton:

"I daresay you remember the rumpus there was years ago anent putting grayling into the Exe? Well, grayling are in it now, and in goodly numbers, too. Some seasons ago a Mr. Langdon, fish breeder at Dulverton, put in about 500 of these fish, and they seem to have multiplied, for during the past week some of the rods above Tiverton have been getting a brace or two of them a day. I don't think there are enough yet to give good autumn fishing, but next season, if all is well, I intend giving them a trial."

GRESHAM ANGLING SOCIETY.

AT the usual weekly meeting Mr. F. W. Norman occupied the chair. Mr. L. B. Wrightson, at Bryn St. Edmunds, several jack returned, and one of 7½lb. and 6½lb. Mr. F. J. Grey, at Kelvedon, roach up to 1lb. Mr. Walker, roach up to ¾lb. Mr. Zerfass, roach and perch from Kelvedon (largest roach, 1lb. 9oz.). Mr. Patterson, pike fishing in private water, result not yet to hand. The annual dinner has been postponed from March 21 to April 25. I should be glad to hear from members as early as possible as to whether they will attend, and also how many tickets will be required. Three new members were duly elected. The programme and book containing rules and regulations of the society, yearly report, maps of waters, &c., is now in hand, and it is hoped, will shortly be sent to the members. Nominations of members to represent the society at Loch Leven competition can now be received. Roach may be fished for at our Kelvedon waters, but the pike fishing is closed until Aug. 31 next. The opening dinner at Chesham will take place at the Black Horse, Chesham, on April 8. Will members who intend being present kindly send in their names? Cheap tickets for the Fisheries' Exhibition, opened March 8, and open for four weeks, can now be obtained from me, price 4s. per dozen. The usual toast, and a vote of thanks to the chairman, concluded a very busy evening.

ALEX. WRIGHT, Hon. Sec.

AMERICAN BOOKS.—A catalogue of American books in various departments of literature can be had of Sampson Low, Marston & Co., Limited, St. Dunstan's House, Fetter Lane, London

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

THE usual monthly meeting of delegates was held at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday last, Mr. C. A. Medcalf, president, in the chair, supported by Mr. W. H. Elsmore, vice-president. The minutes of previous meeting were duly passed, and the executive committee reported the provisional enrolment of a newly-formed club, the Twickenham Piscatorial, after having closely scrutinised their adopted rules, which were found quite satisfactory; also having considered the application of Mr. Higgins for a donation towards the River Keepers' Dinner Fund, and recommend the usual donation be sent, both of which were unanimously endorsed by the delegates present. The visiting officer reported that excellent and well-attended visits had been paid to the Original Clerkenwell A.S., also to the Peckham Bros. A.S.; and from the bailiff's report it appeared that good sport had been obtained by the members on the various private fisheries of this association. The secretary stated that a capital programme had been arranged in connection with the Central's annual smoking concert, which is to take place at the headquarters on Monday, 20th inst., on which occasion the chair will be occupied by Mr. Walter Emden, J.P., L.C.C., particularly urging the delegates and secretaries to do their utmost to make the affair an unprecedented success. It may be mentioned that the commodious hall at the Bedford Head has recently been considerably enlarged. Mr. Elsmore furnished particulars of the recent doings of the T.A.P.S. committee, which proved of a most interesting nature, particularly the generous promise of their president, Mr. H. L. W. Lawson, to defray the cost of the removal of the barren swans from the Thames during the spawning season, in consequence of the refusal of the Lord Chamberlain and the Dyers' and Vintners' companies to arrange for the removal, owing to the expense attached thereto. A very cordial vote of thanks was accorded both the chairman and vice-chairman.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below.

30 min. for Chelsea.	55 min. for Kew.
40 " " Putney.	75 " " Richmond.
45 " " Hammersmith.	80 " " Twickenham.
50 " " Barnes.	85 " " Teddington.

EXAMPLE.—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25, or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, March 11	1.18	1.42
Sunday, " 12	2.4	2.24
Monday, " 13	2.44	3.4
Tuesday, " 14	3.24	3.44
Wednesday, " 15	4.3	4.22
Thursday, " 16	4.42	5.0
Friday, " 17	5.18	5.36

HIGH WATER AT AMBERLEY AND PULBOROUGH.

	Morning.	Evening.
Saturday, March 11	1.58	2.22
Sunday, " 12	2.44	3.4
Monday, " 13	3.28	3.44

These times show high water at Houghton Bridge, Amberley. Pulborough will be 2h. 40m. later.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The general angling season will terminate on Tuesday next, March 14, and all kinds of coarse fish will then have undisturbed possession of the river. The trout anglers have only to wait until April 1, when their season will commence, and, it is hoped, under favourable auspices, though at present nothing of any consequence has been heard of any movement amongst them, and this is easily accounted for by the presence of such ungenial weather and conditions against the possibility of any show being made, but I apprehend when there is a favourable change both anglers and fishermen will be on the watch to indicate where their movements have been seen. In reference to the swan question, the T.A.P.S. is fortunate in having such a president as Mr. H. L. W. Lawson, who is ready, after the refusal of the owners to have them housed at any expense to them, has liberally undertaken to have it done at his own cost, and so relieve the society from the burden of payment. I heartily congratulate the committee on their great success in this matter, as I am certain one and all have been most anxious for the removal of the swans during the spawning of the perch, and in the interest of all classes of anglers. It should be the means of augmenting the attendance of visitors at the forthcoming dinner to the river and lock keepers, and also stimulate the liberality of anglers and others in contributing towards the expenses of it. The T.A.P.S. has been fortunate in its choice of presidents. The late Mr. Thomas Sprackley was the first elected to that office, and succeeded by Mr. Alfred Nanthall, J.P., and it would be impossible to have chosen better and more practical men. I can only speak in the highest terms of each, and that from great experience. The anglers have very little time before them, and up to Wednesday the river was in good condition, but a strong stream.—B.

—(Datchet).—John Keene writes: "The water is in good order, and the fish feeding well. I have had one day with Mr. Maitin, who creeled 40lb. weight of perch; another day with Mr. George Shepherd, 11l perch, the largest 1½lb.; another day with Mr. Wilson and Mr. Saunders, 35lb. of perch and roach; another day with Mr. Jones and Mr. Herbert, eight dozen of roach; another day with Mr. Phipps, nine brace of perch, two jack, and six dozen of roach, three of the best roach weighing 4 b, and the perch averaging 1lb. each; and another day with Mr. Amphlett and Mr. Smith, ten dozen of roach and perch. Nearly all these fish were returned to the river again."—B.

—(Eton).—The river is now in perfect condition, and good all-round sport should be had during the last few days of the season. Trout are on the move. Several good fish have been seen in this district. A splendid specimen was taken by Mr. Paice, of Eton, this week, weighing over 8lb. Fortunately, it was lightly hooked, and therefore was in no way injured, and was at once returned, to afford sport to the lucky angler who may induce him to take his bait after his shyness has worn off. Perch have been feeding well, Budd Smith taking them up to 1½lb. Mr. W. Pritchard has also had several good takes. Mr. Wilson, of Eton, and the veteran Carey, of Windsor, have had some fine roach. Lumsden was up this way one day, and creeled about 30lb. of roach. Mr. Gladstone lost a nice jack of about 8lb. on the 3rd, after playing him some time. James Bunce, out with two patrons on the 5th, had a good dish of roach. I hope to have the pleasure next week of assisting to turn into the river about 1500 trout for the Windsor and Eton Preservation Association, and to net some water not far from here, when I trust the result will be a large consignment to gladden the hearts of other than trout anglers.—CECIL HOWLETT.

—(Hampton Court).—William Milbourne says: "The water is now in good order for all fishing. The dace are heading up, and are very fine. The punts from here to Thames Ditton are taking from eight to ten dozen each per day, and the bank anglers are doing well with roach and dace." Mr. F. J. Ogden Smith writes: "I have been fishing one day with Mr. Gunn and Mr. Boline at Hampton Court, and had a very good take of perch and dace."—B.

—Henley (March 8).—The water continues in good condition. It has now got very fine, and a nice stream running, but there is every appearance of a change in the weather. To-day has been very boisterous, and at the time of writing rain is falling. Sport, on the whole, is good, although some almost blank days have been experienced by some anglers. Perch are going off the feed, or they want a lot of finding. On March 1, a patron of Bob Young, nine jack (best fish 8lb.). On the 3rd, Mr. Norman, out with W. Vaughan, four jack, including a nice made fish of 10lb.; Mr. Escombe, out with J. James, a box of roach and jack, weighing 19lb.; Mr. Johnson, out with G. Arlett, eight jack (best fish 4 b.); a patron of J. Sargeant, seven jack (best fish 4½lb.); and Mr. Bntt, the Marsh Lock keeper, a jack of 8lb. On the 4th, a patron of J. Sargeant, seven jack (best fish 9lb.); Mr. Escombe, out with E. Vaughan, a 12lb. bag of roach; and Messrs. Muller and Johnson, fishing Witherington's Pool, Sonning, which is private water, with G. Arlett, had a take of eighteen jack, weighing close on 60lb. (best fish 7lb.). On the 5th, Mr. Johnson, out with G. Arlett, six jack (best fish 4lb.); Mr. Clements and friend, out with G. Vaughan, seven jack (best fish 5½lb.); a patron of E. Vaughan, three jack and 10lb. of roach; a patron of E. Harvey, a bag of roach and perch weighing 16lb. (best three roach 3lb.); and Mr. J. Harvey, jun., two jack (best fish 9½lb). On the 6th, Mr. and Mrs. Rawlin, out with G. Arlett, six jack, weighing 36lb. (best fish 7½lb.); and Mr. J. Harvey, jun., three jack (best fish 8½lb.). On the 8th, Dr. Riley, out with J. James, five jack (best fish 8lb.); Dr. Shields and friend, out with J. Sargeant, eight jack (best fish 9lb.) and 5lb. of perch; Mr. J. Harvey and friend, a good bag of roach weighing 18lb., which included several pounders; and Messrs. J. W. Read and Allan, out with G. Arlett, eight jack (best fish 4 to 6lb.). Mr. S. Meyers, fishing the Thames above Oxford, with J. James, on the 4th, 5th, and 6th inst., took fifty jack, which included fish of 7lb., 8lb., 9lb., one of 13lb., and six perch (best perch 2lb.). Other anglers have been making some fair bags of roach, perch, jack, and some chub up to 4lb.

—STANLEY MEAD.

—(Kingston).—John Johnson during the week has been taking some bream, roach and dace. N. Bolton, in two days, with Messrs. Tomsett, Mallett, and Halls, who caught one brace of jack (the largest fish 3½lb.), six brace of perch and five bream.—B.

—(Richmond).—Job Brain reports he has been getting a few bream and some roach and dace.—B.

—(Shepperton).—George Rosewell I am glad to find reports he is "all alive and not dead as reported." He has been very ill, but now in his usual good form again, and has sent me the report of having been out with Mr. N. Chick for two days. The first day he landed six brace of perch weighing 14 b, and the second day eleven jack, the largest 9lb., two of the fish were returned. Another day with two other gentlemen which proved a complete blank.—B.

—(Sunbury).—I am pleased to state that Messrs. T. and A. Stroud are now in good health, and quite prepared to give their clients some capital sport during the last few days of the angling season. Mr. Jones, with H. Herbert, eight jack and some fine perch; most of them were returned to the river again.—B.

—(Teddington).—The dace are reported as heading up very slowly on account of the cold nights. W. McBride, in two half days with Mr. Port, seven brace of perch and three jack; and one day with Mr. Maynard, five pike (the largest 6½lb.) and eleven perch.—B.

— (**Twickenham**).—John Spong, one day, six dozen of roach and dace and two bream. R. Spong, seven dozen of roach and dace, three brace of perch, and three bream. H. Spiers, in half a day, four dozen of roach and dace; and J. Draper, in one day, three dozen. Mr. F. J. Ogden Smith tells me he was out one day with Mr. Beavis and Mr. Stevens in a friendly match in the Deeps and in five hours creoled 23½lb. of good roach. He has just received for preservation from Mr. Airnfeld two fine jack which he took in private waters, the largest weighing 13½lb.—B.

— (**Weybridge**).—My valued correspondent, in writing to me, says: "The water has cleared wonderfully during the past week, but the stream is still strong."—B.

Arun (Pulborough).—(March 7.)—Only a few anglers visited here on March 6, who found the river in good order though it was a cold day. Mr. H. Allan, secretary of the St. Albans, had a fine show of fish of about 24lb., among them being a bream of about 3lb. and a perch of about 2lb., and several fair-sized roach; Mr. Gower, Original Clerkenwell Piscatorial, took a 4lb. jack; Mr. Saalfeld, Silver Trout, two small perch; Mr. Fordee, Great Northern Brothers', bream up to 1lb; Mr. A. Drapman, Bermondsey Brothers', bream up to 1½lb. The water is still a good colour, though just now the frosts are somewhat severe.—W. G. HOLLMAN.

Bottisham Locks (Waterbeach, Cambs.).—Pike have been giving grand sport all round the lock. One angler one day had ten pike and one chub up to 1½lb. Several rods out through the week all with fish (early morning). There are still plenty of pike round the locks, although small up to 4½lb., only had this week. Roach fishing quiet. Live baits on the spot, water in excellent condition.—J. O. GEORGE, Beech-road, Cambridge.

Dart (Totnes and District).—There has been some exceptionally good sport with trout in the vicinity of Buckfastleigh. Mr. H. Wright killing no less than eight dozen on the opening day and seven dozen the following day, whilst Mr. Millman secured sixteen dozen in three days. In other parts of the river capital sport has been obtained. Mr. J. Edmonds had several dozen on Monday, a total weight of 10lb., and the Rev. A. Sandbach (Cornworthy) had four dozen from the Harborne on Friday. During last week baskets running up to six and eight brace were made by Messrs. E. Distin, H. M. Turner, H. T. Distin, and H. Full, the latter getting several good fish at Totnes Weir. Mr. Holmes killed some fine trout on Monday, but the water has been very fine in consequence of the frost, which has now broken up.—DEVONIAN.

Derwent (Malton, Yorks.).—The water still keeps in good condition for pike fishing, but the nightly frosts we are having appear to keep roach off feed. The Kirkham Abbey waters are very good for both, but only very few anglers have been out during the past week or two.—H.

Devonshire Streams.—The streams have run down to a fishable condition, but the water has been very fine. Baskets of trout, taken generally, have not been large. Sport on the Dart being about the best obtained, one rod killing eight dozen one-day last week. On the Tavy and other rivers at the southern border, baskets have run up to nine and twelve brace, the Reds and Pheasant Tail are doing well. The March Brown was the most useful fly for the Carey, where sport has been dull up to the present, although prospects were favourable. The Blue Upright, however, seems to be a general favourite. A 2½ pounder was killed in the West Ockment, and some fair takes are reported from the Mid-Taw district. The bright days and sharp frosts are drawbacks to really good sport, but it is thought that a successful season may be looked forward to. Few salmon have been killed as yet, but Mr. Parsons killed a couple of exceptionally fine fish for the Meavy—10lb. and 12lb. Dr. Norman landed a 22 pounder from the Dart and another of 18lb.—DEVONIAN.

Fen District (South Lincs. and Cambs.).—The closing days of the season are even more favourable than those in the late autumn or early winter. The pike waters, such as the Forty-foot, &c., have been freely patronised, and the conditions have been really good. Plenty of fish have been caught, but we hear of nothing of any large size, 6lb. or 7lb. being heaviest. Roach fishers are also having a fine time of it in their department. The Glen at Surfleet and the level drains towards Wisbech have had plenty of visitors, and baskets have been satisfactory. Many will regret the advent of the close time.—LIMPET.

Idle District (North Notts.).—Good sport is now the lot of the angler in the Idle district, and some decent baskets are reported from the popular swims. Between Retford and Mathersey good lots of roach and dace have been captured. On the Ryton, at Blythe, there has been capital sport among the dace with maggots. During the cold days roach have been shy, but chub have been on the feed eagerly. The canal is said to be productive of roach, and a few perch have been mentioned.—L.

Mid-Taw (Eggesford District).—Season commenced March 1, and fair sport has been obtained, notwithstanding frosty nights, and bright sun by day and cold winds. Messrs. Williamson and Melhuish, staying at the Hotel, have made baskets varying from 1lb. to 2lb with fish averaging three to the lb. Flies most successful: Rusty Red and Half Stone.—F. A. M.

North Staffordshire Rivers.—Frosty weather has nipped the soddened land, and kept up much of the moisture which the previous downpours had put into it, and allowed the rivers to clear and put on a fishable appearance once more. At midday the sun has tempered the atmosphere somewhat, and taken some of the sting out of the east wind, so that a few Blue Duns have hatched out between twelve and two o'clock. A few enthusiastic fly-hands have been out for practice and observation, and sampled the trout in our district; and to all appearance we are in for an early and good trouting season. Sport in the coarse fish waters has been variable. Some anglers

wish to do a little among pike during the waning open time, and some fair fish have been killed by live baiting, notably in the Stafford district.—F. W. DALE.

Ouse (Holywell Ferry).—River in splendid condition; jack feeding freely, everyone getting good sport, largest taken here during the week, 12lb., and several very large "smashers" had on, so it is all right for the rod makers, as I have had three gentlemen bring their rods in broken.—A. SCARD.

Ouse (St. Ives, Hunts.).—G. R. James took pike 16lb. 2oz., a beautiful fish. I had roach on Saturday up to 1lb. 4oz. We have had five large pike since Friday last, smallest one 12lb. Splendid prospects for roaching, chubbing, &c. I hope to be able to send you a good list up to-night week for a finish up to season 1898-9. We have opened our new club room in Vine Court; it was formerly the magistrate's room, or Court House for the Borough of St. Ives.—E. COLLINSON.

Lake Vyrnwy (North Wales).—The fishing season began on the 1st of March, and although the days have been very cold, with hard frost at night, the sport has been excellent, and the two lucky anglers who made a point of being on the ground at the earliest possible date have been rewarded with good baskets. On the 1st, Mr. D. Pine killed thirteen (7lb. 8oz.), and Mr. F. Crowther three (2lb. 1oz.); on the 2nd, Mr. Pine took four (2lb. 6oz.), and Mr. Crowther five (2lb. 15oz.); on the 3rd, Mr. Crowther killed seventeen (12lb. 7oz.), and Mr. Pine twenty (12lb. 8oz.); on the 4th, Mr. Pine killed twenty-one (13lb. 8oz.), and Mr. Crowther sixteen (9lb. 4oz.); on the 6th, Mr. Pine took twenty-seven (15lb. 2oz.), and Mr. Crowther fourteen (9lb. 1oz.); on the 7th, Mr. Pine killed nine (5lb. 8oz.), and Mr. Crowther seven (4lb. 12oz.). The best killing flies have been "duns" and "February Reds." The two rods creoled 156 fish during the week, or an average of eleven fish per rod per day.—LONG DRIFT.

Lea.—The season for taking pike and perch in the Lea closes on Tuesday next, and from Wednesday the fish will not be retainable again until August next. Anglers should make a note of this fact, as roach, chub, bream, and dace may be caught until the end of the present month. The capture of some good pike is being associated with the close of the season; and too late for my last report, news reached me to the effect that in the King's Arms Fishery, Waltham, Mr. Summers had taken a specimen of 19½lb., 40in. in length, and having a girth of 21in. The pike was in grand condition. Other pike and a perch of 1lb. 5oz. have been landed there. Decent perch have also been taken in the Enfield Lock district, and at Cheshunt roach up to 1lb. 3oz. have been creoled. In the Fort Guinea water, Rye House, nice roach have also been basketed, but sport among those fish is reported very quiet at St. Margaret's, Ware, Hertford, Ponders End, and Sewardstone. Mr. Wiltshire, early in the week, won the Hoxton Brothers' match at Ware, with dace. Unsatisfactory reports continue to reach me concerning the angling in the Stort. The Burnt Mill and Roydon waters have fished best. The river varies in condition, and so does the Lea. However, they are not too bright for the angler who knows his business.—IZAAK WALTON.

Lugg and Arrow (Leominster).—Both these streams have now gone down to a nice level, and are running clear, and in every way suitable for angling. Trout season opened on Thursday (2nd), and the weather was beautiful and fine, and a few anglers were out. The fish have been rising between 11 and 3 at the fly. A few natural flies have been out. The cold frosty nights have kept them back as yet. A few very nice trout have been landed, and with fine weather there is every prospect of some very good dishes of trout being landed on these streams. The Pinsley is in good order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers, though still on the heavy side, are in fair order, though little or no fishing has yet been done on account of the weather, which has for the most part consisted of sharp frosts by night, followed by bright sunny days. The glass has now sunk very low, and this (Wednesday) afternoon have had a few showers of sleet. The wind, S.E., is very cold, and appearances would indicate a return of dirty weather. Flies as last week.—R. T. WILLIAMS.

Nene (Peterborough).—This week there is a marked improvement in the condition of the river, the water having sunk another foot since last week; but through the long period of inactivity there seems at present a kind of sluggishness on the part of anglers generally, and there is, consequently, no sport to report. Of course, a good deal of this is due, in a great measure, to the keen, cold winds we have experienced during the past few days, although the weather has been fine and dry.—E. A. S.

Otter (Buddleigh Salterton, Devon).—No change in the weather has taken place since last report up to date (March 8). Sharp frosts at night and bright days, with a cold wind generally from the north-east, have been our portion. The river is very clear and low. Trout are not rising at all, and nothing worthy of note has been done on any portion of the river to which this report refers, namely, between Otter St. Mary and Buddleigh Salterton. The ticket for Mr. Rolle's water, at the hotel here, is at present engaged.—HERON.

Plymouth.—Since the opening day, March 1st, some scores of rods have been out with more or less success. Some took as many as three or four dozen, and some only one or two, but all the fish I saw were in good condition for this time of the year. From the number of licenses issued, I should think we should have a good season.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—The weather here still continues more like June than March. The only drawback is the cold east wind, and there is also a suspicion of snow water in the rivers, which, however, are still very low and clear. Trout fishing has now commenced in earnest, but the ruling powers on

the Tanat have not yet issued their permits, so that no reports can be sent as to the sport in that river. No salmon have yet been captured by local anglers, for the simple reason they cannot afford to expend 10s. for a licence to do so.—VYRNWY.

Stour (Bures, Suffolk).—The water is still in very good condition for angling, if anything rather clear for roach fishing. Several anglers were out on March 5, but with the wind in the east sport was very bad amongst the roach, a dozen sizeable roach being the best catch of the day. Several jack were taken by different anglers, but I saw nothing over 5lb. The wind has now changed into the south-west, and gentles or bread crust should now account for some good roach.—W. T. BAINBRIDGE.

Sussex Rivers and Chichester Canal.—Rain still holds off, and rivers are getting clear and bright. The Ouse has afforded sport among all classes of fish—pike up to 4½lb., a few chub, and roach. The roach are feeding best in the tidal portion of the river. The rainbow trout put into the water above the flour mills by the Preservation Society are having a rough time of it. Mr. Chibcott caught a small pike of 1lb. 14oz., which, when opened, contained seven rainbow trout. Mr. McFarlane, while swimming with gentles, caught and returned to the river six others. The Cuckmere has not fished well, nor will it in the present state of the water. A pike of 9lb. was recently captured on the Adur, also a few dace. The Rother is in good order; pike up to 5½lb. have been taken below Selham, and a perch of 2½lb. was taken with worm. Chichester Canal is in good trim, and pike have fed fairly well, but nothing exceeding 4½lb. has come under notice. The water will soon be let off to put in new lock gates at Birdham, but I am doubtful if any steps will be taken to save the fish. No one here seems to interest themselves in the matter.—GEORGE F. SALTER.

Teifi (Campeter, Cardiganshire).—We have a plentiful supply of salmon and trout, and some good fish have been taken during the past week. At time of writing (March 6) the water is rather low, but the fishing continues very good.—H.

Teme (Ludlow).—The Teme in this district is now clear and a nice level, and in capital order for fishing. The weather has been very frosty at night, followed by bright sunny days, and has brought out a good few flies. Trout fishing commenced on Thursday, and there were several anglers out during the week. Fish did not sport very freely the first few days, but as the sun gets warmer the fish begin to rise, and the outlook is very promising. The best flies to use are the February Red, Blue Dun, Palmer's, and Willow. Bottom fishing has been successful with the worm. In the water under Whitcliffe Mr. Watkins, with the fly, landed some very nice trout. Fishing with the worm at the end of last week, Mr. Huck took a brace of fine trout scaling 3½lb. each, in good condition. Pike fishing has been fairly good, and Mr. R. Smith, on Monday, with the gorge bait, under Whitcliffe, took a fine pike, 12lb. weight. Trout have been sold at the fishermen's' at 1s. 2d. and 1s. 3d. per lb. The Ony, Corve, Clun, and Ledwyche are all running clear, and a nice level, and in fishing order. Sport in them has been quiet yet, but will be good with worm.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is now running in capital order for angling, having gone down and cleared nicely. The weather has turned fine, and more suitable for anglers to get out. Sharp frosts have been had at night with bright sunny days, and has been good for trout fishing. Trout have been moving a little at the fly, and a few anglers have been out, and used February Red, Blues, and Palmers, and a few very nice fish have been taken. As the weather gets warmer the fish have been spotting better, and the prospects are good for fishing in this part. The Rea, Kyr, and Ledwyche are all clear.—WORCESTER.

Trent (Newark).—Some capital bags of roach and bream have been made during the past week, the Trent being now in splendid order for bottom fishing; and both varieties have taken brandlings, cockspurs, and ragged tail ends freely. Bags of the following weights have been caught amongst others: Mr. T. Davis, 36½lb. and 32½lb.; Mr. W. Markwell, 30lb.; Mr. Gill, 25lb.; and Quarter-master-Sergeant Waddington, of Sheffield, close upon a couple of stone. The roach were a splendid sample, many being over the pound. Bream not large, but up to 3½lb. A few nice chub have been bagged, worm being the lure, and the closing few days should produce sport. On Monday a Sheffield gentleman visited Ossington Lake, and landed a pike weighing 22½lb.—TRENTSIDER.

Welland (Stamford).—The Marquis of Exeter has been elected president of the Stamford Angling Association. The present Marquis was willing to do all he could to further the interests of the association, as his father and grandfather did before him.—E. A. S.

Witham, &c. (Mid-Lincolnshire).—Anglers around Boston have been busy since the waters ran down. Many have been after the pike, and many fish have been taken, mostly between 3lb. and 5lb. Heaviest on the drains has been one of 11lb. About Dogdyke and Langrick anglers have been very fortunate with pike. One visitor caught ten, and others nearly as many. One fish caught here recently is said to have scaled 17lb. Roaching has been mostly carried on in the side waters. The Smeil Dyke has had many visitors, and so has the Bain. Between Fulsby and Coningsby there have been some capital bauls. Many will regret the closing of the season next week.—LUCY.

Wye (Builth Wells).—River low and clear. No salmon taken, and very few trout caught. Weather cold.—W. B. ROBERTS.

Yore, Swale, Wharfe, Nidd, Derwent, Aire, Ouse, and other Yorkshire Rivers.—Pike fishing seems just now more popular than any other branch of the gentle art, and in the upper waters of our rivers, where pools and streams alternate, the present is a good

time to make an effort to keep the stock of *Esoc lucius* down, for they are very undesirable tenants in trout and grayling streams. I am, therefore, pleased to hear of the capture of several fish in portions of our streams, where their absence is a desideratum. In rivers like the Yore, Wharfe, Swale, &c., there are no slow running weedy drains to which the pike can resort for breeding purposes; consequently they make their way out of the pools into the shallower streams of the river, to spawn amongst the weed on the stones. There they can easily be seen, and steps should at once be taken to kill them. My Hornsea correspondent sent me an account of the week's sport in the famous mere there last Friday. Unfortunately, it reached me too late for publication last week, and the pith of his communication is all I can find room for this week, and that is, that a lot of jack under the retainable limit, viz., 26in., have had to be returned in recent captures, but Messrs. Schroeder, Woodhouse, and Moseley amongst them killed some very good fish. Mr. Moseley one day had a pike of 19½lb., Mr. Woodhouse three weighing 27lb., Mr. Schroeder last Wednesday landed no less than forty fish, the twelve largest, which he retained, weighing 95½lb., the largest pike weighing 11lb., 12½lb., 13lb. respectively. On Thursday the same angler caught eighteen, only five were above the 26in. limit, however; they weighed 44lb., the largest 13lb.; all were taken with live bait on snap tackle. By using this the above anglers in four days fishing were enabled to return sixty-eight under-sized jack to the lake practically unhurt. Sport in the lower waters of the Swale has been poor, the weather being bitterly cold, and water low and very clear. Mr. A. Spence, however, had a nice basket of fish, as had a member of the Black Ox Angling Club in the neighbourhood of Morton Bridge, principally grayling and roach; and Mr. Macaulay, of Northallerton, brought home some fine fish from the Swale. The roach fishermen have only had poor sport, and few pike have been caught, and they have run small, the best fish I have heard of weighing 5½lb., and twelve fish is the best I have seen in the way of grayling fishing. Few anglers have been out on the banks of the Wiske. Mr. Riley Fortune, of Harrogate, and a friend had nice sport in the Harrogate Angling Association waters in the Nidd, which is now very low and clear. On Saturday, however, they caught sixteen grayling, two chub, and nine dace. All the fish were caught with the gentle; two of the chub scaled 5lb. Some trout returned are reported as being in good condition, and prospects for the opening of the season are good, the upper water belonging to the club being well stocked with trout. I hear Messrs. Jenkinson and Pope have had good sport amongst the pike in the Derwent, and they send me a fine fed and well marked specimen for mounting, it weighed 15½lb.; it and the other fish were caught at Pocklington. Messrs. Parker have done well amongst the roach at Heslington; the fish caught were very fine, the largest weighing 2lb. Not many anglers have turned out on the Wharfe, Mr. Wm. Reynolds, however, had good sport on Saturday afternoon, fishing up from Linton to Woodhall Bridge, his basket containing twenty-seven grayling. Mr. J. Pickersgill, at Collingham, on Monday, caught eight grayling, and on Thursday thirteen. All our rivers are very low, and the weather cold; there are, however, indications of rain to-day, which will brighten up matters if it comes.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAM.—Angling matters continue very quiet. All the Yoredale, Wharfedale, and Nidderdale range of hills are snow-coated this morning, the weather is warmer and very fine, but as the barometer has gone down considerably during the night, and is now low, it is questionable if the present conditions will continue long. Prospects for sport next week are not good, and there will be little angling attempted until the opening of the trout fishing season.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddle.—The weather in Eskdale and Liddesdale is gradually becoming milder, although there is frequently a little frost in the early mornings. Sport with spring salmon is not very promising. The waters have up to the beginning of the week been low, when both rivers rose a trifle, a circumstance that will give a better chance for rods. Very few salmon are running up; some kelt have been taken, and, of course, returned to the river. Although trout fishing is open to the rods, yellow trout angling will not commence until the first week in April, as this class of fish will not be in a condition before then. It is too early for sea trout in the rivers. The Solway netting season commenced a fortnight ago, but few fish are running, and only an odd salmon or two have been caught in the stake nets.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—The first salmon of the season was caught on Invercharron water on Saturday by Mr. Barrett, Balmagown Arms Hotel. It was a clean run beauty, weighing 26lb. Other anglers have been out, but no sport obtained owing to unfavourable conditions.—B.

Deveron (Banffshire).—The high state of the water in the river and the prevalence of keen frosts are operating somewhat against the success of the angler. On Tuesday afternoon there was a very heavy fall of rain, intermixed with hail, which aided to discolour the water. There is little change on the appearance of fish, and on several sections kelt are proving troublesome. On March 1 a fine salmon of 6lb. was killed on the Netherdale water. The net fishermen continue their labours with poor success; three fish are the most caught on any day of the past week. On the coast matters are little better, and the yield is exceedingly poor. From both river and sea a small box was sent to the market on Monday, and another on Tuesday, weighing two-thirds of a cwt. A fair sized box was

also consigned on the latter day from the Gardentown fishing.—H. W.

Kenmore, (Loch Tay).—On the hotel water on March 3, Mr. W. G. Beattie killed salmon, 25lb. March 4, Col. Grant killed salmon, 22lb.; Mr. W. G. Beattie, salmon, 17½lb.; on the reserve water, Macdiarmid, keeper, killed salmon, 22lb. 7th. on hotel water, Mr. W. G. Beattie killed salmon, 23lb. Loch in good ply.—W. KNIGHT.

Loch Tay (Killin, N.B.).—March 4, on the hotel water, Mr. J. Clegg had a nice salmon of 16lb. March 6, Mr. Wade, one of 15lb.; Mrs. Wade, one of 8lb. March 7, Capt. Williams, one of 20lb.—H. J. MAISEY.

Naver Bettyhill (Inverness, N.B.).—The weather has been very severe, keen frost and several inches of snow. During the past week only five salmon were caught with the rod, three of which were landed by Gen. Hume, Syre Lodge. On Saturday last Mr. George Mackay, keeper, Skepick, caught two on the private water. At present only one southern angler (Gen. Hume) on the river; Col. Frier had to leave for the south to attend a friend's funeral.—B.

North-East of Scotland.—There has been little change in the weather, yet the sport obtained on the middle reaches of the Dee has been considerable. Not so, however, the far inland or adjoining streams. A slight snowstorm has been experienced, with frosts overnight. On Monday, on Monaltrie water, Mr. Herbert landed a fish of 8lb. On the Hotel water, Mr. J. B. Millar had one of 7lb.; and Lundie, keeper to Her Majesty, had a fine fish of 12lb. on Birkhall section. On the Glentana waters, Col. Birkman creelred three, of 14lb., 14lb., and 13lb., on Wednesday, and one or two every day out. Mr. Merry, on the same beat, has had similar sport. On the South Cambus O'May section, Col. Eddis has only had fair sport as yet. On the Aboyne Hotel waters, Mr. Sharp landed a beauty of 20lb.; Mr. Crawshaw had three small fish, of 5lb. and 5½lb. each; and Mr. Borwick, two, of 5lb. and 7lb. On the Kincardine O'Neil section, Mr. Edward Drummond, on Ballozie, creelred one of 9lb. and one of 7lb. On Dess, Major Davidson, one of 8lb., and two, of 7lb. and 8lb.; while Mr. Stewart Farquhar landed four, of 6½lb., 7lb., 8lb., and 19lb. On the lodge section Mr. J. C. Deverell has been eminently successful, having had three of 19½lb., 14lb., and 8b., two of 7lb., one of 8lb., and one of 9lb. On Carlogie, Dunn landed one of 7lb., while Nicoll on Borrowstone creelred one 7lb., two 7½lb. and 8lb., and one 7lb. On lower Dess John Harper had two of 8lb. and 8½lb. On the Community and Woodend sections Sir John Gladstone creelred five fish scaling 6lb., 7lb., 7lb., 14lb., and 18½lb. for the week, and Charlie Gill one of 8lb. on the sluice water. On the Blackhall waters the Hon. Orde-Powlett had one of 7lb., three of 6½lb., 12lb., and 8lb., two of 8lb. and 8½lb., one of 7lb., and three scaling 18½lb., 8½lb., and 7lb., while the Hon. Milne Gibson landed two of 6½lb. and 7lb., and the Hon. E. Gibson one of 8lb. On the same waters Captain Burnett Ramsay had one of 14½lb., and Captain Mitchell one of 8lb. On the Cairnton, Mr. T. Turner Farley has creelred from five to seven fish daily of average weights. On the Inch, Marlo, and Kinneskie waters Mr. Duncan Davidson and Captain Ramsay have had one and two fish daily. On the Drum Waters, Mr. Perry, and on the Park Waters, Mr. Geo. Davidson, have had fair sport only occasionally. On the Kingcausie section, on Saturday, Mr. Fortescue creelred one of 7½lb., and on Tuesday, two of 19lb. and 8lb. respectively. The supplies of salmon at the coast stations have been exceedingly small, but are now improving. On the Don angling matters have improved considerably, and at Alford, about forty miles inland, Dr. Smith landed a fine fish of 11lb. on Saturday, and Mr. Adam Allan, Kingsford, one of 14lb. on Wednesday. On the Ellon Castle Waters, Mr. Andrew Murray, advocate, Aberdeen, made a fair basket of seventeen finnock last week.

Shin (Inveran, N.B.).—On Monday week the angling tenant, fishing from Sutherland Arms Hotel, landed a 10lb. salmon. In the course of the week Mr. Park, also from the hotel, caught three salmon ranging from 11lb. to 17lb. in weight.—B.

South of Scotland.—All the Border rivers were very low and clear up till Tuesday morning. Heavy rain falling over the south of Scotland on Monday night placed the rivers in flood on the following morning. To-day (Wednesday) the waters in the lower sections are too muddy for fly, and scarcely in trim for minnow. The rise in the waters should give a better chance to the rods, but few spring salmon are running up the firth. **THE ANNAN.**—The first spring salmon of the season in the Annan was caught on Saturday. Mr. Thorburn, of the schoolhouse, Brydekirk, fishing in the Mount Annan water, hooked one in the salmon pool. The fish gave fine sport before being tailed. It proved to be a fresh run spring fish of 15lb., and was taken with a small Border brown turkey fly. Mr. Thorburn killed a spring fish two years ago in the same water with the fly, the same fly. Another rod landed two salmon, but these were kelt, and were put back to the water. In the middle and higher reaches several salmon have been hooked and landed, all kelt. A number of salmon poachers have been before the sheriff since last week's report. Robert and William Gordon and John Richardson Johnstone, all of Moffat, were brought up before the Sheriff on Wednesday, and charged with attempting to take salmon by means of gaff hooks in the Wamphray and Moffat portions of the Annan on Feb. 4. They pleaded not guilty, and were defended by an agent. After proof had been led, the charge was proven, and each were fined £3 each. Robert Sutherland and Thomas Gourlay were fined £1 15s. each for a similar charge in the Urr of Galloway, at Dryburgh, the Urr Association prosecuting in this case. **NITH.**—Nothing has been done

in this river by the rods since the season opened. A few anglers have been out trout fishing, but the catches have been small and the trout in poor condition. The greater majority of anglers abstain from trout fishing until the beginning of April. **GALLOWAY RIVERS.**—Very few rods have been out on the rivers in this part of the country. At the time of writing the waters are in better order. Last week the rivers were too low and clear for salmon fishing. A few trout have been caught in the tributary streams. **AYRESHIRE RIVERS.**—Trout fishing has commenced in this district, but the catches have been small. The clear water worm has accounted for most of the trout, all in poor condition. Indeed, yellow trout should not be taken for three weeks yet. **THE SOLWAY.**—The nets in the firth have been capturing a few spring salmon during the week. The poke nets near Annan had a number of fine fish through the week, and they were believed to be Eden salmon. **SOLWAY DERWENT.**—This river opens for the rods on Saturday, the 11th (to-day), and the slight rise in the water should give a better chance. Very few salmon have been showing, but that should not be taken as a sign that no spring salmon are in the waters. As a rule spring fish do not show themselves freely in March in the Border streams. At the time of writing the weather remains unsettled, and some rain fell on Wednesday morning.—HATHERBELL.

Spey.—Owing to the unsuitability of either the weather or the water, or sometimes both, sport has been practically "a dead letter" since the opening. Efforts have certainly not been wanting on the part of the angler, but only a fish here and there has been the result. Fairly good baskets of trout have, however, been got occasionally.—J. M.

Tweed, Teviot, and other Border Rivers.—Taking into consideration the time of year—the season scarcely begun—matters piscatorially are somewhat dull. The rivers up to yesterday (Tuesday) were running in grand form for minnow fishing, while in a few of the more sheltered nooks on both Tweed and Teviot a few of the more enthusiastic and devoted patrons of the sport have been trying their hand with the artificial fly. Their efforts, however, have not been crowned with much success and no wonder, for the weather has not been of the best character for this description of angling. On the Eden the best take yet recorded for the season was got by Mr. Thompson, Ednam, who had a splendid dish of trout of 6lb. fully, one of his fish weighing just close on 1lb. weight. On the Teviot, baskets of from 2½lb. up to 4lb. have been killed by Messrs. J. Reid, 2½lb.; J. Thompson, 2½lb.; Mr. A. Arnold, 3lb.; Mr. Jas. Adams, 3lb.; Mr. Chas. Farquharson, three takes, of 2½lb., 3lb., and 4lb.; Mr. Wm. Thompson, 3½lb. Many minor baskets have been killed, but the above are the best takes got during the week on the two main rivers, Tweed and Teviot. So far as regards salmon angling, well, there is not much to state. The river Tweed on Monday showed signs of rain in the west, and on Tuesday she was in a 2ft. flood; while, later on, the Teviot also came down in dirty colour to the extent of a foot. To-day (Wednesday), however, both rivers are clearing rapidly, and have fallen considerably, the Tweedometer at Kelso Bridge during this afternoon only showing a foot of flood water above the normal size; therefore, it is anticipated that successful fishing will be had during the end of the week on all the fastnesses. On the celebrated Floors Castle upper water, on Thursday of last week, Lord Stavordale (who has taken a short lease of the upper fishings on these waters) had a fine fish of 14lb. weight, while on the following Saturday he killed a beautiful clean run salmon in the new stream east, which turned the scale at fully 17½lb. Since then no salmon fishing has been successfully available, and therefore, no other reports are to hand up to date. On the Border streams and tributaries trout angling has begun in earnest, and on some of the smaller streams baskets of from 2½lb. up to 4lb. have been killed during the past week. Mostly all the baskets have been got with worm or other ground-bait, and, strange to say, the trout in most cases are in very excellent condition, while those killed on the Tweed and Teviot are very thin, and not in good condition at all. As stated in my former notes, the crusade against the pike has once more begun by anglers on the Tweed and Teviot. On the latter river Mr. Richard Ormiston, Haybank House, Kelso, had three of these fish weighing from 3lb. up to 6lb.; Mr. Jas. Affleck, Heiton, had three also, weighing from 2½lb. up to 5½lb.; while on the Tweed, at Bamff Mill, Mr. William Tait, the fisherman on the water, and his son, were out fishing, when the lad caught two pike of 5lb. each, and lost of another about the same weight. During the end of the present month the Kelso Angling Association are going to have a pike competition, several of the members having promised prizes, Mr. Archsteel, with his usual generosity, heading the list with a handsome silver medal. In the stomachs of many of the pike killed here lately have been found the undigested portions of trout, which, when alive, must have turned the scale at over 1lb. each. There is thus no use asking the question, "Where are all our trout going to?" when over 100 of these voracious fish were killed in a few months in the Kelso district last year, and already over a score have been got in both rivers this year already. Where do all the smelts go to will be the next question, if these fish destroyers are to be allowed to remain in the Tweed and Teviot.—MAXWHEEL.

IRISH REPORTS.

Ballinderry (Coagh, co. Tyrone).—The season opened on Wednesday, the 1st inst. On the Ardrea sections Mr. William McCord and Mr. Robert Campbell killed a few trout. On these sections a good many local men have been out, but with poor success. The frost effectively puts down the trout on the shallows. For the present month it is useless to fish on this river before 10 a.m. or after 3 p.m.—J. A. B.

Blackwater (Benburb, co. Tyrone).—The season opened on this river on the 1st inst. in a cold but fairly favourable weather. The water was in pretty good trim. On these reaches a few good trout up to 2½ lb. were killed by local men, and a Blackwater-trout angler is credited with killing a specimen of 6 lb. on a phantom whilst trolling for pike in a still deep there.—J. A. B.

Blackwater (co. Cork).—Sport is still below the average. A few nice fish have been landed on Careyville, Moollop, and Ballydoff waters, including one of 12 lb. landed by Mr. W. Gorst on the latter water.—W. HAYNES AND SON.

Boyne (Navan Section).—Sport during the past week has been very indifferent, still hard frosts at night and bright sunny days. I hear of three fish being got at Slane, two on Upper Black Castle (including one 29½ lb.), and one on the Blackwater. To-day it is raining heavily, and the barometer being low there is every prospect of a flood which would bring the Marob run of fish and find good sport.—CLARET FLY.

Bundowes River (co. Donegal).—Fishing has been almost at a standstill on this river since last report, in consequence of sharp frost at nights and bright sunshine in daytime. The river has fallen considerably during the past week, but is still in good fishing-ply. At time of writing rain has begun to fall, and prospects of sport are now looking better.—M. ROGAN AND SONS.

Cork Rivers.—Sport has shown up on the majority of the Cork rivers open for angling, both in the salmon and brown trout departments, but it is still far from being good on any water. The prospects for the next few days are fair, though some of the rivers are beginning to run rather low for successful angling. Spring salmon are still arriving in generally good numbers on all the principal rivers.—T. J. D.

Corrib and Lough Corrib (Galway).—The season up to date has been most disappointing on the Corrib, as only four or five springs have been taken by rod fishers. The river is in pretty good order. Lough Corrib is pulling into nice order, and considering the weather, trouting in the past two weeks was really good. Several professionals, out fly fishing and trolling, killed from 6 lb. to 10 lb. per day over the grounds between Oughterard and Dooras, on the Galway shores.—J. A. B.

Cummeagh and Iny.—Brown trout are now giving good sport on the Cummeagh, but no salmon anglers have been out on this water for some time past. The Cummeagh is strictly preserved. On the Inny fair sport continues to be had at brown trout. On Saturday Mr. Moriarty caught two dozen, weighing 8½ lb.—T. J. D.

Erne (Ballyshannon and Belleek).—This river opened for trout fishing, when Mr. P. Cleary and Mr. Tom Moohan took a few fine trout, one of them weighing 3½ lb. on the 1st inst.—M. ROGAN AND SONS.

Kerry Rivers.—Sport has been good at brown trout on all the Kerry rivers open for angling, but very bad, generally speaking, as far as salmon are concerned.—T. J. D.

Killarney.—The weather has been very favourable and the waters in good order. On the lakes, salmon fishing has been of the dullest kind, and matters on the rivers have been far from satisfactory. Brown trout continue to give good sport on the mountain lakes, the fish taking small flies readily throughout each day.—T. J. D.

Lee (co. Cork).—Sport still continues poor, although there are any quantity of magnificent fish showing on all the pools, but the weather is very much against the angler. When it does change there will be some good records. The following have been successful: On Lee Mount, Mr. W. T. Crawshaw, three, 8 lb., 8½ lb., 13½ lb.; and Mr. S. Haynes, one, 7 lb. On Oak Grove, Mr. F. M. Leader, one, 8 lb. On Clashaneur, Mr. J. O'Brien, one, 18 lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport continues very poor on Lough Currane, only two salmon having been had since last report, both of a small size. Fly fishing is being more practised, the weather being now very favourable for this method. Spring salmon are still arriving, but in very limited numbers. April will probably show the best sport at salmon this year on the lake. White trout fishing is expected to open early this year.—T. J. D.

Lough Mask (Clonbur, co. Galway).—For the past week trouting on Lough Mask has been really good. In fact, the March fishing for so far has never been better. Local anglers, fly fishing and trolling, have made heavy bags. The water has fined down into splendid order.—J. A. B.

Lough Melvin.—Some nice trout were taken on the above lake since last report by Mr. P. Gilroy and Mr. M. Hughes, and amongst them were some good-sized gillaroo trout in fair condition.—M. ROGAN AND SONS.

Lough Melvin.—I have been asked by many during the past two weeks as to the chances of trout fishing. Angling will not be at its best for at least another two or three weeks. Fishing up to the present is almost confined to local parties. On best days the catches of fly anglers do not exceed half a dozen per day. Some nice specimens of gillaroo and brown trout were had trolling with artificial minnows. Probably owing to the mild winter trout are in a very fair state of condition. On the 4th inst. Mr. W. K. landed a nice salmon to scale 9½ lb. trolling with spoon bait.—P. GALLAGHER.

Lough Neagh.—The pollen fisheries show an improvement. The trout netting season has also opened well. We have seen some fine specimens up to 9 lb., taken on the Artrim shores. The traffic in kelt salmon has decreased considerably.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport has been good on all the above waters, but the fish had been small. All fishing on these waters is done from the banks, and small dark flies of no particular pattern kill readily whenever a breeze springs up.—T. J. D.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River and loughs in good order; cold east wind still prevails; fish not taking. Capt. Palmer had two kelts; Mr. Crampton had three kelts and lost a clean fish. No anglers have tried their luck on the loughs as yet.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—Salmon fishing has not improved, the weather during the week having been intensely cold. Raining to-day, and, as the water is in good trim, anglers should have a good chance of sport. Mr. Squire Wolstenholme, of Bolton, who has been staying here for some time, creel-fished several lovely trout on lake and river, largest 5 lb. Mr. Wolstenholme, during another visit to Killaloe about a month ago, did great execution among the wild duck and widgeon on Lough Derg; on one evening he bagged twelve duck and a few widgeon. This well-known English sportsman it was that killed in 1895 the largest salmon ever taken with the rod at Killaloe. The monster fish, which was set up by Cooper and Sons, London, and is on view at the Three Tuns Hotel, Bolton. Mr. R. W. Rickards, The Priory, Usk, Mon., has returned to Wales. The Hon. John Wollopp has arrived from London, and is fishing Major Traherne's salmon preserves.—S. J. HURLEY, Killaloe.

Shannon (Castlecconnell).—Cloudy weather has now taken the place of the sunshine of the past fortnight. On Doonass, Mr. G. C. Williams killed one salmon, 3½ lb., on 7th. On Woodlands, Mr. E. A. Anstie killed one salmon, 25 lb., on 4th. On the Castle fishery, Mr. G. W. Greenhill killed one salmon, 32½ lb., on 6th. On the World's End, Major C. Hayes Newington killed one salmon, 13 lb., on 2nd; and on the same water Mr. C. Vansittart killed one salmon, 3½ lb., on 6th.—JOHN ENRIGHT AND SON.

Westmeath Lakes (Mullingar).—The season opened for angling on the Westmeath lakes and rivers of the Limerick district on the 1st inst., but owing to the prevalence of frost and calm weather there has been no sport as yet to record. A splendid pair of otters were trapped recently at Lough Owl. I have never seen more magnificent specimens. These interesting creatures are numerous about this lake. The pike are now engaged spawning in the shallow bays and inlets of the several lakes, and large numbers are being destroyed, which will be of much benefit to the trout fishing. The otters follow them, although they seldom kill or eat pike. In the tributary streams of the river Boyne sport has been poor, owing to some cause, as well as to persistent poaching. The rivers have run down rapidly during the past week.—T. J. W.

SEA FISHING.

The following table gives the nearest approximate tides for the use of sea anglers for the week ending Friday, March 17. Spring tides. Highest on Tuesday.

	Sat.	Sun.	Mon.	Tues.	Wed.	Th.	Fri.

Brighton.—The weather is now settled, and calm seas. The wind has gone round from N.E. to S.W., and small sailing boats are off daily, but the weather keeps rather too cold for boat angling.—H.

Deal (The Pier).—The past week has yielded very poor results, and, almost without exception, the few flat fish taken have been very small indeed. The only patrons of the pier have been two or three local enthusiasts, and on more than one occasion neither of them has experienced a bite. The only catch worth recording consisted of nine dabs—four of them of edible size—caught by Mr. Bushnell on Tuesday afternoon. Though the water is in good colour and condition, it is evident that the fish are not at present in this immediate neighbourhood.—J. RICHARDSON.

Penzance.—Heavy catches of ling are being made by long line fishing. Our mackerel fleet are ready to put to sea.—H.

Plymouth.—We are still having a spell of fine weather, and fishermen are making good use of their time. It is a little bit cold mornings and evenings, but in the middle of the day it is very pleasant. Bass are plentiful in the Cattewater, and from off Bulteel's wharves. They are not very large, few being over 2 lb., but they are in good condition. I saw some nice pollack the day before yesterday that were caught in the sound. This is very early for them, but if the weather keeps fine we may expect the spring fish earlier than usual.—WILLIAM HEARDER (B.S.A.S.).

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £1 1s. from the Enterprise Angling Society's donation box; also 10s. 6d. donation from Mr. G. H. Shepherd (Bermondsey Brothers'), per Hoxton Brothers' smoker.—R. GHURNEY.

Anglers' Association.—The monthly finance committee meeting will take place on Monday evening next, March 13, at 7.30, and the general committee at 8.30.—R. GHURNEY.

Anglers' Association (No. 1 Eastern District) Visiting List.—The next return visit will be to the Albion Brothers' A.S., Frampton Arms, Well-street, Hackney, on Monday next, March 13. Anglers who will favour us with their company will oblige.—G. MANNING.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On March 5 several of our members had very good sport. Mr. Bowyer, three and a half dozen good roach and dace; Mr. Pearce, five and a quarter dozen good dace; Mr. Jones, good chub; Mr. Allright, perch; Mr. C. J. King, perch and dace; and Mr. Thompson, nine fine bream, largest 3½lb. We made another new member on Wednesday. Onting for clock, by Mr. Sparrow, for roach only; where you please, on March 12. On March 13 we have our return visit.—C. J. K.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—On March 5 Mr. Barker had a dace over 5oz. from Thames, and Alf Glaze over 3lb. of roach, and also had roach from Henley. To members who have not taken any prizes there will be a consolation match on the 26th, in the Lea or any waters open. On that date all fish, according to the usual conditions, are weighable; two rods allowed. The canal from Hanwell to Drayton is open, and also various ponds.—BEN ABRAHAMS.

Alma Angling Society, Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—On March 5 the following weighed-in: Messrs. Boothby, perch and roach; Drew, roach and dace; Black, roach; Hall, perch; and Montgomery, chub, roach, and dace, winning the fifth prize left over from the Windsor competition.—J. CHAMBERS.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—On March 12 our Cookham match is altered for Hampton; conditions same; from Hampton Ferry to Sunbury Lock. On March 5 Mr. T. Fairclough had some fine roach. On Wednesday last Mr. G. Taylor weighed-in some nice roach, largest 1lb. 3oz.—J. R.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—Our match for the March series of prizes will take place on March 12 at Bourne End. Leave off fishing at 6.30. Mr. C. Cannar weighed-in one jack on March 5. Members requiring tickets for exhibition at the Aquarium can have same on application to—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On March 5 Messrs. F. Apin, E. Guy, W. Taplin, and J. Hall were the prize winners in consolation match. Also weighed-in: Messrs. S. Apin, Ansty, Thomas, Jenkins, and Manning. The half-yearly general meeting for the election of officers, &c., is fixed for April 4. All members are desired to attend same and oblige.—A. JENKINS.

Battersea Piscatorialists, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Since my last report several of ours have been out. Mr. E. Collins weighed-in perch; Mr. Painter, perch and chub; Mr. Keene and Mr. Triumphant also had fish. We have a consolation match on March 12 (roving) for members not having won a prize during season.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—The following members weighed in on the 5th: Mr. J. Smith, 16lb. roach; Mr. J. Martin, 10½lb. roach; Mr. J. Hobbs, 8lb. roach; Mr. Rewill, roach, one fish, 1lb. 8½oz. The competition for the remaining six prizes of the season will be fished for on the 12th in the river Arun; members to book to and return from Amberley Station; optional to leave London on Saturday night.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Several members weighed-in on the 5th. Mr. Merrygold, roach and jack; Mr. Whiley, Foster, and Howard also weighed-in. I wish to remind members there are five prizes to fish for on March 12, at Pulborough. Start by 8.30 train; return 7.24. Our host has presented us with a guinea to fish for.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On March 5 Mr. J. Roach weighed-in jack, roach, and perch, 6lb. 10½oz.; Mr. R. Lammes, bream and perch, 4lb. 14½oz.; Mr. J. Taylor, chub, bream, perch, roach, and dace, 3lb. 8½oz.; and Mr. F. S. Pavett, roach.—T. PATERNOSTER.

Bomora Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—On March 5 several members were out, with the following results: Messrs. P. Harley, jack; F. Hall, jack and roach; H. Dagworthy, jack; H. Foreman, roach; A. Cowan, roach; H. Parker, roach; G. Farebrother, roach; G. Love, roach and dace; J. Preston, roach; J. Weeks, roach and bream, from Uxbridge. Our smoking concert on the 7th, on behalf of the A.B.S., proved a grand success, the following clubs being well represented: Egin, Cobden, Queen's, Duke of Norfolk, Jubilee, Camden, Dibden, Royal George, Allason United, and Sundial. The Brothers McCarthy, J. Linton, G. Parker, G. Love, E. Baxter, A. Ponlter, A. Young, G. King, Sisters Davison, and a host of others contributed towards the harmony. The sum of 10s. was collected for our box. The chair was taken by Mr. B. Abrahams, in the unavoidable absence, through illness, of Mr. J. Harris, faced by E. Baxter. Pianist, A. E. Charlton.—H. DAGWORTHY.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—On March 5 the following weighed-in: Mr. C. Parmenter, pike; Mr. Papworth, perch; and Mr. Randall, pike. I should like to see a full muster of members on Tuesday next.—F. RANDALL.

Cambridge Friendly Angling Society, Fountains Abbey, Praed-street, W.—A peg-down match at Henley on the 12th inst.; six good prizes to be fished for; train from Paddington 9 o'clock; a saloon carriage. Mr. Seutt had some fine roach; Mr. Fitzgibbon some good roach on March 5.—W. SUTTON.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On March 5 Messrs. T. Penny had a nice

show of roach, perch, and dace; J. Golding, perch; Yeo, perch; Hopper, perch; Burges, perch; Ward, perch; H. Everett, perch; J. Baines, roach and perch; and R. Hubbard, roach. I should be pleased to see members attend in numbers, and give the Albion Brothers a bumper on their return visit next Monday night.—P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—On March 5 Mr. Cook had 15lb. 14oz. fine roach; Mr. White, jack and roach; Mr. Fuller, jack and roach. We have a concert in aid of the A.B.S., Monday, March 13. Ladies specially invited.—E. BOXALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On March 5 the result of our consolation match was as follows: Mr. H. Pegg, first; T. Jameson, second. Fish weighed-in from other waters: Mr. J. Willgoss, 6lb. 11½oz., roach and pike (largest roach, 1lb. 4½oz.); H. Moon, 2lb. 8½oz. (one dace 6½oz.); J. Thorne, roach; H. Runnegar, roach; A. Heyman, bream; J. Burrage, perch.—G. T. JAMESON.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On March 5 the following weighed-in: Messrs. Bampton, jack; Mitchell and Hunt, perch; Eastwood, roach. On March 12 an outing for prizes takes place between Fish and Eels and St. Margaret's Bridge. I am pleased to state our chairman has improved in health.—THOS. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On March 5 Messrs. E. Baxter weighed-in roach, dace, and chub; A. Howland, roach; W. Walker, roach and jack, largest jack 4lb.; F. Melville, roach and perch. March 28 will be the end of the financial year, and all members not clear of the books by the first week in April will be fined, as per rule. Any member wishing to alter any rule must post a notice of same on notice board in club-room after next week.—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Mr. W. and F. Beames weighed-in roach, dace, and bream from the Arun; also out Messrs. Boyd, Stafford, Sorge, Arron, but took nothing. Members are requested to attend next Wednesday, to arrange sea outing and to clear the books, &c.—W. H. STAFFORD.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On March 5 Messrs. Massey, Cutbush, and Curtis had good bags of jack, perch, and roach; and on Tuesday Mr. Curtis had a good show of roach and dace.—W. MASSEY.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—Since my last report we have had some good shows of roach, perch, and jack by Messrs. H. Haines, G. Norris, W. Long, W. Leadbeater, and J. A. Anderson. At our last meeting we voted 2s. 6d. toward the River Keepers' Dinner Fund. I hope to see a good muster on Wednesday next to arrange when and where to fish for those prizes not won during the season, and other important business.—G. H. FRANKLIN.

Dalston Angling Society, Browlow Arms, Brownlow-street, Dalston.—On March 5 a few members were out. Messrs. T. Thompson, T. Swain, and G. Davies were the only ones to weigh-in, they having a very fine show of roach and perch. On Tuesday there was a poor attendance, but I disposed of several items. We voted 2s. 6d. toward the River Keepers' Dinner. It was also decided that the prizes in hand should be competed for on March 19. It will be decided on Tuesday next where it shall take place.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—On March 5 members went to Bures, Bedford, Tonbridge, and King's Langley. Sport was very poor. J. Edwards, jack; W. Elson, roach; E. Colman, roach. On Tuesday we attended the Hoxton Brothers' concert. Wednesday's meeting very quiet.—JOHNNY EDWARDS.

Drayton Park Piscatorialists, Stanley Arms, Landseer-road, Holloway-road, N.—During the past week several members have had some good fish. On the 8th (S.M.) business of importance was satisfactorily transacted. Our second annual dinner will take place on April 25.—GREG.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—Most of our members were out during the week, and weighed some nice shows of roach. Mr. G. Jenkins, roach; Mr. Lumley, roach; Mr. Wilkins, perch and roach. Our last match of the season will take place on March 12. Usual conditions; roving.—W. JENKINS.

Duke of Wellington Angling Society, The Duke of Wellington, St. James'-road, Holloway.—We had a very good show of fish on Feb. 23, viz., four jack (largest, 8lb. 10½oz.) and 8½lb. of roach and perch; and on March 3 there was a good show again, viz., two jack (largest, 10lb.), and also nine good perch. The above were all taken by Mr. A. Norman, of the Arundel Arms, Westbourne-road, Holloway, N., fishing with Vaughan, at Henley.—A. MORGAN.

Eagle Angling Society, Red Lion, Tottenham.—On March 3 and 4 Messrs. H. Denton and W. Denton had some fair takes of jack. On March 5 Mr. J. Dyer and W. S. Price had a nice lot of roach and dace.—W. S. PRICE.

Enterprise Angling Society, City Arms, High Cross-road, Tottenham.—On Feb. 26 the following weighed-in: Messrs. Harne and Wells. On March 1 we held a return visit in aid of the A.B.S., which was a great success. Mr. W. E. Butler was the chairman, Mr. J. Coppen, vice. Mr. Dubbins was the pianist. During the evening Messrs. Cramp, Burnett, Perry, Ashmore, Chapman, Allen, Langton, Lewis Brown, Perring and Co., obliged, with some songs. Mr. Wilson Farrington also gave a performance of sleight of hand tricks. We

handed one guinea to the A.B.S. from our box. Seven clubs were well represented. On March 5 Mr. Wells saved the club from a blank with 5lb. 5oz. perch, also winning the fortnightly prize.—W. LEEFVRE.

Forest Gate Piscatorialists, Forest Gate Hotel, Godwin-road, Forest Gate, E.—On the 5th inst. Mr. Durell weighed-in 8½lb. of chub; Mr. Creeke, chub (largest 3lb. 5½oz.).—H. F. C.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Twenty members fished for fifteen prizes on the 5th at St. Margaret's. Only nine were taken, the remainder will be fished for on March 12. The members to go any part of the Lea; all start on the day. Mr. Thompson brought in some nice roach on the 5th. Mr. A. Coker had another nice jack, 15lb., also one 7lb., from near Brandon. The season will soon be over for jack, but he expects to get a heavier one before it is over.—R. MURPHY.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—The first competition for the Osborne cup took place on March 5, at Broxbourne and Ely House, Mr. G. Francis proving the winner with perch. Messrs. Owen and Evans also weighed-in perch from other waters; Messrs. W. Randall, a brace of jack; Brooks, roach; Rogers, roach; and C. Watling, a fine tray of roach and a jack, 4lb. 13oz., taken with gentles on a tight line.—J. A. FITCH.

Greenwich Angling Society, Morden Arms, Circus-street, Greenwich.—Our final smoker of the season took place on March 8, at the clubhouse, Mr. Dowsett, the president, in the chair. The artists who attended were Mr. Frost Lambert, Charles Neville, Harry Borman, Tom Sheaf, &c. During the interval Mr. Church, on behalf of the club, in a few appropriate sentences, presented to our president (Mr. G. H. Dowsett) a splendid silver-mounted claret jug, and, with musical honours, his health was drunk, also, of course, his wife and family. Mr. Dowsett suitably replied, wishing the club every success. Among the visitors who supported the president were Messrs. A. R. Matthews, Dowsett (brother), Russell, Page, Chamberlain, Tatnal, Marshall (our vice-president), Church (club chairman), Dupere, Young, Steer, and altogether about fifty members and friends. A most enjoyable evening was spent. The musical arrangements were under the charge of Mr. Gorton, to whom the club are indebted for the excellent manner in which they were carried out.—J. DRYDEN.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—I am sorry to have to announce a blank for March 5, very few of our members being out. I should like to ask the members to attend in force on Monday evenings, as there is a lot of business to attend to just now.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Messrs. Russell had a show of roach; Smith jack; Durell, perch; and A. Bagshaw took the remaining prize with jack.—O. SMITH.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—At our outing on March 5 all members weighed-in. Mr. T. Johnson winning first prize with roach and dace; Mr. Clayton, second, with chub and dace; Mr. Stevens, third, with roach, dace, and bream. Thanks are due to Mr. W. McBride for the excellent manner in which he catered for the members. The following takes are reported: Messrs. Geo. Johnson and A. Stevens, fishing with John Hogg at Walton, four dozen good perch, three dozen of which were returned; Messrs. Hawes and G. Cames, fishing with Vaughan at Henley, had several good jack and perch. We have arranged a smoking concert amongst the members and friends on Wednesday, March 16, at headquarters.—A. CLAYTON.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On March 5 a few members competed for a lapsed prize from the week previous, which was won by Mr. J. Wiltshire, with dace; also Mr. F. Newton weighed roach, but not competing. I hope members will try and attend the Albion Brothers' visit on the 13th inst.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—Since my last report the following weighed-in: On Feb. 26, Messrs. Croker, roach and dace; Burwash, roach and dace; Wilkes, roach and dace; Boys, roach. On March 5 Messrs. E. Challis had two nice jack; Croker, roach, dace, and perch; Burwash, roach and dace; Wilkes, roach and dace.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—Only two of the prizes offered for competition on March 5 were taken. The remaining one, with two added prizes, will be fished for again on March 12, competitors being allowed to choose their own fishing waters (private waters barred). There are also two "specials" to be competed for on March 15 on the Lea, between Carthagea weir and Ware Park mill. Mr. W. Wiltshire weighed-in 13lb. 15oz. roach on the 8th inst.—H. B.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—On March 5 Mr. More had a nice show of roach; Mr. Cook and Mr. Biggs also had roach. On March 12 there are two consolation prizes to be fished for, members to go where they like; gross weight.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—We have had a spell of very nice weather, good for grayling and pike fishing, and several of our members have done well with both classes of fish; but the former should now be left alone, though in the Wyrnwy and Tanat the Severn Board of Conservators allow grayling to be taken all the year round, this with the object of protecting the trout. There is no doubt that both the grayling and pike have increased very much during the last few years in the above waters, to the detriment of trout. Next week the close season comes in,

Eighth Annual Fisheries Exhibition.

DAVID SLATER,

(Stand 24)

Of NEWARK - ON - TRENT,

MAKES THE FOLLOWING

SPECIAL ANNOUNCEMENT.

RODS.

THOSE in want of either Rod or Reels will consult their own interests by inspecting David Slater's Magnificent Exhibit at the Royal Aquarium (now open).

Built Cane Salmon and Trout Rods, with or without Steel Centres, for excellence of workmanship and reasonable prices stand second to none. Inspection invited.

Superior Greenheart Trout Rods from 10s. 6d. to 21s. Two tops, and Best Universal Winch Fittings.

Sée our Greenheart Salmon Rods. Best quality only.

Our Noted Pattern, the Newark Perfection, specially designed for the Nottingham style of fishing, price 21s. each.

Pike Spinning Rods in East India, Cane and Greenheart from 10s. 6d. to 21s.

REELS.

Slater's New Aluminium Alloy Salmon and Trout Reels. These Reels are perfection; they combine great strength with extreme lightness; hardened steel works, and beautifully finished.

Sizes.	Prices.	Sizes.	Prices.
2½in.	15s. 0d.	4in.	28s. 0d.
2½in.	17s. 6d.	4½in.	32s. 0d.
3in.	21s. 0d.	5in.	35s. 0d.
3½in.	25s. 0d.		

The Fly-Fishers' Winch (registered). This reel is made in two sizes; can be had with click or silent check. It has two special recommendations—extreme lightness and quick winding.

Also a large collection of the following patterns: Ordinary Wood Sea Reels, The Future Sea Reels, Slater's Combination in Wood and Ebonite, The "Zephyr," the lightest Nottingham, Gun-metal Salmon and Trout, Bronzed Salmon and Trout, &c., &c.

We have a few old patterns Combination Wood Reels, also Ebonite Salmon and Trout, which will be sold regardless of the cost of manufacture during this Exhibition.

Mr. David Slater will be in attendance at the Royal Aquarium during the Fisheries Exhibition, which closes on April 5.

SPECIAL.

A set of twelve STANDARD SALMON FLIES, medium size, gut loops or eyed hooks, all named, sent post free on receipt of 16/-.

C. Cannell, "Daily Chronicle"; F. Oxford, "Morning Advertiser"; J. Mackinlay, "Morning Post"; H. Barnes, "Daily News"; T. Pedley, Assistant Sec., Lychnobite Angling Society; or of the Secretary, as above.

FISHERIES EXHIBITION, Royal Aquarium, Westminster.

OGDEN & SCOTFORD,

PITVILLE GATES, CHELTENHAM.

MANUFACTURERS of FIRST CLASS RODS, FLIES, and TACKLE.

ANGLERS ARE INVITED TO INSPECT OUR NUMEROUS SPECIALITIES AT ABOVE EXHIBITION.

Branch Establishment: 19, LEICESTER SQUARE, LONDON, W.C.

and will be more or less observed; for, say what you will, there are plenty of anglers who cannot resist the temptation or longing to handle their rods, especially as the two nice months of April and May are covered by the three months close time. The present season bids fair already to be better than the last, which was a poor one indeed. The early efforts of anglers have been, so far, attended with a considerable measure of success, both with the fine and coarse fish. The trout fishing in the Pen y Cae water opens on the 15th, and we have an outing to the Dee next week.—RD. WOOLFALL.

Maldon and Heybridge Angling Society, White Lion Inn, Heybridge, Maldon, Essex.—During the past fortnight roach anglers have had poor sport, owing to the brightness of the water. Some anglers have been out pike fishing, and during the past week over fifty pike have been taken from the waters at Hoe Mill, Ulting, and Besleigh. Some of the fish, I hear, have been small, but several fair sized, from 5lb. to 8lb. had been taken. At the time of writing several more are out piking, and I expect to hear of some good captures. Mr. F. Springett secured a jack on the 4th inst., 4lb. 12oz., and one on the 5th, 6lb. 4oz. I shall be pleased to hear from the secretaries of the various angling societies respecting the tickets for the Langford fishery for the next season, as it entirely depends upon the number of subscribers at 5s. each whether the lease of the fishery will be renewed for the next season.—F. KEEN, 26, Spital-road, Maldon.

North-East Brothers' Angling Society, Star and Garter, Green-street.—The following weighed-in on March 5: C. Lamb, jun., eighth prize. Out of match: H. Hart, Mr. Auvache, J. Eaton Richards, sen., E. Lamb, H. Collins. Members may go where they choose on the 12th for yearly prizes. Start on Saturday if they choose.—A. LEWIS.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several of the members of the above were out on the 5th inst. Some nice trays of fish were shown. Mr. Hopton, top weight, 15lb. of roach and perch, also two jack; Mr. Coldwell, jack and perch; Mr. Reitz, perch; Mr. Thompson, some nice roach; Mr. Carter, roach; Mr. Tracy, perch; Skeggs, perch.—W. S.

Phoenix Angling Society, The Tavistock, Stibington-street, N.W.—On March 5 we had a good show by Messrs. F. Dove, Nobby, Austin, Bouffler, Carter, and E. C. Sherlock, of jack, perch, roach and chub. March 6, Carr, a few perch and roach, best perch 1lb. 12oz. Our central visit is postponed to March 23, as the Central Association have a big smoking concert on March 20.—R. C.

Prince of Wales' Angling Society Windsor, Castle, Church-street, Edgware-road.—During the past few weeks we have had some capital shows of roach and jack by Messrs. Robins, Haynes, N. Tuford, and Clist. We take a visit on the C.D.V.L. on Monday, March 20, when with the support of brother anglers we hope to give "Case" a welcome.—W. B.

Queen's Piscatorialists, Queen's Arms, 1A Chapel-street, Edgware-road, N.W.—On March 5 the following weighed-in: W. Shepherd, C. Shepherd, C. Brett, J. Reeve, and J. Winsby. Will as many members as possible meet at Paddington Station, 8.40 a.m. train, on March 12, the last competition of the season.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—On March 5 we fished a competition at Bourne End with the following result: Messrs. Davis, 1st; Pope, 2nd; Brand, 3rd; W. Harris, 4th; W. Allport, 5th; H. Allport, 6th; Bardot, 7th; and Gibbons, 8th. Mr. Burrell also weighed-in. Our new member, Mr. Brand, amongst other fish, weighed-in a specimen roach.—G. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—In our match on March 5 the following weighed-in: J. Payne, perch; Merigold, chub; Tishaw, chub. The first-named member was the only to weigh-in for prizes. Two left over.—F. PIGNANTELLI.

St. Alban's Angling Society, Rising Sun, Prince's-road, Lambeth.—Our members were out on March 5 for consolation prizes. Mr. Donaldson, sen., was first; E. Leighton, second; J. Norton, third; R. Turner, fourth. The fish were mostly bream. There are still three prizes for March 12. We had a fine show of fish by H. Allan from Pnllborough, 24lb., several bream 2lb., one bream 3lb. 5oz., and one handsome perch 1lb. 14oz. Our South London visit takes place on March 20.—H. A.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—On March 5 a few of our members were out, with the following results: Messrs. Campbell, 9lb. 4oz., roach; S. King, 6lb. 2oz., roach; W. North, 4lb. 10oz., roach; W. Roach, 4lb. 13oz., roach; and T. Arrigoni also weighed-in roach. On March 12 all members can fish for two additional prizes, viz., 10s. 6d., given by Mr. Goode, for the heaviest roach from the Thames (bank); and 10s. 6d. for the gross weight; all fish (club rules); given by Mr. W. Barker, jun.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On March 5 the two prizes left from previous outing were won by Messrs. Woolt in and Clark, at Ship Lake. On March 7 (quarterly night) all the officers were re-elected. Mr. Abrahams had a nice show of jack.—PELICAN.

Stockwell Angling Society, Old Queen's Head, Stockwell, S.W.—Mr. W. J. Wade's lantern lecture at the above, on March 2, was attentively listened to by an appreciative audience. I am requested to tender thanks to those who favoured us and supported in a generous manner the object in view, viz., the collection for the T.A.P.S. We are deeply indebted to Mr. G. H. Shepherd, Bermondsey Bros., who arrived early and occupied the chair; and to Mr. E. C. Barnstead, the president of the Larkhall A.S., for attending; also to those members of the S.L. clubs who assisted in the programme. Mr.

G. H. Shepherd presented our club with half a guinea prize to be fished for. We are holding a grand evening concert at Evesham Hall, Brixton, on March 20, partly in aid of the A.B.S.; and as no expense has been spared in the selection of sixteen artists, I trust that some of our friends will support us. Tickets, 2s., 1s., and 6d., can be obtained of the hon. sec., THOS. LUCAS.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On March 12 we have an outing to Wraysbury, Thames; bank only; members to go by the 8.2 train from Grove-road, Hammersmith Station, and return by the 8.40 from Wraysbury; for three prizes for the first, second, and third best specimen fish caught. Mr. King's cup to be taken by the best specimen fish. Members are requested to attend meeting next Tuesday, as there is a very important question to decide.—C. E. LOCK.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—Since my last report several members have had fish. Mr. Simonds, four dozen nice roach on Saturday; Mr. Barrow, on March 5, six perch; Mr. Ogden Smith and two friends, on Thursday, 23lb. roach; and Mr. Smith again on the 6th, three and a half dozen perch, being the best takes.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—On March 5 Mr. G. Marsh had a fine take of perch, best fish 1lb. 5oz.; Mr. C. Wilderspin, roach. The members will fish a go-where-you-please match on March 12 for several prizes.—H. TYLER.

Victoria Brothers Angling Society, Princess Victoria, Robert-street, Hampstead-road, N.W.—On March 5 only two prizes were taken, W. Boud, first; W. Toothill, second. Remaining prizes to be fished for on March 12.—W. H. B.

Waltham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Mr. Bradley weighed-in the finest specimen perch ever brought into the club-room on March 5, scaling 2lb. 12oz. We have a roving match on the 12th inst.: conditions, two rods; bank or punt; all fish to weigh; and option of going away on Saturday.—W. H. BATCH.

Walthamstow Brothers' Angling Society, Essex Arms, Forest-road, Walthamstow.—On March 5 the following weighed-in: Messrs. Howarth, roach and dace; Howell, dace, 3lb. 14oz.; Skelsey, perch, 3lb. 6oz.; Eaton, jack and perch; Knight, perch; and Coates, roach, 5lb. 3oz.—H. WIGG.

Walton and Cotton Angling Association, Crown and Woolpack, 162, St. John-street-road, N.—Our members are winding up the season fairly well, weighing in the last six days, one jack, 10lb. 3oz., four jack, 14lb. 12oz., one chub, 3lb. 2oz., two perch, 1lb. 3oz., and several takes of roach.—M. CUDDA.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—On March 12 we hold an open competition (bank or punt) for several prizes, all fish to weigh. Mr. W. L. Griffin was first this week with some good roach from the Thames; Mr. W. Sparrow weighed-in a nice bag of mixed fish towards gross weight.—W. WRAY.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—On March 5 Mr. F. Homer weighed-in jack, saving us from a blank. I hope our members will not forget our peg-down match on March 12 in the Forty-Guinea Water. All to go down by the first train on the morning that leaves Stratford at 7.41 a.m.—LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—We have arranged for our final club match of the season to take place on March 12. All members to go to Shepperton station; bank only; for six prizes. Our president will give a "Bickerdyke's" book for the best roach of 12oz. or upwards. Mr. C. J. Carter is the winner of the silver cup for this season. Mr. C. Martin weighed in a specimen roach 1lb. 7oz. On March 5 Mr. W. Cox, sen., also weighed-in three bream.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—On March 5 the only fish shown was a good perch; caught by Mr. Eccarius. The last match of the season will be fished in the Thames, from Walton Bridge to the Anglers' Inn, on March 12; leave Vauxhall 8.50, return 8.36; two rods; jack barred; all fish to be shown at station.—S. J. H.

Why Not Social Angling Association, Why Not Inn, Steelhouse-lane, Wolverhampton.—The annual dinner in connection with the above association will take place on Tuesday, March 14. The president, Mr. Councillor L. Johnson, has kindly consented to preside. The following gentlemen have kindly promised to attend: Alderman S. Craddock, Mr. Councillor F. H. Parkyn, Mr. Councillor E. C. Pratt, Mr. Councillor G. F. Steward, G. Craddock, Esq., and A. Lamsdale, Esq. A capital programme is being arranged, both vocal and instrumental; in fact, everything hides fair to equal, if not surpass, previous social functions. Mr. S. Lamsdale has kindly consented to act as pianist. At a well-attended meeting on Tuesday evening seven new members were enrolled.—J. W. VANN.

Wimbledon Piscatorialists, 28, Alexandra-road.—On Tuesday Mr. S. Peskett had a fine show of roach from the Thames, 7lb. in all, taken in two hours' fishing. Mr. E. Bowie brought up two brace of perch, and reported having landed a trout of 3lb. at Kingston while perch fishing. The trout was, of course, returned. Mr. H. A. Rolt had chub up to 2lb. and roach, and Mr. Enever perch. The winners in the last outing were Messrs. Salks, jun., Lawrence, and Bowie. The final match for the silver cup comes off on the 12th inst. in club water, as previously announced.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—The result of our prize outing on the 5th was much brighter than previous.

H. Closter took first prize with nice show of dace; and T. Gloster, second, with some good roach. Mr. Wyett and others weighed-in fish. We have a match at Weybridge on the 12th for four good prizes, being the last match before close season, and invite all members to attend to this. We have received from Mr. J. Wysett a very handsome map of the Thames and tributaries.—N. LINDEN.

Doings by the Way.

Mr. W. H. BROUGHAM, of T.A.P.S. notoriety, will on Tuesday next, March 15, enter into his 80th year. Same age as Her Most Gracious Majesty, empress and queen, is it not? Still live, Mr. Brougham! Don't do more than ten dinners in one night. We do not want to have a second edition of the "Massacre of the Innocents."

THE second annual dinner of the Hastings and St. Leonards Angling Association will take place at the Castle Hotel, Hastings, on Wednesday, March 22, at 7.30 p.m., the president, Mr. O. R. Travers, M.R.C.S., in the chair; Mr. F. S. Foster, vice-chair. I hear that some decent pike have been taken at Pevensey Sluice lately. Mr. F. G. Hutton had six, ranging from 5lb. to 11lb.; and his son one of 19lb. 5oz.

THE March number of the *Thames Angling News* is one of the best numbers yet produced, and the editor (Mr. F. H. Amphlett) is to be congratulated on its progress.

THE Greenwich "Smoker" was a grand success.

YOU may fish all day Tuesday on the Thames, and as long as you can see at night, but on Wednesday, March 15, you must not. The Lea is open till the end of the month. Trout anglers may fish for trout on April 1 on the Thames.

THE Lychuobite's grand "smoker" on Saturday, March 25, bids fair to be a grand success. I looked in on the boys at a committee meeting, and found Mr. Tom Pedley (assistant secretary), Mr. Gus Cannell (president), Messrs. L. A. Swallow, C. Townsend, W. J. Povey (treasurer), and Tom Edwards all under full pressure of steam. Mr. West and Mr. L. Chaplain (the vice-chairman on the 25th) were working hard in a good cause.

THIS is from Mr. R. W. Vernon, of Ilfracombe: "On Saturday last I landed a cod of 14lb. with throw-out line from the pier; and on the previous Wednesday one of 18lb. with rod and line. I was using a small whiting hook, baited with lug worm. For twenty minutes he gave me as excellent sport as a salmon (and I have killed many a salmon). I may mention that the fish was gaffed from a boat." [Well done, Mr. Vernon! This is one of the "monsters of the present"—not past. Although I have not seen it, it would appear 'twas in the water. Surely a fine specimen of the *Gadus morhua*!]

THE same gentleman sends the following effusion re the *Plesiosaurus*:

"Your youngest daughter, 'Draguet,' sure a genius must be

Since she can tell where creatures live which none shall ever see.

For all these fabled fish, I wean,
Are in the brains of those who ne'er

The truth have ever learnt to tell

(In matters piscatorial, I mean").

[All right, Mr. Vernon. Daisy "Drag" is at home with the "flue." She shall answer you next week if she is well enough. Look out!]

FAREWELL to the season of spinning.

For pike, now the season is o'er,
The spring's joyous season's beginning,
And angling is over once more.

The roach are at rest for the spawning,
The reach-pole is put to the rout,
And anglers all sigh for the dawning
Of April the First with the trout.

With fur, and with wool, and with hackle,
The angler prepares for the rise
Of the beauties, the gossamer tackle,
That lures the sagacious and wise.

How light leaps the heart of the lover
Of angling and nature to draw
The greenheart again from its cover,
As supple and true as of yore.

Farewell for a time to coarse fishing,
The trout time already is near,
So here's to all angling men, wishing
"Tight lines in the spring of the year."

MR. A. E. ARMSTRONG, of the Cardiff A.S., writes: "A deputation from the Cardiff Piscatorial waited upon the County Council asking that they erect a hatchery, not only for restocking waters under their jurisdiction, but for scientific and educational purposes. The deputation was introduced by Councillor Gerhold, and your humble as spokesman. After a little discussion, the chairman (Alderman F. J. Bevan) sympathized with us, and promised his support. We have just received the following extracts from minutes, &c.: 'That this committee recommend that a fish hatching station and the necessary developing tanks

he erected near the arch at the bottom of the waterfall in Reath Park. At a members' meeting of the Cardiff Piscatorial Club, held on Thursday evening, March 2, Mr. F. Handley read a most amusing and instructive paper, on "A Day's Fishing off Ilfracombe." Mr. T. J. Williams was in the chair.

THE 20lb. pike taken by Mr. Baker at Broxbourne recently was reported to be 27 inches in length. It should have been 37 inches. Hon. Sec. Butt writes like copper-plate, and how his 3's could be construed into 2's is a mystery. Fish sometimes grow after they leave the water; they have also been known to diminish slightly—but not 10 inches in two days. Kindly leave the calculations as you find them, please Mr. Printer.

"TRUTHFUL TOMMY" tells me a charming anecdote of Her Majesty, which has, at least, the merit of being true, and at the same time shows once more that Queen Victoria is a woman first, and a queen afterwards. It appears that a well known stockbroker spent his holidays in the Isle of Wight, near Osborne. His two children, a boy of five and a girl of seven, were most anxious to see the Queen, and were told by their father that if they waited at a certain place they would see their Sovereign pass on her daily drive. Patiently, day after day, these loyal little Britons waited; carriages passed, but no Queen. One day, however, Her Majesty walked by, and seeing the children still in the place in which she had noticed them for several days when driving, stopped and spoke to them. "Why are you waiting here, my dears?" was the royal query. "We want to see the Queen," replied the little girl. "Well, dear, I am the Queen, and now you have seen her." But this was too much for the sturdy five-year-old boy. "Oh, you go along," he answered, and then, much to Her Majesty's amusement, continued, "The Queen wears a golden crown, but you are an old lady in a bonnet."

THE Queen's love of children is proverbial, and that little chap received a good motherly kiss for his answer. There is, as Sam Slick remarks, "a good deal of human nature in man," and it is little things of this sort, as much as our inborn respect for the monarchy, that make the toast "Gentlemen, Her Majesty the Queen, God bless Her," very much more than an empty and meaningless formula.

MESSRS HAYNES AND SONS report the capture of a large trout on the Bandon river, Co. Cork. The "slob," or tidal trout was killed by Mr. James A. Allman, of Woodlands, Bandon, and was on view in Messrs. Haynes and Sons' (fishing tackle makers) window on Tuesday. It was a magnificent specimen weighing 7lb., length, 26in., girth, 14in.—the largest trout killed on this river in the memory of the oldest anglers; it was landed after a hard fight.

I CAN very strongly recommend any brother anglers who are spending this week at Southend to give a look in at the Empire Theatre there. Mr. Fred Marlow, the popular proprietor of this pretty play-house, is constantly and successfully endeavouring to provide his patrons with entertainments of the highest class, and this week the piece on the boards is "The Second Mrs. Tanqueray." Thoroughly well staged and most admirably acted, it is well up to West-end standard. Miss Lucy Wilson's impersonation of Paula, "the woman with a past," which, under adverse circumstances, she is trying to redeem, is an intellectual treat, every gesture, every inflection of voice, proclaims her to be a lady of exceptional histrionic ability, and from first to last she carried her audience with her; the other members of the cast loyally and ably back up Miss Wilson in this altogether admirable piece.

SAYS WILLIAM HOWLETT, of Newmarket, in the *Man of the World*, "The new tickets for the Lark Angling Society can now be obtained, and if any intending anglers wish to try the pretty Lark stream in Suffolk, and they send me postal order for five shillings, I will, by return, send them a ticket for a year."

ON Monday, March 20, the fourth annual dinner of the Kingston Piscatorial Society will be held at the Sun Hotel, Kingston, at 7.30 p.m. Mr. A. W. Homersham, J.P., president of the society, will preside, and the committee have sent me a kind letter, inviting me to attend. The roach competition on the Thames, held on March 5 and 6, resulted as follows: Mr. W. A. Smelt, first; Mr. F. H. Amphlett, second. I understand that these two members were out with Keen, of Datchet, and had 34lb. of very fine roach, and five perch.

So far as the Thames and Lea are concerned, pike and perch fishing is prohibited after Tuesday, March 14, but there is no close time on many of the Norfolk and Suffolk rivers. For instance, Mr. Loftus Lamhert, of the Cambridge Storea, Northgate-street, Beccles, Suffolk, says that "the river Waveney is now teeming with pike, and many very fine fish have been taken during the last fortnight. This house is on the banks of the river, and Charles Ward (same address) will, on receipt of a post-card, have boats and baits in readiness."

THEN, on the back of that smart angler's business card (George Applegate, junr., Rose Cottage, Potter Heigham) is written the following: "Thomas Horbert Jeffries, of Upper Clapton, fishing on Potter Heigham on March 1, took eleven pike and lost three. Heaviest fish, 144lb."

"A STRANGE incident occurred on Saturday," says the *Daily Mail*, "at Duddingston Loch, Midlothian. A number of anglers observed an animal swimming in the loch, and thinking it was an otter, several casts were made. The animal was eventually hooked and landed; but the surprise of the company was considerable when they discovered their catch to be a hare!" [I have read somewhere of the bait of Midlothian, but the hare—well, hardly ever.]

"I HAVE," says the editor of the "Thames Angling News," "to congratulate Mr. G. Sinibaldi, of Teddington, upon the capture of a pike which weighed 23lb. 14oz. two and a half hours after it was landed. The length of the fish (a picture of which is here given) was 42in., and the girth 25in. The measurement from the eye to the fork of the tail was 34in., length of head 11in., and girth at the wrist of the tail 7in."

"THE fish was caught in private water when Mr. Sinibaldi was spinning with a spoon bait, the line being a No. 4 harbel line. The fish gave some grand sport for thirty-five minutes, and upon examination of the inside of the mouth after the pike was landed, the tail of a fish was noticed protruding from the throat. It proved to be a crucian carp of 1lb. 4oz., partly digested. The K.P.S. club weight is registered as 23lb. 6oz. The above photograph was taken by Mr. G. Clarke, 'Ravensfield,' Teddington, and depicts the fish hung up by the gaff.

"THE other Monday I visited Henley in search of perch and pike. Whilst waiting at Westbourne Park station for the train, I got into conversation with an old man who walked about with the help of a stick. When I said I was going up the Thames fishing, his eyes, already rather dim, sparkled. No doubt it reminded him of days long gone by, for the person was no other than J. Wilder, the professional fisherman. He said he was now eighty-seven years of age, he was born at Bray, and he had fished the Thames all his life. Harry Wilder, the boat builder at

Maidenhead, is his younger brother. Speaking of Thames trouting J. Wilder said: 'As a rule I did not dream of commencing trout fishing until May, and I have taken nine trout in one day fishing from Bray point, down to the top of Hamilton Eyot. Seventy years ago,' he continued, 'I caught a salmon off 20lb. off Monkey Island. I caught him off the bank opposite the Temple; and I got a jack of 27lb. at Clevedon Springs. In the same year I captured a sturgeon of 165lb. in the Lock Pool at Boulter's.' I couldn't swallow that sturgeon, so further cross-questioned him, but he averred that the truth it was, and nothing but the truth. I respect old age, especially in an angler, and so further comment is needless. In fact, I cannot recollect the incidents that occurred on the Thames seventy years ago, so cannot dispute the matter. I was rather sorry that the train came in then, because J. Wilder's professional experiences were cut short.

"ARRIVED at Henley my friend Mr. A. E. Hobbs greeted me at the station, and said that the river was still a little over the banks. The boat was in readiness and we were towed up to the first lock, and fished the best spots coming back. Result: five jack and thirty perch. We had a 'run' from a sturgeon, as we thought, but it was not. Had it been, we should, of course, have sent it to Windsor Castle. On our return Mrs. Hobbs had ready for us a warm cosy fire, a cup of delicious tea, &c., to which two half famished anglers did ample justice. I had scarcely time to see all the angling trophies of friend Hobbs, for the train waits not even for anglers, but what I did see proved that my friend is one of the most proficient of Thames fishermen."

THE Piscatorial Society's annual dinner will be on Monday, March 20.

THE Kingston Piscatorials will dine on March 20.

THE Central Association of London angling clubs announce a smoking concert for March 20.

THE Stockwell anglers (combined with the Holland Athletics) will give a grand smoking concert in aid of the A.B.S., on March 20.

THE Prince of Wales' anglers have arranged a visit for March 20.

THE St. Albans anglers have managed to fix the date of their South London visit for March 20.

My landlord has fixed March 25 to pay me a visit to "Drag Mansion." Guess I shall be engaged that day.

THE Stockwell A.S. hold a concert in aid of the funds of the A.B.S. on March 20.

"I say, cabbie, I don't want you to 'loiter,' but can you take me by the hour?" "Take yer by the ear, sir!" "Right! First drive me to the Holborn Restaurant; then to Kingston-on-Thames; back to Maiden Lane; on to the Gresham Hall, Brixton; then to the Edgware-road; from there to the Rising Sun, Lambeth; then—" "All right, sir, jump in, I'll 'ave a try! Shall only 'av to change 'orses three times!"

ONE of the curious effects of the recent terrible explosion at Toulon was to bring on a shower of rain. This conveys a lesson to us anglers. Last year we were all crying out for rain. If that erratic official, the clerk of the weather, serves us the same trick this year that he did last, and keeps the rivers low, and spoils angling, it is only necessary to set light to forty tons of gunpowder to upset his plans. Now, having told you, I will beg that any reader who takes my tip will try the experiment at a safe and convenient distance from Fetter-lane and "Drag Mansions"—say in the North of Scotland.

"POOR France!" I wonder how many times I have heard that expression used during the last few months. Truly, her troubles come not "in single spies, but in battalions." Secure in our little island home we can afford to smile at her "pin pricks," and grieve with her in her sorrows. Of course, there is a few, and a noisy and demonstrative few, who scream about "perfidious Albion," and nonsense of that kind, but that the two peoples have in their innermost hearts a deeply rooted respect, awe, and affection, for each other is beyond a doubt, and on both sides of the Channel there is too much good sense to allow another war between us. No, Madame La France, it takes two to make a quarrel *et pour nous nous ne sommes pas having any*. Politics are barred in the *Fishing Gazette*, or I should like to say a great deal more.

TALKING about France gives me an opportunity of answering a question that has frequently been put to me: "Where were you born, Drag?" All the world knows that a whole crowd of cities competed for the honour of being the birthplace of Homer after his death. (They didn't care much for the poet during his lifetime, by the way.) But in order to set at rest any questions which may arise after my toes are turned up to the daisies, I now place on record the historical fact that I was born in the Department of the Seine ("Truthful Tommy" suggests I mean the department of the *in seine*, but that is both impolite and incorrect). Although I am English to the backbone, it was the City of Paris ("Gay Paree, dontcherknow") which had the honour, an honour I fear the gay city did not sufficiently appreciate, of being the birthplace of DRAGNET.

PISCATORIAL SOCIETY.

ENNUI, pronounced and undisguised, permeated the meeting on Monday night. For some unaccountable reason a spirit of unrest and horedom seemed to have taken possession of the members. It may be that the had results of the closing weeks of the coarse fishing season had somewhat damped the ardour of those who are not averse to courting the gamesome roach, portly chnh, or greedy pike, or the all superfluous energy was being thoughtfully held back for the annual dinner, which is announced for Monday, the 20th inst. In this latter connection I may be pardoned a momentary digression, to state that Mr. C. Butler has most kindly consented to preside, and that the genial member, Mr. W. Thomas will support him in the vice-chair. Such well-known anglers as Messrs. R. C. Blundell, R. E. Booker, N. Campbell, F. Ward, and H. Harden, with the respected hon. treasurer Mr. E. Foreman, have each promised to take the head of the table. The presence of the last named gentleman, however, is contingent upon his being allowed out of the house, as he has not yet received a "clean bill of health" from his medical adviser. It is sincerely hoped that he may be well enough to be amongst the goodly company, as he will be much missed should he unfortunately not be permitted to grace the proceedings by his ever welcome presence. But to return to my "muttons." There was no angling experiences of note to record, save and except the good fortune of Mr. M. G. E. de Courcy, who had creeled three barbel, each weighing 3lb. 8oz., together with a 3lb. chnh, in private water on the Colne. He hooked altogether six fish, but landed only the three aforementioned. The fish were as fat as butter, and took gentles. There was a hard frost overnight, which put the roach completely off the feed, and the taking of barbel under such conditions of weather, and at this time of year too, is somewhat remarkable. I ought to have stated at the outset that Dr. C. S. Patterson took the chair, but *Mas vale tarde que nunca!* Shortly after the meeting commenced Mr. J. W. Zaehnsdorf, at the request of Dr. Brnnton, read a short unannounced paper, written by the doctor himself, on the society's new water at Uxbridge. The *resumé* was most amusing and entertaining, and was delivered in an inimitable manner by the worthy hon. librarian. It dealt with the capabilities of the fishery many years ago, and was a pleasing contribution, take it all in all. It was announced that it had been decided to open trout fishing on the Ver, Moor stream, and Kennet (and possibly on the Uxbridge water, too) on March 31, and members will be duly informed of this by post card. On Monday next Mr. Chas. H. Wheeley will read a paper on "Chuh Fishing." The subject will be treated in Mr. Wheeley's well known style, and is sure to be instructive, interesting, and entertaining. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Cannon-street Hotel on Wednesday, March 8, Mr. J. C. Wilcocks in the chair. Mr. Yardley reported fair sport from South-end, taking off the Low Way Buoy five and a half score of good dabs. Mr. C. O. Minchin read his paper on "Lobsters, Crabs, and Shrimps." The lecturer, after a brief sketch of the position of these organisms in the animal kingdom, went on to deal severally with the different forms, showing that they belonged to three divisions—firstly, those with big tails, the lobster division; secondly, the short tails, such as the crabs; and thirdly, the crooked tails, such as the hermit crabs. The first group includes some well known forms, such as the lobster, the crayfish, the true prawn, the red and the brown shrimp. The second group comprises the edible crab, the green crab, the spider-crabs, and the land crabs. The third group is best known by the hermit or soldier crab, inhabiting the shells of well-known molluscs. The soldier crab has one nipper large and the other small, and two pairs of legs upon which he walks. An interesting account was given of the *Lerneæ*, a parasitic crustacean common on the sprat, which at night is strongly phosphorescent, and is called by fisherman "the lantern of the sprat." The method by which the crustaceans change their shells was fully explained. The lecturer then touched briefly on the method of capturing lobsters by the pot, and also described an interesting method of capturing lobsters by the hard, the question of the wandering of lobsters, and gave an interesting experience of the capture of marked lobsters eight miles from the situation where they were released. Regarding the Norway lobster, or, as it is commonly called, the Dublin prawn, was then described, and the fresh water crayfish was mentioned. The true prawn was spoken of, and the methods of capture were briefly dealt with. The ring net method was specially mentioned. The brown shrimp was mentioned—sometimes called the Sonthend shrimp, but usually more Dutch than Sonthend, and attention was drawn to the liking this form has for situations where fresh water enters the sea. The lecturer showed a very fine specimen of an Australian prawn, and drew attention to the record price for prawns in the Jubilee year, 15s. a pound. The best method of boiling shrimps was described. Speaking on the subject of crabs, several interesting methods of capture were described, and the edible qualities of one of the swimming crabs—the velvet or Spanish crab—were highly commended. Another little known crab, the *Cranque* (French), sometimes called the king crab, or shellywink, was recommended as a food, and September was recommended as the best month for capture. An excellent soup was also recommended as being made of the common green crab. Its great use as bait was pointed out. The use of crabs in the soft state as food in the United States was also touched upon. Speaking of the hermit crabs, the lecturer pointed out that these crustaceans migrate from one shell to

another as they grow larger; their use as bait was also described. As a conclusion a few words were then given on the immature stages, when the free-swimming larvae and intermediate forms were described. An interesting discussion took place in which Messrs. Taylor, Rash, Eldred, the chairman, and the hon. sec. took part. The chairman in thanking the lecturer, mentioned that in lobster-pots, conger eels were frequently and occasionally also the bass. A hearty vote of thanks was given by acclamation. The chairsmen drew attention to the subject of bait for bass-fishing at Shoreham; he pointed out that live sand-eel could be obtained from the whitebait netsman at the station, and very fine bass could be captured there with this bait. He brought up two models and exhibited the method of baiting. An enthusiastic vote of thanks to the chairman closed the meeting.

CHARLES S. PATTERSON (Hon. Sec.).

Notes from the North.

THE salmon netting season on the North-East and North Coasts of Scotland has been anything but a productive one as yet. How could it be otherwise? Not for twenty years has there been such a combination of adverse conditions—easterly winds, frosty nights, too bright sunshine, excessively high tides, and in the rivers excessive drought. That supplies should even continue to be what they are, meagre enough though these may be, shows that given fair average weather and the results would soon mount up.

Salmon have been clean off the rise for a fortnight or so past, and only at occasionally favourable opportunities has anything like good sport been had. With settled or even moist weather matters would be more brisk, but meantime the rivers and streams are down to summer level.

A fish of 42lb. was got in the Tay estuary nets last week. This is the top weight of the season as yet. The Aberdeen Harbour Commissioners have had two, of 36lb. and 32lb. respectively, as their top weights.

The Duke of Richmond and Gordon's Huntly fishings do not open till April 1. They used to be free, but a small charge is this year to be imposed for watching purposes. The prospects are said to be good.

The usual trout flies, but of the biggest sizes, are the most acceptable finnoch (sea-trout) lures in the early months of March and April. With a favouring breeze, and a cloudy day, there is no more fascinating sport than covering a few miles of finnoch water. Fresh weather is also a desideratum, but as yet such has been a minus quantity.

The Brora has been forging ahead during the past few years as an early salmon river, quite eclipsing its neighbour the Helmsdale. This season, however, owing to the prevailing calms and frosts, the two chief lessees, Major Bunnell Smith and Mr. McCorkdale, have only creeled eleven and fifteen fish respectively. The best day yielded five fish.

The famous Glentana Dee waters are not yet at their best. Colonel Brickman had three on Wednesday of 14lb., 14lb., and 13lb., but six, seven, and eight will more likely be the order of the day when once the pools get stocked.

A mixture of very small salmon has been met with on the Dee this season, 4½lb., 5lb., and 5½lb., alongside comparatively heavy weights of 18lb. and 20lb. On Aboyne water last week Mr. Crawshaw had three of 5lb.; while Mr. Sharp, on the same station, had one of 20lb. the same day out. The same unequal weights are being met with on the Tweed.

On Her Majesty's Birkhall waters, Mr. Lundie, one of the royal keepers had a fine fish of 12lb. on Tuesday last, which was despatched to Osborne.

Sir John Gladstone had twenty-one fish in four days on the Comonty and Woodend sections, averaging from 7lb. to 8lb.

The steam trawler, *Sea Eagle*, brought into Aberdeen last week eleven specimens of the sea ape, or rabbit fish, which is usually only found within the Arctic circle, and seldom so near the coast. The fish are being set up for museum purposes.

The Duke of Portland is due at Invergarry for his spring season on the Garry. The prospects are said to be fairly good, with open weather. Gen. Hume, Col. Frier, and some others have been out on the Naver for some days, but sport has seldom been so poor.

Lord Kyllachie has remitted to Mr. Manners, C.E., Inverness, and Dr. Readman, chemist, Edinburgh, to inspect and report upon the remedial operations being carried out in connection with the Spey pollution case at the Macallan Distillery to prevent pollution of the Spey by the discharge of waste products.

The Don District Fishery Board, and certain proprietors of fishings on the river, are to oppose the Aberdeen Corporation Bill now before Parliament, as it excludes from the sewer proposed to be constructed the refuse of the mills. In short, it fails to deal with the most serious and acute source of the pollution of the river. Nothing

less than a conjoint scheme between the town and county councils can meet the exigencies of the case.

The erection of a new bridge over the Spey, at Boat of Garten, has now assumed practical shape, and the masons are busy with the abutments. It will be a veritable boon to the tourist, angler, and cyclist, and will be ready before the tourist season sets in.

The fine new hotel at Cruden Bay, built by the Great North of Scotland Railway Company, and the finest of its kind in the kingdom, was formally opened on Wednesday. Golf is the chief attraction in the sporting line in the meantime; and a grand tournament is on the tapis for April 14 and 15, when £120 is to be offered in prize money. Visitors will not be long in discovering the fine attractions in the bay, where fish of all kinds abound.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the committee of the Birmingham Angling Association was held on Thursday evening last, March 2nd. Mr. T. Coles presided, and Mr. H. Miller occupied the vice-chair. The meeting was well attended, only one member being absent. The minutes of the previous meeting were read and confirmed, after which the report of the dinner committee was given. This went to show that the tickets retained were larger than in any previous year, and that one of the largest number of delegates that ever sat down to our annual dinner is expected. Tickets have been sent out to our leading railway officials who have intimated that they intend to be present upon this occasion. Messrs. Holding and Bagley gave in their report of their visit to the Princess of Wales club. The report went to show that the club only had sixteen members who were not connected with any other society, and it was resolved not to admit them until they had the required number, namely twenty-five members. Messrs. Rabone and Hughes gave in their report of their visit to the Salmon Society, which is held at the Salmon Inn, Severn-street. The report was in every way satisfactory, and as no opposition was offered to the club's affiliation, they were admitted. Messrs. Rabone and Hughes also gave in a report of their visit to the Erdington Club, which is held at the King's Arms Inn, Erdington. The report was all that could be desired, and as a consequence the club was accepted. Messrs. Holding and Gumbley visited a new club at the Vine Inn, Newtown, but owing to the Queen's Arms Society not having been consulted in the matter, the application was allowed to stand over. The question of the association renting water for the members in the Defford district was re-opened, when, after the matter had been discussed, it was resolved to rent the water, providing it could be taken direct from Lord Coventry. With this in view, the secretary was instructed to take the matter in hand, and report to the next committee meeting. For some time past the general secretary of the Provincial Angling Association, acting upon instructions from the committee, has been in communication with the general manager of the Shropshire Union Canal Company, with a view of getting a proper close time for the canal. And I am pleased to say that he has succeeded, as the close time now will be from March 15 to June 15. Another 2000 perch have been put into the canal, and none of these fish under 7in. in length will be allowed to be taken. The Anglers' Pride Society held a concert on Tuesday evening last at their clubhouse, the Royal Oak, Barr-street, in aid of a fund for the purchasing of a silver challenge cup. A first-class programme was provided, which was greatly appreciated by a large audience. The concert was a decided success, and great credit is due to the committee for the manner in which they conducted the arrangements. The Camden hold their annual *soirée* at the Camden-street Board Schools on Saturday, March 18, the proceeds from which are to go towards augmenting their prize fund. The Vine Unity hold their special concerts for the same purpose at their clubhouse on March 21 and 23 next. Snow and rain fell on Saturday and Sunday last, but it did not deter our members from turning out, some of whom had some very decent sport amongst the chnh and pike, the best fish coming from the Trent.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

There has been nothing this week to disturb the equanimity of anglers, and a most successful week's sport has resulted. Pike fishing continues to attract by far the greater share of attention, and on most waters some splendid fish have been captured. The Welland is now being fished with very satisfactory results, but the best sport has probably been had on the Witham, where specimens weighing up to 11lb. have been captured. Most of the visitors have disported themselves on the lengths between Kirkstead and Boston, and as many as four and five brace of fish have been grassed by individual rods in a single day. Amongst hags for enumeration may be mentioned 42lb. (four and a half brace), 37½lb. (four brace), 34lb. (three and a half brace), and 29lb. (three and a half brace). A brace, taken from the Forty-foot on Monday, turned the scale at 13½lb., the best weighing 8½lb. Roach fishing also continues to afford excellent sport.

FROM HULL AND DISTRICT.

The coarse fish season in this district draws to a close on Tuesday, and, so far as the river Hull is concerned, it has been a very good one, especially for specimen fish, for the capture of roach scaling from 1lb. to about 1½lb. each have been of weekly occurrence all throughout the season.

ANGLERS' HOTELS, FISHING QUARTERS, &c.**FORTINGALL HOTEL,
GLENLYON, PERTHSHIRE.**

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay.

This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." Good spring salmon fishing on the River Lyon opens Jan. 15. Trout fishing free. Posting. Post and Telegraph Office two minutes' walk.

PAUL MACPHAIL, Proprietor.

Sole Agent for Manchester Cotton Twine Spinning Co.'s Lines, Nets, &c., for North of England and South Scotland.

Angling information given for Derwent District.

Some very nice chub have also been shown from the top stretches, amongst which Mr. G. W. Schofield had one that scaled 3lb. 6 $\frac{1}{2}$ oz., and from the lower waters and tidal portion of the river some exceptionally good bream have been taken, the two best fish of the season being one of 6lb., caught by Mr. W. Dodsworth, and another that scaled 7lb. 6oz., caught by Mr. W. Hewson in the neighbourhood of Weel; and a quantity of fine dace have been taken during the season scaling from 8oz. to 12 $\frac{1}{2}$ oz. each; but the perch have only run small, the two best only weighing 14 $\frac{1}{2}$ oz. and 12 $\frac{1}{2}$ oz. respectively. The pike fishing has also been fairly good, and fish up to 15lb. each have been reported. Trout fishing commences on the river Hull on the 16th inst., and there is a very fair prospect of the season being a better one than last, for several well conditioned fish have been noticed sporting themselves at the back-ends during the past week or so, and insect life seems to be fairly forward, a few having already hatched out. Some grand pike fishing took place on the Hornsea Mere during last week, where on Tuesday Mr. Woodhouse, of York, secured three fish that weighed, in the aggregate, 27 $\frac{1}{2}$ lb.; and our local enthusiast, Mr. Moseley, landed a splendid fish that turned the scale at 19 $\frac{1}{2}$ lb.; and on Wednesday Mr. Schroeder caught twelve fish that weighed 95 $\frac{1}{2}$ lb., his three heaviest turning the scale at 13lb., 12 $\frac{1}{2}$ lb., 11lb. respectively, and on Thursday the same angler had five fish that weighed 44lb., the heaviest scaling 13lb. Our local anglers have secured a few fair sized fish during the week, at Newport, from the Market Weighton Canal and top ponds. A sweepstakes took place last week on the river Hull, at Hull Bridge, by members of the Osborne A.S., Mr. W. Brown securing the first prize. The Horns Angling and Recreation Society held their third annual smoking concert on Monday last. This society will hold their first match at Weelferry, on April 15. The Newington St. George's A.S. will hold a smoking concert on the 16th inst. On Friday evening last the officers were elected, and the first match arranged at a meeting of the Hull Ramblers' A.A. Mr. T. Featherstonehaugh is the winner of the society's gold medal for the past season. The Derringham A.S. will fish their first match of the season at Hull Bridge on Good Friday.

FROM THE LAKE DISTRICT.

The question of the betterment of salmon fishing was the chief topic of interest at the meeting of the Lake District conservators on Thursday. The chairman stated that he had been in communication with the secretary of the Board of Trade, who had consulted him with regard to difficulties connected with salmon fishing questions. He had suggested to Sir Courtenay Boyle that the Board of Trade should convene a conference of the boards of conservators of England and Wales in preference to appointing a Royal Commission. Such a conference would probably be identical with the conferences which had been held on sea fisheries, and might result in much explanation with regard to the decline of salmon in England and Wales. He had not yet, however, had a reply. Sir J. T. Hibbert trusted that a conference on the lines suggested by Mr. Fell would be convened, and a resolution asking the Board of Trade to convene such a conference was adopted. The meeting next considered the points to be discussed at the forthcoming meeting of north-western boards of conservators, an informal but very useful meeting of which had been held last autumn. The clerk said one of the subjects would be the weak points in the Salmon Fisheries Acts, together with the best means of remedying them. The chairman said there was another subject, the effect on estuaries and fresh water by netting from an angler's point of view, and whether netting should not be abolished. Playgrounds for salmon, an extended weekly close time, and other matters were considered. There has not been a great deal of trout fishing during the past week, the weather being cold and somewhat stormy.

FROM LANCASHIRE.

The Wellington Angling Society, Moston, have secured some private waters, and are in treaty for more, and with a view to improve the fishing in the same, are utilising what remains of the cold weather to do a little stocking. An order has been placed for 500 mature fish with a local purveyor, who can be relied on to do the thing satisfactorily. The St. Helen's Anglers held an important meeting on the 8th, too late for notice this week; the agenda however was urgent. The Warrington Anglers' Association, at their last committee meeting, had nothing but good reports from every department of their programme. Twenty-seven new members were enrolled; arrangements approved and permission granted to the local cycling club to fish a match in their private waters; a committee appointed to do some netting; and other stocking items received attention. They are also in treaty for more waters, and feel confident of getting at least one in Cheshire. The annual dinner is fixed for Thursday, March 23. The chief item of interest is the approaching contest at Wyresdale. Up to post four clubs are noted to the writer as successful in obtaining places, viz.: Levenshulme, Kingfisher, and the Moss Side Socials Angling Societies, and the Worsley Canal Fishery. Replying to various inquiries re fishing at Clonbur, &c., and the cost, it may be said that all the 60,000 are perfectly free, but extras, such as boats and boatmen, are necessary; so are lodgings, but they are reasonable at Mount Gable. The West Derby Angling Society, Liverpool, have announced their creed as follows: "This club is to do, and not to say." A vote of confidence was passed in their three deputies, Messrs. King, Hyams, and Collinson. At the next meeting some astounding news may be expected. The Liverpool East End Association is fishing away as usual; first a match, then numerous individual efforts, and the lot leavened by good work amongst their various branches. The committee is an exemplary one, united and industrious, also discreet.

The Liverpool Centrals are progressing, new members are being enrolled, and, all things considered, the coming season will be successful. The Welcomb Angling Society are meeting at three o'clock at Taylor's Bridge, Stretford, to-day, to fish a match by way of winding-up the season; their concluding social is on the 17th. The Irlam and Cadishead waters are continuing to yield big fish, the last is a magnificent rudd, which was taken by Mr. F. Bibby, of Ardwick.

FROM MANCHESTER.

A treat is in store for the members of the Hulme Crown Anglers, who, on Monday evening next, March 13, are to have the pleasure of hearing Mr. Fred Bibby give another of his popular angling lectures. This time the subject is "Ten Days' Fishing in Donegal," and the event will take place at the club's headquarters, Hulme Crown Inn, City-road, Manchester, at 9 p.m. The business of the club will commence one hour earlier. The secretary of the Moss Side Socials is anxious for a good muster at the ordinary business meeting on the 13th. At the meeting arrangements will be made for the "smoker" on the following Thursday, 16th inst., at headquarters. The stocking competition in connection with this club is proving to be a great success. The second annual dinner of the Horse Shoe Angling Society took place at headquarters, Pendleton, Manchester, on Saturday last, Mr. E. Hill occupying the chair. Messrs. Robert Ramsbottom, B. J. Pickering, S. Boswell, and W. Prescott attended, by invitation, to formally present the Bridge-water challenge shield, awarded to the club at the 1898 competition, together with an illuminated record. Some thirty-one gentlemen sat down to a splendid repast, and this over, the business of the evening was proceeded with. Short addresses were given by each of the aforementioned gentlemen, touching upon the prosperity of the club since its formation. Harmony reigned supreme for the rest of the evening, and contributions were forthcoming from Messrs. Pickering, Hill, Bates, Gillibrand, Martin, Taylor, Salt, Pilkington, and Overend. Mr. Prescott announces that the new travelling cards of the Northern Anglers' Association are now ready, and he is prepared to issue them to the affiliated clubs. Mr. Bibby, of the Buckland Anglers, took a very fine rudd from the County Palatine Angling Association's waters at Irlam last Saturday. The Sun Anglers, since reducing their entrance fee to 1s. and resolving to spend their money on prizes, have received a large increase in their membership. Mr. Wallwork gave his promised lecture to the Lancaster Angling Society, the event proving most instructive and interesting. At the last meeting of the Good Intent Angling Society the members were treated to an excellent discourse on bottom fishing, after which Mr. Binns gave some very useful information on the microscope, illustrated by views of insect and plant life found in fishing waters in the district. The match to-day (March 11) will be fished in the Poynton Canal, 3.30 to 5.30.

FROM NORFOLK.

Sport among the pike still continues very good. On Wednesday last Mr. J. Yallop and friend, of Norwich, had six fish, 16lb., 16lb., 14lb., 13 $\frac{1}{2}$ lb., 12 $\frac{1}{2}$ lb., and 12lb., total weight 84lb., an average of a stone a fish. On Thursday two rods had several nice fish, largest 11 $\frac{1}{2}$ lb. On Saturday two Norwich gentlemen, fishing in private water, took seven fish. On Monday two rods had half a score, largest 12lb. The election of Major Jary to the presidency of the Yare and Bure Preservation Society meets with universal approval.

FROM NOTTINGHAM.

It is difficult to chronicle much news on fishing. Roach anglers have been out, but have experienced saddening reverses, and on this score Mr. F. W. K. Wallis, one of the most talented roachists on the Trent, writes me: "I have never found sport so slack in my life for winter fishing. Have been on the Sawley waters (Pride of Derby Club) time after time, and have returned home literally empty handed. Have taken a few large chub, but positively not a roach. The main reason I assign is that the ever recurring rises of the past few months has glutted the fish with natural bait, on the grassy slopes, with worm and other ground grub. Am, however, pleased to say, as regards pollution, we have not, so far, been troubled with the G. S. sewage from the Burton Breweries. Have seen and heard of a good many salmon 'pitching' at Sawley, at Shardlow, and at Weston (King's Mills Weirs)." Personally, as to roaching, I may say I have not creeled half a dozen fish since Christmas, and this spite angling two days a week. Why, the other day, in a glorious water, I was out with a friend near Newton Solney—the Dove joins the Trent here—and failed to get so much as a nibble. Years ago in this district I killed dace averaging 11oz. each—many over 12 $\frac{1}{2}$ oz. Yet we ought not to grumble; patience will be rewarded sooner or later. Only last Friday (supposed to be an extraordinarily special day) I pike fished the Kennel Ponds at Belvoir Castle and never got so much as a run. Three other friends were with me, and "no run" may be dotted down to them. Higher up the beautiful valley of the ponds—rather, lakes—five gentlemen from Leicester operated upon Knipton. Result, never a run. Query, where have the fish, roach and dace, gone to?

FROM SHEFFIELD.

During the past week or so the weather has been all that could be desired from an angler's point of view, and the sport has been of a satisfactory character. The Derwent and Wye have been in excellent trim for fly fishing amongst grayling; but the cold snap has prevented a good number of anglers from trying their luck, the fear of catching influenza being greater than their desire for catching fish. In the Miller's Dale portion of the Wye, rosters hailing from Lancashire have fared very well amongst the big grayling, and in the waters of the Darley

Dale Club a few nice brace of grayling have been landed. The frosty nights have considerably improved bottom fishing in the Derwent, with the result that some good takes of grayling and various coarse fish have been made. A few decent sized trout have been captured in the Derwent, the deep holes yielding the best specimens, and garden worms have proved to be the most alluring baits. The best trout fishing waters in Derbyshire will not commence the season until the end of this month or the beginning of next. A few rods have been out on the Amber near Ambergate, but very few trout have been taken, although some nice grayling, perch, and roach have been secured. The Trent has been running in first-rate order, and all the well known lengths have been well patronised, with the result that many gratifying takes of roach have been made. At Weston Cliff pike have furnished a good deal of sport, and some capital fish have been secured, including several very heavy specimens. Some very large pike have been landed at Averham, near Newark, and in this particular part pike fishing has been exceedingly good. On Monday Mr. J. H. Blyde, of Pitsmoor, Sheffield, had some rattling sport with a large pike on Newark. He succeeded in landing it, and the fish was found to weigh 22 $\frac{1}{2}$ lb., and was 3ft. 6in. long. It has been sent to Messrs. Cooper and Co., London, for preservation. The waters in the Boston district have answered very well for pike fishing during the last few days in consequence of the sharp frosts, and the Witbam has provided innumerable decent sized fish. In the Sincel Dyke some splendid roaching has been had, worms and yellow paste proving very deadly amongst the red fins. The Rytton has come in for considerable attention, and both dace and roach have fed well. The Bain continues to fish with commendable results, and if the present weather holds up, nearly all the Lincolnshire waters will be well visited this week.

FROM SHROPSHIRE.

The trout fishing season was ushered in amid very favourable climatic conditions, but very little sport was obtained on the opening days. On Saturday the weather changed for the worse, and snow fell, capping the bills and making unwelcome invasion of the streams. Two very fine fish were taken from the Severn, in Shropshire, last week. One was a handsome salmon of 23lb., netted near the mouth of the Vyrnwy, above Shrawardine. This is about the first salmon of the season, so far as the upper waters are concerned; and the fact is disappointing, as the few netmen who still think it worth while to take out licenses expected better results, on account of the recent floods. The other fish referred to was a splendid pike of 20lb., and it was displayed at the establishment of Mr. Ashdown, naturalist, where it will be set up. The fish, which was taken at Atcham by Mr. Bromley, of Bishop-street, Shrewsbury, measured 3ft. in length, and 20in. in girth, and it was in every respect a fine specimen. The fortunate angler was fishing from the bridge which spans the river at Atcham, and he was using as a bait a chub of nearly half a pound weight. The fish gave half-an-hour's exciting sport ere it was landed. Mr. Bromley on the same day caught five other pike, averaging 6lb. or 7lb. weight. The capture of a pike of 18lb. by Mr. R. F. M. Wood is also recorded. Anglers who take these big pike from the river earn the gratitude of coarse fish anglers and trout fishers alike. Although the fence is on for pike and other coarse fish commences on the 20th inst., these fish may be still caught if the bolders of Severn licenses obtain from the distributors the permits, which are issued gratis by the Severn Conservancy Board.

FROM WORCESTER AND DISTRICT.

The weather, with the exception of a strong N.W. wind, has been delightful the whole of the week. All the rivers in capital condition, and the fish well on the feed. A good many rods have been out, and sport fairly good all round. Some very heavy baskets of chub have been taken in the Severn, and a fine lot of roach. The chief sport in the Teme has been among the dace, though a good few very fine chub have been creeled. Trout fishing almost a failure, and the trout taken by club members on their preserved water has resulted in almost all the fish landed being restored to the water again as being quite out of condition; and, with a continuance, it will be quite a month before they are in condition. The grayling full of spawn, and none basked. A lot of pike have been taken in the Severn and Avon, but none of large size, the largest I have heard of 8 $\frac{1}{2}$ lb., most of them taken with the spinning tackle. Some very fine fish have been taken in private water, but all full of spawn. Salmon fishing has been only fair during the week; a few good conditioned fish have been taken, but nothing above ordinary. Prices keep well up. The next smoking concert of the Worcester and District Angling Association will be held at the Crown Inn, Sidbury, on Monday evening next, and a large company is expected, everything being done to make it a success.

FROM YORK AND DISTRICT.

With grayling fishing at an end, and but little doing by coarse fishers generally, pending the advent of the trout season, the present is a quiet time among most Waltonians, and not much is likely to be heard about sport for the ensuing week or two. Whilst trout fishing will commence on some waters thus early, the beginning of April will witness operations on the chief club lengths. On the Derwent, Swale, Wharfe, Ure, Nidd, and Rye the favourite fish are abundant, and should no untoward atmospheric influences intervene, the bright and encouraging prospects will doubtless be realised. It is gratifying to learn that trout have not suffered appreciably from the recent floods. Meantime it may be remembered that among the best and most tempting early flies for the rivers mentioned are the Early Brown, Spring Black, Dark Snipe and Orange, and Snipe Blon.

ANSWERS TO CORRESPONDENTS.

C. O. (Newport).—There are not two kinds of grayling in this country. The fish you saw at the fishmonger's, called grayling, were probably small grey mullet, or pollen (white fish), from Lough Neagh, Ireland.

BAITS IN THE CLOSE SEASON.—RIFLE RANGE AT HAMMERSMITH.

DEAR SIR,—We beg to thank you for your kind reply to our query re live bait. As they will live in our tanks all the summer, we are not particularly anxious to sell as long as we may keep them, as in an aquarium, till the end of close season. Our range is a covered one at above address. We shall be very glad to see you any time, and, perhaps, it will interest you to look round our premises, as we dabble a little in fishing tackle and sports of most kinds. We have a competition for shooting every Wednesday, free; the shot only to be paid for; open to all comers, of course. The 500yds. range is always open for practice; seven shots for sixpence; electric targets. We use miniature M.H. and Colt repeating rifles. Being practical gunmakers the rifles are always in perfect condition, and the practice is really good. If you should favour us with a visit you will find it comfortable. Thanking you again for your advice, we remain—Yours truly,

W. KING AND SON.

74, King-street, Hammersmith.

[Of course Messrs. King can keep the live bait in their tanks all the year round if they like. We think the information about their 500yds. rifle range will be useful to some of our readers, as we believe it is the only one of the kind open to the public in London.—ED.]

RIVER AND LOCK KEEPERS' DINNER.

DEAR SIR,—May I announce through your columns that subscriptions for the above have been received as follows:

FROM ANGLING CLUBS.

Collingwood, Friendly Anglers', Sundial, West London, Royal George, Anchor and Hope, Battersea Friendly, Camden, Hammersmith, Lychnobite, Royal Oak, South London, North-Eastern Brothers' Queen's, St. John's, Greenwich, Phoenix, Shepherd's Bush, Twickenham, Grange, Crystal Palace, Gresham, and Clapham Junction.

FROM FOLLOWING SUBSCRIBERS TO T.A.P.S.

Sir Ford North, G. J. Chatterton, J. T. Davenport, M. Davenport (C.C., J.P.), P. Green, F. Lewin, W. M. A. Mitchison (J.P.), C. E. Nuthall (J.P.), T. Rogers, Rev. W. Snell, A. M. Turner, G. F. Wilson, A. U. Homersham, J. Mup, A. Woodroff, G. Bishop, Farlow and Co., Mrs. Ogden Smith, E. G. Bawden, J. W. Skanden, the Field, A. Drinkwater, F. Sands, W. L. Thomas, H. M. Pike, Central Association, G. N. Levy, C. L. Wingfield-FitzGerald, A. Stroud, T. Stroud, L. Hart, and Messrs. Brougham, Gunston, and Sachs.

FROM COMMITTEE OF T.A.P.S.

F. Berry, T. Crumplen, Dr. Coates, A. Nuthall (J.P.), Major Perry, T. J. Miller, C. H. Briand, C. G. Burrow, C. H. Wheeley, W. J. Gomm, C. H. O'Dowd, W. H. Elsmore, W. F. Grimmett, A. P. Matthews, W. G. Barnes, H. W. Higgins, A. Price, H. L. W. Lawson, W. J. Wade.

Formal receipts have been sent in each case. Further subscriptions will be gratefully received.

H. W. HIGGINS, Hon. Sec. T.A.P.S.

34, Windsor-road, Holloway, N.

DRESSING OF SALMON FLY WANTED.

DEAR SIR,—Can you favour us with the dressing of salmon fly Mellishe's Nondescript per return, and greatly oblige.—Yours faithfully,

W. R.
(Pro. REDPATH AND Co.)

LIFE HISTORY OF THE MAY FLY.

DEAR SIR,—Will you allow me to draw your attention to a remark you make in your article on the life history of the May Fly, as to the period of incubation between hatching out of the eggs and the appearance of the fly. You say (I write from memory) that the period is from two to three years. I lay not the slightest claim to any special knowledge, but would suggest that the period must be an exact number of years. I have always understood it was just two years, say, twenty-four months. This seems to be borne out by the date of the appearance of the sub-imago, which is practically synchronous with the laying of the eggs. Surely if the period were two and a quarter years, eggs deposited on June 1 would hatch out as fly on Sept. 1. It has always struck me as a very beautiful provision of Nature that the period of incubation (or whatever is the correct term) should be an exact number of years. Otherwise, we would have May Fly (and other flies) hatching out at odd times of the year, some of which times would inevitably be too cold and otherwise unsuitable. Thus, if the period were two and a quarter years, June eggs would hatch out early in September. The eggs of these September flies would, in their turn, be due to come out early in December, and so on. I have not overlooked the fact that temperature has a lot to do with the earliness or lateness of the hatching out. I merely give the above exact periods for the sake of simplicity. I think, however, it is clear that if the period of incubation were twenty-seven months, the fly would be coming out more than once a year; and the fact

that there is practically only one rise seems to prove the period of incubation is exactly twenty-four months (or thirty-six or twelve).—Yours, &c., J. G. G.

[It should have been "two or three years"; we believe it is not certain which, but probably two years that the larva of May Fly lives in the water before changing to the fly.—ED.]

"UNCLEAN SALMON."

SIR,—I wish to bring before all salmon anglers who read the *Fishing Gazette* the following report of a case, which was heard at Newcastle-on-Tyne on the 25th ult.:

"MORE FISHERY PROSECUTIONS."

"At Newcastle Police Court this morning (before Mr. Bailey, Mr. Beattie, and Mr. Gillespie), John George Fryer, of Barnard Castle, was charged with having in his possession one unclean salmon, on Oct. 28, and, further, with sending it to Durham, on Oct. 27. Mr. C. O. Humphreys prosecuted on behalf of the Fishmongers' Company, London, and Mr. J. Dodds defended. Evidence having been given, the Bench decided that the offence was proved. A previous conviction was put in, and the Bench ordered the defendant to pay a fine of £5, and £1 for the fish, or in default one month's imprisonment."

The report, as above given in the *Newcastle Evening Chronicle*, is not strictly accurate. The young man, Fryer, caught the salmon on Oct. 26, and gave it to a friend, who sent it to a friend at Newcastle, by rail, on Oct. 28. The matter seems to have come to the knowledge of the Fishmongers' Company, and on Feb. 23—nearly four months after the day on which the salmon is caught—Fryer is served with a summons to answer a charge of having an unclean salmon in his possession on Oct. 27, 1898. There was not sufficient time in which to get up a proper defence or to subpoena witnesses, and the result of the hearing was as reported above—£5 for the offence and £1 for the fish!

The previous conviction was not for a similar offence as might be inferred.

The question arises—Who is safe from prosecution? I venture to assert that after this case of Fryer's, every angler who kills, or has in his possession, a salmon containing spawn, especially if it happen in September or October, runs the risk of being summoned and fined. Where the justice of the case comes in it is difficult to tell. The fishery board issue licences to fish for salmon up to Nov. 1; but it appears as if licencees were liable to fines for doing what they are licensed to do.

Doubtless the matter hinges on the question, "What is an unclean salmon?" According to Bund's "Law of Salmon Fisheries," p. 336, it means a fish that has not migrated to the sea after spawning. But this fish that Fryer caught was only coming up from the sea, and was on its way to the spawning beds. In all probability it was aiming for a tributary of the Tees called the Lune, and would have arrived on its spawning bed one or two, or perhaps three, weeks after October 26 had it not been caught. How, then, could it have been "unclean?"

It looks as if the Fishmongers' Company meant to try to stop the killing of salmon after Sept. 1, or when the nets are taken off, on the principal that if they cannot have the salmon no one else shall. If they have their way, farewell to salmon fishing on late rivers, and the fishery boards may bid farewell to revenue.

As there are many anglers interested in this matter, I trust that some who are acquainted with the ins and outs of it will give us their views in the *Fishing Gazette*.

Barnard Castle.

BETA.

[There is no absolute definition of an unclean salmon. It would be very difficult to get one, and even if it could be satisfactorily obtained, it would be most undesirable. We believe that the salmon referred to by "Beta" was found on Oct. 28, at the Central Station, Newcastle, packed in brown paper, and when opened was found to be in bad condition and heavy in spawn. There was a very large gaff mark on the left side, laying bare the ova. No hook marks were to be seen in the mouth. Previous convictions were put in, and the magistrates considered the case proved. To attack the Fishmongers' Company, which is doing such good work in the public interest, is as absurd as it is to suppose that the local magistrates, who had all the evidence before them, convicted Fryer in order to please the London Fishmongers' Company!—ED.]

ARTIFICIAL HATCHING OF SEA FISH.

SIR,—For some few years I have been reading a good deal about sea fish, and gleaming what was to be learned from several authors, but nothing have I read which has given me so much pleasure than the article published in your paper last week, written by Dr. Patterson. It is most intelligible, and throws a light on many subjects which have until now been immersed in darkness. One matter that has attracted my particular interest is that of artificial hatching of sea fish, and I note what he says with reference to the fact that each fish has only a few eggs ripe at any one time. This, no doubt, must, as he says, make it weary work gathering them, and every praise must be given to those who have collected the 117 million eggs from which the fry were hatched at Dunbar. Nevertheless I would like to ask what is the percentage of fry which are supposed, or it is even hoped, will reach maturity out of this same number?

After all this labour has been laid out in collecting the ova, hatching, &c., might it not be conjectured that the change of life which must take place on their being turned into their native element must be so great that few can survive?

What would be the effect of placing Alphonso the young King of Spain, who has been matured, or, rather I should say, is being matured, in all delicate luxury, on Dartmoor, there to complete his childhood among "the savages," as a noted author has termed those who inhabit that wild waste? Thus it must be with sea fish hatched

artificially. Last year, when mentioning this theory to a sea fisher, he immediately said, "But you hatch salmon artificially with success." "No doubt," was my answer, "but it must be remembered that salmon fry remain from one to three years in our rivers before emigrating to the sea, and are therefore more ready to withstand the hardships which they will necessarily have to encounter."

This letter is not written in criticism of any of Dr. Patterson's statements, for whose knowledge I have the greatest respect, only to bring forward a matter which appears to me to have escaped the attention of those who are now agitating the matter of artificially hatching sea fish.—Yours truly,

PHEASANT TAIL.

TROUT FISHING IN MAY WANTED.

DEAR SIR,—I shall esteem it a great kindness if you or one of the many readers of the *Fishing Gazette* can recommend to me some pretty little cottage or nice rooms where I could get good trout fishing from about the middle of May. Of course I would not object to paying a moderate sum for the fishing; as to the district, it should be Yorkshire or one of the neighbouring counties. As there will be ladies in the party we would like a place where the scenery is pretty, and which possesses other attractions than mere fishing.

May is such a good fly fishing month that it ought not to be difficult to find a suitable place, but my own experience of May fishing is extremely limited.

I do not expect to get very big fish in rapid stream fishing, but would like something better than fingerlings. Few and good rather than many and small is my motto.—Yours, &c.,

J. G. G.

FISHING NEAR HOUNSLOW.

DEAR SIR,—Could you or any of your readers tell me whether there is any fishing club within a cycle ride of Hounslow, by joining which I could get some fair trout fishing (fly).—Yours truly,

H. B. GARNER.

FISHING NEAR TORQUAY.

SIR,—Just recovering from a most severe attack of pneumonia, my doctor tells me I must go somewhere in the neighbourhood of Torquay to gain health and strength. As I am an ardent amateur fisherman, I was wondering if I could manage a little angling at the same time. Would some of my brother anglers kindly point out some spot suitable to my case.

OLD SUBSCRIBER.

[When staying at Torquay, a good many years ago, we found some pretty fair fishing for trout in the Dart, and we believe it is now much better. Buckfastleigh is a good place, and you can fish up to it from Totnes with a day ticket. It is an easy journey by rail from Torquay. Lynmouth, North Devon, is a good place for an invalid, with some trout fishing in the Lyn (not very grand) handy.—ED.]

"FISHING IN THE LAKE OF PATRIA."

SIR,—I have just read "Markit's" letter, in your last number, headed: "Fishing in the Lake of Patria." I can find no mention of this lake, or of Pagliara, in Baedeker, or on the map, and there is no railway station of Pagliara. I am going to Naples shortly and should feel obliged to "Markit," or any other correspondent, for information as to where Pagliara is situated, and how it is to be got at from Naples.—Yours obediently,

M. B.

12, Via delle Carrozze, Rome, Feb. 28.

KILLARNEY FISHERY DEVELOPMENT ASSOCIATION.

DEAR SIR,—It may interest some of your readers to know that steps are being taken to improve the fishing on the Killarney Lakes. For this purpose the Killarney Fishery Development Association has recently been formed. Its principal objects at present are to stock the lakes with rainbow trout, to introduce a change of blood in the brown trout, and to keep down poaching, and protect the fish generally. The association has already purchased some thousands of rainbow yearlings, besides over 40,000 eyed ova. The latter are to be hatched out at the Muckross Hatcheries, and the fry kept in protected ponds till yearlings.

Spillers (night lines) and cross lines have been abolished and a permanent staff of bailiffs is employed.

No doubt in a few years the Killarney lakes will be amongst the finest trout waters of Great Britain if the energies of the association are continued.

In the opinion of experts the Killarney Lakes are admirably suited to the habits of the rainbow, there being plenty of food and an even temperature.

Mr. W. Graham is hon. sec. to the association.

It may be mentioned that the funds are derived solely from voluntary contributions.

W. G.

Killarney.

[We are very glad to hear this, especially that night lines and cross lines are abolished, and hope they will be so not in name only. The cross lining has been the ruin of the attractions of the Lakes to English anglers, who hate the very name of cross line. We always refuse to publish takes of fish by this poaching method if we know it is used.—ED.]

Several letters unavoidably held over.

REAPING AND SOWING are the two most important periods in the life of the farmer, and granting that all circumstances are favourable, he naturally, during the latter period, hopes to get an adequate return for his labour. As he sows, he expects to reap, and unless constant industry has been exercised, the harvest is generally a poor one. So it is with regard to health, if we are not constantly on the watch and destroy the germs of disease as soon as they are discerned, the body becomes weakened, and at last is unable longer to resist the attacks of the enemy. Holloway's Pills destroy even the most minute traces of disease, by purifying the blood and strengthening the system.

SATURDAY, MARCH 18TH, 1899.

THE SALMON SEASON IN SCOTLAND.

It would be quite premature to pronounce any judgment on the spring season, as so little of it has as yet gone; but without going quite so far, it may be otherwise advantageous to take stock, as it were, and see how matters fare, both with the angler and the netter, as far as past results and future prospects are concerned.

Let us look at the less interesting, though equally important, commercial results of the salmon season in the first place. It is now four weeks to-day (Saturday) since the season opened, and the results obtained during the first three of these have, on the whole, been somewhat disappointing. Compared with last year they are far behind. But then, it must be remembered that although last year, as a whole, proved a very bad one indeed, yet the opening weeks were brilliant in the extreme, and especially so on the estuaries and river stations, where the first fruits of the salmon season were almost the only fruits obtained.

In this connection the comparison is not a fair

one, unless a similar period of drought is to be experienced, which as yet is a thing of the future, so that although some 430 boxes of Scotch salmon were received at Billingsgate last year at this date, compared with only half that number for the first three weeks of the present year, there is no saying but that the returns for the next three weeks may not only wipe out this adverse difference, but yet leave a balance in favour of the present year. Let us hope so.

During the opening weeks of 1898 every favourable condition was experienced by the salmon netmen. The combination of wind, weather, and water was unique, as was pointed out at the time, and the hauls of salmon proportionately large. But it was a flash in the pan, and, like all such abortive and abnormal flashes, was followed by such a falling off, mainly through adverse weather conditions, the like of which has not been experienced for the past quarter of a century.

At one station on the Dee tidal some 300 fish were netted during the first six hours on the opening morning—more than double what was taken for the whole of the season through right on to the end of August, and of these even scarcely a round dozen were caught after the advent of April. This may be taken as a sample of last year's season all over, and will show the futility of making any deductions from a comparison of last year's returns with what little of the present season has yet gone.

The weather conditions since the middle of February have not been particularly favourable for the present salmon season either as regards the sea or river fisheries. The season opened under the very worst of weather auspices, and since then scarcely any two favouring conditions have as yet been experienced in combination. Frost, drought, easterly or other adverse winds according to the locality, have mostly ruled, instead of the dark days so much loved by the salmon netter, the freshening land breeze, favouring a run of fish to the coast, and calm seas and normal tides. When any of these favouring conditions have predominated for a couple of days on end, the returns have gone up accordingly, but the general tenor of the weather has been towards extremes, and anything but favourable for salmon fishing. There is no necessity for the cry that the salmon supply in the sea is short. There has been little chance of proving anything of the kind, and although there may be long faces amongst the netmen at their poverty-stricken returns day after day, yet it must be borne in mind that such a combination of adverse weather conditions has not been experienced on the east and north-east coasts during the past two decades, and after such a spell of bad luck matters are not likely to mend in a day, although there is no saying but they may do so for all that.

During the first week of the season the returns were fairly good, and had these continued, even at the same fair rate, the present cry as to the shortening salmon supply would not yet have been heard; but during the succeeding fortnight matters have gone from bad to worse, till at present they are very poor indeed. A drop from eighty and a 100 fish per day to eight and ten, as was experienced at the Aberdeen Harbour Commissioners extensive fisheries, gives some show for grumbling, if not cause for alarm, were it not that behind this drop the unique combination of wind, weather, and water was as dead against the netman this season as it was in his favour during the first month's fishing last year. Matters are beginning to mend considerably, and although the daily supplies are as yet light, they have mounted up during the past few days with improved weather conditions.

The Deveron district fishings, like the Findhorn, have been practically nil since the opening week, while the Forres and Nairn districts are in a similar plight. "The exceedingly low rate of temperature prevailing, the frosty nights, and the exceedingly bright sunshine during the day, have made fish shy of coming on the coast," is the verdict of an experienced fisherman, who also adds, "I have no recollection of there ever being such a dearth of fish in the Moray Firth districts during the early weeks in all my fifty-four years at the nets." The same poor results are common to the Ness, Beaulieu, Oykel, and Brora fisheries, while the fishings along the North coast have been good, bad, and indifferent—mostly indifferent.

Let us hope that the contrary character of the

present season, compared with that of last year, may continue throughout, and that the lean opening days may now be followed by months of fatness and rejoicing in the land of the tacksman, for when there is a good show of fish on the coast the future prospects of the rodder are all the more brilliant. But at the best, till weather conditions of the most favourable description prevail for a reasonable time, and the returns from the several fisheries still continue to decline, will our faith continue to rest comfortably in the fact that the days of *Salmo salar* are not yet numbered. That salmon are not anywhere over abundant is only too evident to the most casual observer; but it has often been the case in the past, that when matters in this respect seemed to reach a climax, the next tide or so belied the gravest fears, and dashed the darkest speculations to the winds by a harvest of plenty; and it is a well-known fact in the natural history of the salmon that a series of bad seasons is invariably followed by a series of good ones.

If the netter has suffered in pocket from the adverse nature of the prevailing weather conditions, how much more so has the angler in regard to his sport? With the exception of the Dee, and that exception confined to the mid-reaches, the angling results have not been of the most gratifying order. "Two fish for one week's operations on both sides of twelve miles of water, between Craigellachie Bridge and Ballindalloch, is a poor show," is what an esteemed Speyside angler sends us; adding, "The failure is attributed to cold, frosty winds." So much for the Spey.

As a salmon stream the Don is fairly out of it, yet two fish were got at Alford, some forty miles inland, last week in a favourable turn in the weather, and another of 19½lb. at Kintore on the same day, which shows that what early spring fish may be in the river are well distributed, and that under a spell of more favourable angling conditions the good old Don may yet prove surprising in spite of the gigantic pollution and other machinations so recklessly employed to bring about its ruin.

The Ythan and Ugie opened only the other day, so little can be said about them. They are really sea trout streams, and if they yield a spring salmon or two to the rod, these are hooked more by chance than good management, except on those few well-defined salmon pools where they are regularly and systematically looked for. The best basket of finnock yet got on the Ellon Castle waters scaled 17lb.—not bad under bad conditions. The Findhorn is another early sea trout stream, and not in it for early salmon angling. The Ness, however, is one of the most prolific salmon streams north of the Dee. "Loch Ness is well stocked with fine early salmon, and last week alone some twenty fish were got by anglers 'free fishing' from one or other of the various hotels alongside of the loch," writes a local correspondent. Miss Tilston, from Foyer's Hotel, has the honour of having secured the top weight of the season—a beauty of 29lb. The Sutherlandshire streams have been very disappointing to the angler; but then, so has the weather.

The North Esk has been little fished as yet, but a good few springers are said to be in the pools. The South Esk, on the other hand, has yielded very fair returns, and a couple of 9-pounders were got on the Kinnaird Hotel section on the opening day (Feb. 25). Under the forward policy now ruling the destinies of this beautiful little river, much may naturally be expected in the near future.

In spite of heavy waters, which as suddenly subsided and have been followed by heavy droughts, and its effects; in spite of overnight frosts, followed in the daytime by masses of grue; and in spite of adverse winds and too bright lights, the Aberdeenshire Dee has fished remarkably well almost every day since the season opened, and exceptionally so with every favourable turn in the prevailing adverse weather conditions. The best catch was Davie Nicoll's nine fish to his own rod from the Floating Bank Pool on the Lower Durris water. After this come half a dozen fours, a dozen threes, and so on. Mr. Farley has had from six to eight fish daily off his water, and Sir John Gladstone creel his thirtieth fish since the season opened on Tuesday last, being an average of about ten per week, a bag which should gratify the most fastidious, especially when it is remembered

that it is made on the Dee, where anglers have to work for their sport. There is certainly a scarcity of fish on the upper waters, but that grievance is being daily remedied with every flood and favouring breeze. Mr. George Blacklaws, than whom no one knows the Dee better, writes an answer to our query. "There are plenty of fish in the pools, and as soon as we get milder weather sport will be something immense." During the first three weeks of the season ninety fish were killed to the rod in Mr. Blacklaws's district—not bad, we say again, under bad conditions. The best sport, however, is always got when a slight break occurs, under a favouring light or a westerly breeze, as was the case on the Ballater waters when, during the opening days, one rod in two days creeled sixteen fish of various weights up to 17lb.

In taking stock of the season as far as it has gone, it may confidently be allowed that the main drawback has been the weather, and that under improved conditions a good season may yet be enjoyed. G. M.

COARSE FISH ARE OFF!

THEY are so, thanks to an Act of the late Mr. Mundella, which gives them respite from the pressing attentions of the angler from March 15 until June 16. Previously to that Act fishers of the class more especially charged with the possession of patience rather than of sense were at liberty to take coarse fish all the year round. It ought to be said that some authorities of sport as well as of the pot object to the term "coarse" as applied to this order of fish. I am satisfied to protest against the equally common and still more invidious application of it to the fishermen themselves. "Coarse fish," if you like; but, please, not "coarse fishermen." To return, as the body of anglers in the country grew larger the stock of coarse fish, especially in the public waters, grew less, until at length some check on the ignorance and bloodthirstiness that were causing this diminution became imperative, and the Act came into force whereby at this present season coarse fish are off.

The season that has just closed has been monotonous—monotonously indifferent, unfortunately. The few good catches here and there stand out brilliantly from the average greyness. Almost invariably bags and baskets have been light, and the hearts of the fishers heavy in proportion. Anglers are never so happy as when seeking an excuse for their failures, and this year they had no difficulty in finding it in the remarkable drought of last summer. Account for it as they may, at any rate, the barbel season opened badly. Perch and dace were not to be lured, try for them never so expertly; big bream were few and far between; and the plunge of the pike was looked for, but was not found. That was the experience all round. Sheffield anglers went out in thousands, and came home fishless most of them. Birmingham's fishers fared as badly, spite their skill. So it was on the Trent, home of the "stylists" in roach fishing, and on the waters near the metropolis, notably the Thames, where, save in the tideway, sport was far below that of average years.

When fish are on the rise there is not so much difference between the expert angler and the rustic lad with willow wand and bent pin and worm. Unfavourable conditions are the test of skill, and this season it was the dexterous rod only that made the big baskets. A famous lake in the north yielded a fine catch of pike to some notable Yorkshire anglers, and the more expert Nottingham men had some good takes of chub and roach. So with roach and bream in the Norfolk Broads. While the ruck of fishers on the Lea again were scarce getting a "knock" (the local term for a bite, or the semblance of a bite), a few of the cleverer men caught roach that doubtless will take a place among the trophies on their club walls. On the Thames, where, as a rule, sport was very dull, there was one bright gleam. Perch fishing, which was supposed to be almost, if not entirely, at an end on the metropolitan river, suddenly revived this season; with very fine paternosters, daintily baited with minnow or worm, anglers did well. Big bream, also, hobbled up serenely in the upper waters; unfortunately, there were few of them. The heavier roach, as usual, appeared at the wind-up

of the season. During the hot months, fly-fishing for chub in the leafy shadows was a pleasant sport, but it could not be called profitable.

While on the Thames, I may stop to enquire why it is that the gudgeon fishing of olden days has almost disappeared from it. It was a pleasant, nay, a romantic sport. The previous generations could tell of many a matrimonial match brought about in the pursuit of it. Many an old print recalls for us woman—lovely woman and dexterous angler—armed with a double lure, and with an eye upon a second fish. That was in the days of the quiet courtships on the river bank, and protest may be made that we could well spare for them the noisy and unblushing flirtations of the Thames highway to-day. Even without these contingent attractions, gudgeon fishing is not to be sneered at. The gudgeon is not so great a fool as he is called. Given a properly selected and prepared swim, fair skill, suitable tackle, and plenty of worms, of medium size and well scoured, and no doubt your gudgeon will bite and be caught. But to say that he is a specially silly fish is a slander. I hope to see gudgeon fishing once more common on the Thames, with or without the ladies. Last season would have been specially favourable for such a revival.

Coarse fish anglers are unassuming sportsmen, and it is surprising to find them opposed anywhere to the powers that be. This last season, however, a quarrel, or let me call it a misunderstanding, between the Birmingham anglers and the Severn Board of Conservators has brought about a state of matters that may become of considerable importance. On the one hand is Mr. Willis Bund—than whom there is no more competent authority—asserting that the river under the control of his Board is intended primarily to hold *Salmonidæ*; while the coarse fish anglers hint that the netting of the coarse fish has been carried on in a somewhat severe manner. Meanwhile, these anglers, before they are allowed to pursue their sport, are charged for a license; and this because the waters they fish may contain fish other than those known as "coarse." Here plainly is a pretty point for an arbiter. It seems unfair that the water of the angler for coarse fish should be depleted, and that yet he shall have to pay for the privilege of fishing it. On the other hand, *Salmonidæ* undoubtedly do frequent that water, and the Birmingham angler is not always on all occasions just precisely as particular as perhaps he ought to be. So it is quite right that he should pay. Could not an arrangement be come to whereby certain portions of the river shall be reserved, under the necessary restrictions, for the coarse fish anglers, and the money they pay applied to the protection and preservation of the coarse fish? But then, Mr. Willis Bund and his fellow conservators are probably not averse to the total disappearance of the coarse fish, and those who angle for them from these waters. Mr. Willis Bund may be right. Probably he is within his rights. But may not the nine or ten thousand Birmingham fishers have rights also? It appears a pretty point for an arbiter. IBIS TAG.

BETWEEN THE BITES.

It has been said, and the phrase is much heard in our day of town-growth and centralization: "Man is a gregarious animal." Yet when this assertion is considered, the fact would appear that the social affinities of the genus *Homo*—to use the scientist's language—are but means to an end, which is pleasure: that, indeed, the social man is really the pleasure-seeker. Man does not love society because he yearns for society *per se*, but for the pleasure incident to human intercourse.

The statement of this psychological distinction is necessary, in order to justify our defence of the "poor fisher" as regards the aspersions of certain folk, not of a piscatorial inclination, who are wont, at times, to regard us anglers as an unfavourable variation of the species.

Every human being seeks happiness, immediate or prospective. Happiness seems to consist in contrast; that is, before the feeling of happiness, the sense of eminent well-being can be experienced by an individual, this must have been preceded by a lower degree of the same mental state, or by

a degree of pain. Thus our critics find the contrast, productive to them of pleasurable feelings, in society; and the angler, though, as he might say, "'Tis not that I love man the less," likewise instinctively has none other motive in his gentle art than to become sensible of the lively contrast which arises from the quiet, restrained excitement of making the acquaintance of the elusive inhabitants of river and stream.

The fisherman, moreover, in thus taking his pleasure, is far more likely, when he returns from his excursions to the bosom of society, to be a socially agreeable and efficient being; and the more so, on account of his self-enforced contact with nature, and because, in Hazlett's words, he gives himself "a little breathing-space to muse on different matters, where contemplation

"May plume her feathers and let grow her wings,
That in the various bustle of resort
Were all too ruffled and sometimes impaired."

Experience of anglers proves that men of fresh, pleasant, original nature, and withal most profitable sociably, are to be found in the majority amongst them. I call to mind a hearty, white-haired old friend, a true disciple of Walton, who is, in fact, full of years, but young in spirit. How he delights to pass a day on the bank of a stream, talking to no one but the murmuring water and the spirit of the air, content so as he may have his crisp crust of bread and chunk of country cheese! If one is with him, he may drop an occasional remark which is always interesting—a very welcome exchange for commonplace verbosity. But he is too engaged and happy to speak overmuch. When, however, he returns to the centre of civilization, there is generally a competition for his company, so full of quaint tales and original comments is he. Everyone appears to find interest in his talk and society; and when any of these town-folk, with all timidity, venture with him to his happy hunting grounds, they not infrequently catch the piscatorial spirit, which is infectious, harmless, and delightful.

PHILOSOPHUS.

THE "BLOOMING" OR "BREAKING" OF LAKES AND PONDS.

(WASSER-BLÜTHE—FLEURS D'EAU.)

(Continued from page 166.)

"THE breaking of Copmere last year was caused by two of the species I have already mentioned. That portion forming a green scum on the surface of the mere I found to be *Clathrocystis æruginosa*. That permeating the water at all depths of the mere was *Aphanizomenon flos-aquæ*. They will presently appear on the screen in a very enlarged form.

"*Clathrocystis æruginosa* is the most remarkable product I ever saw. Amongst the countless millions on the surface of the mere no two are alike in form. To the unassisted eye they are like emerald green granules; they are fronds floating about the upper strata of the mere in vast numbers, forming a scum through which the water beneath cannot be seen.

"The size of these granules or fronds is as variable as their shapes, from $\frac{1}{16}$ th of an inch in diameter to $\frac{1}{8}$ th. Each frond is a microscopic gelatinous body, composed of a colourless gelatinous matrix in which are embedded innumerable minute green transparent round cells. The alteration of size and shape of the fronds, which are at first roundish, is owing to an erratic multiplication by division of the minute cells, causing the gelatinous encasing matrix to take shape as the cells, not larger than the $\frac{1}{1600}$ th of an inch in diameter, which multiply. Some resemble handcuffs, some chainwork, dumb-bells, and some in very fantastic lattice-like forms. It is from this lattice work the term *clathrate* is given to their structure. Each frond is quite distinct from its congeners whatever its shape may assume.

"The cells multiply by dividing into two or four, they have a distinct margin and contain granules. As cold weather approaches they swell up, fade to a brownish tint and sink to the bottom, to await a new life in the following year, until which time their life-history becomes lost.

"Unlike the freely swimming ciliated *Volvox*, they are motionless.

"I now come to the second kind.

"*Aphanizomenon flos-aquæ* is the extraordinary name given to the algæ which we found permeating the water of Copmere. It did not lie on the surface, like *Clathrocystis*, but was equally diffused throughout the whole of the mere. Its appearance is indicated on the sheet.

"It consists of what are termed trichomes, from the Greek word *thrix*, meaning the hair. It is a thread or filament of filamentous algæ, but has the power of associating itself with others in bundles of membranaceous flakes until they assume more or less a diamond shape. When so associated they appear minute specks, but can only be defined by microscopic assistance.

"The trichomes are straight, thin rods, separating when the water is shaken in a bottle. They are slightly granular, with cylindrical joints and reproductive spores. They belong to the confervoid algæ of the family *Nostochaceæ*. The filaments or trichomes have a diameter of about $\frac{1}{3000}$ th of an inch, and are flattish, but with cylindrical cells. It is probable that it is their flatness which causes them to cohere in clusters or bundles.

"Now, much as I had vainly hoped to have discovered something botanically new to chronicle in the report of our proceedings, I am obliged to confess that I am only relating what has been observed before in other meres by enquiring members of neighbouring field clubs; but as no discovery is complete in itself, or final, and only leading on by further investigation to fuller development, I am glad to be able to relate something of novelty and progressive research, and I am here led to the chemical and colour side of this question, and in that region I feel to be more at home.

"Having during many years past examined the colouring matter of plants yielding dyes, amongst many others that which gives to vegetation its green colour, namely chlorophyll or leaf-green, I was led to think the colouring matter of this alga was chlorophyll, and to try whether it could be isolated, and this inquiry resulted in some very interesting facts.

"It has been much questioned for many years past whether chlorophyll exists under the form of globules or granules, and whether solid, semi-solid, or a fluid enclosed in delicate membranes. In microscopic plants in which the circulation of the sap can be seen with the microscope, as in the *Chara*, the circulating chlorophyll can be seen in corpuscles beyond the cell-wall and in the circulating matter. In other plants the chlorophyll is to be seen both in corpuscles and amorphous.

"It is well known that alcohol and ether abstract the colour, whilst the corpuscles, cells or fibres containing it, remain, this points to their being dyed with the chlorophyll, and being distinct from it.

"The bottle of water containing these two forms of algæ I brought home with me as well as another I subsequently sent for, both of which I set aside for watching and experiment.

"With tincture of iodine the green colour is turned into a kind of golden brown. Natural decay also brought about the same change.

"In two weeks a perceptible change took place, decomposition set in from the algæ gradually dying, a light brownish sediment formed at the bottom of the bottle, which on examination with the microscope consisted of cell-walls of the trichomes, which were being greedily devoured by innumerable animalculæ, mostly ciliated free swimming infusoria of the *Colpodea* family, such as *Paramecium*, and *Opalina*, with a few rotifers of which there were only a few when the algæ were in a healthy state. The rapid increase of these infusoria, and their voracity was one of the most wonderful sights I ever saw. They seemed to increase by millions as scavengers of this decaying microscopic plant-life.

"In proportion as the vegetable tissue decayed a remarkable change occurred in the liquid. The chlorophyll having escaped its bonds became bluer in shade and remained in solution in the water as a tinctorial fluid of a bluish-green colour. Then in another week a new change took place, the dawn, so to speak, of autumnal tints occurred, the bluish-green liquid appeared by reflected light to be auburn, whilst by transmitted light no trace of this tint could be observed, as it held definitely to its bluish-green colour. This was a remarkable find, resembling a few of the dichroic and fluorescent aniline dyes

such as Uramine and Eosine, specimens of which I have brought with me in these small bottles, which distinctly show two colours as they are viewed by reflected or transmitted light. This is exactly what occurred with the solution of chlorophyll in the bottle. By reflected light no tinge of blue could be seen, nor any yellow by transmitted light. Chlorophyll then, in this state of change, is a dichroic liquid.

"This phenomenon remained in its fluorescent or dichroic state for about one month, and gradually the bluish green changed into a pretty autumnal reddish brown in which it rests to-day, the whole of the water becoming rust coloured, leaving no trace of blue or green. The animalculæ, for want of food, have died and helped to increase the deposit at the bottom of the bottle; the surface of the liquid, at first covered with the scum of *Clathrocystis*, is now a light floating scum of a rusty brown colour like the liquid and its deposit.

"Does not this portray what occurs in the leaves themselves during spring, summer, and autumn? With the sprouting of the leaf into light, chlorophyll begins to form, gradually deepening as summer advances, then as the sap loses its force and vitality, the chlorophyll changes its colour into those autumnal tints which make the woodland scenery so beautiful and varied.

"My friend, Dr. Schunck, of Manchester, to whom I sent a bottle of the Copmere water in its worst breaking state, by treating it with ether obtained two beautiful blue colouring matters of considerable intensity.

"This change finds its reflex, too, in the arts, for chlorophyll is now a commercial product. Mr. E. D. Haen, of Hanover, has discovered a method of extracting chlorophyll from plants in the two forms in which I found it in the bottles of Copmere water.

"I have had an interesting correspondence with him, and have obtained from him samples of his products, both in a soluble and insoluble form.

"Those insoluble in water are soluble in oil and other fatty matters, also in absolute alcohol. They are chiefly used by confectioners in the manufacture of liqueurs, and for reviving the tone of faded tinned vegetables.

"I venture to suggest, in concluding this paper, that it would be of interest, and probably of use, to institute a series of investigations to determine the pathological properties of these mere waters when in the 'breakage' condition.

"It occurs to me to suggest that if fish are so harmfully affected by it, it may not be outside the bounds of probability that epidemics, both in man and beast, may be traced to this source as a cause. I found vibrios present in considerable numbers."

THE IRISHMAN'S STORY, WITH INTERRUPTIONS.

BY "KRYPTOS."

"DID ye never hear the story of Jarvey's salmon, sor?—No! Well, I am surprised! Why, iveryone from here to Kilerum has heard it a dozen toimes with one in to make it shure they'll never forget it.

"Jarvey's the boatman down at Ballycorvan Lake wid his own boat, shure. 'Tis thrue it's got a mighty little bit o' bottom; but thin ye can't have iverything in the world.—Oh, it's the boat that has mighty little bottom—not the lake—that has moiles of it.

"Well, sor, as oi was sayin', the boat on Ballycorvan belongs to Jarvey, or it did before it sank, an' Jarvey died.—No; Jarvey wer'nt drowned whin the boat sank, he wasn't in it; there was no accident thin, divil a bit, because he'd hoired the boat to an Englishman! Of course the Englishman was drowned, but 'twas his own fault, shure, for no one but a fool would hoire a boat wid no bottom.—How did he git into the boat?—Why, like any ither man. No; he couldn't fall through, because the holes were patched up. Anyhow, before he hoired out the boat he used it himself, an' he would 'a used it afterwards only he died before, an' the boat sank, which was a providential thing, because it might have sunk before he died, an' when he was in it, bad luck to it, and thin his woife would 'a been lift a widder, only she'd been dead two year, an' he'd married agin since thin!—Oh, yes, the Englishman lift a woife

an' family; so ye see it's an ill wind as blows nobody good. It might 'a bin Jarvey's family, 'cept that he didn't have none, as his bhoys was all grown up.—Well, sor! before he died he was out fishin' wid two gentlemen who was stayin' up at the Inn, an' as they didn't care to come out for the rain, he wint along by himself, an' as his boat had no bottom at all, at all—savin' the patches—he took old Michael Cassidy's, which had a good bottom but poor side planks, an' he was out on the top of the lake an' usin' a loive-bait for pike, which same are foine fish in our water. Well, sor, 'twas rainin' loike the ould gentleman himself—savin' your presence—an' he was wet as the lake itself; except he was in the boat he might 'a bin in the water, though he was better where he was, for Jarvey couldn't swim. Michael Cassidy could though! so he hadn't patched up the soides of his boat quite sure, for he niver used it himself, an' o' course if other people couldn't swim 'twas nothin' to do with him. Well, sor, Jarvey got holt av a big fish, an' he pulled up the stone they used to anchor—'twas Jarvey pulled up the stone, not the fish—and he cut it off av the rope because, shure, the boat wouldn't hold both him an' the stone.—How did he get the stone there? Well, begorra! I'm tilling the story as ivery one av us heard Jarvey tell it, an' Jarvey cut the stone off, so I suppose he put it on! An' shure wasn't it raining, so the boat wud be full o' water. That's why he couldn't take the stone in too!—Why didn't he empt' the water out? Well, wasn't he in the middle av the lake, an' didn't oi tell ye he couldn't swim! How was he to git out an' do it? Well, in good toime the water in the boat ran out av the holes in the soides, an' Jarvey was mighty glad, or he'd niver 'a bin able to git the fish in. Jarvey said 'twere the biggest fish in the lake, an' begorra! it pulled like a horse, wid Jarvey an' the boat bein' towed along ather it. Then Jarvey found that all the loine was out an' the fish was still pulling.—What did he do? Why he let it pull! an' they wint from the thop av the lake to the bottom in fourteen minutes.—No, I don't mean that the boat sunk thin! I mean they thravelled from the Kilerum end to the Ballycorvan end in that toime. Sure, it wouldn't take thim fourteen minutes to do it *downwards*, though the lake is deep! Presently he saw Michael Cassidy comin' down the shore, and Michael yells, 'Come out o' my boat, ye spalpeen!' 'I wish oi cud!' says Jarvey, then he bawls 'Bring me another loine and a gaff!' for the boat was so low in the water that he'd lift these out for fear she'd be swamped. So Michael started off to Kilerum to git him a new loine.

"When he'd gone the salmon turned an' pulled the boat back to the Kilerum end, so if Jarvey had knowed he might have given Cassidy a lift as far as that, 'cept that, av course, he couldn't git near the shore, an' the two av thim must 'a swamped her intoirely.

"What did Jarvey do? Why he wint with the boat! I told ye he couldn't swim! Presently the soides av the boat begun to leak, an' Jarvey tuk off his coat an' sthuffed the hole up wid his sleeve. Thin the other soide began to leak, so he tuk the other sleeve an' sthuffed that hole up, an' ather that the boat begun to leak, an' Jarvey sot on the hole! But the extry weight av the coat at the bottom av the boat settled it a bit more, so he tuk it out and threw it over the soide; but it only sunk a little more, so he got out av the boat to loighten it! It was a great shame entirely, for it was a foine fish, and—What became of Jarvey? Why, shure, I told ye he couldn't swim! He was drowned! I told you he was drowned in Michael Cassidy's boat!—How do we know it was a salmon?—Beggorra, didn't the salmon get away! Who saw it all happen?—Why haven't I told you Jarvey told Michael Cassidy to go an' git him a gaff an' a loine, an', shure, didn't he come back an' foind his boat at the bottom! Bad luck to it! It must have bin a foine fish.—What?—Oh, thin! I can't tell ye all over agin, and shure it's Jarvey's own story, an' it's not well to talk careless av dead men!"

THE LION HOTEL TROUT WATER, FARNINGHAM.—We hear that Mr. Lovegrove has re-stocked his water, and, to make it more select, has raised the price of day tickets to 7s. 6d., with a limited number of season tickets at £5 5s.

IMPRISONMENT FOR A DAY'S FISHING.

A SHORT time ago, an officer of the 60th Rifles was staying at Troyes for a few months in the summer with an Abbé, for the purpose of rubbing up his French before going to the Staff College. Being a keen fisherman, he spent a good many of his leisure hours in whipping the neighbouring streams. He fished the Yonne, Seine, and Aube; the best for trout was the first named, though he caught some beauties over a pound, high up in the Aube, above Bar-sur-Aube; he caught no trout in the Seine.

The streams were all netted, and it was only in places difficult to net that there was any good sport to be had. Proprietors generally made no difficulty about allowing him to fish. One day, when fishing near Brienne, and having landed about two dozen small fish something like our dace, which had risen eagerly to a blue dun, a picturesque view on the opposite bank caught his fancy; he sat down by the side of the stream, took out his drawing-book, and began making a sketch. Becoming engrossed in his work, he did not hear two men approaching him from behind. The sketch being finished to his satisfaction, he put the book into his pocket, and was proceeding to take up the rod, when a hand was laid on his shoulder, and turning sharply round, he found himself face to face with two gendarmes, one of whom said, "I arrest you as a German spy," and in spite of his protestations, was marched off to prison; after being searched, he was taken before the Mayor of Brienne. In vain he explained that he was an English officer on leave, and that he was merely making a sketch for his own amusement. This did not satisfy them; they said they did not believe he was an Englishman, but knew he was a spy and a German, and one that the secret police had long been on the look-out for, and that now being caught in the flagrant act of making a map of the country he must go to prison. He was locked up all night in a very uncomfortable cell on very short commons. However, the next day, much to his relief, he was informed that his identity had been proved through the English Embassy in Paris. The gendarmes apologised for the mistake that had been made, and said that, having been warned that a spy of German nationality was in the vicinity, and having watched him on several occasions taking notes, and, as they thought, making a plan of the country, they considered it their duty to arrest him. Everything having been explained satisfactorily and a promise being given that care should be taken that he should not be interfered with again, he was allowed to go free. In relating his adventure, the officer in question said that after it was all over he was not sorry to have had this experience, as it gave him an insight into French prison life, which he could never otherwise have obtained; he also learned a good many French phrases not in common use.

P. H. BEWICKE.

WHEN AND HOW TO USE GENTLES.

IF you look at a Lea angler at work, the chances are that you will find he is using as bait white bread paste—an excellent bait, too, for most kinds of fish, as he or any experienced angler well knows. This clean and simple bait is found to be universally effective in the capture of roach and bream, and though not the bait *par excellence* for other fish, still it not infrequently accounts for the lives of rudd, barbel, chub, tench, and dace, to say nothing of bleak, and most of the few remaining kinds of fresh-water fish, odd members of which are at times thus accounted for. No doubt white bread paste is always reliable as likely to give some results, but however much can be said in its favour, even for the capture of those two fish for which it is particularly good, it seems to me too great a piece of conservatism to use it so exclusively as does the Lea angler. Winter and summer alike you rarely find him without it, whilst usually he has nothing else, or, if he has, it is in insufficient quantity to be effectively used. It is more than a stand-by with him; it is as essential as was the sheet anchor in the sea songs of the Dibdin days. On the face of it, such conservatism is hardly wise considering the fickleness, if I may be allowed

the word, that is characteristic of all angling experiences. I may go a step further, and say that it is a mistake.

Now, on the other hand, if you look at a Sheffield angler when engaged in catching the same species of fish, you will almost as certainly find him using gentles—he is as conservative in their use as is his Lea brother in the use of bread paste—and as we condemn the exclusiveness of the one, so must we that of the other. This much, however, for the Sheffielder, that, though gentles are to him a stand-by, they are not essential, being oftener subordinated to other baits than is bread in the case of the *habitués* of the Lea. The Sheffielder knows well the virtues of creed wheat, potato, worms, and the like, not to relegate some amount of consideration to them at suitable times of the year, though from a large amount of experience and contact with him in his own waters I must say that he is altogether at fault in a too sparing use of bread. Perhaps this omission is not entirely a loss, for he is so inordinately extravagant in the use of ground-bait that to follow his practices with a bait of the food value of bread would be to surfeit the fish in every water with which he came in contact.

Of the respective merits of paste and gentles I need not stop to compare. Both are excellent, and in their season and place the best that can be used. Personally, I am unprejudiced, using both with equal openness of mind, being guided solely by discretion. To the reader I would advise the same freedom, and forthwith I am brought to the practical purpose of this article, which I trust will be found of some real utility to those who peruse it.

When to Use Gentles.—I could dismiss the question with the reply, "Rarely be without them," and the advice would be good, if, albeit, too summary. But I wish to be much more exact than that. In waters like the Thames and the Trent they are never out of season, but in canals, lakes, and quiet waters generally, there are very decidedly preferential times, and times when they are at a discount. They are at a discount in very warm weather, the number of little fish then taken amounting at times to a positive nuisance. Autumn is the time *par excellence*, and running it close in suitability is winter. It sometimes happens, too, at the end of June, when the angling season is just born, that the temperature of the early mornings, or even later in the day, is much on an equality with that of autumn. In such a case gentles ought to have a preference. From purely practical considerations I would also strongly recommend gentles for windy weather at any season of the year. Paste, unless sweetened or otherwise rendered more than naturally adhesive, is not a very comfortable bait to use at such times. With paste the angler needs to see a bite promptly, and though a feeding fish is noticeably bolder in rough weather than in calm, and takes the bait with much less circumspection, yet for all that there is still lacking that absolute promptitude of detection that should characterise paste fishing. Now, with gentles it is otherwise. You must be as prompt to detect a bite usually as with paste, but there is this great difference, that your gentles will not be taken off the hook before you have a chance of getting your fish, should you be somewhat slow, or, what is tantamount to the same thing, your gentles are not so easily gutted in proportion as paste is removed from the hook, this fact often resulting in the fish holding the bait longer in the mouth in the former than in the latter case—a distinct advantage when at such times delicate movements of the float are undiscernible except to the most practised sight.

It will be noticed that I have assigned the best times for gentles to those seasons when they are scarcest or altogether unattainable. True, they are not to be had freshly bred, but they are to be had for all that. The angler must look ahead, and provide, like the ant, in the season of plenty for the time of dearth. To be precise, the angler must get his gentles as late in the season as the weather will admit of their being bred (last year, owing to the extreme mildness that prevailed, they were to be had until well into November, though in general the middle of September is quite late enough), and then suitably store them for the rest of the autumn and winter requirements. The *modus operandi* is, I believe, commonly known, but for the information of the inexperienced, and for the sake of completeness, I

will briefly describe it. When full grown, the gentles should be taken from the vessel in which they have been bred, and placed in a large earthenware jar or in a zinc bath with alternate layers of damp sand. Caution must be observed not to make the sand too damp, or it will lead to the death and decay of the whole, and to the annoyance and disgust of the angler. Be prodigal with the sand; and when the whole have been bedded down, place the vessel in a dark, cool place, with preferably a damp, not wet, atmosphere. At intervals pay a visit of inspection, especially if immediately after the operation of storing the weather should become rather warm for a day or two. If the surface sand shows signs of becoming dry, add a little damp sand, but on no account try to water the sand already in the vessel. Don't be alarmed if you find a few flies about. So long as there is not a general exodus from the vessel, the bulk of those stored there will be safe and well. When you require to take some of your store, be careful not to disturb the repose of the remainder. Neither curiosity nor concern should induce you to interfere with them until they, too, are required for actual use. The test of your success will be a good sized, smooth-skinned gentle all through the winter. Failure will be evinced by a putrid, offensive mass if too much water was used initially, a preponderance of dead ones if you were too early in your storing, or kept the vessel in too warm a place, and a diminutively sized gentle if all along the sand has been too dry. Notwithstanding, it is a simple matter to be successful.

How to Use Gentles.—In this there lies some amount of art. I have seen anglers, who might have known better, using gentles in a manner that was absolutely prohibitive to success. On this head I hope to convey some useful information. When I have been in a tackle dealer's shop, I have been amazed at times by the number of customers coming in for pennyworths of gentles. I may say most emphatically that it is sheer waste of money and labour to go fishing with a pennyworth of gentles. When they are retailed at a penny the spoonful, as is very often done, two shillings' worth would be but a moderate quantity for a day's fishing. This, I know, would be beyond the pockets of many anglers—I should be sorry, myself, to have to add 2s. for gentles to the other incidental expenses of the day—and I would strongly advise anglers to resolutely decline to pay such a proportional price for them. It is scandalously exorbitant, and the retailing at a penny the spoonful is quite as bad. Nowhere can you expect to get one gentle too many for a fishing excursion for 6d., and with a reasonable dealer this quantity should be your medium amount, while half as many more, or upwards, would be better. Best of all, is to take a lesson from the Sheffielder, and breed your own. You will get a bigger and better gentle for your reward. When once the eggs have hatched out nicely in the breeding vessel, a good covering of bran will effectually remove any offensiveness that otherwise might arise either for yourself or your neighbours. As an alternative, I would suggest your making friends with the butcher's boy. He is most amenable to a few coppers, though I have found that, unless he knows the value of gentles in the angler's eyes, he thinks you a fool, and neglects you if you are not handsome in your rewards.

To have plenty of gentles, then, is the first essential to success. A second preliminary that I would insist upon is as essential in its way as the first. It is to have a suitable ground-bait. Nothing can be better than bran. If the water to be fished will admit of it, bran alone should be used, but if there is too much stream for the angler to know precisely where his ground-bait of bran alone would ultimately rest, then he must add something to give it more weight. A little meal is beneficial in this respect, and gives less food than bread. Whatever the angler uses, it should have as little food value as possible. The aim should be to use as light and as unfeeding a ground-bait as possible. If the added material has a value in this respect, rather than err on the side of adding a needless quantity, it should be carried separately to the waterside and mixed in the proportions that then appear necessary. The mixture can then be quietly soaked in the water and squeezed to the required consistency. A

good alternative to bran is to chew, or soak and squeeze, a few pellets of bread, but it should not be overdone. It is also good to follow paste fishing in a spot without using any ground-bait at all.

When the preliminary ground-bait has settled, throw in a handful of gentles—now we shall begin to understand the necessity for having plenty of them. If the water contains bleak or other small fish in numbers, and but too often they simply swarm, then a handful of gentles is wasted. Instead, two or more handfuls thrown in as quickly as possible, so that a fair number will ultimately reach the bottom, will be necessary. One must circumvent these small pests somehow, or not a single gentle will reach its intended destination. A good plan is to throw several pieces of soaked, but unsqueezed, bread on the water, and when this has floated or drifted away, and so taken off the attention of the small freebooters, a handful of gentles can be safely and quietly thrown in. When the sport begins, do not keep the fish too long without a gratis feed. Use little ground-bait, but after every fish, or alternate fish, throw in a few more gentles, taking care that they shall have a chance of getting to the bottom as before. This plan you will adhere to throughout your fishing. If the bottom is weedy or muddy more gentles are required to produce the effect you desire, as they quickly get buried and lost.

Lastly I come to the hook and the mode of baiting it. Much fault often attaches to the angler in this respect. In baiting the hook, take a gentle and hold it very firmly between the finger and thumb, with the thin end or head of the gentle pointing towards you. Do not be afraid of holding it firmly, it takes a very hard pinch to burst a well-scoured gentle. Now take the hook and prick it through as little of the skin at the thick end of the gentle as you can, increasing the firmness with which the latter is held during the operation rather than relaxing it. When the point of the hook has pierced its skin, push the gentle well on the bend so that the barb is quite clear. Release the gentle from the hold, and what have you? A natural looking, unrestrained bait.

"But all your hook is visible to the fish," I hear someone (to whom the method is strange) object. "Quite so," I reply, "and what of that?" "Oh, the fish will see the hook and know the danger!" "With qualification," I reply; "rubbish, my good friend! If your hook is big, well, it will present more hook than gentle, and you would hardly expect an educated roach to accept such an anomaly. Now, follow me. I use by preference McKenzie's, which are numbered in the old style of larger numbers to the smaller sizes. If you are going to fish with a single gentle on the hook, then use a No. 14 or 15 for a still water, and a size larger for a running stream requiring heavier tackle. Nos. 14 and 13 are also good for two gentles. For three or more gentles use a 13 or a 12. In roach fishing a smaller sized hook can safely be used than would be advisable in bream or chub fishing with a corresponding bait. Also single gentles are often the best for the former, when they would be useless for the latter fish."

Thus I would answer the objector. If he has a very strong opinion against showing even a little of the hook, he will the more readily follow the plan I myself adopt, which is to change the size of the hook with systematic regularity every time that the number of gentles used at a time is varied. I would urge the use of a short-shanked hook—the shorter the better—and the smallest that will give you a chance of landing your best fish. When fish are shy, risk a little in this direction, and leave yourself the minimum of chance, trusting rather to your skill and care than to a larger hook, which might be safe if you could get your fish on to it, but which would, if tried, be precisely the reason why the fish would thankfully decline. It pays to attend to these details. The finest roach I ever caught—a fish of 1lb. 14oz.—was taken with a single gentle on a No. 16 hook. The day was most miserable, and altogether against successful angling. With the utmost care and diligence I could only show that and another fish at the end of the day. Nevertheless, I was proud of the result, and the anxiety of the moments whilst fighting my prize on such a very small hook forms now one of the

pleasantest recollections amongst many happy reminiscences that it is my fortune to possess.

To sum up and complete the gist of my advice, on the second head of my remarks, I would say: In all cases adopt the method of hooking on the gentles that I have indicated, whether for one, two, or more gentles, and bury any absurdities you may have cherished on the mere fact of a visible hook; on the other hand, do not let the size of the hook render the appearance of the bait suspicious, or hamper its freedom unnecessarily; use the smallest hook possible with the shortest of shanks, and I may add as neatly and finely "dubbed" as possible; change the gentles every time you get a bite, whether they appear spoiled or not, and if you do not get a bite quickly, change the gentle every few minutes as though you had had a bite; select for the hook the largest, liveliest, and smoothest skinned ones; keep feeding your fish with gentles according to the particular necessities of your swim; ground-bait little and rarely, and with ground-bait of the highest possible character; fish with tackle as light as possible; and, finally, let observation and discretion attend you in all things.

FOSSDYKE.

THE FISHERIES EXHIBITION

AT THE

ROYAL AQUARIUM.

"In the eighth annual Fisheries Exhibition, beautifully constructed fishing rods, reels, flies, baits, nets, bags, and all accessories of the gentle art of fishing are exhibited by the leading fishing tackle makers. An angler must indeed be hard to please if he cannot select a suitable outfit from the immense varieties that are on show, and to those who are purchasing, the advantages of a visit to the Exhibition for the purposes of comparison and selection are obvious. In the tanks will be found collections of live fish recently contributed to the society by the foremost fish hatcheries (including that of Mr. Corrie on the Itchen). There are also on exhibit some of the fish sent to the Aquarium last year, now thoroughly naturalised. Amongst the novelties will be an importation of a considerable number of frozen New Zealand fish, forwarded to the Fisheries Exhibition by the Waitaki and Waimate Acclimatisation Society, per the New Zealand Shipping Co's. ss. *Waitaki*, which left New Zealand the end of January last. A good array of craft of all kinds, including launches, punts, skiffs, canoes, &c., by leading boatbuilders, and exhibitors in the subsidiary trades, are interspersed throughout the Exhibition."

These words from the "Preface" to the exhibition catalogue seem about all that need be said about the affair generally. We miss some old friends, but the exhibition is very attractive to anyone interested in any branch of angling, as it is a thoroughly up-to-date show of all that is best in rods, reels, and tackle of all kinds.

Taking the stands in their order in the catalogue (and we beg to suggest to Mr. Ritchie that 6d. is 3d. too much to ask for it), we began a six hours' tour of them at Messrs. Hardy's No. 3 and 3A. Here the Alnwick firm have a grand show of their single and double built split cane rods, famous all the world over. Even American anglers are customers, in spite of the heavy duty and the perfection of their own split cane rods. Among many we tried were "Hardy's Champion," 17ft., a copy of Mr. J. J. Hardy's own favourite pattern, and the one he has made his record casts with. The "Kelson," 17ft. 6in., is one of the most powerful built cane rods in the Exhibition, while as an A 1 general fly rod there is nothing to beat the "Hi Regan," 16ft. (called after the author of "How and Where to Fish in Ireland"). A 15½ft. steel centre struck us as being just the thing for a lady salmon angler, or for grilse or heavy trout. Messrs. Hardy make a still lighter salmon rod for ladies—one of 15ft. and a 14ft. May Fly rod, which would have delighted the late Francis Francis. Other patterns new this year are the "R. B. Marston" dry-fly rod in split cane; it is 10ft. 6in., and has a hand grip to screw on to the butt, giving an extra 6in. or 8in., which at times is an immense advantage. The action in this rod plays evenly down to the hand, and although it will cast a long line it is intended for fishing comfortably all day without

straining the wrist and with a light reel line. It is the copy of a rod made to order for the editor of the *Fishing Gazette*, and used by him with great satisfaction all last season. A rod about which there has been some correspondence in the *Gazette* is the "Harden," also a dry-fly rod, the pattern of Mr. Henry Harden, of the Piscatorial Society. We certainly think there is more of the Castleconnell action about this rod than we have noticed in a split cane, and we should say that anyone who once got into the swing would be very much pleased with it. Other favourite patterns are the Halford "Priceless," and the Booth "Derbyshire" dry-fly rod, shorter and lighter than the Hampshire rods. Then Mr. Pope's pattern, made both in split cane and in greenheart, the latter at 25s., is one of the sweetest greenheart rods we ever handled. Mr. Pope is a member of the Fly Fishers' Club, also of the Dorchester Club, and a first-rate fly fisher. In lines Messrs. Hardy show a most perfect one, double tapered, called the "Corona," and their silk waterproofed landing-nets are very great improvements on the old nets, which shrink up to nothing, or catch the barbs of hooks, as if made for that purpose.

Messrs. Hardy tell us they have a great demand for Mr. Murdoch's split cane spinning and prawn-rod, and also for the same rod in greenheart at half the price. We have already fully described and illustrated the hardy "Silex" reel, and after trying it and also watching what a perfect novice can do with it, we can say with confidence that it is a splendid reel. For instance, we were pike fishing last month with a friend who had never done any pike fishing to speak of, and knew nothing of casting from the reel in any other way. We fitted him up with a stiff Slater greenheart pike rod and a "Silex," and all day long for two days he made casts from the reel almost without an over-run. It happened in this way. Soon after Mr. J. T. Emery had made his extraordinary cast of over 80yds. from the "Silex," we had a long chat with him about it, and he said that provided you were using a fairly heavy bait you could cast from the "Silex" without needing to control it in any way, so that it could be used by a novice or anyone who could not get the knack of controlling the Nottingham reel. The "Silex" is thus proved to be as valuable to the expert as to the novice in casting, and the makers are adapting its principle to their sea reels, for which work it answers admirably. Messrs. Hardy have made one specially for us with the rim of the revolving part exposed, so that it can be controlled with the fingers, and without guards of any kind. Messrs. Hardy have, of course, a fine general show of salmon and sea trout flies and baits, flies on gut, and A 1 floaters on eyed hooks. We hear they have on hand a new combination pike tackle invented by Mr. Alfred Jardine.

At stand No. 13 Messrs. A. CARTER and Co., of 137, St. John-street, London, E.C., have a show which does them credit, as usual, and many anglers have already tried the action of the Duke of Edinburgh's 10ft. split cane fly rod, a lovely little rod for 45s. Other favourite patterns with their customers are the Dixon and the 9ft. "Phelps," made for a relation of Phelps, the famous actor and fly fisher. Another aristocratic pattern is the 14ft. "Empress," sold to the Empress of Russia, a light, split cane grilse rod. Surely no one need be without a salmon rod who can get near salmon fishing. Carter's £2 2s. greenheart rods, 16ft. to 18ft., are wonders at the price; for those with longer purses they have treble-built split canes of various lengths. The "Imperial," 9ft. 9in., fly rod, ordered for the Emperor of Germany, is a beautifully-finished greenheart, and can also be had in split cane. To take up a whole cane pike rod after handling those for fly work, is like catching hold of a poker—rather appropriate in the case of the "Kitchener," ordered for the Sirdar. Now that special wire reel lines are being used and advocated by some members of the British Sea Anglers' Society, it has become necessary to enlarge the revolving wheel in the pulley arrangement at the end of the top joint; and this Messrs. Carter have done. Another novelty is their trout reel in aluminium—very strong shape—the cheapest reel of the kind we have ever seen. Such a reel would have been £5 a few years ago, before aluminium dropped so in price. Carter's sixpenny 3yd. all undrawn gut lines are worth

examining, as also are their 1s. 6d. a dozen floating double wing flies, on eyed hooks, and their small May Flies at 2s. 6d. a dozen. Also may be mentioned small Jock Scotts at 6d. each, well dressed, double tapered trout fly lines, and salmon gut at 30s. a hank. Equally cheap and good are Carter's solid leather tackle cases and fly books. The tubular steel fly rod, at 22s., is said to have many admirers, among which we do not figure. Anglers who want a cheap reel for a boy should ask to see Carter's shilling metal reel. Their salmon gaff, with shank specially made to fasten to a stick, is excellent; the inside of the shank is rounded to fit the handle, and the outside deeply notched, to hold the waxed thread well.

At Stand No. 15 Messrs. KING, MALCOM and Co., of 19, Leicester-square, show their excellent hand-made fishing brogues, with a stout metal plate the whole length of the foot to carry the nails. Their tanned calf shoe and boot fishing brogues are made in improved shapes, and also well worth notice are the strong leather rain and wind resisting coats in all colours. Of these the secretary of the Automobile Club says: "They are very suitable coats for motor cars and for night and sea fishing, as they can easily be kept soft and pliable." Another useful invention is the light, but strong wicker "tree" for drying knee and thigh boots. The combination waterproof cloth and leather knee and thigh fishing boots; the rubber, or, as the Americans call them, "gum" boots, with leather soles; and other things of interest to anglers will be found at our old friend Mr. Malcom's stall.

Stand No. 20.—Messrs. OGDEN and SCOTFORD, of Pittville-gates, Cheltenham, and 19, Leicester-square, London. A rod Mr. Scotford showed us, which ought to have a good sale, is a guinea fly rod in a dull green colour, with two tops, called the "Colne," and their 12ft. (£3 10s.) split cane, and 10ft. 6in. (£3 3s.) ditto, made in two joints or three joints, struck us as being excellent value. Another fine rod is their 15ft. double-built split cane, steel centre, with lockfast joints (£8 8s.). We hear they will put a new reel on the market shortly. We shall give an illustrated notice of it when it is ready. Of their celebrated Blue Mahoe rods, which this firm has made for so many years, they have only about five left—three joint rods—(42s.). They can get no more Mahoe. A rod spear of good shape, made of aluminium gut, salmon casts, three yards (8s. 6d.), tested up to 17lb. (was it 17lb., or did we misunderstand?) emerald green whole gut trout casts at 1s. Mr. Scotford thinks his emerald green tint a better one than the ordinary blue tint—and it may be—certainly the casts are excellent. We last year noticed the firm's registered "Duplex" fishing bag; but they have improved it since then, and make it in two sizes at 6s. 6d. and 10s. 6d. By a very simple arrangement you can use it either as a small bag, to hold, say, 10lb. or 12lb. of trout, or opened out to take bigger fish. It is made of some very strong material which washes well, and although not actually waterproof (a bad thing to carry fish in), it will not allow moisture from the fish to exude. Living near the celebrated Fairfieldshire Colne and other good trout streams, it is for the fly fisher that Messrs. O. and S. chiefly cater, though other branches of the art are by no means neglected.

Stand No. 21 is a large and well arranged one of the ARMY AND NAVY CO-OPERATIVE SOCIETY, of Victoria-street, S.W. The society is only showing here, not selling. It has purchased and issued over 20,000 tickets to its own members in order that they may have a chance to see rods, reels, &c., better than they do at headquarters. In the middle of the exhibit hangs a framed copy of *Vanity Fair's* portrait of the late Mr. William Black, with an extract from one of the articles he wrote for the *Fishing Gazette* some years ago. There are also two very fine stuffed tarpon on show here, and the "Army and Navy" Co. make a feature of rods and tackle for tarpon fishing. Here you can see an American split-cane tarpon pole at £8, and an English whole cane one for 26s. Also English and American tarpon reels and lines. (This reminds us that Mr. Rowland Ward, of 166, Piccadilly, has some startling oil paintings of tarpon fishing on view). Altogether, the Army and Navy Co-operative Society may be proud of their show. They have on sale a book, not previously known to us, called "The Tarpon," price 5s. an

American work worth noting by those interested in this great sporting fish. A very attractive and well got-up catalogue has been produced by the Army and Navy Co-operative Society, reflecting great credit on the manager of the Fishing Department.

At Stand No. 24 Mr. DAVID SLATER, of Newark-on-Trent, makes a fine show, as usual. His latest salmon reel is made of an aluminium alloy, and the 5in. size is 35s. We understand that the other day his Royal Highness the Duke of York purchased one of these reels. For trout the 2½in. size is 17s. 6d. He has the well-known and favourite ebonite "Fly Fisher's Reel" in two sizes, and with silent or ordinary check as desired. His 12-plait undressed Nottingham silk line, of a dark green colour, at 6s. 6d. per 100yds., should be noted by pike and Nottingham anglers, as also the well-made 4in. Nottingham reel, with check, at 7s. 6d.—quite thirty per cent. cheaper than formerly. Sea fishing reels seem to be inclined to become as big as the proverbial gooseberry. Mr. Slater makes a big one, called the "Future," of mahogany and aluminium: the latter metal is making headway in all branches of the tackle business. For £3 Mr. Slater makes a very pretty 10ft. steel centre split cane—one top—and one at £4 5s., 10ft. 6in., with two tops, steel centre, or £3 5s. without. Another rod which we liked has a greenheart butt and the rest split cane. These mixtures have not been tried half enough; the advantage of combining two different woods in bows has been known for ages. For instance, a rod with greenheart butt, whole cane middle joint, and split cane top might answer admirably if judiciously matched, and would not be expensive. Mr. Slater is also showing split cane salmon rods in different lengths; his "Piscatorial" general rod, at 10s. 6d. with cork handle, and punt rod, at 23s., deserve mention. Of his reels of walnut, mahogany, ebonite, brass, aluminium, gun metal, &c., he has a brave show.

Stand No. 28.—Mr. JOHN ENRIGHT.—Mr. Enright is making a feature of the "Shannon" salmon reel, made of ebonite (extra large), to hold 200yds. of line, and the same reel can be had in aluminium. He has also an aluminium trout reel, at 6s. 6d. The "Shannon" 3yd. trout casts, at 4s. a dozen, will be found first-rate for sea trout and lake trout flies; and for dry fly or wet fly work in rivers the 3yd. natural gut casts, at 9d. each, can be recommended. Very good salmon gut casts are the 3yd. treble and single, and ditto double and single casts, at 6s. 6d. Then he has a light salmon cast, at 3s. 6d., and a light grilse, at 1s. 3d. For rough work, in big waters, the 3s. treble gut "Shannon" casts and traces cannot be beaten, and some big Shannon fish have already been killed on them. Pike anglers should make a note of Mr. Enright's stout 2yd. gut traces, at 1s. It is not picked gut, of course, but it is just the thing for the pike paternoster. Of course, Mr. Enright has a good show of salmon and trout flies, including floating flies. His double hook salmon flies are in great demand, and his reel lines, both for salmon and trout fishing, including doubled tapered 40yd. lines, are certain to give satisfaction. Among the fly rods we handled we liked much a 16ft. greenheart, in two joints, and 18ft., in three joints. This is made after the pattern of the "Champion" rod, but with a little less stuff in it. The guinea four joint greenheart fly rod, with two tops, is full value, and those who are satisfied with less finish should note the fact that Mr. Enright is now selling a greenheart fly rod, with two tops, any length or action up to 12ft., at 12s. 6d.

No. 29 on the list is Mr. T. W. MARTIN, "The Trent Otter" show. Mr. Martin is well known as the author of "Float Fishing and Spinning in the Nottingham Style," published sixteen or eighteen years ago, and other works on angling, which can be seen at his stand. He is now located at 8, Seymour-street, Euston-square, N.W., an address well known to London roach anglers. Mr. Martin has some fine roach poles from 18s. to 35s., and is showing English made split cane rods from £2 2s., and Malleson's American ditto at 30s. and 35s., with maker's name on them. This is important, as some very cheap rubbish in the shape of split cane rods is on the market. Mr. M.'s greenheart fly rods at 17s. 6d. up to 12ft. deserve notice, and for a youth we can safely say we have not seen at the price, 6s. 6d. to 8s. 6d., a better rod than his greenheart fly rod. In salmon

rods he shows greenheart from 25s. to 45s. A 17ft. at the lower price seemed to us, as far as it was possible to judge in such cramped surroundings, quite wonderful value. At £8 he has a genuine "Leonard" salmon rod, split cane. Of course, Nottingham rods and tackle are well represented, and he has a pike or sea rod at 28s., with extra stout ferrules and fittings. Mr. M. shows Mr. Coxon's capital "Ariel" Nottingham reel, and what seemed to us to be extra stout and round salmon gut at 12s. per hundred lengths—just right for those who are not particular about extra length as long as the gut is strong—and he has much cheaper still, which would do for sea fishing. Fly fishers should see his 5s. 6d. trout landing net, a very simple affair, which we can recommend to those who want a light net that closes up for packing, is strong and rigid, and without knuckles. For another shilling you can have a butt to fit on to the landing handle—a capital thing where a long landing handle is wanted. Mr. Martin has an eyed fly box, fitted with the invaluable oil bottle, held in its place by a clip—the first box we have seen so fitted.

Near Mr. Martin's stand is an exhibit of McLACHLAN'S patent portable electric propeller. Anyone possessing a skiff, canoe, &c., can by means of this apparatus convert it into what is practically an electric boat without in any way altering the construction. You simply take off the old rudder and hang on MacLachlan's, which is rudder and propeller combined. It is a very clever affair.

Stand No. 30.—A few words of praise must be given to the "Ceres" Letter and Card Files, Cabinets, &c., illustrating the "Ceres" system of keeping letters and papers. We have used the box files for years, and consider the whole system the best we have ever seen. Nothing could be better, for instance, for a fishing tackle maker who wished to keep customers' special orders and patterns always handy.

There are several things, mention of which must be held over at present; but No. 38.—Mr. GEO. HOYLE'S case of feathers, &c., used in fly dressing—should not be overlooked. In the tanks are some fine yearling and two-year-old trout and rainbows, presented by Mr. G. Valentine Corrie, of Chilland, Winchester, and some golden orfe, tench, and king carp, presented by Mr. Thomas Ford, of Caistor.

At Stand No. 32 may be seen the famous "Berthon" folding boats and canoes, which still hold their own as the most practical things of the kind, in spite of scores of imitations.

At Stand No. 41 is what is called a "hybrid perch-jack," caught by Mr. J. SKELSEY, at Reigate. We have not seen this exhibit as yet.

PISCATORIAL SOCIETY.

MONDAY'S meeting was a marked contrast to the gathering of the previous week. The announcement that so popular a member, so graceful a writer, and so competent an authority on angling matters generally as Mr. Chas. H. Wheeley would read a paper on chub fishing brought together a large and appreciative audience. Under the chairmanship of Mr. Horace H. Brown things went as merrily as a marriage bell. The table was graced with an exceedingly *apropos* exhibition of two very fine chub, weighing respectively 4lb. 4½oz. and 4lb. 10z., the former caught by Mr. Cormac H. O'Dowd in the Thames (the sole result of a whole day's fishing, and the biggest chub, by the way, that the most successful chubber has ever taken), and the latter by Mr. H. A. Rolt in the little river Wey. After the customary relation of angling experiences, Mr. Wheeley gave his reading. Within the limits of a necessarily brief report it is impossible to give more than a very short *resumé* of a dissertation crammed with information of the highest value to those who stalk the loggerheads. Tips were freely dispersed, and members were told how and where to fish for the sport-giving chevin at the various seasons of the year; the tackle necessary, and the way to use it under all conditions of water, was explained in a most lucid manner, especial reference being made to the method of working a swim with a slider float. Examples of the best floats, lines, hooks, and rods to use were handed round for inspection. It was mentioned that chub could be taken dapping with a moth, beetle, or frog, and by fishing with dry or wet fly or tiny fly eppons. The lecturer also told his hearers of many grand days he had had with the fish, remarking that the best catches he had made had, curiously enough, been in very windy weather by long-corking in sheltered swims. Clear water was essential for large takes, and Mr. Wheeley's opinion was that chub did not mind the gut being a bit coarse, provided they were not alarmed by the angler. Chub could be taken, too, by spinning and live-baiting with a small bleak, gudgeon, or minnow, the last named being good in the early part of the season. Ledgering was often effectual,

a big lob being impaled on the hook tail first. The lecturer heartily commended chub fishing, both in summer, autumn, and winter, to the serious consideration of the members, feeling assured that if those who had not taken kindly to it already would only fish carefully, quietly, far off, and not too fine, they would not be eager to relinquish a sport so productive of good results as that familiarly termed "chubbing." A hearty vote of thanks was accorded Mr. Wheeley for his able paper. The dinner next Monday, March 20, bids fair to be a success.

BRITISH SEA ANGLERS' SOCIETY.

The usual weekly meeting of this society was held at the Cannon-street Hotel on Wednesday, March 15, Mr. T. B. Bates in the chair. Mr. Parker gave a very unfavourable account of the sport off Southend. Mr. Charles Graham reported that he had seen a codling 3lb. weight taken on Saturday afternoon off Southend Pier with rod and line, baiting with lugworm. The chairman showed an improved pulley top, which was generally admired. The question of the preservation of various baits, such as mussels, lugworm, &c., was thoroughly discussed, and various suggestions were made by members. The hon. sec. drew attention to the fact that the date of the annual dinner is fixed for April 12. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

GRESHAM ANGLING SOCIETY.

At the usual weekly meeting Mr. J. T. Emery occupied the chair. Messrs. Fosbrooke and Cowley reported pike, perch, roach, gudgeon, dace and bream from the Mole. Messrs. Allen, Marshall, Snare, Beaumont, and Gilbert, roach from the society's water at Kelvedon. Mr. Hicks, roach from Kelvedon. Messrs. Connellan, Gill, and Gibson, dace and trout from Hertford with the fly, the trout, of course, being returned. Mr. Buckingham, pike from private waters. Mr. F. A. Gray, roach from Littleport. Mr. Scott, pike up to 5½lb. from private waters. Mr. Wrightson, pike from the Stour up to 7½lb. I am still open to receive names of gentlemen who intend being present at the opening dinner at Chesham on April 8, so that all proper and necessary arrangements may be made for their comfort. The usual toasts and vote of thanks to the chair concluded the proceedings.

ALEX. WRIGHT (Hon. Sec.).

YARE AND BURE PRESERVATION SOCIETY.

The annual meeting of the above society was held on Monday evening, March 6, and a generally satisfactory report was presented. At the same time, it does not appear that any very great progress has been made in what in my opinion is the most important matter of all. I refer to the influx of the salt tides. The danger is a double one. First to the fish, with which the society has properly most to do, and secondly with regard to the banks and the consequent danger to the low-lying land. The chairman, in moving the adoption of the report, said that Breydon was silting up, and that in consequence the natural safety-valve was practically not available. But mud is removable. Given the command to attack, Admiral Hobrough would soon make a clearance, and the incoming tides, instead of running up-stream and spoiling the trade at the Red House, would spread themselves in the great settling tank nature has provided, the care and cleansing of which, however, is left to those who benefit by it. In proposing Major Jary as the president for the ensuing year, Mr. Fred Taylor, in one of his happy speeches, said that wherever fighting was to be found, that gallant soldier had been always in the front rank. Well, there is the North Sea to fight, Yarmouth apathy to combat, and the fish to be protected. With Army and Navy united, the foe should be incontinently routed.

WARRINGTON ANGLERS' ASSOCIATION.

The monthly meeting of the committee of the above was held on March 2 at the Roebuck Hotel, Bridge-street. Twenty-seven new members were enrolled. Permission was granted to the members of the Warrington Cycling Club to fish a contest in the Association's private waters. Messrs. Ed. Gilbert, John Bailey, and J. Bancroft were appointed to conduct certain netting operations for stocking purposes. The committee are seeking additional waters in Cheshire, and in one case their efforts will be successful. Stocking is also to be undertaken in connection with the old river at Lymm. The next meeting of the committee will be held on March 16, to arrange all details in connection with the annual dinner of the society, which will be held on Thursday, March 23.

FRED. J. EMSON.

CHARGE OF SALMON POACHING ON THE EDEN, CARLISLE.

WILLIAM MASON was charged at Carlisle with having an unclean salmon in his possession on February 18, and James Robinson was charged with having aided and abetted Mason in the commission of the offence. Inspector Nicholson prosecuted on behalf of the Eden Conservancy Board. P.C. Edward Baker stated that he saw the two defendants in Bridge-lane, and, suspecting that they were trying to "run" a salmon, he concealed himself in a shop. Robinson came up the lane, and looked all round to see if there was a policeman in sight. He then waved, and Mason came up Bridge-lane. The witness got hold of him, and found he was carrying a salmon. Robinson called John Cunningham, who stated that he was with

Robinson when Mason came up. Robinson did not give Mason "a set," and he was not in his company. The Bench dismissed the case against Robinson. They also discharged Mason, who is a cripple. W. A.

EELS—ANOTHER ENEMY TO THE FISH.

At the recent monthly meeting of the West Cumberland Fishing Board, at Whitehaven, Mr. John Musgrove in the chair, Mr. Lowthorpe, who has charge of Holm-rook Pond, announced that there were once thousands of eels in that sheet of water, but, said Mr. Lowthorpe, I have cleared them all out. The Chairman: Don't you know that eels can travel over land? They are not limited to water. Mr. Lowthorpe: Yes, I know. The eels get into very soft places. They are very numerous in the river Irt, and grow to very great strength and vigour; in fact, he one day caught an eel in the act of killing a 7lb. salmon in the Irt. The eel got hold of the fish in a pool, and soon a battle royal took place. He ran for his gun, but found the fish dead on his return, and the eel gone. He took the salmon out of the water, and on examining it found that the eel had caught it below the gills and made a hole in its side, and it had bled to death. On a fine day, when the water was clear, eels could be seen in shoals at the head of Wastwater Lake. Dr. Braithwaite said there were many a million in Wastwater. He had caught eels in that lake as thick as his wrist. G.

REPORTS FROM RIVERS, LOCHS, &c.

 River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—Another general angling season is past and gone, and there is very little to recall as to results at the finish. The general absence of reports from some of the fishing stations for some time has indicated the almost barren character of sport, and a great deal of this is to be attributed to the imperfect condition of the river, which I know has given great disappointment to the anglers, and not to any deficiency in the stock of fish. As far as my own knowledge is concerned, and that supported by the practical testimony of others, the river is well stocked with all kinds of fish; but, as all anglers know, the result of sport depends on the feeding of the fish, and being piloted by an attendant who has a thorough knowledge of the water and where the most likely swims are. It is a good many years since a little entertainment was given to some of the fishermen in the tidal waters by the committee of the T.A.P.S. with a view of bringing them more into union with the work of river preservation, but which, I regret to add, had no encouraging results. When they got a little merry through the excess of stimulants it became a scene of sad disorder, and I can remember one of them exclaiming to the others, "You know, when we get a customer, unless he is known to us we don't take him to the best swims," and the meeting ended with great discouragement to the promoters. It must be borne in mind this was in the dark days of the Thames, little known to many of the present day, and many of those that were then present have gone to "the great majority," and the change has been for the better. I have heard in my time complaints from the fishermen of the comparative want of treatment on the part of their clients that some did not treat them so well as others in the cravings of the inner man, and have been designated to me as "bread and cheese men." Well, there is a great deal in this, and it is only human nature after all. In any sphere of life kindness and courtesy are the most appreciated, and will always work the best in the end. In another fortnight the trout fishing season will commence in the midst of the Easter Holidays, and I hope next week I shall be able to report something about the movements of the trout. I think the fishermen are very confident as to the prospects of a good season, and I am sure my good wishes go with the anglers for a successful realisation.—B.

—(Datchet).—John Keene, one day, with Mr. Jones and Mr. Herbert, eight jack, the largest 8½lb., and fifteen perch; another day, with Mr. Back, one brace of jack, six brace of perch, and three dozen of roach, the largest roach 1lb. 4oz.; in three days, with Mr. Wilson, thirteen jack, fifty perch, and fourteen dozen fine roach; and another day, with Mr. Mobbs, six chub and three dozen of roach.—B.

—(Eton).—The angling season now just come to a close cannot be chronicled as a red-lettered one, but good sport has been obtained at different periods. Perch and roach have fed well during the closing week, and Mr. Frank Shanatt, on emptying his well one evening, counted out over 100 good roach, and set a good example to his brother anglers by returning the whole lot. This, as Frank observed to me, is one of the most practical ways of assisting the good work carried on by the Preservation Association. Trout are well on the move; I saw one this morning feeding well, close to Windsor Bridge. A small one was taken on the 14th by Mr. Franklin, of Eton, whilst spinning for jack, and was carefully returned without injury. John Keene undoubtedly again takes the premier position of the most successful professional during the past season, and will no doubt sustain his reputation on or about April 1 by securing one or two of the spotted beauties that he has made a note of.—CECIL HOWLETT.

—(Hampton Court).—William Milbourn writes: "The water during the last few days has been low and bright. There has been a great quantity of dace caught,

and this fish still keeps heading up to Hampton Court. Mr. Gunn, on Monday, out in his private punt, landed a pike of 7lb. The bank anglers have been doing well with the dace, and getting a few chub.—B.

—(Henley (March 15)).—Sport has been quiet during the closing days of the season, although a great number of anglers have been out. A decent bag has been made here and there, while others have met with almost blanks. The following are the best I can hear of: On the 10th ult., Mr. Elliott, out with J. James, a 16½lb. bag of roach; and a patron of G. Arlett, a bag of roach and jack weighing 19lb. On the 11th ult., Mr. Leaf, out with G. Arlett, a 26lb. bag of jack, best fish 6lb. On the 12th ult., Mr. G. Clements and Friend, out with S. Vaughn, five jack, best fish 4½lb.; and Mr. Rutter, out with G. Arlett, four dozen roach and two jack. On the 13th ult., Messrs. J. W. Read and Allan, out with G. Arlett, five jack, best fish 9½lb. On the 14th ult., Mr. Normans, out with W. Vaughn, seven jack, best fish 4lb. Messrs. J. W. Read and Allan, out with G. Arlett, a 20lb. bag of roach and jack. Messrs. A. E. Hobbs, F. H. Amphlett, and friend, fishing on this date, took three jack, averaging 5lb. each, while two rods accounted for fifty-four retainable roach; and Mr. J. Harvey, jun., fishing above Marsh Lock, took a well made pike, scaling 14½lb., which has been sent to Messrs. J. F. Cooper and Son, to be made beautiful for ever.—STANLEY MEAD.

—(Kingston).—There does not appear that anything has been done in the way of angling at the end of the season, and the same information comes from Sunbury, where the punts of Messrs. T. and A. Stroud have not been out. Some trout are reported as having been seen in several portions of the river.—B.

—(Lechlade).—The closing week of the season has been bright and springlike, but with frosty mornings. A splendid take by Mr. S. Meyers and "The General" is reported from the St. John's Bridge waters, fifty pike and eight perch being caught in two and a half days; twenty-one brace were returned; best pike, 13lb., which is being set up by Cooper; best perch, 13lb. Mr. Maundrell reports a jack of 8lb. from the same water; and Mr. Rawlinson one of 7lb. from Inglesham. Mr. Perkins, Mr. E. Chew, Mr. John Morgan, and others have also been out, with sport. Trout prospects for April 1 are good, several being on the move.—RAMBLER.

—(Richmond).—Job Brain reports that he has been getting a few roach, dace, and bream during the week.—B.

—(Shepperton).—George Rosewell, on Saturday last, with Mr. Chick and friend, caught between nine jack. Mr. Chick hooked a fine trout of 9lb., which, in good condition, would have weighed nearer 12lb. It was carefully unhooked, which was only over a bit of skin, and placed in the river again, and swam away as if nothing had been the matter, the anglers drinking its health and hoping to renew the acquaintance later on, and find it in better condition.—B.

—(Teddington).—W. McBride, one day with Mr. Underdown and friend, eight bream, a few perch, and one jack; half a day with Mr. Simpson, twenty-two bream, seven being returned, and four brace of perch; another day with Mr. Parsons and his two sons, thirty-nine bream, the largest 4½lb., five brace of perch, and a jack of 2½lb., which was marked with a silver ring and tablet through the fin, and bearing the initials and date "S. W., 1898." Mr. Parsons carefully returned the fish to the river again to get larger.—W. McBride informs me he has seen a very large trout, which he estimates at from 8lb. to 10lb. It has been feeding during the last week, and he hopes as soon as the season commences to get hold of it.—B.

—(Twickenham).—There has been very little done here. Mr. Ogden Smith one day creeled some roach; and Mr. Symonds, from the bank, 9lb. of roach, some of which he returned.—B.

—(Weybridge).—Herbert Carr says the fishing has been very bad, and has closed the season with one of his clients, who landed one brace of jack and a chub of 3lb. My good friend Mr. C. H. Wheeley also says there are very little angling news. Mr. H. A. Rolt has taken a fine chub of 4lb. 1oz. in the Wey, and saw a nice brace of jack being carried through the town, which he was informed had just been caught in Walton Ssle. I am much grieved to learn that Herbert Carr has just lost his only son after four days' illness. He was twenty-two years old, and it is a great loss to this worthy fisherman and his wife, who have my deep sympathy.—B.

Arun (Pulborough).—Over 100 anglers visited here on the 12th, and some fair sport was obtained, though, speaking generally, sport has not been so good here this season as last, owing, no doubt, to the frequent and long disturbance of the river through the floods. Mr. Cockarta took four medium-sized perch; Mr. Richards, Lincoln, 4lb. bream and roach; Mr. Watts, a 4lb. jack; Mr. Daley, Clapham-junction, 10lb. bream, largest 2½lb.; Mr. H. Allan, St. Albans, 11lb. bream, largest 2½lb.; Mr. Wilson, Battersea Friendly, 6lb. bream; Mr. E. G. Platt, Stoke Newington, a 10lb. jack, taken with a spoon; Mr. Stilman, Blackfriars, 6lb. bream; Mr. Holding, same club, a 3lb. 2oz. bream; Mr. Foster, ditto, a 3½lb. bream; Mr. Farmer, ditto, a 5lb. jack; Mr. Stump, ditto, 6lb. roach; Mr. Stone, Peckham Brothers', 10lb. bream, up to 2lb.; Mr. Every, St. Albans, two bream, 3½lb.; Mr. Bishop, same club, bream, up to 1½lb.—W. G. HOLLMAN.

Coln, Leach, &c. (Bibury, East Gloucestershire).—A ramble over ten miles of the nil and upper Coln on Tuesday found this famous trout stream in splendid condition, being bank high nearly throughout this distance. Saw a rod out this early on the Fairfield Park water (Mr. Aubrey-Miller), who caught several trout, but, I understand, returned them, being out for an opening. At Coln St. Aldwyn's (Sir Michael Hicks-Besch's) water the trout were rising freely, so, too, were they in the Hathrop

Castle and Bibury Court waters, which are simply teeming with fine trout. There appears to be a good show of trout in the Swan Hotel waters at Bibury, and here the trout were rising freely to March Browns, Olive Duns, and Blue Gnats, which were on thick, it being a warm, bright day. The season here opens on March 29. The Leach fisheries and other streams in East Gloucestershire are all reported as in capital trim for the opening of the season, and Easter anglers will be just in it.—PAW.

Darenth, Eynsford, Farningham, Horton Kirby, Sutton-at-Hone, and Hawley.—All along this part of the river trout may be seen, and now and then they rise. Those I have seen have been chiefly the old staggers of 1½ lb. or so, the large numbers of young fish recently put in making little show at present. Prospects are fairly good, the river having been well cleansed, yet we could bear another flood before the 1st. The rates for fishing at the Lion Hotel are considerably raised, which is not surprising, when the great demand for trout fishing near London is to be remembered.—J. P. T.

Dart (Totnes and District).—The river is in fishable condition, but the frosts have made the water very fine, and consequently fish are very shy. Some fair baskets of trout, however, have been creoled lately, Mr. H. Wright, of Buckfastleigh, getting two and three dozen a day. Mr. Colin May killed a dozen, and a few brace were secured by Messrs. M. Revell, H. T. Distin, E. Ackrell, and others. Fish are difficult to catch, except in the stickles, but a good number of rods have been out. Good flies are Blue Upright, Half Stone, and March Brown, with Edwards Palmer occasionally. On Monday Mr. Edgbrook, staying at Furzeleigh Mills, landed a spring salmon, 1½ lb. in weight, from Mr. Pear-e's water above Buckfastleigh. The net fisheries are quiet. The conservators this week rescinded the resolution passed at their previous meeting, and will again grant free licences to the Duchy tenants on Dartmoor, over whose land anglers have to go. Had not this course been adopted a good deal of valuable water might have been lost.—DEVONIAN.

Devonshire Streams.—Most of the streams are in good fishing trim. Baskets on the streams in the North Devon district have not been large, but the re-stocking of the Taw and Torridge should tend to a good season with trout. The Rusty Palmer and March Brown are used. After the rain of last week some fairly average takes were made on the southern streams, but it is useless to start before 11 a.m., as the mornings are very frosty. The Blue Upright is a general favourite with trout; but sport with salmon has been very dull up to the present, although a few good fish have been killed on the Dart. The streams in the famous Lyd and Tavy Clave district have run somewhat low, and visitors have hardly commenced to arrive. Takes, however, have included some well-conditioned trout. That attractive fly, Bishop's Fancy, is again proving its value, other bait being the March Brown and Gannan Stone.—DEVONIAN.

Eden (Carlisle).—There has been hardly any sport of late. There has not been a single good run of fish this season. Indeed, the nets, both in the sea and the river, are yielding worse than they have done since 1894; and the Eden is not singular in this respect, the accounts from the Tweed being, if anything, worse. Several anglers have not yet landed anything but old kelts, and the few fish that have been killed have chiefly fallen to the rods that are day after day at work. The Corby Castle keeper has had one, 20 lb., Simon Bell, one, 17 lb., at Armethwaite Hall; and in the Corby water, Lord Brackley, one, 9 lb.; Lord Newtown Butler, one, 16 lb.; and Mr. Wm. Stephenson, one, 18 lb. The river is now low and clear, and three or four feet of fresh water is much needed.—SILVER GREY.

Exe and Canal (Exeter).—Weather beautifully fine, but not good for heavy baskets. Waters very low and bright, and brilliant sunshine from morn till night, renders fly-fishing generally unremunerative. Messrs. Snell, Taylor, Toukins, Shapley, and Roberts are among the successful ones on the Bampton waters, and the following have scored among the salmon: Col. Wyatt Edgell, a 9-pounder; Mr. Edmonds, one of similar weight; Mr. Coombe, an 8-pounder. No improvement in angling prospects can be expected until we get a further rainfall, the river being already down to summer level.—"RED PALMER."

Fen District (South Lincs. and Cambs.).—The coarse fishing season is over. It has been a good one, and continued good right up to the end. From Surfleet we hear that things had got slow from the low state of the water. A rather notable catch is reported from Jackson's Hole. With a few nice roach and perch a Leeds sportsman recently landed a splendid trout of 3½ lb. This species is rare in this locality, but its discovery should show the possibilities of the cultivation of trout in these waters. Picking on the Forty-foot has produced a specimen of 8½ lb.—LIMPET.

Idle District (North Notts).—The Idle has not been yielding very well lately, but the Rytton about Blyth has yielded very well; one visitor had three roach scaling 4½ lb. recently, and since then anglers have turned up in force. The best fish last week was 1½ lb. 12 oz. Good dace have also been captured. The canal between Clapham and Clayworth has been affording the best sport. There some good roach baskets have been obtained with bread paste. A few pike have also come to hand. Trout fishing for the next three months will be the coarse angler's refuge.—L.

Lake Vyrnwy (North Wales).—During the week under report the first three days were cold and frosty, and the remainder very hot and bright, without any breeze. Sport has been fair, but heavy baskets have been out of the question, as the surface of the lake has been as smooth as glass. On the 8th Mr. Pine killed fourteen (9 lb. 8 oz.), and Mr. Mason twelve (7 lb. 2 oz.); on the 9th Mr. Pine killed eight (6 lb. 4 oz.); on the 10th Mr. Pine killed eleven

(6 lb. 8 oz.), Mr. Crowther eight (4 lb. 13 oz.), and Mr. Mason three (1½ lb. 12 oz.); on the 11th Mr. Pine took five (3 lb. 12 oz.), and Mr. Horne one (14 oz.); on the 13th Dr. White killed seven (5 lb. 10 oz.), Mr. Pine six (3 lb. 13 oz.), Mr. Briggs four (2 lb. 12 oz.), and Mr. Horne four (3 lb. 10 oz.). The best fish of the week was killed by Mr. Horne, weighing 1½ lb. 10 oz.—LONG DRIFT.

Lark (Lackford and Flempton).—The coarse fishing season closed here on the 15th. The last few weeks have been more satisfactory, the water being in very fair condition for bottom fishing. Mr. L. F. Best, out on 6th, had some nice roach, best fish 1½ lb. 6 oz.; Mr. W. G. King, on the 9th, killed a few very good dace; Mr. Mayhew, on the same day, fishing near Lackford, one small pike, 2 lb.; Mr. H. Best, fishing at Flempton, some nice dace, and one pike of 2½ lb. Also a few small trout were caught with worm, but, being out of season, were carefully returned. The trout fishing season commences here on the 1st of April. After that date I hope to be able to send a report of the capture of a good fish or two, which have been seen feeding in different parts of the stream. The new tickets of the society can now be obtained from me at Bury St. Edmunds.—A. E. KEMP.

Lea.—Tuesday was the last day for retaining pike and perch in the Lea, and during the past week a good many anglers have been out spinning, live baiting, &c. Sport, however, generally speaking has been quiet, and no heavy pike are reported captured during the closing days. In the King's Arms Fishery, Waltham, Mr. Perry has landed four jack, going 12 lb., Mr. A. Shamrock has secured one of 4 lb., and Mr. W. Taylor is also credited with a decent fish. One of Mr. Perry's fish provided some diversion in the bar by suddenly seizing a gentleman by the finger. At Enfield, Cheshunt, and Broxbourne matters piscatorial appear to have been very quiet, and as regards roach fishing anglers once more have been greatly disappointed. The fish have been right off the feed. The Stort has furnished anglers with some small pike, but the roach have not been biting. This latter river closed for coarse fishing on Tuesday.—IZAAK WALTON.

Lugg and Arrow (Leominster).—These noted trout streams have gone down to a nice level, and are running clear, and are both in good order for fishing. The weather has been beautiful and fine during the day, and without any winds, which has been most suitable for anglers to get out. A good few flies are now coming out, and in a few days the March Brown may be expected, when trout will be certain to rise freely at them. The best flies at present are the February Red, Blue Dun, and Palmers. A few very nice trout have been landed this week with the fly. The Pinsley is running clear and in good order for fishing.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in good orders, but weather is against trout fishing. Mostly sharp frosts by night, followed by bright, sunny days. Have heard of very few trout being landed, and natural insects are scarce. Until the nights become warmer but little improvement can be looked for.—R. T. WILLIAMS.

Nene (Peterborough).—More activity has been evinced in angling circles during the past week, as the circumstances have been much more favourable for prosecuting sport, and some good catches of pike can be recorded for the close of the season. Mr. Priestley, of Peterborough, was fortunate in securing seven good specimens near Oundle, the largest scaling about 7 lb. A fine chub of about 4 lb. was caught at Alwalton by Mr. Wright, Peterborough. At a meeting of representative gentlemen, held at the Angel Hotel, Peterborough, on Friday evening, it was decided to form a trout fishing association for the Peterborough district, and to stock a suitable piece of water with trout. The vicar of Peterborough was elected president of the association. The Sheffielders, who visit the Wisbech, Sutton Bridge, and Boston districts in large numbers, have commanded interest on their behalf, and the licensed victuallers and tradesmen are co-operating with the Sheffield Amalgamated Anglers' Society to purchase fishing rights in local waters in the districts mentioned.—E. A. S.

North Staffordshire Rivers.—Beautiful weather, fined down streams, fly on, and a few fish on the rise are the angling conditions of our district at this time. A little sport has been had with grayling before the close on the Tean brook, and with trout on the Blythe; but few fly hands have been out yet. The coarse fish season ended fairly well among perch, chub, and pike, Mr. John Lloyd getting a very plump 7 lb. fish; Mr. Harry Parsons, of Stafford, and two friends, seventeen pike; and a lucky angler secured a good-sized barbel from the Sow some days since, which is being set up.—F. W. DALE.

Ouse (Holywell Ferry).—Season finished up grandly, Messrs. Kaye, Lambert, Briggs, and seven other gentlemen getting good fish up to 9 lb., the last named gentleman having the pleasure of gaffing the record fish of years about here, a very handsome perch, 3½ lb., which I took with a small roach. It is now at Mr. Anstiss', of Chelsea, and will make a fine companion to the 2½ lb. one I caught in the summer.—A. SCARD.

Ouse (Huntingdon).—Season ended here in a very satisfactory manner. For some few days the water has been in excellent condition, and the weather also was very favourable. Some nice pike, roach, and a few chub were caught, some of the roach scaling nearly 2 lb., many of the pike over 10 lb., whilst on the closing day a 13 lb. and an 18½-pounder were captured.—B.

Ouse (St. Ives, Hunts.).—I have weighed in during the past week pike up to 16 lb., perch up to 3 lb. 4 oz., roach up to 1½ lb. 11 oz., which makes a good finish up for season 1898-9. We can now clean up our rods and reels, and put our lines in vaseline, &c., and make everything in readiness for June 16; and I can only hope that every angler may be permitted to see the opening of next season.—E. COLLINSON.

Otter (Tipton St. John's).—The river is clear and low. The last few days have been bright and mild. Fishing continues to be very bad. To-day (Wednesday, 15th) only three anglers were on the river between this station and the mouth. Nothing worthy of note was done. At 1 p.m. the Pale Duns came on the water, but the trout did not stir. An angler last week hooked a salmon kelt on his trout fly just above Otterton weir. He stuck to him for three-quarters of an hour, and then the fish broke away. It was about 5 lb. weight. This is not a common event on this river.—HERON.

Plymouth.—The sport on the various rivers is still very good, and some good baskets have been taken. On the Dart, especially, the fish have been very fine, so also on the upper waters of the Tavy.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—All these rivers are at present in the very best possible condition for angling with the fly, and with the weather more resembling the month of May than the middle of March it is most extraordinary that so very few trout have as yet been captured in any of these streams, but what are taken have all been found to be in splendid condition. On Saturday last, Mr. W. Wood, of Warrington, Lancashire, was successful in landing a very large pike—a female—38 in. in length from tip of nose to fork of tail, but, strange to say, did not weigh nearly so much as it should have done, being out of condition, and it is sincerely to be hoped that other pike anglers will follow Mr. Wood's good example, and kill as many of these pests as possible, as at the present time they are very easy to capture, and more easily still in about a month's time, as by then they will have finished spawning. A fine salmon of upwards of 20 lb. has been taken in the Severn near Shrewsbury, and several others have been seen in that neighbourhood and also in the Vyrnwy, which good news may tempt our local anglers to invest in salmon angling licences to help on the Severn Fishery Board.—VYRNWY.

Sussex Rivers and Chichester Canal.—The weather has held fine until the close of the coarse fish season. The winter has been exceptionally fine and mild, and sport quite up to the average. Pike in the Ouse seem to appreciate the introduction of rainbow trout. Mr. Bridger, on opening a 7 lb. fish, found the remains of nine, and at this rate the importation will soon be cleared out. This pike was taken above the mills. A few small fish have been caught in the Fletching district, but nothing exceeding 4½ lb. has come under my notice. The Cuckmere, which is now closed, has yielded a few bream and roach from the tidal water, also a few small fish above the road hole. Visitors to the Rother have had fair sport with pike and perch. A trout of about 2 lb. was taken with gentles while roaching. It was in poor condition, and was returned to the water. Chichester Canal has fished fairly well. Pike up to 4 lb., a perch of 2½ lb., and bream of 1 lb. are among recent captures.—GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—The river is rather low, and hence very little sport is got either with salmon or trout. A fresh is much needed.—H.

Teifi (Lampeter, Cardiganshire).—The river has run rather low. Salmon are not so plentiful, but some nice baskets of trout have been taken during the past week.—H.

Teme (Ludlow).—The Teme in this part has lowered, and is now running clear and a nice level, and is in capital order for fishing, and suitable for either fly or bottom. The weather has been beautiful and fine, with bright warm sunshine days, without any March winds, and has been in every way suitable for anglers to get out, and will no doubt be a great assistance to the trout to get back into good condition after the long spell of bad weather in February, as some of the trout taken have been long, lean, and flabby, and not in the best of condition. The trout have been more on the feed, and have been rising better, and more anglers have been out of late. The flies used are the Blue Dun, February Red, Palmers, and, if the weather holds, March Brown will be out in a few days. Some very nice-sized fish have been taken, but no good baskets as yet. Close season for coarse fish commenced on Wednesday, and will continue until June. On Monday six nice trout were landed with the Blue Dun and February Red. With the worm, on Tuesday, four trout were taken below Ludford. In the Ludford water some good trout have been taken. The Ony, Corve, Clun, and Ledwyche are all clear, and in good fishing order, and a few nice trout taken from them this week with the fly.—S. LUDLOW.

Teme (Tenbury).—The water in this district is still running clear, and has gone down to a nice level for fishing, and the very fine weather of the last few weeks has done much to improve the prospects of fishing. The warm days have brought out a good number of real flies, and the trout have been more inclined to feed, and have been rising better the last few days. There has been a fair number of anglers out with Blue Dun, Palmer, and February Red, and several nice trout have been taken; and if the weather will hold fine there will be some good baskets of trout landed in this part, as there are plenty of fish in the river. The Red Kyre and Ledwyche are all clear and in good order.—WORCESTER.

Trent (Newark).—The closing days of the coarse fishing in the Newark district was a general failure, notwithstanding the many rods out. Down to Thursday last roach had been taking worm freely, and the hopes of anglers were that this would continue to the end. Amongst those most successful Mr. T. Davis far excels his frequent big bags of roach, containing some nice specimens, three out of a 30 lb. bag on Thursday reaching within a few shots of 1½ lb. each. Other good roach were taken by Sergt. Walters and Mr. F. C. Lees, the latter having one 1½ lb. 6 oz. Dace have been exceptionally scarce, and but few perch, Mr. Stemult bagging one of the latter

weighing 1lb. 2oz. Bleak have come to the fore during the week, and the season closed with a good head of fish in the river to produce a future supply.—TRENTSIDER.

Usk (Abergavenny).—Water low and clear. Some few trout have been caught here and there, but have not heard of or seen any good catches.—ERLE DELAFIELD.

Witham, &c. (Mid-Lincolnshire).—The immigration of visitors to the Witham district was at the weekend very numerous. This was for a last look-in. Though late, they appear to have done fairly well among the pike. Many anglers have got fish from different places on the river, but the best sport has been at the ends of open streams and drains, thus showing that pike are resorting to side waters for spawning. Roaching on the river has met with ill-success. Anglers on the Bain have enjoyed fair sport about Conningsby, and in the reaches about Fulsby Mill spinners have secured jack from 2lb. to 4lb. each. From the drains about Boston the reports of bottom fishers have been poor, but the securing of a jack now and then has put a little life into the sport.—LUCE.

Wye (Buith Wells).—River low and clear. No salmon taken. Anglers say there are no salmon up. I cannot understand it—a mild winter, several good floods, and yet no salmon. A few decent trout taken; A. G. Vaughan, Esq., was the most successful. March Brown and Blue Dun best flies; weather warm.—W. B. ROBERTS.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—Both the Yore and the Swale had a little fresh down them on Saturday, doubtless from a rainstorm or two on the moorlands and some melting snow from off the higher hills, but it was very little, and was quickly out again, and at the time of writing both these rivers, in fact, all the Yorkshire angling streams, are very low, and as bright as they can possibly be. This, with brilliant sunshine and sharp frosts at night, has been against roach fishing, and the takes sent to me are, with very few exceptions, "stale, flat, and unprofitable," but coarse fishermen have a lot to be thankful for, for the past season, particularly during the months of November, December, January, and February, has been one of the best they have had for many years, and, as far as I can judge, the trout season only requires favourable weather and water to make it a success, for all the well-known waters are well stocked with fish, and I see the Hawes and Abbotside Angling Association are again re-stocking their waters, and are putting in another 2000 yearling trout. Visitors to Upper Wensleydale should pay their water and the Crown Hotel (the headquarters of the club) a visit. If they do so, and inquire for Host Fawcett and James Blades, it will be their own fault if they don't catch fish. The annual meeting took place last Wednesday, Dr. Grime in the chair. From the report read by Mr. Platt, the club is in a flourishing condition, and a balance of £36 12s. 11d. remains in hand after paying all the expenses connected with the past season. The Earl of Wharfedale was re-elected president; Mr. E. Platt, treasurer; Mr. Beckwith Thompson, secretary; Mr. J. Fawcett, assistant secretary, and Mr. Moore, who has had rare sport amongst the grayling since he came to reside amongst us, was elected a vice-president. The Horne Mere pike fishermen finished up the season well, Mr. Selke, of Newcastle, having the honour of catching the big fish of the year—viz., one of 21½lb.; this fine pike measured 3ft. 1in. in length, 2ft. in girth. On Friday last, Mr. Schröder caught three weighing 19½lb. The sharp frosts of the past few nights have prevented many flies from hatching out, but during the past day or two I have noticed the Needle Brown, Winter Brown (Dark Woodcock and Orange), and a few spiders on the water. For a commencement the best flies will be the Needle Brown (dark), Sipe and Purple, Partridge, Waterhen Bloa, Snipe Bloa (orange body), Blue Hawk, and Spring Black, but until we have some warm rain to freshen our rivers I cannot give my readers much encouragement to go fishing.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—Large Irish Pike.—J. E. Miller, Northern Anglers' Depot, 19, New Station-street, Leeds, has received a pike for preservation, weighing 30lb.; length, 47in.; girth, 24in. It was caught by Capt. Gardiner, of the Durham Light Infantry, with an artificial bait, on Loch Sheelin. It is the largest fish caught this year in the loch, but last year one was caught weighing 62lb. Loch Sheelin is a veritable anglers' paradise, has excellent trout fishing in a broad stream running into the lake, as well as perch and pike, and any amount of wild fowl shooting in the season. Capt. Gardiner, Loch Sheelin, Cavan, will gladly give any information to anglers visiting the neighbourhood. The weather continues gloriously fine, and our rivers low and clear. The only chance of getting a few trout at present is by fishing the worm well up-stream on fine tackle. There will be little or no fly fishing attempted until after a freshet.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Ardgay (Perthshire, N.B.).—All the tributaries of the Kyle of Sutherland, including the Carron, Shin, Cassley, Oskell, and Eiding, have given but very indifferent sport this season so far as known. Mr. James A. Young, Balmagown Arms Hotel, has got salmon up to 20lb. on the Gledfield and Danie waters. On the Invercharron waters Mr. Barratt has got up to 26lb. In present conditions good sport cannot be looked for.—B.

Border Esk and Liddle.—Although the whole of the waters in the Esk and Liddle were opened this week, little worth recording has been done. The weather still remains cold, and few anglers have ventured out. Salmon are very scarce; indeed, only one has been taken since the opening, and that by Dr. Anderson, Eskbank, Canonbie, in the mid-reaches. A few yellow trout have been caught in the Lougholm and Canonbie waters, whilst the Long-

town and Metal Bridge divisions of the river have yielded nothing worth placing on record. A gentleman staying at Longtown had a brief run with a salmon at Lyne Foot, but the fish got away. Several kelts have been hooked in the middle and lower reaches. Up to the present the season has been less prolific than the first month of last year, and that was considered to be about the worst on record. There will be no good fishing until April. At time of writing the weather is very dull and rainy looking.—GILNÖCKIE.

Deveron (Banffshire).—The heavy rainfall in the end of last week has freshened the weather, which has been somewhat cold, keen frosts being pretty frequent. The water is also in good condition, but consequently, owing to the close netting, which continues night and day by the net fishermen in the vicinity of the Raik cottages, anglers are having but poor sport. On the Carnousie section a nice fish of 5½lb. was caught on the 8th inst. On the free water at Banff a few trout have also been killed. The net fishing on the river and coast stations showed a slight improvement in the end of last week and the beginning of the present. A box, on Monday, and another on Tuesday, each weighing close on 1cwt., were sent to the London market. The salmon are of an average size of 8lb., and of splendid quality. A box of ½cwt. was also sent from the Gardenstown coast fishings on Tuesday.—H. W.

Kenmore (Loch Tay, N.B.).—On March 13, on the reserve water, Mr. McIntyre killed a salmon 17½lb.; on the hotel water, Mr. Knight killed a salmon 16lb. 14th, on the hotel water, Mr. Smerdon Roe killed a salmon 19lb. Loch in good ply.—W. KNIGHT.

Killin (Loch Tay).—On March 8, Mr. Wade had a salmon of 17lb. 10th, Mr. Ware had one of 20lb.; Mr. Pigou had one of 27lb. 11th, Mr. Langley had one of 19lb. 13th, Capt. Williams had one of 14lb. 14th, Mr. Ware had one of 27lb.; Mr. Langley had two, of 21lb. and 18lb.; Mr. Pigou had one of 20lb. Only three boats out. Loch in good ply.—H. J. MAISEY.

Loch Ness (Foyers Hotel), N.B.—On March 3, Mr. Tilston's boatmen killed a nice salmon, weighing 25lb. On the 6th, Mr. James R. Sloan, Glasgow, killed four, 20lb., 18½lb., 18lb., and 8lb.; and Mr. D. McRae, one of 18lb. On the 9th, Mr. Sloan had one of 18lb. On the 10th, Mr. Sloan, one of 20lb.; and Mr. Tilston's boatmen, one of 18lb.—S. TILSTON.

Naver (Bettyhill).—Since last reported the following sport was obtained under most adverse circumstances: On 7th inst., Col. Frier, Dalvina Lodge, on Beat No. 1, landed a salmon weighing 9lb.; Mr. Campbell, on same water, but fishing Beat No. 2, had three salmon of 8½lb., 9lb., and 10½lb.; and Gen. Hume, Syre Lodge, on Beat No. 3, one salmon of 9lb. On 9th, Gen. Hume, on Syre Lodge waters, landed five salmon, ranging from 7½lb. to 10½lb., on Beats 5 and 6. On 10th, Mr. Campbell, Dalvina Lodge, had a 7lb. salmon on Beat No. 5; and Col. Frier, another salmon on No. 3. On 11th, Gen. Hume landed a salmon on No. 2.—B.

North-East of Scotland.—Although a good few spring fish are being got in the mid reaches of the Dee, yet there is a considerable slackness elsewhere, probably arising from the dearth of fresh fish from the sea. The weather has been too fine from an angler's point of view, and a moist day or two would be more acceptable than the excessive glare of sunshine at present prevailing. On the Invercauld water, Mr. H. L. Craik landed his first fish this season on Thursday, of 14lb. The Duke of York will fish the Abergeldie and Balmoral reaches for the next three weeks, staying at Birkhall, as being nearer the lower and more prolific pools. On the Invercauld Arms Hotel water, Mr. Holland had three, 6lb., 7lb., and 18lb., and two, of 7lb. and 8lb.; while Mr. Ferguson had two, of 7lb. and 10lb. On the Moraltree water, McLaren and Sturton, gillies, had two, of 7lb. and 8lb. respectively. On the Glentana waters, Col. Brinckman, Profect's Hotel, had one of 8lb., one of 19lb., four, of 6lb., 6lb., 8lb., and 15lb., one 16lb., and one 18lb.; while Mrs. Brinckman had two, of 9lb. each; and Mr. H. D. Harvey two, of 5lb. and 6lb. In the Aboyne waters, fish have been badly off the rise. On the Kincardine O'Neil section, Major Davidson creel two, of 7lb. each, one of 8½lb., one of 7½lb., and one of 7lb.; while Capt. Ramsay had one of 6lb. On Borrowstone section, Nicoll, keeper, creel a fine fish of 25lb., and one of 6lb. On Ballogie, Mr. Edward Drummond had one of 8lb., and two, of 7lb. and 9lb.; while Sir John Gladstone, on Upper Blackhall water, had two, of 6lb. and 9lb., and two, of 9lb. and 14½lb. On the Lodge water, Mr. Chas. Blacklaws had two, of 6lb. and 9lb. On the Blackhall water, on the 8th, the Hon. A. Orde-Powletle had two, of 7lb. and 9lb.; the Hon. E. Milne-Gibson, one of 7½lb.; and Col. C. Leith Hay, one of 7lb. On the Lower waters only an occasional fish is being got. Mr. Perry, who was only down at the opening, and other leasees have left some time ago on account of the slackness of sport. On the Kincansie waters, Mr. Irvine Fortescue had three, of 6lb., 6lb., and 9lb., and two, of 6lb. and 10lb.; while Miss Fortescue creel one of 6½lb. Mr. Davidson, Wellwood, has had occasional sport on the Park waters; but all over the Lower waters angling has been very backward indeed. The Duke of York, who passed up Deeside, accompanied by Sir Chas. Cust and the Hon. Derek Deple, on Wednesday morning, arrived at Abergeldie mains shortly before noon, and were on the river after luncheon. There is a scarcity of fresh run fish in the Royal waters, but the first bit of spate will alter all this, and then the Royal angler will be in the thick of the spring migrations. On the Don, Mr. Wragg creel a fish of 9lb. on the Inverure section. Some fair baskets of finnock have been made on the Ythan tidal, but the easterly winds have greatly retarded sport here as elsewhere. The weather is all over too dry and too bright, with overnight frosts. A couple of hours' rain would be a veritable boon just now.—G. M.

South of Scotland.—The weather has become more settled this week, and as no rain has fallen, the waters have been fining down since the end of last week. Angling has been somewhat poor in all the rivers of the district; as a matter of fact, very few spring salmon appear to be in the rivers, and they have been making a poor show in the nets in the firth. Trout are now improving, but another fortnight should be allowed to pass before taking them. A very fine yellow trout of 7½lb. has been caught. THE ANNAN.—This river is now in nice order for fly, but not much is doing. For two or three days the temperature has been very mild and spring-like. Another spring salmon has been caught in the middle waters by Mr. Johnstone, fly dresser, Moffat. I have not learned its weight, but it is said to have been a pretty fish. Mr. Johnstone took a basket of yellow trout, but these were not in good condition. Another angler was reported as having hooked what was said to be a clean run salmon, but it escaped. Salmon kelts have not been so troublesome this season, so far, to anglers, but another flood or two must come before they are cleared out of the river to the sea. THE NITH.—More anglers are now on the banks, but sport has not been very encouraging. A few yellow trout have been picked up here and there on the main stream. In the tributaries the baskets have been better, and the condition of the trout in fair order. The worm bait has accounted for the best sport and the largest trout. A rise of fly has been on since last week, the February Red being on the water last week-end. The March Brown has not hatched out yet. THE GALLOWAY RIVERS AND LOCHS.—A very fine yellow trout, weighing 7½lb., was taken on Milton Loch last week by Mr. William Landsborough Crockettford. The trout was taken on pike tackle and bait while spinning for pike. It was reported to be in fine condition. The rivers have not afforded much sport. At the time of writing the waters are in first-class order for fly. AYRSHIRE LOCHS AND RIVERS.—Angling has been indifferent on the rivers and lochs of this part of the country. A few fair yellow trout were taken towards the end of the week with bait tackle, the tributaries affording better sport than the main rivers. THE SOLWAY.—Few spring salmon have been running in the firth. Those taken in the nets have, however, been very fine fish of heavy weights. The pike nets at Annan have been doing fairly well during the past fortnight. THE DERWENT.—The Fishery Board put into the Derwent 500 yearling trout, which were presented to the board by Mr. Hartley, of Armathwaite Hall. The trout were consigned from the Wyresdale Fishery, in Lancashire, and were placed in the river at three points between Cocker-mouth and Brigham. Mr. Hartley is reported to have placed a similar number of trout in the river above Cocker-mouth. Angling for trout commenced last week on this river, but not much has been done yet. A number of rods have, however, been out. Mr. John Allison caught eight yellow trout, and Mr. B. Hewitt also had a few. These were taken in the waters below Cocker-mouth. Mr. J. Ritson had a fair catch in the higher waters. The Fishery Board appears to have managed badly the fishing affairs of this river, and I see they are deeply in debt for the past year. The Derwent should be one of the best angling rivers in the North of England if it was rightly managed.—HEATHERBELL.

Tay.—During the last fortnight the Duke and Duchess of Bedford have been fishing Stohhall and Mickleour water and landed sixteen clean fish. On Stanley water on Thursday, Mr. Jas. S. Mowat had one salmon of 16lb., and on Friday, Mr. George McGregor, fishing Mr. Kelly's boat, landed one salmon of 17½lb.; fishing Bercehall water on Friday, Col. Phillpotts had two salmon of 18lb. and 18½lb. Out from Fishers Hotel, Pitlochry, on the lower waters, Dr. Anderson, Pitlochry, had one salmon of 19lb., Mr. Robert Thompson killed one fish of 25lb. On the Bernam Hotel waters, Mr. Reginald Glanville, United Service Club, London, landed a nice clean run salmon of 16lb. Mr. Henry Peters, fishing Faskally water on the Tinnmel on Thursday, was successful in landing four fine salmon weighing 16½lb., 20lb., 20lb., and 25lb., and on Friday landed other four fish. The water is in fine order. On Friday, Mr. James Menzies, on the Bonskaid water, had two salmon of 14lb. and 14½lb. On the Lyon on the 7th inst. Mr. W. Stewart Menzies, of Chesthill, caught two splendid salmon of 20lb. and 18lb. On the 8th, Mr. Donald McNaughton, keeper on Chesthill water, two, 18lb. and 17lb.

Tweed, Teviot, and other Border Rivers.—Since my last notes the rivers have now cleared from the effects of the flood mentioned last week, and trout anglers have been out in considerable numbers lately, and some very good baskets of trout and grayling have been killed. Some of the latter fish weighed from ½lb. up to 1lb. and 1½lb., and one beauty of 2lb. 1oz. was killed on the Teviot with fly by Mr. Richard Newton, Kelso, who, besides, had another half dozen of the same fish weighing fully 3lb. With regard to the salmon rod angling there is little to report. I understand that two fish have been killed on one of the lower waters below Kelso, but particulars are not yet to hand, and on the Borgham water (Lord Home's) sport has also been poor. On the Floors Castle fastnesses nothing has been done during the past week in the way of salmon angling, although Lord Staverdale, who killed two fish last week on the upper water, which he has taken for the spring months, was out two days, I believe, did not get a fish of any kind. On the Ednam House water no fishing has as yet taken place, and on the Hendersyde stretches (belonging to Sir Richard Wilde-Griffiths, Bart., of Hendersyde Park) there have been no salmon killed for the past ten days, although I am led to understand that a nice dish or two of trout have been taken when the weather permitted. On the Sprouston water no fish have been killed, but two baskets of trout (7lb. and 6½lb.) were got on Monday and Tuesday. At the present time, although

there has been any amount of favourable opportunities for salmon getting to the upper reaches of the river, there does not seem to be many clean salmon in the Tweed or Teviot in the Kelso district, while reports from further down the river on the angling stretches lead one to the same belief. It certainly would seem as if the Tweed was yearly getting a later river for the fish to enter, or else there is some unknown cause why this once well-stocked river—both spring and autumn—is now so barren of the salmon tribe. Can anyone explain? Of those who have been most fortunate amongst the trout since the season opened we may give the following: Mr. Robt. Robertson, Kelso, on Teviot, on Friday last, with fly, had 6lb. of trout, 3½lb. of grayling (one 1½lb.), and 2lb. of smaller trout. Mr. Richard Newton, Kelso, had a basket of 5lb. of trout, and the same quantity of grayling, on Friday; while since then he has killed dishes of trout and grayling combined, weighing from 4lb. up to 7lb., all on the Teviot. On the same stream yesterday (Tuesday), Mr. Wm. Barfi had about 2½lb. of nice trout, all got with fly; Mr. Jas. Robertson, on Tweed, 3lb. (fly); Mr. Robert Ferguson, on Teviot, 3½lb.; Mr. Jas. Tait, on Tweed, 2½lb., and a bull trout of 4½lb., all with fly. To-day (Wednesday) Mr. Adam Denholm, Kelso, in two hours' fishing, after trying the grayling with worm for half an hour, put up fly, and at the close of his two hours he had 2½lb. of trout and 2lb. of grayling, nearly all got on Jack's Plumb, on the Teviot. Many other baskets of trout and grayling have been killed during the past week on both the main rivers, ranging from 2lb. up, but those given above are the best. The rivers to-day are in splendid condition, and the weather for the trout angler is all that could be desired. I believe that Kingside Loch, on the Ettrick, has been stocked with trout from the Howistown Fisheries Hatchery at Stirling. The trout measured from about 4in. to 9in. in length, and were brought to Selkirk in fifteen tanks, each tank containing from 300 to 500 fish. Before the loch was reached on Thursday morning, however (the fish having arrived the previous day), a good many of the trout had succumbed to the imprisonment in the tanks or to the transit, either by rail or road, five lorries being required to convey the tanks from Selkirk Station to the loch. The fishing for pike in the Tweed and Teviot still goes on, and a few have been got during the past week. Mr. Jas. Affleck, on the Teviot, had one of 5lb.; on Monday, Mr. Ormiston, one of 3lb. on the same river; and Mr. Hogarth, Henton Mill, five, of various weights. The Tweed salmon net fishings are most unsatisfactory, only some three or four fish being killed each day; while the number of trout does not increase. Salmon, on Saturday, were 3s. per lb.; trout, 2s. 2d. per lb. Last year at same time prices were: Salmon and trout, 2s. 6d. per lb. each.—MAXWHEEL.

IRISH REPORTS.

Belfast.—Up to a day or two ago the Lagan fished well about the Dromore reaches, but is now too low and clear for success. A few anglers were out this week on Woodburn and Stoneyford Dams. There is little to report from the Antrim and Down rivers.—J. A. B.

Blackwater (co. Cork).—Sport still continues poor owing to the unfavourable state of the rivers, nearly down to summer level. On Kibbarry water, Mr. A. Browning Priestley had two magnificent fish one day, 42½lb. and 18lb.—W. HAYNES AND SON.

Bundrowes River (co. Donegal).—Owing to the continued dry weather this river has become rather low, and a good many of the pools are out of order in consequence. Mr. T. Feely took one nice fresh run salmon of 10lb. on 9th inst. A good fall of rain is at present needed very much to put a fresh in the river, when good sport would be had, as the river now contains a good stock of fish.—M. ROGAN AND SONS.

Cork Rivers.—All the Cork rivers have been in pretty good angling order since last report, though a few were running rather low for successful angling to be had. The accounts to hand show that there has been a material improvement all round, though on no water can sport be considered satisfactory so far.—T. J. D.

Corrib and Lough Corrib (Galway).—Since last report little was done on the river. Not for several years has there been such an inauspicious opening. The river has been open now almost six weeks, and not as many salmon have been killed. On Lough Corrib trouting in the last fortnight has been excellent, but chiefly confined to professionals, whose daily baskets ran from 7lb. to 10lb. and higher; whilst several fine fish up to 7lb. were killed along the Galway shores.—J. A. B.

Erne (Ballyshannon and Belleek).—This river is now in fine order for trout fishing, and some fine trout are being taken daily by Messrs. P. Cleary, Moolan, Knox, and others.—M. ROGAN AND SONS.

Killarney.—Sport has shown some improvement since last report, though it is still far from satisfactory, considering the favourable weather and water conditions. A few salmon have been had, and some fair baskets of well-conditioned brown trout.—T. J. D.

Lee (co. Cork).—Salmon fishing has slightly improved since last report. Nevertheless the water is down to summer level nearly, and it requires the finest tackle possible. On Lee Mount, Mr. W. T. Crawshaw, one, 7½lb.; on Ballineadig, Capt. Richards, 11ants Regiment, one 12½lb.; on Carrigrohane Fishery, Mr. M. Murphy, one, 20lb.; on the Powdermill stream, J. H. Gribble, one, 8lb.; and Mr. Ned Murphy, two, 10lb., 9lb.; on Ashton, O. L. Evans, 13½lb. At the Waterworks fish are now collecting; Mr. J. O'Donnell had two, 8lb., 8½lb., and Mr. J. McAuliffe, one, 10lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport continues very bad among salmon, though the water is in good order, and the weather all that could be desired. Only two salmon have been had since last report, viz., one

of 10½lb. (by Mr. A. J. Tronp, Bayview Hotel), and one of 10lb. (by E. Dennehy, a local professional).—T. J. D.

Lough Mask (Clonbur, co. Galway).—Trouting pretty good lately. A valued correspondent assures me that since cross lining was abolished three years ago the trout rise better to the fly—which they were rather chary of doing previously—and sport all round has improved immensely. Intending visitors could not do better than write to Mr. Govan, Clonbur, a noted angler, who would be pleased to give any information on the subject.—J. A. B.

Lough Melvin.—The Rev. Wm. Verner had some fine trout again during the past week (trolling), weighing from 2lb. to 3½lb. Mr. G. landed a fine fresh run salmon, of 14lb., on 10th inst., with several gillaroo, trout, and brown trout. Mr. T. Hughes took five gillaroos and four brown trout, weighing in all 8½lb., on 9th inst.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlaugh End).—Excellent sport was had amongst the trout by fly anglers during past week. Weather conditions were everything that could be desired—genial showers, with south-westerly winds. Baskets were had on many days averaging from 10lb. to 14lb.; also some nice trout were had trolling with artificial minnows to Leale, from 2lb. to 4lb. Weather conditions still look promising.—P. GALLAGHER.

Mountain Lakes (Waterville, co. Kerry).—Sport continues very good on all the above waters since last report.—THOS. J. DENNEHY.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River in good order, and the wind has got to the south for the past few days, and quite a number of clean fish has come in from the sea. Capt. Palmer, on March 13, had clean fish 11lb. and lost another. Mr. Phillips, on March 11, had clean fish 13lb. Mr. Quegley, on March 13, had four kelts. Mr. Benson, on March 13, had clean fish 16lb. Few trout have been taken on the Lough by local anglers.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—The weather has been too bright all this week for salmon fishing, and, besides, the wind has kept steadily in the north all the time. On Saturday, Major Traherne's men, P. Ryan and W. Fogarty, killed, on the major's preserves, a freshly run salmon of 24lb. Mr. W. Malmeshry Cotham and his son, Mr. Bertram Cotham, Springfield, Prescot, have arrived here, and have rented my preserves to the end of March. I know of a few rare stretches of strictly preserved salmon and trout water to let here for some time should any of your angling friends want such.—S. J. HURLEY.

Tyrone Rivers.—Both the Ballinderry and Blackwater have run down clear, and this, with sunny days and frosty nights, has stopped trouting. Pike fishers, however, are doing well, and a good job, too, for these rivers are overrun with them. Heavy floods are badly needed.—J. A. B.

SEA FISHING.

Brighton.—We are having splendid weather and calm sea. A shoal of porpoises passed close inshore (going west) yesterday (14th). Several boat anglers have been off, but have not heard with much success.—H.

Deal (The Pier).—Local fishing has shown no signs of improvement during the past week, though several local anglers have daily wetted their lines. One boatman has taken a fair number of pouting in the vicinity of the "Wreck" on two recent occasions. On March 12 the pier anglers were Messrs. Gray, Glynn, Andrews, and Kellaway, but the total return for the day only reached one plice and three dabs. Mr. Filmer drew a blank on Monday; Mr. Bushnell took two very small dabs; and Mr. Cooper a similar number. On Tuesday afternoon Mr. Bushnell managed to get eight very diminutive dabs, but three brother anglers did nothing. To-day (Wednesday) has witnessed but meagre sport, three rods only accounting for two immature dabs.—J. RICHARDSON.

Flymouth.—It seems as if we are to have no winter; the weather at present is quite like summer, in fact so much so that on Monday I strolled down to my boat to see about fitting out. I was struck with the extreme lowness of the tide, in fact I do not remember seeing such a low one before; you could walk right out through the opening of the West Hoe Pier, and right round outside to the beach, commonly called Peeble Side. I noticed a few boats in the offing fishing, but they did not seem to be very busy. The spring pollack are coming on, but they are not taking many from the piers as yet. I saw a school of gray mullet, some 5000 or 6000, following a vessel into the dry dock. When the gates were closed and the water pumped out they were dipped up in landing nets and baskets and sold to a local fish huyer. It is a funny thing how these mullet will follow a ship that has long grass weed growing to it.—W. HEARDER (B.S.A.S.).

Southend and Leigh.—Things piscatorial here are at a standstill. No fish, and no prospects of any; consequently, there is nothing to report. I do not remember any time at which fish were so scarce. The weather is beautiful, and seems likely to continue so. Visitors are arriving daily.—CHARLES HUSSEY (B.S.A.S.).

From *Harper's Bazaar*.

"Well, what did she say?" asked Tattered Tompkins, when his partner, Soiled Simpson, returned from an attempt to replenish the commissary. "I told her," replied Simpson, "that I wanted somethin' to eat, an' she said: 'What's the use o' my givin' ye somethin' to eat? Ye'll only get hungry again.' With that she shut the door, an' what could I do?"

"So you have no House of Lords in this country?" said the visiting Englishman. "No, we haven't," replied the American; "this is a nation without a peer."

Angling Fixtures.

March 19.

Brunswick Brothers: Consolation prize outing.
Collingwood: Consolation prize outing.
Good Intent: Lapsed prize outing.
Izaak Walton: Lapsed prize outing.

March 20.

Central Association: Smoking concert.
Kingston Piscatorial Society: Annual dinner.
Phoenix: Visit.
Piscatorial Society: Annual dinner.
Price of Wales: Visit.
Stookwell: Concert.

March 21.

Westbourne Park: Annual dinner.

March 22.

Bostonians: Lantern lecture.
Hastings and St. Leonards: Annual dinner.
White Hart: A.B.S. concert.

March 23.

Izaak Walton: Lapsed prize outing.
Phoenix: Visit.
Thames River and Lock Keepers' dinner.
Warrington: Annual dinner.

March 24.

Anglers' Benevolent Society: Committee meeting.

March 25.

Lychnobite: Benefit concert at the Champion Hotel.

" 25.—Drayton Park Piscatorials: Annual dinner.

" 25.—Gresham: Annual dinner.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening**. Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly delegate meeting will take place on Monday evening next, March 20, at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £17 12s. 9d., proceeds of St. Margaret's competition, and £12 9s. 6d., proceeds of the Amberley competition, per Mr. S. Malby; Battersea Friendly Angling Society's donation box, 14s. At the last committee meeting (March 10) two applications were entertained, and £11 was voted. The committee will meet on Friday evening next, March 24, at 8.30.—R. GHURNEY.

Anglers' Association (SOUTHERN DISTRICT) Visiting List.—I paid a visit to the Battersea Friendly and opened the Benevolent box, which contained the sum of 14s.—E. ROWLES.

Anglers' Association (WESTERN DISTRICT) Visiting List.—On account of my illness, my friend Abrahams attended at the Royal George return visit. On the roll call, twenty-three clubs were represented. The A.B. box contained £22 2s. 9d. The next visit will go to the Harcourt A.S., Harcourt Arms, Harcourt-street, Marylebone, on the 27th.—J. HARRIS.

Allason United Brothers' Angling Society. Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—On March 12 Messrs. Stage had roach; Jackson, roach; Barker, roach; Abbott, dace (largest, over 7oz.); Ben, dace (largest, over 6oz.); Shepperd, perch (several up to 1lb.), and hooked a 5lb. trout at Tilehurst, and carefully put same back. It was taken on a No. 11 crystal, hunch of gentles, and roach pole. A consolation match takes place on the 26th to all who have not taken any prizes. The only fish weighable in season, viz., from the Lea, any other open waters same species of fish as from the river Lea only accepted in the above. Next Wednesday is quarter night; election of officers, &c. I have Aquarium tickets at 4d. each.—BEN.

Alma Angling Society. Coach and Horses, Portmouth-place, Lincoln's Inn Fields.—On March 12 the following weighed-in: Mossrs. Drew, Montgomery, Boothby, Hall, Hopping, Butlin, and Utting. Mr. Willie Ward (Gaiety Theatre) captured a 10lb. jack. Mr. Black landed it for him.—J. CHAMBERS.

Amicable Excelsior Angling Society, Prince Arthur, Arthur-street, Battersea.—On March 12 several members fished in the last match this season at Hampton, when only two had fish, as follows: Messrs. D. Cooper, first; J. Rich, second. Mr. F. Fairclough also weighed-in 8lb. 8½oz. of roach and two small bream.—J. R.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—On March 5 an outing took place for five prizes, the following being the winners: Brealsforth, roach and perch; Nunn, sen., roach; Allen, jack; Millin, roach; Lambarth, roach and dace. On March 12 an outing took place for four prizes, they being taken in the following order: Allen, jack; Brealsforth, roach and perch; Millin, roach and dace; Nunn, sen., roach, chub, and dace. At the weekly meeting on the 15th a sum was voted for the river-keepers' dinner, and a smoking concert arranged in aid of the Anglers' Benevolent Society's funds, which will take place on April 17. Will secretaries please note date, to avoid clashing?—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—On March 12 the members competed for four prizes, the following being successful: Mr. H. Hamilton, first; Mr. T. Bowling, second; Mr. W. J. Wade, third; and Mr. J. Jones, fourth. Two rudd (largest 1lb. 10z.) and a dace of 1lb. 10z. were shown at the club on Wednesday, and are in the hands of our Mr. Jones for preservation. Mr. G. Clark was elected a working member.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—On March 12 the following members weighed-in: Messrs. F. Aplin, bream; W. Thomas, roach; S. Aplin, roach and bream; W. Hersant, jack; G. Miller, jack; and A. Ansty, roach, the last named having 1lb. of good fish from the Thames. Mr. L. Hooper was elected a working member. Will members please clear the books by end of month.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Several members were out on the 12th, and returned with some nice takes of fish. Mr. E. Wilson, in two days, 60lb. of roach and chub; Mr. A. Painter, roach, chub, and dace, largest chub 2lb. 13½oz., largest dace 6½oz.; Mr. H. White, 3lb. 8½oz. of roach and perch, being second in consolation match; Mr. A. White weighed-in perch, being third; Mr. W. Keene weighed-in some nice jack.—T. TRINGHAM.

Bermundsey Brothers' Angling Society, Woolpack, Bermundsey-street, S.E.—The following members weighed-in: Mr. J. Hobbs, 25lb. roach; Mr. J. Martin, 16lb. roach and jack. Only three members who fished in the Arun succeeded in taking a prize: Mr. J. Wegley, 9½lb. bream and roach, first; Mr. W. Taylor, 8½lb., second; and Mr. Kervill, 3lb., third. The remaining four prizes not won are to be fished for by the members who have not won a prize during the season; conditions are that they shall fish anywhere in the River Lea, the gross weight of the remaining two outings to take the prizes in rotation; the 1lb. rule to be abolished on this occasion. On Monday, April 17, Mr. W. Wade will deliver a lecture, accompanied by lantern views, on a fishing trip on the S.E.R., followed by a smoking concert, in aid of the A.B.S.—A. CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—On second March prize outing, subscribed by our host, was fished off at Pulborough, Mr. Stillman being first with bream, 5lb. 3½oz.; Mr. Foster, second, with one bream, 3lb. 4oz. (thoroughly spawned); Mr. Hobett being third with bream and roach, 2lb. 8oz. Mr. Merrygold also nice show of roach, and Mr. G. Howard grand take of roach. We have arranged a grand consolation prize outing for members who have not taken a prize during season, to be fished for at Rye House (roving). Start 9.10, return 7.20, on March 26. We should like any intending gentlemen to join us at beginning of season, as our new season promises to be a record one.—WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On March 12 Mr. J. Roach weighed-in roach 9lb. 10z.; Mr. J. Taylor, chub, perch, roach, and dace, 8lb. 12½oz.; Mr. W. Bray and Mr. J. Sinclair, bream; Mr. F. W. Stocker, bream and perch; Mr. R. Lmmes, Mr. F. S. Pavett, and Mr. C. Davis, perch.—T. PATERNOSTER.

Bomora Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—On March 12 several members were out with the following results: Messrs. G. Love, roach and dace; T. Lewis, sen., roach; T. Lewis, jun., roach; P. Harley, roach; J. Weeks, roach; F. Hall, roach; H. Foreman, roach and gudgeon, from Uxbridge. Next Tuesday being quarter night, I hope all members will attend and clear the books. We also wish to remind donors of prizes that they will greatly oblige by sending them in as soon as possible.—H. DAGWORTHY.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—On March 22 Messrs. Ward and Jones, members of the society, will give, with the assistance of the lantern, an original production of "Facts and Fancies." Members and their friends are requested to be in attendance at 8.45 for 9 o'clock. On March 12 Mr. J. Jennings had a nice tray of roach and dace; Mr. Ward, roach and rudd.—J. H.

Brothers Well Met Angling Society, King Edward VI., King Edward-street, Liverpool-road, N.—On March 1, H. Canton, 3lb. of roach. On March 5, W. Facham, 2lb. 2½oz. roach; H. C. Canton, 3lb. 11½oz. roach; C. Smith, a very pretty jack, 8lb. 3½oz.; H. Field, 4lb. 11½oz. roach. On March 8, A. Field a nice tray of roach, weight 16lb. 1½oz. (four largest, 1lb. 6½oz., 1lb. 4oz., 1lb. 3½oz., and 1lb. 2oz.). On the 12th, J. Maynard, jack and perch, weight 16lb. (two largest perch 2lb. 8oz.); H. C. Canton, roach.—H. Y. TAME.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—On March 12 the following weighed-in: Messrs. C. Parmenter, pike; Kelley, bream; A. Randall, perch; R. Bennet, roach, dace and chub; E. Papworth, dace. Our next return visit (No. 1 Eastern District) takes place on March 28. The match for all members who have never won a prize will be refished in the Lea on March 19 and 26.—F. RANDALL.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On the 12th we had a splendid show, the trays being well filled by Messrs. T. Benny, roach and dace; H. Hackett, roach and dace; H. Deverill, roach and chub; G. Yeo, jack; J. Golding, jack; L. Stephenson, jack; B. Smith, roach; H. Everett, roach and perch; B. Sawyer, jun., perch; and R. Hubbard, roach. On the last day of the season (14th) our worthy host, Mr. B. Williams, with Mr. E. Brickett, of the Original Alexandra A.S., showed some excellent roach, twelve fish weighing just on 20lb. (heaviest 1lb. 15oz.). A very good finish to an indifferent season.—P. E. LOFT.

Camden Angling Society, The Locomotive, James-street, High-street, Camden Town, N.W.—We had a good show of fish on March 12, Mr. White and Mr. Cook having grand shows of roach. Mr. Fuller and Mr. Harris also weighed-in. Our concert on Monday, in aid of the A.B.S., was a great success, thanks to the friends that supported us.—E. BOXALL.

Central Association of London Angling Clubs.—The committee have pleasure in announcing that the Central's annual smoking concert will be held at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday next, 20th inst., when the chair will be taken by Mr. Walter Emden, J.P., L.C.C. An excellent programme has been arranged.

Central Association Visiting List.—The next return visit on this list will be to the Phoenix A.S., held at the Tavistock Arms, Stebbington-street, N.W., on Thursday next, 23rd inst. Anglers and their friends cordially invited.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—On the 12th inst. the following weighed-in: Mr. J. Thorne, 11lb. 5½oz. roach and jack, two jack 9lb. 10z.; J. Burrage, bream, largest fish 3lb. 10½oz.; J. Jones, roach.—G. T. JAMESON.

Clerkenwell and District United Visiting List.—The next visit on the above will be to the Prince of Wales' A.S., held at the Windsor Castle, Church-street, Edgware-road, on Monday next, March 20. This being their first visit on this list I hope some of the West-end clubs will rally round them. If not on the list the more to their credit.—F. CASTELL.

Clissold Angling Society, The Cricketers, Northwood-road, Stoke Newington, N.—On the 12th only two prizes were taken, by Messrs. Bampton and Eastwood. Mr. Osment weighed-in a good show of roach for gross weight. Members are requested to attend on Tuesday next.—T. FAULKNER.

Cobden Angling Society, Kensal-road, W.—On March 12 the following weighed-in: Messrs. A. Howland, E. Baxter, F. Scrafield. Will members oblige by attending the meeting, as I have tickets for the Fisheries Exhibition at the Aquarium, and also there is some very important business to be transacted?—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—We had a nice show of fish on March 12, Mr. Beames weighed-in a chub of 4lb., also jack and roach; Mr. Turner, roach; Mr. Jarrett, roach and dace; Ball, roach; F. Beames had a nice show of roach and dace from the Arun; Mr. Stafford, bream and perch. The consolation match takes place on the Lea (roving) on March 19 and 26. Conditions: The heaviest one take of roach and dace. Our sea outing takes place on April 9; place to be fixed later. Members are requested to note that there will be no meeting next Wednesday, the 22nd inst., as all members are going to the Fisheries Exhibition; meet at the clubhouse at 8.30 sharp.—W. H. STAFFORD.

Convivial Angling Society, City of London, Sidney-street, City-road.—Since my last report we have had the following weigh-in fish: Messrs. G. Kynaston, roach; W. Braxton, roach and jack; S. Harell, roach and bream; G. Pratt, roach and bream. On the 12th inst. we had an outing at Woking, for six prizes, when the following were taken by Messrs. G. Hurrell, J. Parker, P. Juchan, and J. Hurrell. Mr. W. Marshall weighed-in a good show of roach and jack from other waters (heaviest jack, 6lb. 4½oz.).—PHIL.

Cosy Angling Society, The Plough, Rochester-row, Westminster.—On March 12 Mr. C. Eves and Mr. J. White had roach from the Thames. A special meeting is called for Wednesday, the 22nd, for important business. Will members kindly attend?—J. WHITE.

Covent Garden Piscatorial Society, King's Arms, Long-acre, W.C.—On March 12 Messrs. Cutbush, Massey, and Curtis weighed-in roach, dace, chub, perch, and jack. On Tuesday Messrs. Curtis, Massey, and Cutbush had good shows of roach, perch, and jack.—W. MASSEY.

Crown and Buckland Piscatorial Society, Middlesex Arms, 35, Clerkenwell-green, E.C.—We had our trays well filled on March 12. The following weighed-in: G. Norris, 13lb. roach and dace; W. Long, 8lb. bream; A. Anderson, 3lb. bream; H. Maines, 3lb. roach. Those prizes not won during the season will be fished for on March 26, at Broxbourne. Boundary from Carthagea Lock to Rye House Bridge.—G. FRANKLIN.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On March 12 Messrs. G. Davies, T. Thompson, and W. Thompson were again to the fore with a very grand show of roach, perch, dace, and jack. On Tuesday there was a better attendance than there has been of late, when it was decided that our con-

cluding outing should take place in the Lea; full particulars to be obtained at the clubhouse.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—All members out on March 12. Mr. A. Edwards weighed-in a good show of perch; Mr. E. Colman, dace. Wednesday's meeting discussion as to how best to stop the planting of fish in pant wells was decided to expose through the Press anything of this sort any member might come across.—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Sport rather poor for end of season; but several members have been re-stocking various rivers with 8½oz. dace. Our concert on the 15th was very successful.—GREG.

Duke of Norfolk Angling Society, The Apollo, All Saints'-road, Westbourne Park.—On March 12th our last match took place, when the following took prizes: Messrs. Balls, roach, 4lb. 13oz.; Viner, roach, 3lb. 2oz.; Smith, one perch, 1lb. 13oz.; Allum, roach; Millett, roach; and Bidwell, roach.—W. JENKINS.

Elgin Angling Society, Blenheim Arms, Blenheim-crescent, Notting-hill, W.—Several of our members were out on the 12th. Mr. King had a good show of roach and bream; Mr. Wilson, perch; and Messrs. Ryell and Bridge, roach. On Tuesday our quarterly balance-sheet was passed as correct, officers were appointed, and a lot of general business done. I hope to see a large attendance next week to arrange the fish audit.—G. KING.

Eaterprise Angling Society, City Arms, High Cross-road, Tottenham.—On March 12 Messrs. Peachey, 7lb. 13oz. roach and dace; Harne, 2lb. 9oz. roach and dace; Crump, 1lb. 15½oz. roach and dace; Biggs, 1lb. 2½oz. roach and dace; Wells, 11oz. roach. A grand wind-up of the season for jack, Mr. W. F. Butler weighing-in jack, 32lb. lot, largest fish weighing 20lb., measuring 3ft. 3in. in length, and in girth 23in. Mr. H. S. Warwick also weighed-in four fish, weighing 23lb. 9oz., largest fish 8lb. 2oz.—W. LEFEVRE.

Forest Gate Piscatorials, Forest Gate Hotel, Godwin-road, Forest Gate, E.—Our match at Bures was a great success, Mr. King being first with 7lb. 13½oz. roach; Mr. Durrell second, 4lb. 12oz. bream, largest 3lb. 2½oz.; Mr. Catt, third. Messrs. Mendham, Inman, Willett, Creeke, and Woods also weighed-in.—H. F. C.

Forest Piscatorial Society, Rose and Crown, Hoe-street, Walthamstow.—The following were the only members to weigh-in: Mr. T. J. H. Marshall, one perch, 1½lb.; and Mr. G. Beament with roach.—H. TISLEY.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—The members fished for six lapsed prizes, any part of the Lea, only three taken, by Messrs. Murphy, Evhan, and Whitmore; the remainder to be fished for on March 19; the same conditions. Mr. A. Coker brought in 22lb. of capital class roach from Littleport. Messrs. Thompson, Maybury, and Haines also brought in roach.—R. MURPHY.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—We concluded our season on March 12, and had a fair show of fish, the following members weighing-in: Messrs. C. and F. Watling, C. Large, Dutton, J. Petrie, and T. Brooks, roach and dace; G. Francis, J. Evans, and J. A. Fitch, perch; R. Owen and W. Randell, jack; and W. Lowry, two nice tench. The following rivers contributed to the show, viz., Thames, Colne, Lea, and Arun. It is with sincere regret I have to announce the death of Mr. A. Hambridge, an old and esteemed member of the society, who died on Saturday last, 11th inst., and will be interred at Highgate Cemetery on Saturday, March 18, at 3 p.m.—J. A. FITCH.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We take a return visit on Monday, March 27, on the A.B.S. List, when I hope to see many old friends.—A. E. PAYNE.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Mr. Callent had a show of roach; Mr. A. Bagshaw, jack; Mr. Smith, roach, dace, and jack. Will members kindly attend next Wednesday, for special business?—C. SMITH.

Highbury Angling Society, Globe Hotel, Upper TOLLINGTON-road, N.—Some grand fish have been recorded the last three weeks. I have had dace of 14½oz. (medal), 11½oz., 10½oz., and 10½oz., and a pike 14lb. 10½oz. last Sunday from the Thames. The latter was promptly eclipsed by Mr. F. Berry, who on the closing day weighed-in one of 17lb. 5½oz. (medal), and three others scaling 12lb., which, with roach (two biggest 1lb. 6oz. and 1lb. 5oz.), brought up his total for the day to 57½lb. On the same date Mr. T. A. Shaw had ten nice roach weighing 7½lb. Messrs. J. and G. Parsons, and S. Stone, have taken roach, dace, and perch, but not quite reaching specimen standard. A general meeting is called for April 12 to consider a proposed increase of the standard for certain fish, and other important business.—E. W.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—A successful concert was held on March 15, at headquarters, a pleasant evening being spent by members and friends, some specially good songs being given by Messrs. G. Johnson, T. Johnson, and T. Smith. Mr. H. Grettan presided at the piano. Fishing reports are as follows: Messrs. A. Clayton and A. Stevens, on March 10, fishing in private waters, a fair take of perch, and roach up to 1lb. On March 11, Mr. F. Haves, fishing with Vaughan, at Shiplake, a number of good perch and jack. On March 12, Messrs. A. Clayton and T. Johnson had fair sport at Bures, Mr. Clayton taking a jack of 8lb. 6oz. Mr. F. Clay, on March 12, brought a good show of chub and roach from the Thames.—A. CLAYTON.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road.—On March 12 Messrs. F. Newton weighed-in roach; S. Cole, dace; S. Gillett, one chub, 3lb. 8½oz.; and T. Sowerbotts, one jack, 4lb. 11½oz. Our

Eighth Annual Fisheries Exhibition.

DAVID SLATER,

(Stand 24)

Of NEWARK - ON - TRENT,

MAKES THE FOLLOWING

SPECIAL ANNOUNCEMENT.**RODS.**

THOSE in want of either Rod or Reels will consult their own interests by inspecting David Slater's Magnificent Exhibit at the Royal Aquarium (now open).

Built Cane Salmon and Trout Rods, with or without Steel Centres, for excellence of workmanship and reasonable prices stand second to none. Inspection invited.

Superior Greenheart Trout Rods from 10s. 6d. to 21s. Two tops, and Best Universal Winch Fittings.

See our Greenheart Salmon Rods. Best quality only.

Our Noted Pattern, the Newark Perfection, specially designed for the Nottingham style of fishing, price 21s. each.

Pike Spinning Rods in East India, Cane and Greenheart from 10s. 6d. to 21s.

REELS.

Slater's New Aluminium Alloy Salmon and Trout Reels. These Reels are perfection; they combine great strength with extreme lightness; hardened steel works, and beautifully finished.

Sizes.	Prices.	Sizes.	Prices.
2½in.	15s. 0d.	4in.	28s. 0d.
2¾in.	17s. 6d.	4½in.	32s. 0d.
3in.	21s. 0d.	5in.	35s. 0d.
3½in.	25s. 0d.		

The Fly-Fishers' Winch (registered). This reel is made in two sizes; can be had with click or silent check. It has two special recommendations—extreme lightness and quick winding.

Also a large collection of the following patterns: Ordinary Wood Sea Reels, The Future Sea Reels, Slater's Combination in Wood and Ebonite, The "Zephyr," the lightest Nottingham, Gun-metal Salmon and Trout, Bronzed Salmon and Trout, &c., &c.

We have a few old patterns Combination Wood Reels, also Ebonite Salmon and Trout, which will be sold regardless of the cost of manufacture during this Exhibition.

Mr. David Slater will be in attendance at the Royal Aquarium during the Fisheries Exhibition, which closes on April 5.

Branch: 19, LEICESTER SQUARE, LONDON. CATALOGUES GRATIS.

Bohemian concert, in aid of the A.B.S., on the 7th inst., was again a success; the Dibdin, Peckham Brothers', and St. John's Angling Societies were well represented. The chair was ably filled by Mr. G. H. Shepherd, Bermondsey Brothers', faced by Mr. G. Armstrong, in the vice. Mrs. L. C. Peudry officiated at the piano. Amongst those who contributed to the harmony were Miss A. Ash, B. Ash and Brady, Messrs. G. H. Shepherd, G. H. Wood, F. Newton, A. McGinness, H. Streth, E. Hunt, Will Musgrave, Johnny Edwards, Josh Cosnett, Ted Hilton, Will Poore, Dent, &c. A vote of thanks was passed to Messrs. G. H. Shepherd and Armstrong, for their services rendered in making such a pleasant evening, and also adding to the funds of the A.B.S. The next Bohemian concert will take place on Tuesday, April 11.—JOHNNY.

Insurance Piscatorial Society, Barley Mow, Long-lane, E.C.—Messrs. Boatwright and Sloper weighed in 25lb. of roach from the Thames on 13th inst. Mr. Boatwright's five best fish weighed 5lb. 12oz. (largest fish, 1lb. 8oz.); and on the 15th inst. 15lb. of roach by the same gentleman, also from the Thames.

Islington Brothers' Angling Society, Middleton Arms, Canonbury-road.—The following weighed-in on March 12: Messrs. E. Challis, jack; Holder, jack and dace; Burwash, roach and dace; and Wilkes, roach and dace. On Tuesday it was settled to fish off the remaining prizes up the Lea; boundary, from St. Margaret's Bridge to Wear Bridge. Members to go by 8.3 or 9.5 train from Liverpool-street, or the 8.10 or 9.19 from Hackney Downs.—J. H. HEBBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—Three special prizes were competed for on March 12, Messrs. Butt, Poole, and Nunn being the winners; but only one of the two "specials" fished for on Wednesday last was taken, Mr. Nunn being the winner. The members will compete for two special prizes on March 19, on the Lea, between the Fish and Eels and Ratty's Weir; also for two on Wednesday next, 22nd inst., at the same place.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Since my last report we have had two nice shows of roach weighed-in from the Thames by Messrs. Bence and Gilder. I hope members will attend better next week, as we have some business to bring forward.—G. BENCE.

Leicester Independent Angling Society.—Mr. F. and H. Barnes, of the above society, fishing in local waters, on March 2, took seven pike, weighing 22lb., and on March 9, accompanied by Mr. R. G. Briggs and Pole, took some pike, bream, perch, and roach, Mr. Briggs capturing a pike weighing 16lb. The pike is being set up by Mr. Pinchen, of Church-gate, Leicester.—F. BARNES.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—On March 12 the following showed some nice fish: Mr. Johnson, a nice show dace; Mr. More, roach; Mr. Cook, R. Watling, A. Richards, C. Biggs, W. Bowdrey, and W. Watling also showing some nice roach, dace, and bream.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—In view of the close season local anglers have been very active, and there have been plenty of fish taken from ponds and canals. There are now four other societies, viz., Nelson, Central, West Derby, and East End, at work in the city, and amongst them they have rented the fishing in several farm ponds in Cheshire, and there has been a rare race to get hold of these. The river Dee is yielding well, and many good catches have been had from its water. Many portions are strictly preserved, and it will be necessary for anglers, unless they have permission and a trout licence, to be very careful what they do with any trout taken when bait fishing, for there are both watchers and keepers on the look out for offenders. The great danger in keeping trout is that some one may be caught, and then "farewell, a long farewell" to riparian owners giving permission for the future.—RD. WOODFALL.

Mildmay Angling Society, Clarendon Hotel, Mildmay Park, N.—The coarse fishing season has finished up very quietly with us, beyond a few jack (up to 5lb.) and perch from the Lea, perch from the Thames, and a few jack from private waters up to 11lb., there has been nothing worth recording. I shall now be glad to receive entries for our annual club hilliard handicap.—A. E. HENDON.

North-East Brothers' Angling Society, Star and Garter, Green-street.—The following weighed-in on the 12th inst.: C. Lamb, sen., C. Lamb, jun., J. Eaton, H. Hart, Mr. Thorn, L. W. Richards, sen., with a large perch, heating all weighed-in this season, who will take many prizes given for same. Wednesday next, March 22, special meeting, when all contributions due should be paid up.—A. LEWIS.

North Lambeth Angling Society, Newcastle Arms, Hercules-road, Lambeth, S.E.—We had a grand show of jack for the last outing of the season on the 12th, when the following took prizes: R. Morris, first, with jack, and also a special prize for second largest jack; J. Cheese, second, with jack; T. Dew, third, with jack; G. Palmer, fourth, jack; J. Edwards, fifth, with jack; also C. Dicks took first prize for honorary members; A. Dawson, second. All members had fish. T. Dew took prize for the largest jack for the season, and a tobacco prize; R. Morris took the season gross weight prize.—E. ROWLES.

Park Angling Society, Park Hotel, Park-lane, Tottenham.—Several of the members were out on the 5th. The following had fish: Messrs. Carter, Reitz, Coldwell, Tracy, Hopton, Juno. Sport being bad, very few fish were shown. All members are requested to attend on Tuesday next at 8.20.—W. S.

Phoenix Angling Society, The Tavistock, Stibbing-ton-street, N.W.—We made a good finishing-up show on March 12. Messrs. Bouffier, Austin, Nobby, F. Dove,

and Carr, jack, roach, perch, chub, and dace; best jack, 6lb. 8oz.; chub, 2lb. 10oz.; and several roach over 1lb. Members and friends not posted to, please accept this invitation to Central Visit on Thursday, March 23.—R. C.

Portsmouth Piscatorial Angling Society, Golden Fleece Hotel, Commercial-road, Landport.—The annual dinner was held on Monday, March 13, at the Albany Hotel, when there was a large number of anglers present. A first-class menu was put on by Host Holley. Mr. W. Hooper in the chair. During the evening the secretary, Mr. J. S. Dyer, submitted the last year's report, including the many privileges the society holds for its members, which was favourably received. It was also announced that the club is in a most flourishing condition, having a good balance in hand. A smoking concert followed, in which many harmonious members assisted.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—We finished our Thames season on March 12 with some capital shows of fish by the following members: Mr. Whitford, four jack and some nice roach; Mr. Haynes, three jack and roach; Mr. Robins, roach; and Mr. Davis, a fine brace of chub. Our visit on the Clerkenwell district will be held at the above on March 20, where all will be welcome.—W. B.

Royal George Angling Society, Queen's Arms, Bateman-street.—The following returned with fish on March 12: Messrs. Holder, Spielmann, Davis, Longland, Pope, Brand, W. Allport, E. T. Harris, and Gibbons. Mr. Longland showed a very nice specimen perch, and Mr. E. T. Harris showed an excellent tray of specimen pike. I shall be pleased to see all members in their places next meeting night.—J. GIBBONS.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—Several of our members were out on the 12th, and the only member weighed-in was Mr. Dornsford: three nice jack, one 10lb., 7lb. 14oz., and one 7lb. 2oz., which saved the club from a blank.—F. PIGNATELLI.

St. Albans Angling Society, Rising Sun, Prince's-road, Kennington.—Our show of fish on March 12 was not so good as the previous week, the only notable tray being that of H. Adam, 9lb. hream. Mr. Brown also weighed-in for a prize in the consolation. Our South London visit is postponed until Monday, March 27, owing to the Central Concert. Wednesday, March 29, general meeting of all members for election of new secretary and other very special business.—H. A.

St. John's Angling Society, The Empress, St. John-street-road, Clerkenwell.—We had a splendid show of fish on the 12th, consisting of jack, perch, chub, dace, hream, and roach. It was decided on the 15th that the twenty-first annual supper takes place at headquarters on April 12. Members please note.—F. THORLING.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—On the 12th Mr. W. Bignell weighed-in jack, and Mr. G. Richards, roach. We fish for a series of prizes on the 19th in the Lea at Ware.—W. ANSTREY.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—We had a very nice show of fish on March 12. The following weighed-in: Mr. King, first prize, with 10lb. 13oz. Mr. King and Mr. Blyth made a dead heat for the heaviest roach, each of their largest fish being 15oz. Other members who weighed-in were Messrs. Blyth, 5lb. 12oz. (all fish); W. Roach, 3lb. roach; R. Spencer, 6lb. 14oz. jack (one fish); Wells, 6lb. 10oz. jack; E. Henson, 4lb. 12oz. roach; Campbell, 4lb. 9oz. roach; B. Smith, 1lb. 14oz. roach; Arrigione, 2lb. 2oz. roach; and Mr. E. Burden also weighed-in some roach. Our annual smoking concert will take place at the King and Queen, Foley-street, on April 11.—W. ALDIS.

Silver Trout Angling Society, Bedford Head, Maiden-lane.—On March 12, Mr. R. Smith had 8½lb. and Mr. Fletcher 12½lb. of very nice roach. March 14, Mr. F. J. Williams had a splendid show of roach 20lb., the two largest 1lb. 12oz. and 1lb. 7oz.; Mr. Abrahams, jack.—PELICAN.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Monday, March 27, at the St. Albans Angling Society, Rising Sun, Prince's-road, Kennington-cross.—ALF. PAINTER.

Stepney Angling Society, Bee Hive, Rhodeswell-road, Stepney.—On March 12 we were saved from a blank by W. Woodford, who weighed-in a nice roach of 12oz. I beg to announce our grand smoking concert in aid of the Anglers' Benevolent Society, which takes place on Monday, March 27.—C. TATNALL.

Stockwell Angling Society, Old Queen's Head, Stockwell-road, S.W.—Our last match of the season took place at Thames Ditton on the 12th. The members mustered fairly well, and all had fish, Mr. Lucas taking first prize with hream; Mr. Alec Pain, second, with some very fine dace. Arrangements for a sea outing will be made next meeting night.—THOS. LUCAS.

Stratford Angling Society, Dorset Arms, Leyton-road, Stratford New Town, E.—Since my last report the following have weighed fish: Mr. T. Sandilands, 10lb. and 5lb. of hream; J. Grande, roach; F. Humphreys, roach and dace; F. Bates, roach and jack; J. Friend, roach; and G. F. Weaver, roach and chub.—G. F. WEAVER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On March 5 the club prizes were taken by Mr. Quitt, 1st; Mr. Alder, 2nd; Mr. Lock, 3rd; Mr. Harwood, 4th; Mr. Parker, 5th; Mr. Holt, 6th. Private prizes, Mr. Quitt, for heaviest dace; Mr. Parker, heaviest perch; Mr. Lock, heaviest roach. Result of outing to Wraybury, March 12, for three specimen prizes, Mr. Harwood took Mr. King's Cup with a roach 1lb. 2oz.; Mr. Hare, 2nd, dace; Mr. Holmes, 3rd, roach.—C. E. LOCK.

True Caledonian Angling Society, 23, Caledonian-road, N.—Mr. Miller some nice chub from the

Thames (three largest, 4lb. 10½oz., 3lb. 9½oz., and 3lb. 9½oz.); Mr. Lawrence, one of 3lb. 12½oz. Twelve members and a friend fished for prizes at Shiplake on March 9, resulting as follows: Mr. Mason, jack, first; Mr. Miller, ditto, second; Mr. George, chub, third; Mr. Ward, roach, fourth. Three prizes not won. Mr. G. Silverlock, on the 14th inst., chub from the Lea (largest, 3lb. 12½oz.).—THOS. F. WARD.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—March 14 was the first quarterly meeting, but the phenomenal density of the lower strata of the atmosphere resulted in a very small meeting. Mr. Barrow reported taking 9lb. of nice roach, one new member was elected, and several good prizes were offered for competition during next season.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—Several members fished a go-where-you-please match on March 12, with the following result: Mr. H. Fordham, first, with pike and bream; C. Freak, second, dace; E. Skeats, third, pike; C. Wilderspin, fourth, perch; H. Collings, fifth, roach. Other members were out, but returned with blanks.—H. TYLER.

Waggoners' Angling Society, White Lion, Albert Embankment.—Since my last report the following have had fish: On the 5th, Mr. Clegg, roach; Mr. J. Clayton, sen., dace. On the 12th, Mr. Clegg, roach and dace; Mr. G. Clayton, roach; Mr. Allan, dace. Several others had fish, but did not weigh-in. Our usual weekly meeting took place on Tuesday last. Members are requested to show up on Tuesday next, so that we can fix the date for future progress. Members in arrears are requested to settle up at their earliest convenience.—H. C.

Walton and Cotton Angling Association, Crown and Woolpack, 162, St. John-street-road, N.—Since last Thursday we have had the following fish weighed-in up to the 14th inst.: One jack, 7lb. 12½oz.; one jack, 4lb. 12½oz.; one chub, 3lb. 9oz.; takes of roach, 14lb. 13oz., 3lb. 6½oz.; and of perch, 1lb. 13½oz.—M.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—We had a capital show of fish on the trays, the result of last competition, Messrs. W. Sparrow, first; C. Pearson, second; A. J. Hammond, third; W. Wray, fourth; J. H. Risdon, fifth; J. Brunner, sixth; E. Hammond, seventh. The other competitors were not successful in securing a prize. Mr. C. Pearson had a nice 4lb. chub amongst his take.—W. WRAY.

Westbourne Park Piscatorial Society.—The annual dinner of this society takes place as usual at their headquarters, The Pelican Hotel, Westbourne Park, W., on Tuesday evening, March 21, T. S. Franklin, Esq., taking the chair. Several of the members were out for the wind up of the season. Mr. H. Beech was the bearer of three jack from the Kennet, but those members who fished the Thames had but indifferent success.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—Our members were out in strong number on March 12 for our last match, but sport was very bad, only three prizes being taken: Mr. Philips, first; Mr. T. Miller, second; Mr. Weller, jun., third. The rest of the prizes have to be returned to the funds again. Quarterly meeting on Wednesday next, March 22, for the election of officers for the year.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—Several members were out for the match on March 12. Mr. Ramsay took first prize. Mr. Cox, sen., and Mr. Weeden also took prizes. Mr. Ramsay weighed-in a perch, 1lb. 5oz.; Messrs. Peart, Coomes, Martin, Hunter, and Carter also weighed-in. Members are requested to pay in their subscriptions to enable our acting treasurer to audit the accounts.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—Our last match of the season proved another blank, Messrs. Humphrey and C. Crane only having fish, but neither reaching the standard. Messrs. Eccarius and Dodimead (not competing) weighed-in, the former roach and the latter a specimen perch. The quarterly meeting held on the 15th was adjourned until next Wednesday, when I hope members will try and attend.—S. J. H.

White Hart Angling Society, The White Hart, Tottenham Vale, N.—On March 5 W. F. Bastock had roach. On the 8th, W. E. Beaumont, 4lb. 9oz. of roach. March 12, W. Butler, jack, roach, and perch, winning Mr. F. Hoy's prize. On the 15th, W. F. Bastock, roach. Will secretaries please note our change of headquarters from the Volunteer, Chesnut-road, Tottenham, to the above hotel, and that our return visit will take place at the above on March 22 in aid of the A.B.S., trusting we shall be well supported.—W. E. BEAUMONT.

Wimbledon Piscatorials, 28, Alexandra-road.—The final match for the silver cup came off on the club water on the 11th inst. In the result Mr. H. A. Rolt, the hon. treasurer of the society, was adjudged the winner, his score being a long way ahead of all other competitors. His take included a very fine chub, a trifle over 4lb. in weight, taken on a drawn gut roach triangle. The following members carry off the three additional money prizes: Messrs. H. Golding, R. Howden, and F. J. Bovie. The annual dinner of the society has been arranged for Tuesday, April 11, at headquarters. The presentation of prizes will take place the same evening. Further particulars will be given later on.—HON. SEC.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good number out on March 12, with very poor results, only three weighing-in fish: J. Wyatt, roach; F. Taylor, sen., perch; and N. Linden, perch. As there are still some prizes not having been taken, we have an outing on the Lea, from Rye House to Ware. Will all members please note, on March 26 the last outing this season?—N. LINDEN.

Doings by the Way.

A WELL-KNOWN figure by Colneside has passed away in the person of Mr. H. Markham Pike, of Old Burlington-street. A member for many years of the True Waltonian Society, and lately of the Friendly Anglers also, he was ever ready to aid with purse, advice, or otherwise, in the furtherance of all angling sport. A great gap has been caused by his sudden death, and his loss is deeply mourned by troops of true and sorrowing friends. To those who frequented Rickmansworth and its waters for angling, his pleasant manners and great courtesy will be greatly missed.

MR. H. W. HIGGINS, hon. secretary and hon. treasurer of the T.A.P.S., has given notice that all those gentlemen who are desirous of being present at the Thames River and Lock Keepers' Dinner must apply for tickets on or before March 20.

THE monthly delegate meeting of the Anglers' Association will be held on Monday evening next, March 20, at 8.30.

ON Wednesday, March 22, at nine o'clock p.m., Messrs. Ward and Jones will give, with the assistance of the lantern, to the members of the Bostonian Angling Society and their friends, an original production of "Facts and Fancies." The vocal and instrumental music will be under the direction of Mr. A. Jones. Commence at nine o'clock. Those who are fortunate enough to obtain permission ("come early if you want a seat" is the cry) may be quite certain of an intellectual treat.

"DEAR 'DRAG,'—On March 12 I made a bet with a brother angler that I would go out in a boat and catch a fish that never existed. I went out and caught a crab, which didn't exist before I caught it. Do I win my bet?" [If a crab is a "fish"—and you succeeded in catching it—why did you not bring it up to the club? Your brother members would have decided the matter for you. Perhaps it was only one of those "crabs" which Mrs. "Drag" catches when she relieves me for a little while at the sculls!]

THE Lark Angling Society, according to the last general meeting, is going well and strong; how could it do otherwise under the superintendence, &c., of such an able and indefatigable general secretary as Mr. William Howlett? The balance-sheet was brought before the meeting on March 9, and the accounts for past year gone into, audited, approved, and passed. There are a few alterations in the committee, but the branch secretaries remain as usual. Mr. Howlett spoke highly of the energy the local secretaries had thrown into the work. The Most Noble the Marquis of Bristol was proposed by Mr. Howlett as president, and Sir Henry Bunbury, Bart., vice-president.

ANOTHER large perch, 3½lb., caught by Mr. A. Seard at Holywell, in the Ouse, near St. Ives, has been forwarded to F. W. Anstiss for preservation. Mr. A. D. Hall, fishing private water in Kent last Saturday, landed a splendid perch, which weighed 2lb. 14oz. This fish has also been sent to Mr. Anstiss.

THE Dart Conservators recently came within an ace of losing much of the valuable fishing rights on Dartmoor, by a decision to grant no free licenses. The tenants of the Duchy have received free licenses as an acknowledgement of the trespass committed over their lands, and it seems that this was an agreement made some years ago. As soon as the Duchy authorities were brought acquainted with this resolution they intimated that they might take the fishing into their own hands, in which case the water above Dartmeet (providing excellent fishing), would probably be closed. The conservators, at their last meeting, wisely decided to rescind the former resolution, and anglers, for this season at any rate, may have no fear that the enjoyable fishing on Dartmoor will be curtailed.

"A 7lb. jack," says Mr. Stanley Mead, "met with a most remarkable death, in Marsh Lock, on Friday last. The fish was observed in the lock by the lock-keeper, and soon after he saw the fish strike at a bait. 'Mr. Jack' missed his mark, however, and his head came into contact with one of the lock piles with such violence that it was completely 'done for.' The lock-keeper lifted the fish from the water, but it was quite lifeless. This is an instance of the great force with which a fair-sized jack takes his prey."

SOME anglers are finding them, and are making a successful finish to the season. As a case in point, Mr. C. Brown, of the Brompton Angling Society, enjoyed some remarkably good sport on Wednesday on a piece of private water in Bedfordshire. The water was in splendid condition, and in the course of three hours' not particularly hard fishing, Mr. Brown took 48½lb. of roach and rudd. The four best fish weighed 9½lb. It happened to be a club meeting night, and on his return he received the congratulation of his fellow members there assembled, who were exceedingly jubilant at finishing their season with such a magnificent show.

"COUNCILLOR WARING," says the *Western News*, "delighted the Cardiff Corporation with a learned and humorous dissertation on carp and tench: how they were to be caught, cooked, and eaten. His object was to show

that it was a mistake to put carp and tench in the Roath Park lake, as the parks committee proposed, but his amendment was defeated, and his theories neglected. He also delivered an address on the Roath lake fishing. Here is the tag-end of a sentence: 'The trout darts out upon the unsuspecting fry which comes within his vicinity. Would he be driven to the surface by the militant tench and carp? No. The aristocratic trout would seek the seclusion of the brooks, where he would become the easy prey of the ubiquitous poacher.'

THESE municipal fish yarns are catching, so to speak. An alderman who doesn't know a trout from a vegetable marrow points out gleefully the news that a rare find, in the shape of a moa's egg, has been made in a mining district in Central Otago. The only other perfect specimen was unearthed by a man while digging in the alluvial soil at the Kaikoura Mountains in the early sixties. This egg, which was 9in. in length and 7in. in breadth, has been sold for 100 guineas in England. "Great Scott!" remarked the alderman, when he read this to us, "Why, not long ago Beavan told us that these eggs were common at the Roath Park Lake! A hundred guineas apiece? We're losing revenue!"

OH! those Twickenhamites! This is how they explain the cause of a small attendance on account of the fog: "The phenomenal density of the lower strata of the atmosphere resulted in a very small meeting." I shall put "Daisy" on to "Jack." She will put him straighter, I guess.

OUR F. G. ALBUM OF ANGLERS.

No. 36 (New Series).

MR. FRANK CLAY

Is president of the Holloway Angling Society, of which he was one of the founders. He is also a member of the British Sea Anglers' Society. Although very fond of sea fishing—at which on one occasion at Deal I had the pleasure of fishing with him—he is an adept with the roach pole. During the last year he has weighed in the best brace of trout (taken with the fly), best brace of roach, best roach (2-pounder), best tench, and best chub. The best tackle that can be procured is good enough for him to use. As assistant to Mr. Carter, of St. John-street Road, he has, perhaps, greater facilities for experimenting with rods, reels, hooks, &c., than the average angler. Mr. F. Clay is one of the best all-round men we meet. A good musician, a good fisherman, a charming companion—what more can be said?

I FOUND the following tucked under my bedroom door the other morning. It was from "Daisy." A genius? If I tell the truth I must be, I suppose; But I only know that no one knows—well—more than what they know. I'm told I've brains—but cannot tell how people found it out—No one's ever seen 'em (so my dad says "there's a doubt"). And re those "monstrous fishes," of which I think you spoke; I've seen 'em—yes, as plainly as a blind man sees a joke. But where I've quite forgotten; p'raps 'twas in those mystic streams We sometimes meet with "over there" in the glorious land of Dreams.

My friend, "Jack" Brougham, the hon. secretary of the recently formed Twickenham Angling Society, called upon me one day this week to report progress. We had a very pleasant chat, in the course of which he informed me that the society was going well and strong, and that they hoped by the opening of the next season it would be one of the biggest institutions of its kind on the Thames, or, from what Mr. Brougham told me—in strict confidence, of course, so, pray, do not let it go any farther—

the prize list is already assuming very respectable proportions. The donors must certainly be congratulated on the wise and thoughtful discrimination they have exercised in the selection of their gifts. *Imprimis*, the president has given a handsome silver cup—specially constructed for the reception of temperance beverages—which is to be competed for next season for specimen fish only. Another member has promised a warming-pan. This, however, appears to be a rather superfluous article, because the Twickenhamites are, from what I know of them, a pretty "hot lot," and a warming-pan is about the last thing they require to maintain the heat of their piscatorial enthusiasm. A bible and a case of whiskey are included in the prize list, so that, taken altogether, the "soles," moral welfare, and spiritual wants of the club members are well looked after.

If they have not yet made history, the Twickenhamites have at least added one more to the wealth of fish stories already in existence. It happened in this wise. There is no need for me to say where the fortunate water was, but like the journey of Scott's minstrel—I refer to the last "gent" of that ilk—the way was long, and involved a pull of some seventeen miles. The boat had no well, so the baits were placed in a box, and towed at the stern. On arriving at the hostelry which had been selected as the headquarters of the party, it was too late to fish, so the box of baits was deposited in a quiet corner of the stream, and their owners retired to the smoke-room. In due course rosy aurora—this is the classical expression for sunrise, it has no reference to the chambermaid, as might be supposed—rose from her couch, and the members, following her example, armed with the panoply of piscine war, sought the water side and baits. But, alas! when the box was opened, eight dozen beautiful dace had gone out with the Ewigkeit or elsewhere, and their place had been taken by nineteen fine eels—one for each member of the party.

THIS was certainly a modern miracle, the wonder of which was increased by the assurance given by one of the party, who pointed out to his friends that the eels must have crept through the gimlet holes which had been bored to let the water into the box, and snarfed themselves until it was impossible for them to get back. Strange to say, two of those Twickenhamites had a good catch of jack that day. They explained that they had taken them with an artificial bait, but subsequently the landlord explained that the two in question had suffered from an attack of somnambulism, and their walk had led them to the waterside.

THE grand "smoker" of the C.A. takes place on March 26, over which Mr. Walter Emden, J.P., L.C.C., will preside. Admission will be by programme only (price 3d.). So hurry up all ye who would enter there. (An-dante, please, Mr. Brooker, D.P.A.S.)

I HAVE paid several visits to the Royal Aquarium since the Fisheries Exhibition has been opened, but am compelled to hold over my impressions until March 25.

ADVERTISERS, correspondents, reporters—in fact, all who would like to appear in the *Fishing Gazette* on April 1, will oblige by forwarding to St. Dunstan's House not later than Wednesday, March 29 (early as possible), as, on account of Good Friday, the paper will be published on Thursday, March 30, at twelve o'clock.

ABOUT noon on Wednesday (March 15) the Thames between Blackfriars and Westminster bridges presented an extraordinary appearance in consequence of a remarkably low tide. At Blackfriars, so low was the water that it was possible to walk round the buttresses at either side, and there are only four. A number of coal barges lying almost in mid-stream were completely stranded, while along the Embankment the unusual sight of the exposure of the bed of the river, in some cases to the extent of many yards, was witnessed. At Waterloo, on the Surrey side, no fewer than three of the buttresses were clear out of the water, and in many parts of the river tugs drawing craft had to proceed with the greatest caution.

"TRUTHFUL Tommy," who appears to have spent a good deal of his time while running about the country in philosophising on men and things, and in collecting fairy tales, writes me a letter from Carlisle in which he says: "Dear Drag," has it ever occurred to you how the language of our business, profession, or hobby creeps into our daily conversation? For instance, it is not long ago since your worthy editor, in putting an end to a controversy in the columns of the *F.G.*, said: 'We must now put a check on this line of correspondence.' When John Roberts, the billiard player, was stumped at cricket, and returned disgusted to the pavilion, he replied to the question, 'How were you out, John?' by the remark, 'Oh! the marker said I was out of baulk.' Instances like these might be multiplied *ad infinitum*, but one of the funniest I have met with is the following:

"A WELL-KNOWN M.F.H. was showing a friend round the hunt kennels, and somehow the conversation turned upon nightingales and their song. This led to an argument as to whether the sweet singer was of the male or female persuasion. They could not agree on the point, so it was referred to the huntsman who accompanied them on their ramble. 'William,' said the master, 'is it the male or female nightingale that sings?' 'Well, sir,' was the reply, 'I don't rightly know, but I have always been given to understand that is the dawg bird.' Surely this huntsman was the first cousin of the worthy who at the end of the season said disgustedly: 'Of course, there ain't no scent,' because of them stinkin' violets." DRAGNET.

Notes from the North.

THE DUKE OF YORK is to be on the Birkhall and Balmoral reaches this week for three weeks spring salmon angling. He is to put up at Birkhall, the favourite autumn residence of the Duchess of Albany, instead of Balmoral Mains, where he will be within easier reach of the lower pools.

Many lessees have left for the south on account of the slackness of sport. Mr. Perry, who rents the Drum mid-section, was only north a few days. He fortunately hit the lucky moment at the opening, when he killed three fish. He has not missed much since then.

Mrs. Bruickman is angling the Glentana reaches of the Dee along with her husband, Colonel Bruickman, and last week had her "first blood," a beauty of 8½ lb. Miss Fortescue on the Kingcausie section had two on the same day of 8 lb. and 8½ lb.

The first fish of the season on the upper Dee waters was got on Thursday, the 9th March, by the lessee, Mr. H. L. Craik, who rents the Invercauld private waters near Braemar. Owing to the protracted drought, it will be some weeks yet before sport may be expected to be rife in these far inland parts, but when it does come records are the order of the day.

The March Browns were out in considerable force on Saturday and Sunday last, and fish rising freely to them. While angling for finnock on the Cults, Dee water, we had three brown trout on Saturday in very forward condition for so early in the spring.

The "slump" in the salmon supply still continues, and the wall of the netters more grievous than ever. Only one fish was got from a mile of nets on the Aberdeenshire coast one day last week.

On the lower reaches of the Dee an occasional "drappit" fish is being got by the few anglers caring to try. A "drappit" fish is an odd, or single fish swimming by itself apart from a shoal, and the phrase is used in the north to indicate the poverty of sport.

The larger patterns of salmon flies so much in vogue in the opening days of the season have now given place to very normal sizes, and 1½ in. and such like are now the order of the day.

The Don Fishery Board, together with the angling lessees and proprietors, have raised, since last autumn, a fund of £3000 for the double purpose of opposing the Corporation Bill and raising an action in the court of session to compel the Messrs. Pirie, of Waterton paper works fame, to take such measures which will result in their taking a much less supply of water from the Don than they do at present; and more money will be forthcoming if needed.

The live seal recently caught in the salmon nets at Portgordon, near the mouth of the Spey, has been sent, by the Duke of Richmond and Gordon, to the London Zoo.

A severe snowstorm was experienced in Inverness and the North on Thursday night last. There was much drifting, and Ben Nevis Observatory was quite buried in snow. A heavy gale accompanied the storm, the velocity of which was reckoned at forty and sometimes sixty miles an hour. No wonder, though sport be slack.

A crew of Mull fishermen tried an experiment the other night. They put out their lines as usual, but also ran out thirty fathoms of net. The latter engine scooped out sixty odd codfish, while the time-honoured bait only held three.

Mr. A. C. Pirie recently purchased the estate of Dunecht from the Earl of Crawford and Balcarres, and has now entered into possession. The magnificent mansion house and grounds, together with the beautiful chapel, are not equalled in the north of Scotland. The house alone is originally said to have cost £140,000.

The expenses incurred in connection with the abortive scheme to promote an international fisheries exhibition at Aberdeen in 1899 amount to £370. It was at first thought that the Finance Committee of the Town Council would at once see the propriety of wiping this off by a vote from the common good. They are now "haggling" over a subscription of £100. This is somewhat rough on the ex-Lord Provost and City Fathers, who were *ex officio* the prime promoters; and it is anything but handsome to make private individuals "stump up" in such a case, and yet spend twice the amount in fighting the Don Fishery Board over a question of pollution. SPECIAL SCOTCH.

A PRETTY CHILD, accompanied by her mother, entered a third-class compartment at Westminster Bridge Station the other day. All eyes were turned upon her. She was poorly dressed, but wondrously pretty. Although, as afterwards transpired, a town-bred child, the glow of health was in her cheeks. And, after all, the basis of beauty is health. Some passenger complimented the mother on the appearance of the child. The woman's reply was instructive. "Well, you see, ma'am, I believe in looking after the health of my children, and then I find their looks can take care of themselves. I keep Holloway's Pills and Ointment always in the house, and neither I nor my children have ever wanted any other medicine."

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The quarterly general meeting of the Birmingham Angling Association was held on Thursday evening, March 9, at the headquarters, and was one of the best attended meetings the association has ever held, as near upon 150 delegates were present. Mr. Coles occupied the chair, and Mr. J. A. Dance occupied the vice-chair. The minutes of the previous general meeting, held on Dec. 8, were read and adopted; after which the minutes of the committee meeting, held on Jan. 5, together with the balance-sheet and auditor's report for the year ending Dec. 30 last, was taken. The report went to show that the association was in a sounder financial position than ever it had been since its formation. All liabilities had been disbursed, and a splendid balance remained to the credit of the association. The minutes and report were received and adopted. All new clubs passed by the committee were admitted by the delegates, with the exception of the Princess of Wales Club, which application was referred back to the committee. The minutes of meeting held Jan. 12, which applied to the election of the new committee, were adopted. The minutes of committee meetings, held Feb. 2 and March 2, were read and adopted, with the exception of the minute dealing with the renting of the river Avon at Defford. This matter was considered, but as Lord Coventry refused to take the letting of the water out of one of his old tenant's hands, the matter was referred back to the committee for them to again go into the matter. The testimonial to Mr. W. Pearson, the Midland Railway Manager in Birmingham, who is retiring after thirty-five years service, was considered, when it was decided to subscribe the maximum donation as mentioned in the circular, namely, two guineas, to the fund, and the delegates were of the opinion that the P.A.A. should do likewise. Mr. C. White, the general secretary, gave in his report *re* the Trades Exhibition, to be opened at Bingley Hall on Monday next. He stated that Mr. G. Stanley had offered £20 as prizes for specimen fish, and to pay the whole of the expenses of printing, postage, &c. Mr. White had accepted the offer for the members of the association, and had been successful in getting a number of the clubs and private gentlemen to forward their collections. Altogether some 140 cases of fish will be on view, and several rare specimens of sea fish. Tickets, at about half price, will be issued to clubs, and all the members and clubs will be allowed a free pass. A grand array of fish will be got together, which will do credit to our association, and also be the means of getting the members to have their best fish preserved in the future. A vote of thanks was passed to Mr. White for his services. The twelfth annual Birmingham Association dinner took place on Saturday evening last at the Metropole Restaurant, High-street, Birmingham. It turned out a thorough success, as near upon 150 delegates sat down to the dinner, which was placed upon the table in excellent style. After the cloth was drawn the usual loyal toast was submitted, after which the toast of the associations was given by the chairman, Mr. T. Coles. This was followed with songs, after which the toast of the railway companies was submitted by Mr. C. White. This was replied to by Messrs. Pearson and Goldborough, of the Midland Company, and Mr. A. Entwistle, of the L.N.W.R. Company. After the toast had been disposed of, some excellent songs were rendered by the special *artistes* engaged, which made the latter portion of the evening enjoyable. Some of our members have been very busy with the pike, and making up for lost time through the bad weather. Several up to 14 lb. have been taken by the members of the Midland Piscatorial Society from the river Trent, at Alrewas. The Large Lamp Society fished a contest at Rugeley on Sunday last. The first three winners are in the order named: W. Hooper, J. Williams, and E. Humpage. The Cole's testimonial fund will close on Thursday, March 23, and the presentation will be made at Kidderminster on Saturday, March 25. The half-yearly subscription of 2d. per member is now due to the Provincial Angling Association.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

The concluding week of the season, so far as coarse fishing is concerned, has been productive of wonderfully good sport in the Fen district, and it is doubtful whether anglers were ever favoured with a better time at this period of the year. On all the pike streams fishermen have been getting some splendid fish, and a record one (at any rate for this season), a 22-pounder, is mentioned from the Tattershall district of the Witham. Five and six brace of pike per rod in a single day has been no uncommon experience, and several of the fish have run up to 10 lb. apiece. In the Bardney district some remarkably big specimens have been seen, and one estimated at nearly 20 lb. was lost on Monday, after a fine show of sport. On the Forty-foot subscribers have done equally as well, but the fish have not run to such a large size. Roach are now assembling in the side drains, prior to the spawning season, but those following this class of angling have been very successful.

FROM HULL AND DISTRICT.

The weather in this district during the last few days of the coarse fish season was simply splendid for the time of year, much to the delight of our local anglers, who mustered out in considerable force; but, if anything, it was really too bright for successful operations amongst roach, yet, the river Hull being in very fair condition, favoured them. Some nice baskets of fish were had in the Wansford, Brigham, and Swing Bridge stretches with both paste and pearl barley, several of the fish scaling from 1 lb.

to 1 lb. 7½ oz. each. Some very good perch were also taken, with the aid of worm, at the beck-ends, going from 8 oz. to about 1 lb. each. The upper stretches are in first-class condition for trout fishing, either with fly or minnow, and several good fish have been on the rise in various parts of the river during the past week. The lower waters are also in very fair condition below Beverley Beck for worm fishing; and as the flounders and eels are well on the run, no doubt some good takes of these fish will soon be reported. The trout licences of the Yorkshire Fishery Board are now in the hands of the local distributors in the various districts, and can be obtained on application. The 1s. licences, being a rod licence, is available on all waters in the Yorkshire fishery district where the holder thereof has otherwise permission to fish. The havens and drains on both sides the river Humber are all more or less in first class condition for flounders and eels during tide time. Salmon are reported to be making up the Humber. At the last council meeting of the Hull Amalgamated Anglers' Association steps were taken and a committee appointed relative to the re-stocking of the Burstwick Drain, at Hedon, with mature flounders, and as these fish are a great acquisition to our local anglers during the fence season, it is to be hoped that they will be successful in their efforts to keep the stock up, for a flounder is one of the most prolific of spawners, and, when once introduced, multiply tremendously in most streams, and will also grow to a large size in suitable ponds. The Old Souleates Angling Society held their annual dinner and prize presentation at headquarters the other evening, when amongst the aggregate prizes Mr. W. Peacock was the recipient of the society's gold medal for most points during the past season, Messrs. H. Rudd, T. Muir, and W. I. Cox receiving suitable prizes for the next three places on the list. Mr. J. Goring received a prize for the heaviest bream, and the secretary, Mr. E. Clegg, was presented with a handsome testimonial for services rendered to the society during his term of office. At the annual prize presentation for specimen fish of the Hull Amalgamated Anglers' Association, in the roach class Mr. T. Barber took the first prize, Mr. H. Woollock second, and Mr. S. Conyers third; bream, Mr. W. Dodsworth, with one from the river Hull that scaled 6 lb. 0½ oz.; perch, Mr. J. W. Thirsk; and dace, Messrs. R. Clark, S. Grayson, and S. Holloway, with fish scaling 11½ oz., 9½ oz., and 7 oz. respectively. The Victoria Angling Society will hold their annual smoking concert at the White Horse Hotel, in Carr-lane, on Monday evening. This society will open their season in an open match on the river Hull at Dunswell on April 29th.

FROM THE LAKE DISTRICT.

An amusing statement was made by one of the members of the West Cumberland Fishery Board on Thursday. Speaking of the mischief done by eels, he said that on a recent occasion he found an eel killing a salmon, a grilse of about 7 lb. weight. He heard a great disturbance in the water, and on looking over the bank saw the eel and salmon struggling together. The eel had got hold of the salmon in a pool. Not having anything to kill the eel with, he proceeded to get his gun; but on his return found the eel had managed to kill the salmon, and had disappeared. This was a pity, for it would have been interesting to learn how one of the combatants could have been disposed of by a gun to the advantage of the other. On the salmon being taken from the water it was found to have received a large wound behind the gills, and had bled to death. Another interesting statement at the same meeting was to the effect that there was something like 20,000 to 23,000 young trout in the hatchery at Calderbridge which were ready for turning out. It was resolved to distribute these in the Bootle rivers, Ehen, Bleng, Mite, Pow, Beck, and tributaries of the Esk. With an improvement in the weather, there has been a larger turn out of anglers during the past few days, whose sport has been of a varying order. Opinions differ as to the condition of fish, but there can be no doubt that there is room for improvement in this respect. Many of the trout already taken have been poor in colour and thin, although Mr. G. Bland had at least one good fish of about 3 lb. from the Kent. Wednesday was a beautifully fine day, and top feed is becoming more plentiful.

FROM LANCASHIRE.

The Tyldesley and District Angling Association wound up on the 11th with a match in the Worsley Canal Fishery at Atley. The sport was not exciting, but they succeeded in awarding all their prizes as follows: First, Mr. J. Roach; second, Mr. J. Howarth; third, Mr. C. Wood. The Urmston Angling Society have been doing some stocking, neither trouble nor expense being spared to put their private waters into good fishing trim. The last consignments of fish were very fine. The Barton Angling Society have received since the beginning of the year no less than five consignments of stock fish, all of which have safely arrived and turned into their new home. The last lot arrived on Saturday, the 11th, from Mr. Ford, Caistor, and were reported in excellent condition. Mr. G. Shaw, one of the members, took from the same waters a club of 1 lb. 14 oz. The St. Helens Anglers held their fifth annual meeting on the 9th at headquarters, Mr. Wells presiding. The whole of the members were re-elected, as per rule, and the executive were also re-elected *en bloc*. June 22 is the date fixed for the first outing to Cheshire. Mr. Cox, Liverpool, offers a splendid prize for this event, in addition to the usual list. The champion medal for the season was won by Mr. Cox, his average for the season being considered the best. The aggregate prizes were taken by Mr. H. M. Greer, first, and Mr. G. Scott, second. The annual tea was fixed for April 6; ladies and friends to be invited. The Lune and tributaries are reported as in fair order. During the netting operations fifty-six pike were killed, the two heaviest weighing about

ANGLERS' HOTELS, FISHING QUARTERS, &c.**FORTINGALL HOTEL,
GLENLYON, PERTSHIRE.**

8½ miles from Aberfeldy Railway Station and 2½ miles from Fearnan Pier, Loch Tay. This new First-class Hotel is beautifully situated near the "Famous Pass of Glenlyon, with Mineral Well." Good spring salmon fishing on the River Lyon opens Jan. 15. Trout fishing free. Postings. Post and Telegraph Office two minutes' walk.
PAUL MACPHAIL, Proprietor.

**SALMON FISHING
ON
LOCH TAY.**

For Boats, apply to

H. J. MAISEY, Killin Hotel.

FOYERS HOTEL, LOCH NESS.

Re-decorated and most Comfortably Re-furnished throughout. Electric light.

THIS Hotel, which is most beautifully situated, overlooking Loch Ness, and commanding finest views of the Great Glen, has the right of Salmon Fishing on Loch Ness, which will be free to visitors staying at Hotel, also Trout Fishing on River Foyers, Loch Bran, Loch Garth, and Loch Farraline. Boats for use of visitors. Terms moderate.
S. TILSTON, Proprietor

Good Spring Salmon Fishing.

BOATS TO LET ON LOCH TAY.

Visitors Fishing on River Lyon Free.

Apply W. KNIGHT, Hotel, Kenmore, Perthshire.

**SPRING SEA TROUT
FISHING.**

Under the Distinguished Patronage of the Crown Prince of Siam, &c., and the Nobility and Gentry.

**UDNY ARMS HOTEL,
Newburgh, Aberdeenshire.**

YTHAN, reckoned one of the best sea trout rivers in Scotland, five minutes' walk from hotel, fished from bank and boat; experienced gillies; tariff moderate; fine golf course in close proximity; accommodation limited; communicate early. Particulars from

J. RITCHIE, Proprietor.

Telegrams: "Ritchie, Newburgh, Aberdeenshire."

**LUIS HOTEL
(LOCH TAY),****GLEN DOCHART, PERTSHIRE.**

BEAUTIFULLY SITUATED on the banks of the River Dochart, surrounded by wild, picturesque, and romantic scenery; six miles from the head of Loch Tay, and one mile from Luth Station on the Callander and Oban Railway. Five miles of good Salmon and Trout fishing on the River Dochart. Loch Dochart and Loch Nuhair free to visitors staying at the Hotel. Boats free. Every Home Comfort, combined with moderate charges. Parties Boarded. Golf Course. Postings in all branches. Post and Telegraph, Luth Station. DONALD MCNAUGHTON, Proprietor.

SALMON ANGLING.

LOCH AWE HOTEL.—Superb and extensive additions since last season. Excellent TROUT and SALMON FISHING on Loch Awe, Free. Experienced boatmen. Boats towed by Steam Launch to the best Fishing Grounds. Magnificent views of mountains, lake, and river scenery obtained from the Hotel.

DALMALLY HOTEL, GLENORCHY, under the same management.—Guests have nine miles FREE SALMON FISHING on the beautiful and celebrated salmon river ORCHY. Parties wiring to ascertain in ply of river promptly answered.
DUNCAN FRASER, Proprietor.

**OVERSCAIG HOTEL,
Via Lairg, N.B.**

THE Angler's Paradise for Trout and Ferox. Fishing on Lochs Shin, Grian, Merklind, and Gorm. Also Salmon and Sea Trout Fishing. Boats and experienced Gillies. Postings, &c.

DUNCAN MACRAE.
Total season 1895, sixty days' fishing for one rod 2906 fish weighing 1125lb.
Last season's catch over 10,000 fish.

**EASTER HOLIDAYS
IN
SCOTLAND.**

ESKDALE TEMPERANCE HOTEL, Langholm, twenty miles from Carlisle, is the most convenient place to fish the "Borror Esk" and its tributaries.—W. DOUGLAS, Proprietor.

LOCH KATRINE—STRONACHLACHAR HOTEL.

THIS Hotel, the only one on the shores of Loch Katrine, is most beautifully situated in the heart of Rob Roy's country, Glenlyne and the romantic graveyard of Clan Gregor being in close proximity, and as a fishing station it is unsurpassed. The fishing is free on Loch Katrine, Loch Chon, and several hill lochs, to people staying at the hotel; excellent boats and experienced boatmen are kept. The hotel is replete with every comfort, and is reached by way of Callander and Trossachs and Loch Katrine steamer, or by Loch Lomond steamer and coach from Inversnaid, or by Aberfoyle and Trossachs and Loch Katrine steamer, there being a full service of coaches and steamers by these routes during the season. Post and telegraph office in hotel.

DONALD FERGUSON, Proprietor.

ROSAPENNA HOTEL, CARRIGART (Co. DONEGAL).

THIS Hotel, built in 1892 by the late Earl of Leltrim, is situated on the Rossgull Peninsula, midway between Sheephaven and Mulroy Bay. Tourists and Anglers will find superior accommodation at the above Hotel. It contains over sixty bedrooms, spacious billiard, drawing, and public rooms. Salmon fishing in the famous Glen Lough, Owencarrow and Lackagh Rivers, is free to Hotel visitors from Feb. 15 to end of July. Salmon licences can be had at the Hotel. Free access to numerous lakes and rivers on the estate for white and brown trout fishing. No charge for boats. Excellent sea bathing. Golf links, eighteen holes in a circuit of 3½ miles, encircle the Hotel. For terms and further information apply to the Manager.

FREE SALMON AND TROUT FISHING.

Commencing: Salmon, February; Trout, March.

GENTLEMEN staying at the **PORTH HOTEL, LLANDYSSIL, SOUTH WALES**, have two and a half miles of the Teifi for Salmon and Trout (large) fishing, strictly reserved. Also about ten miles of other trout fishing can be had in the neighbourhood. Splendid scenery. Fourteen miles from the sea. Vide, "Across England in a Dogcart," pp. 280. A. E. SMITH, Proprietor.

LAKE VYRNWY.

Splendid trout fishing in the lake and rivers; fish average 3lb., and give grand sport. Easy of access. Every comfort and luxury provided in the Hotel. Good boats and steady boatmen. Splendid cycle track (twelve miles). Bracing climate, and magnificent scenery. Season begins on March 1. First-class Grouse Moors and Rough Shootings to Let. Railway station, Llanfyllin.

Post and Telegraph Address: "LAKE VYRNWY HOTEL, OSWESTRY."

LOUGHS CONN AND CULLIN.

FREE SALMON, CHARR, TROUT, and PIKE FISHING.—Subscriber begs to intimate to Anglers and Tourists that his HOTEL is now OPEN for the reception of Anglers. The house is situated in that lovely sheltered glen close to the Police Barracks; most charming scenery, wood and mountain, and overlooking Lough Oullin; within ten minutes' walk of pontoon bridge on Lough Conn, celebrated for its salmon and trout fishing. Illustrated Price Lists Post Free on Application. Old bicycles exchanged.—THE BRITISH CYCLE MFG. CO., 45, Everton Road, Liverpool.

6lb. each. There is a satisfactory decrease in the size of same. The Warrington Anglers' Association continues to prosper. This time progress is reported with the acquisition of additional waters. They are particularly pleased with the fact that their efforts to get the Shropshire Union Canal closed until June 16 have succeeded, and that it will not be opened, as announced, on May 1. The Stanley Arms Angling Society, Leigh, wound up the season with a match in the local canal on the 11th. The sport was not exciting, but all the members enjoyed the event. The stocking fever has reached Urmston, and the local organisation there have gone in for a liberal programme, which was completed on March 10. The Longsight Victoria A.S. finished up on March 11 with a match at Poynton, with the following result: First, V. Hotherhall; second, T. Taylor; third, A. Terry. Prizes will be presented on April 7. Their stocking competition has not been the success it was hoped to be, but still it has done a lot of good.

FROM MANCHESTER.

The bi-monthly meeting of delegates from clubs affiliated with the County Palatine Angling Association met on the 9th at Beswick; in all, thirty-four clubs were represented; the agenda was important and interesting. Routine business being disposed of, which included various lots of minutes, correspondence, &c., after careful discussion the following resolutions were recorded: To hold all future meetings in the City of Manchester; to promote a grand angling contest; to approve of the committee's action with respect to their waters at Irlam, Cadishead, and in Derbyshire. The next meeting will be held at the headquarters of the Merry Anglers. The Union Chapel Angling Society, Gorton, held another of their social gatherings on the 13th, the room being tastefully decorated with piscatorial trophies and tackle. The winter series of monthly social and educational gatherings will terminate on the 27th in a grand concert, the proceeds of which will be devoted to the stocking fund of the County Palatine Angling Association. They are hoping for the support of the surrounding clubs. The Old Standard Angling Society, Hulme, had an outing to Irlam last week-end, visiting the waters now receiving so much attention. One member was the lucky captor of a rainbow trout of 2lb., which caused quite a sensation, but had to be returned under the prohibitive law in force. The Moss Side Socials have concluded their stocking competition, and announce the total of fish added to their Kersal waters as 1125, making a grand total of over 3000 fish added to this particular water. The stocking prizes are awarded as follows: First, Mr. John Fisher; second, Mr. W. Taylor; third, Mr. J. Lund; fourth, Mr. W. A. Leigh. Mr. Harkness will be their representative at Wyresdale next week. The first annual dinner of the Isaac Walton A.S., Ardwick, was held on March 13, at the Birch Inn. The club numbers sixteen, and they are jubilant over the selection of their entry for the Wyresdale competition. The Welcomb A.S. visited the Moss Reach on Saturday last to wind up the season. Sport was wretched, but the weather delightful. They have yet to negotiate the closing "bust." The lecture by Mr. H. Wallwork to the members of the Lancaster A.S., Loughsight, was a most enjoyable event. The members were delighted, and after carefully perusing the MSS, your correspondent can heartily congratulate the youthful lecturer on a palpable hit.

FROM NORFOLK.

The pike season now ended has been only a moderate one. No fish larger than 24lb. has been taken in this district. Last week very little was done. One angler had one of 15lb. on private water, and Mr. C. E. Betts took two 10lb. fish on Wroxham Broad on Thursday. Bream are now feeding well near Norwich, and a few decent bags of these fish have been secured. Trout fishing opens here on April 1, and the prospects of a good season are excellent.

FROM NOTTINGHAM.

Angling pursuits on the Trent were active until the last. The closing day of the season (Tuesday) was beautiful in the extreme, and scores of votaries were out, though, truth to tell, most returned home with comparatively empty creels. My "Jutilee" day was spent with a friend in North Notts, and he came off "first best" amongst perch and pike. Previously we had fished the river for chub, and had killed ten fish. Eight of these scaled 19lb. And on the same stretch of water (Kelham), Mr. Herbert Baker and Mr. Joseph Baker excelled with the worm. On Thursday members of the Shonder of Mutton Association engaged in their closing contest at Staythorpe. Twenty took part, and the prizes were won as follows: First, Mr. J. E. Wootton; second, Mr. J. Truman (president); third, Mr. E. Gillett; fourth, Mr. A. Sharpe. Mr. T. Wood is reported to have taken a large quantity of pike at Weston; and at Rolleston, Mr. J. Cass and Mr. W. Foulds have each killed specimens over 7lb. each. Salmon have again been showing at the foot of Beeston weirs. News is scarce from Sharnlow, where, however, salmon ought to provide sport to the rod before the month is out.

FROM SHEFFIELD.

Now that the coarse fishing season has come to an end matters will be comparatively quiet in Sheffield for the next three months. Anglers will put away all their tackle and wait patiently for the opening of the season in June next. Fortunately the last few days of the coarse fishing season held up remarkably fine, and consequently large numbers of anglers left Sheffield to have a last day's sport. Pike fishing in the Witham has been followed with considerable success, many heavy fish having been caught. Rodsters hailing from Lincoln have been favoured with the best sport, although several Sheffielders have been at work, with results satisfactory to

themselves. Very little roach fishing has been obtained, and this remark also applies to the river Bain, the water having been too clear to permit of successful roaching. However, pike have, in a great measure, compensated for the lack of sport in other directions, the frosty nights appearing to have made them very keen. Visitors to the Chesterfield and Stockwith Canal have fared very well amongst roach, using bread paste as bait, whilst sundry pike of decent size have helped to augment the catches. Very little sport has been found in the Idle, but the Ryton has furnished a few anglers with moderate sport amongst roach. Chub fishing in the Trent has answered extremely well, and at Collingham, Kelham, Hazleford, and other places some capital sport has been forthcoming, pith and brains being generally used with gratifying success. Pike fishing at King's Mills has also been of a very gratifying character. Very little, if any, roaching has been done. Both the Derwent and the Wye are reported to be in the best possible condition for grayling fly fishing, but in consequence of the unfavourable weather which has recently been experienced, anglers have been unable to follow the sport with the assiduity they would otherwise have shown. As soon, however, as the weather will settle down to be a little warmer more attention will be paid to fishing. A few nice creels of grayling have been secured near Rowsley and Miller's Dale, whilst in the Matlock Bridge and Batley neighbourhood trout have recently been providing satisfactory fishing, several heavy fish having been caught. In the Darley Dale waters, too, trout are fishing well. The Sheffield Angling societies are bestirring themselves in the matter of the taking of small fish, and are anxious to bring about an improvement. In the past many anglers—and Sheffielders are not the only ones in fault—have retained every fish they have caught, in their forgetfulness and carelessness ignoring the fact that the slaughter of so many small fish must, in the long run, seriously affect the quantity of fish in the waters. The Sheffield societies are suggesting that all fish under 7in. in length should be returned in general fishing, and if caught in matches should be kept alive until the weighing, and then returned. It is to be hoped they will have the courage to proceed with their suggestions, and take some steps to bring them into operation.

FROM WORCESTER AND DISTRICT.

The weather during the past week has been simply grand—nice gentle frosts at night, and bright sunshine in the daytime. The trees are full of bud—some of them out in leaf—fields are getting gloriously green, primroses, violets, and wallflowers to be seen in abundance, birds busy nesting, and every indication of an early spring. The rivers are in capital order and a nice level, and during the last few days anglers have been busy, but sport has not been very brisk. Still, some good baskets of chub were taken up to Sunday, and at the Working Men's Club two specimen fish were shown, weighing 4½lb.; and one well-known town angler, called "Darkie," caught a lovely brace of perch, which weighed between 4lb. and 5lb., and ought to have been set up, but they were sold at 8d. a pound. Pike have been off feed for some days. Still, some good sized fish have been landed. One was on view at the Sabrina Club on Saturday, 18lb. in weight, which was the best fish of the week. One fine fish was taken in the Upton part of the Severn, and a few good chub and roach; but there has been so much illegal netting in this district of late that sport cannot be expected to be good there. The water bailiff caught two men in the very act a few days ago, with their net full of fish, and they will appear before the magistrates on Thursday next to answer to the charge, and the result is looked forward to with great interest by anglers in the district, who find their sport becoming less year by year, and who are very anxious that this wholesale destruction by the small meshed nets should be put a stop to. The dinner of the Worcester United Workmen's Angling Club was a capital affair. There was a large company present of members and a few friends; in fact, the room was full. Mr. Councillor Jos. Radford was a capital chairman, and Councillor E. Yeates as vice-chairman was the right man in the right place. Host Seth Robinson excelled in his catering—the viands were of high order and abundant, the liquids first class. The usual toasts were duly honoured, the band discoursed sweet music at intervals, and some excellent songs were given during the evening. Mr. H. Nicholls, one of the guests present, and who has a lovely stretch of trout water running through his land a few miles from the city, generously gave the club the sole right of fishing it, for which they tendered him their heartfelt thanks; and this water will be strictly preserved and much valued. The dinner was a success all through the evening, and full of pleasant memories. Very few have tried for trout during the week, they were not on the feed, and the few brought home were no credit to the possessor, though the fish were said to have looked in good colour when taken from the water. They were far from it when I saw them in the evening. Salmon are very scarce indeed; the nets are doing next to nothing. The Upton-Severn nets have only taken one fish for a fortnight; the Worcester nets not much better.

FROM YORK AND DISTRICT.

Comparatively good sport has been obtained by anglers. The frosty nights kept grayling well on the move, and in the midday sun, when natural flies were about, fish rose readily. Grayling, however, have been making for the spawning grounds, and have scarcely been worth taking. The river Derwent in the Cottingham district is in prime condition for angling, and good fish have been taken lately. An exceptionally fine pike has been brought to York from this river. The Foss is in fair trim, and sport has been pursued among the pike, but as they are now ready for spawning, true sportsmen will lay by their tackle for a while. There has been moderate

sport on the Ouse. The Ure is low, and anglers are doing well. The trout season has just opened on these waters with fair prospects. The outlook for early trout on the Midd is also encouraging. Gratifying sport may be anticipated on the lengths of this stream, which flows through the pretty valley of Nidderdale, by Pateley Bridge and Knaresborough. The Nidderdale Angling Club, which preserves a portion of the river, is re-stocking its length with some thousands of eyed ova. At the opening of the season the best casts to use on the Yorkshire rivers for trout are: Early or Winter Brown (tail fly), Spring Black, Dark Snipe and Orange, and Snipe Bloa (droppers); 2. March Brown (tail fly), Spanish Needle, Little Early Brown, and Dark Bloa (droppers). There are few more effective flies for early spring than the Early Brown.

ANSWERS TO CORRESPONDENTS.

ST. MARY'S LOCH.—The address of the Hon. Sec of the Scottish Trout Anglers' Association is 44, Leamington-terrace, Edinburgh.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

TROUT FISHING IN MAY WANTED.

DEAR SIR,—J. G. G. should try Hawes, on the Upper Yore, but the cottages as a rule do not come under the description of "pretty." Necessity requires that they should be plainly, but substantially built. He would, however, be able to find comfortable and homely rooms at some of the farmhouses, &c., in the neighbourhood. He can obtain their names and addresses from the North-Eastern guide book, published by the North-Eastern Railway Co. This is on sale at 6d. at all the stations on their system. The Hawes water would, I think, suit J. G. G. There is plenty of it, both in the main river (the Yore), and its tributaries. Hawes is a capital fishing centre, and within easy reach of the Swale, Ribble, Eden, &c. The district is an ideal one to any angler or tourist in need of a change, and the scenery is romantic and beautiful. J. G. G. will be able to get full particulars respecting the district from "Romantic Richmondshire," published by Elliot Stock, 62, Paternoster-row, E.C., or from "Eden Vale to the Plains of York," by Edmund Bogg, 3, Woodhouse-lane, Leeds. May is a good month to fish the Upper Yore, &c. Lower down this beautiful valley I can recommend the Cover Bridge inn—one of the quietest and most homely of the few old-fashioned angling resorts in the kingdom. The visitors' book is full of flattering entries from ladies and gentlemen visitors, and amongst other poetical effusions that amused me in perusing the book this morning I copy the following:

IN PRAISE OF COVER AND THE INN.

"It stands beside a country road,
A cosy, pleasant house of call;
The Ure runs by a field away,
The Cover laves the garden wall.

There 'mid the stream and trees and flowers,
Each one may find refreshment, rest;
And with the birds and wild things, draw
Fresh strength from nature's kindly breast?

Then let us leave the smoky town,
Forget its hurry and its care,
And by the Cover's crystal stream
Drink in the pleasant country air.

Along its banks all day we'll roam,
And tempt the cautious wily trout;
But he's a disappointing fish
And knows full well what he's about.

At night we'll gently close our eyes,
Lulled by the Cover's evensong,
That through the texture of one's dreams
Runs like a silver thread along.

We'll wake at dawn with the birds,
And see the sun shine sweetly in,
And feel the freshness of the morn,
Far from the city's jarring din."

Any further information I shall be glad to supply.—
Yours, &c., JOHN E. MILLER.
Northern Anglers' Depot, 19, New
Station-street, Leeds.

DEAR SIR,—In reply to your correspondent's (J. G. G.) letter in your last issue, I would very strongly recommend him to try Matlock Bath, in Derbyshire, three hours from St. Pancras, where he can get good trout fishing for 7s. 6d a week, amidst the most beautiful scenery, and in a most health-giving neighbourhood. He can also get most comfortable rooms for himself and party at a very moderate price. If he were here on May 20 he could witness the turning into the river of over 1000 two-year-old trout, running from 5in. to 11in. If he entertains Derbyshire, and will communicate with me, I will put him in the right way for sport, pleasure, and comfort.—
Yours faithfully,
HENRY COOPER
(Treasurer and Hon Sec.).
Matlock and Cromford Angling Association.

TROUT FISHING IN YORKSHIRE FOR MAY.

DEAR SIR,—In reply to fishing inquiries, I should think that Ryedale (if not already visited), with Kirbymoorside as a centre, would be found to sufficiently interest the ladies mentioned, by its castles, parks, mansions, circular

tours, drives, and rambles amongst beautiful wooded and moor scenery, all within easy access by rail or road at short distance. The rivers Dove, Hodge, Seven, and Rye, with their standards from 8 in. to 11 in., should be ample, and are within a distance of seven miles from this town. Accommodation is plentiful and charges most moderate. Being one of the many interested in the private portions of fishings, and also a lover of the noble art, it is a pleasure to give any further assistance, on application, as to which portions are free, private, or fishable by ticket only. The smaller edition of "Guide to Ryedale," sold by Messrs. Lumley, Kirbymoorside, and also procurable at Smith and Son's bookstall (price 1s.), gives full descriptions, with engravings, and also map with the roads marked.—Yours truly,
Kirbymoorside. J. CRAVEN FRANK.

FOR THE WIDOW OF THE LATE JOHN HORROCKS.

DEAR SIR,—Enclosed please find cheque for £2 towards the "John Horrocks' Widow Fund."

In the spring and early summer of '76 it was my good fortune to be "cramming" with the English chaplain at Weimar, whose wife, if I recollect rightly, was connected in some way with Old Horrocks, as we boys irreverently called him. Many a pleasant hour have I spent with him, either watching him fish, or fishing myself, and many a time do I wish I could have some of those happy hours over again; for, as regards fishing, it was certainly the best I have ever had. I was then quite a beginner at fly fishing, though I had caught a few trout; but I was no expert, and I often wish I could find myself on that river once more with what little experience I have since gained in the art.

In those days we rarely used more than two flies. In fact, John Horrocks said his experience there was that if trout wouldn't look at those two it was no use offering them anything else. We always had a small Green Drake as a tail fly, and a Coachman as a dropper—always fished wet. I don't remember in those days to have heard of the dry fly, and I certainly never saw it used. I never had a whole day, and only on Saturdays could I get an afternoon, and, as far as my memory serves me, my best bag was fourteen fish (retained), running probably between 11 lb. and 2 lb. The usual run of fish was about 1½ lb.: one seldom caught them smaller and only rarely much larger, but I remember one of 6 lb. which I caught just above the Grand Duke's Palace in the park, and three fish caught by another English boy, just below the weir one afternoon, the largest of which was over 6 lb. and the smallest over 3 lb.

John Horrocks did not strike me as an artistic fisherman, but, nevertheless, he was a highly successful one, and I retain the kindest recollections of him as a genial fishing companion, and a generous instructor of youth in the sport.

Apologising for the length of my letter—believe me, dear sir, yours faithfully,
Edward H. R. HIBBERT.
Naval and Military Club,
Piccadilly.

[We are glad to publish this interesting reminiscence of Horrocks and to receive Captain Hibbert's subscription of £2. Mr. Felix Schröder has also kindly sent £1 ls. and "Buck Bean" £2.—Ed.]

FISHING IN LOCH FYNE.

DEAR SIR,—I should be greatly obliged if you or any of your readers could give me some information as to line fishing in the Firth of Clyde, Loch Fyne, &c., especially with the trot or bulter for conger.—Yours faithfully,
INQUIRER.

LAKE PATRIA.

DEAR SIR,—Lake Patria is about ten or eleven miles N.W. from Naples, is within a mile of the coast as the crow flies (i.e. if the scale in the map was correct), and marked Laguna D. Patria on the large map.

If your correspondent finds that it is further from Naples than this as the crow flies, he must blame the map, and not me.—Yours, &c.,
MARKIT.

A NEW TROUT FISHING ASSOCIATION IN NORMANDY.

DEAR SIR,—In one of my former effusions I mentioned that there was excellent trout fishing to be had in Normandy. For the sake of the many anglers I have gone to considerable trouble to ascertain further particulars, and it is with great pleasure that I am able to say that an association has been formed at Dieppe under the able guidance of the popular Mr. Walter Sambourne, who is president of the very flourishing shooting club and captain of the golf. The object of the association is to preserve eight miles of water on the Eaulne and Varenne, beginning at Arynes la Bataille and going up to Martigny, and from St. Germain d'Etables to Torcy. On the Eaulne, from the station at Martin-Eglise beyond and including the balastière pond, the difficulties to contend with have been the leasing of the water (for, generally, the landlord only reserves to himself a co-right with his tenant), and the prevalence of poaching; indeed, the streams must be very productive, seeing what bags are made by rod and line in spite of these drawbacks. Two years ago a Mr. S. went on a visit to Dieppe, and hearing that trout were to be caught in the neighbouring stream, and being an enthusiastic fisherman, he got leave, through the courtesy of the Pro-Consul (Mr. Sambourne), to have a few days fishing. In three days he caught 60 lb. of trout, his best day being twenty-two trout, weighing 20 lb., the largest fish turning the scale at 3 lb. A friend of mine took in one day, last year, thirty-eight trout, weighing 23 lb. If these bags can be obtained under the present circumstances, what glorious sport may be looked for in the future, when these rivers are under the entire control of the association which has just been organised.

Within a radius of forty kilometres there are seven rivers which run through the most gorgeous scenery to be found in Northern France. There are plenty of good hotels in Dieppe; one I can recommend from my own experience is the Hotel de Paris, which is both comfortable and inexpensive, opposite the Casino. Dieppe can be reached from London in five hours by the Newhaven and Dieppe route.—Yours truly,
P. H. BEWICKE.

THE IMPROVED GEEN SPIRAL SPINNER.

DEAR SIR,—We have much pleasure in forwarding you one of our improved Geen's ring mounted spiral spinners, which, we think, is something worth your notice. We have mounted it with a wire running through the bait, and phosphor bronze rings, as you will see. To these rings can be attached any size hooks that may be required. In the event of a hook meeting with an accident a new one can replace it within a few seconds. The bait will spin very much better on this wire than on the ordinary mounting, and, as you will perceive, the life of the mount will be considerably longer, as there will be no chafing taking place in the same. Gnt or gimp invariably is destroyed by the friction at the edges of the bait. Of course, the bait is well known to you, but we think that this improvement entitles it to fresh consideration.

The advantages claimed were that it would spin better than the Devon, without any of its ugly flanges; that it could be drawn through the water so slowly that the laziest of fish could seize it, yet its spiral shape made it appear to be in a terrible hurry to escape. Some portion of the concave side, and either one or the other of the concave fins, were, without cessation, reflecting the rays of light, thereby attracting the attention of all fish within a considerable radius. The fish are not frightened by any large number of ugly hooks, only two being needed, and these being practically hidden within the circumference of the bait. The bait slides up the line when a fish is hooked, and the hooks are self-adjusting when the fish is released.—Yours faithfully,
S. ALLCOCK AND CO.

Standard Works, Redditch, March 11.
[We like the look of the improved "Geen" spiral bait very much indeed, but would suggest to Messrs. Allcock that split rings are the worst form of attachment for holding hooks to baits. The watch spring catch would be far more reliable and more convenient for changing hooks. Split rings rust quickly, are only half as strong as they appear to be, and more fish have been lost through the breaking open of split rings—especially on spoons—than from almost any other cause. We are not sure that it would not be better to prevent the bait slipping up the wire so easily, because in casting it is liable to get jerked out of place, and does not go back, so spoiling the cast. But it is a first-rate artificial.—Ed.]

DAPPING AS AN ART.

DEAR SIR,—I have read with great appreciation "Pheasant Tail's" article under the above heading, in which he describes in a most lucid manner the plan of utilising the spring of the rod in order to get a fly into places that are inaccessible by any other method.

As he truly says, it is very pretty work. I have seen it performed by a "master angler," to watch whom at work was a treat. I have also seen a good angler make his first attempts, with the result that a distinct blue mist arose, caused by his fearful language at repeated failures.

It certainly is a pretty and also a sportsmanlike mode of fishing—but it is not dapping; and I would suggest to "Pheasant Tail" that if he wants a distinguishing name for it, "catapulting" would be an appropriate one.

I need not inflict on you a description of ordinary dapping, which must be almost universally known, and can only be carried on from the bank.—Yours faithfully,
A WHITE-HEADED NOVICE.

TONBRIDGE AND DISTRICT ANGLING AND FISH PRESERVATION SOCIETY.

DEAR SIR,—About a fortnight since, Mr. Copsy, a member of our society, was fishing in the Medway, just above Tonbridge, when he was fortunate enough to hook and land a pike in good condition, weighing 11 lb. He also hooked a larger one, but the fish and the ice smashed his tackle up. I shall be glad if you will insert the above in your valuable paper, as it might drive more lovers of the gentle art to our river here.—Yours truly,
ALFRED BARNES
(Hon. Sec. Tonbridge, &c.).

RIVER AND LOCK KEEPERS' DINNER (MARCH 23).

DEAR SIR,—I have received and forwarded acknowledgments of subscriptions herein since your last issue as follows:

FROM ANGLING SOCIETIES.

Twickenham, Grange, Crystal Palace, Gresham, Clapham Junction, Lincoln, Cambridge Heath, Jolly Butchers', Brunswick Brothers', Crown and Buckland, School Board, Cambridge Friendly, Dalston, and Waltonians.

FROM SUBSCRIBERS TO T.A.P.S.

A. and T. Stroud, L. Hart, J. S. Spence, J. Richardson, J. F. Marchant, W. McFarlane (*Sporting Life*), W. Johnson, J. H. Krauss, S. Shum, W. D. Bayley, J. Hough, W. Marsden Smith, and W. H. Brewer.

FROM COMMITTEE.

J. Sams.

I regret to say that up to the present the clubs have not subscribed so well as last year, but there is plenty of time yet left to remedy this.—Yours faithfully,
H. W. HIGGINS
(Hon. Sec. T.A.P.S.).

SALE OF BAITS IN THE CLOSE SEASON.

DEAR SIR,—Referring to your article on the above subject in the *Fishing Gazette* of the 11th inst., permit me to point out that I think you are in error with regard to eels. The Fresh-water Fisheries Act, 1886, 49 and 50 Vict., c. 2, while not authorising (or prohibiting) angling for eels during the coarse fish close season, declares that the term "freshwater fish," in section 11 of the Act of 1884, does not include eels. Therefore, eels may be bought or sold during the close time.—Yours faithfully,
LOUIS F. HIGGS
(President Worcester and District United Angling Association).

[We hope we are wrong and Mr. Higgs right, but we know that in several cases magistrates have held eels to be protected, and have convicted for taking them in close season.—Ed.]

AN INVITATION TO FISH THE EDEN.

DEAR SIR,—Should any coarse fishing club, or member of same, like to come to Carlisle, I am prepared to grant them free fishing in the Eden; it would only be necessary for them to write me for permit and enclose stamped, addressed envelope.

These waters are noted for chub, dace, with roach and pike, the latter in smaller quantities.—Yours faithfully,
H. H. HODGKINSON
(Hon Sec. Carlisle Angling Association).

[Coarse fish anglers do not care to take fish out of season, or we should imagine this invitation would be responded to by some of them. We remember, many years ago, seeing quantities of fine chub in the Eden, and catching some when trout fishing.—Ed.]

BROWN TROUT FOR THE LUNE.

DEAR SIR,—We received last Wednesday morning from the Wryesdale Fishery 1500 yearling brown trout, which all arrived in the best of health and condition, and were turned out without a single one being lost. Several members of the association helped to put the fish in, and all were very satisfied with them.—Yours faithfully,
Ingelton, Kirby Lonsdale. GEO. H. PADGETT.

SCOTCH SEA FISHERY QUERY.

SIR,—Can you or any of your readers refer me to a few stations on the coast of Scotland, accessible by rail, where pollack run heavy, and where good accommodation can be had at a moderate expense?—Faithfully yours,
G. DE MAUPAS.

NETTING FUND.

DEAR SIR,—Since last report I beg to acknowledge receipt, with thanks, of 10s. 6d. donation from the Edmonton and Tottenham Angling Society.—Yours faithfully,
ALEX. WRIGHT (Hon. Treasurer).

AN ACKNOWLEDGMENT.

SIR,—Will you kindly allow me to acknowledge through the columns of the *Fishing Gazette* the receipt of so many letters and telegrams, from both anglers and fishermen, offering their best wishes on my eightieth birthday on Wednesday last, and to thank them very kindly for their pleasant remembrances? Some of the fishermen date their friendship from over forty years, and are hoping to see me at the Keepers' Dinner, but I am afraid they will be disappointed. One of my telegrams is from my old friend Mr. A. E. Armstrong, who is now in Cardiff, and one of the letters from my dear old friend Mr. Alfred Jardine, referring to past happy associations.
W. H. BROUGHAM.

Pownall-gardens, Hounslow, March 15.

BRITISH BOOKS ON ANGLING.

DEAR SIR,—I should be much obliged if you, in the columns of the *Fishing Gazette*, would give me a list of the most important British books on angling.—Yours very truly,
DANISH SUBSCRIBER.
[There must be about a thousand British books on angling. On what particular branch does our correspondent want them?—Ed.]

NEW PISCATORIAL PATENTS.

The following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

33,549. Bags for anglers and cyclists. Patentee: Mr. W. Chalkley, The Square, Winchester, Hampshire. Relates to a leather bag or case, to which may be secured boxes, with hinged or sliding transparent lids. The pocket is adapted to fold over, and the whole is secured by a strap.

3359. Harold Thomas Tanner, Ingleside, Redditch. Improvements in the manufacture of fish hooks.

18,283. Fishing. Patentees: Messrs. S. Buckingham, Duke-street, and J. Epton, Duke-street, both in New Cleve, Grimsby. Relates to trawling gear. To diminish the tendency of the wing nets to lift the ground rope, they are made with a selvage at the top and bottom instead of one only at the top.

3733. Alfred Hemsted, Cannon-street, London. "An artificial bait for fishing, fitted with reversible fins."

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
"Six Months ditto	5s. 4d.
"Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

SATURDAY, MARCH 25TH, 1899.

THE BATTLE OF POLLUTION.

THE first open engagement between the forces representing salmon *versus* sewage has been won by the former. The victory is no mere moral one, but a substantial crowning success to our salmon fisheries in general, and the "poor old Don" in particular. The defeat is all the more crushing, seeing it has been sustained by such an influential corporation as that of the City of Aberdeen, representing nearly 200,000 of a population, with all the wealth of the sinews of war at its back, in the shape of unlimited rates to draw upon, and the best guidance and generalship that such influence and money can command at the hands of a small but determined band of angling proprietors and lessees, but having a comparatively small stake each in the purity of their comparatively small river.

For years the Don Fishery Board has been protesting, through its officials, against the increasing pollution of its once limpid and pure waters from the mills and villages on the last few miles of its course. But only during last autumn was any real action taken by those interested, when an association was duly formed

of the members of the local fishery board and a few of the upper riparian proprietors, with the ostensible purpose of providing funds to raise an action in the Court of Session against the unnecessary or illegal abstraction of too much of the water in the river by the Messrs. Pirie for mill purposes; and to take in hand the interests of the Don as a salmon river generally, with the ultimate aim in view of restoring it to its pristine purity if possible.

The funds came rattling in, and soon an amount equal to all present emergencies and future demands for some time to come, of over £3000 was cheerfully subscribed, with the hearty promise of more to follow if needed. Nor had such spontaneous and ready action been taken a day too soon. The association have not had long to wait to find an opportunity to call out their forces.

The Aberdeen Corporation, as represented by its sewage committee, had to deal with a promised scheme for disposing of the part of the city sewage which entered the Dee at Victoria Bridge, in order to satisfy the demands of the Dee Fishery Board, and for this purpose had to promote a bill in Parliament in order to get the necessary sanction to carry out the works. In their bill they proposed also to deal with the Donside section of the city sewage for which they were responsible, and in this connection were to construct only such works as were necessary for the suburbs of Aberdeen, known locally as the villages of Woodside and the Aulton, leaving the mills—the main sources of the pollution of the Don—out of account altogether.

Now was the chance of the Don Fishery Board, and right well have they caught at it. If supineness was one of the many charges levelled at them as a board in the past, such cannot now be laid to their charge. Nay, they have even redeemed their characters in this respect, by the alacrity and despatch shown in the present case, and wiped from their escutcheons the last stain of any such laggard disposition.

When the Corporation Bill was announced they stepped into the arena to oppose it. Half a loaf was of no use to them. It was even worse than actual starvation for a time, as it would prevent them getting sustenance in the future. It must be a whole loaf, or determined and strenuous opposition would follow. Their chance had come, and they were determined to make the most of it. Negotiations were opened. Conferences were suggested and conferences were held, but the fishery board for once stood to their guns and refused to compromise one single inch. "Include the mills and our opposition will drop" was their retort. Seeing that matters could not be adjusted locally, and on the spot, the last of the conferences came abruptly to an end, after high words on either side, with the heated declamation, "We will meet at Philippi," and within the next forty-eight hours or so at Philippi they met, with what result of course the whole world knows.

The Lords' Select Committee on Bills, with Lord Northbrook as chairman, heard the case for and against the passing of the Aberdeen Corporation Bill during the whole of Tuesday, Wednesday, and the greater part of Thursday of last week, and after listening to chemical and engineering experts on both sides—the best money and experience could procure—and listening to the speeches of eminent counsel over the question of salmon *versus* sewage, they decided, after having cleared the committee-room for just fifteen minutes by the clock, in favour of salmon. There is no halting between two opinions in their decision. It is a clear and emphatic declaration in favour of the preservation of our salmon rivers and streams. They refuse to pass the Don clauses of the Bill *in toto*. Nor did the Lords' Committee stop short at the official dictum that the proposals of the corporation were not good enough as regards the Don valley, but they went the length of giving a plain bit of advice to the Aberdeen Corporation, recommending them and the county engineers to lay their heads together and devise such a scheme as will effectually and effectively purify the Don, and then, and only then, to look to Westminster for sympathy and support in carrying it out.

The Aberdeen Corporation Bill has been passed by the Select Committee of the House of Lords, but minus the Donside clauses. The meeting at

Philippi has been anything but a source of gratification to the granite city officials. On the other hand, the Don Fishery Board is quite jubilant. They can well afford to be so. It is a famous victory, and no mistake, and will nerve them to further action in other quarters, which may have a more immediate effect on the salmon fisheries under their charge, and enhance the angling interests of the river as a whole more than the fight with the Aberdeen abortive sewage scheme can accomplish for some time. If the questions as to certain water rights claimed by mill owners can now be as successfully tackled, and the obstructions arising from numerous dam dykes solved after the same successful fashion, the future of the Don to its former place as one of the first salmon rivers in the kingdom is fully assured. There is nothing we can see to hinder such success all round. Public opinion is now against monopoly and injustice in any shape and form, and the monopoly of polluting an otherwise fine salmon and trout river such as the Don by a few grasping mill owners and dividend hunters cannot stand. It is against all nineteenth century common sense, the eternal fitness of things, if it is not otherwise against all law and order. The Don Fishery Board will still have a good balance at its bankers, after settling last week's bills, the costs in connection with the first real engagement in the battle of pollution on which it has entered, and it can now go ahead to more conquests in fresh fields and pastures new.

That the Aberdeen Corporation feel sore over their defeat goes without saying. They courted it, and they must now bear the brunt of their anything but magnanimous proposals with regard to the Don. If they feel the bruises sore they need not look for sympathy nor complain. There is a golden rule which it is well to remind corporations of as well as individuals, that they should do as they would be done by. Had they had the same stake in the Don salmon fisheries that they as a corporation have in the Dee, they would have seen their way to include the mills in their sewage scheme, without any meeting at Philippi, or intervention on the part of the Lords' Committee to direct them in the paths they must tread ere they again ask their sanction to engage in public works of a gigantic character needing the sanction of Parliament for their promotion.

There is no difficulty as to the future course of action on the part of the Corporation of Aberdeen. They must face the music, and that with the best grace possible. A scheme for a joint town and county sewer was planned by the county engineer, and approved by eminent consulting authorities some years ago. It proposes to carry the sewage and polluting effluent, presently being discharged into the Don, for a distance of some seven miles, right out to the sea at a cost of £40,000. The mill owners were the only parties who objected to stump up their moiety of the cost, and so the scheme, as a voluntary one, has been in abeyance. It must now be made compulsory, and the mill owners be made to pay for their whistle—and obstinacy. It is certainly not a light scheme; but to object to it because it might pollute the North Sea at the mouth of the river, is a pitiable official exhibition of straining at the gnat and yet swallowing the camel. Yet such far-fetched arguments are being seriously trotted out since the battle of pollution has gone against the Aberdeen Corporation. How have the mighty fallen.

G. M.

A FULL BAG IN '98.

MY luck of late had not been quite of the best amongst the fjeld trout. The weather had been cold and the wind far too rough for really good sport. Consequently, I was not expecting a by any means heavy bag when I started from our soter to try what a fair-sized burn would afford me in the way of fish.

A few days earlier one of the party had reported having seen a quantity of fine trout in some deep pools, about two miles distant down the stream, running past the soter, and once or twice some six to eight good trout had already been caught in this particular stream. But up to the present time nothing remarkable had been done there. However, some fish were wanted for dinner, and after three long days of ryer shooting and conse-

quent hard walking over the fjeld, I thought a turn at the trout would be something of a rest and a change. For it was not laborious work casting over the burn, which could all be very well covered by a 10ft. rod, whilst a pair of shooting boots and gaiters made the equipment considerably less cumbersome than that required for wider waters, and since the walking before me was not exactly along a well-kept main road, carefully steam-rolled and swept by the County Council, waders and brogues were impedimenta joyfully left behind.

There was a strong north-west wind blowing directly upstream; so strong was it that the lake which formed the source of the burn was covered with miniature rollers, emulating in a very small way the more formidable white-crested waves which make the North Sea of such uncomfortably evil repute among bad sailors.

The stream after leaving the lake was for some half a mile or so nothing more than a tiny rivulet, bending and turning in many directions, with a deepish pool at almost every sharp corner. I spent but little time over this portion of the water, as but few large fish were in the habit of frequenting it, although fingerlings swarmed on most of its shallows. It was not until a larger and deeper pool, formed by the junction of another stream, was reached that I began to fish carefully. The wind was still blowing a whole gale, and was straight in my face. Accordingly, casting became rather an erratic matter, and as the heavier fish did not seem keen on the March Brown or anything else I could offer them, I soon left the pool, after throwing back three or four little beggars not big enough to keep.

For some distance after this the water was too thin and rocky to hold large fish, but at last the stream made a sharp bend, and as usual there was a deep pool at the turn. Here I caught one about $\frac{1}{2}$ lb., and put back several of the ubiquitous fingerlings. Notwithstanding that there was some very likely-looking water in this portion of the burn, all of which was carefully fished, I could neither take nor see anything of a decent size. I began to fancy that the heavier trout must have migrated from their usual haunts, and I was somewhat disappointed when two o'clock came and there was nothing but one solitary miserable $\frac{1}{2}$ -pounder in my bag.

Lunch, and a soothing, consoling pipe at an end, it was time to fish my way back towards our soter. By this time the wind had dropped a little, but was still occasionally hurling violent squalls up the stream quite forcible enough to make it at times an affair of some uncertainty as to where my fly would be allowed to fall. Once or twice, in fact, the wind took sole control of the business, and lifted fly, line, and all clean off the water.

I worked away for nearly half-an-hour with just as much want of success as earlier in the day. Plenty of tiny ones—about five to a pound—but nothing of any size would look at my fly.

Fortunately, as it happened, I made my way up stream slowly and carefully, for at length I fancied that I saw the back fin of a good trout appear for a second about 15yds. above me, close in to the side I was standing on, and just at the edge of some sedges which fringed the margin of a long stretch of deep water.

Before casting I waited a few moments to make sure that the cast and fly were both still in good order and repair. Whilst I was so doing a fish jumped straight into the air—so straight, indeed, that for a fraction of a second its attitude was just that of those brightly-coloured varieties which perpetually dangle at the end of a pole, planted over the door of some tackle sellers in England. This trout went through its acrobatic feat rather nearer the place where I was standing than where a back fin had made its appearance, but also close into the sedges.

The banks of the stream are here quite as high or higher than a man, but luckily there is a narrow shelf about a foot or so above water, and just broad enough to afford standing room. To this I scrambled down and commenced casting carefully towards the sedges, near where the fish had moved. Close in by the lower end of the weed clump a trout rose greedily to a medium-sized March Brown, and was firmly hooked. He made one strong dash right across the stream, and then tore away down the pool past where I was standing. Gradually he was worked back,

and for a few moments—anxious moments, too—I feared I should lose him, for straight under my feet he darted, and gained the shelter of the hollow bank. Luckily, heavy stamping over his head dislodged him, and that without breaking down my narrow standing place. This dangerous manoeuvre on the part of the fish entailed a very heavy strain on the little 10ft. rod, and the greenheart must have been of exceedingly good quality to bear such a test without breaking. However, no accident happened, and at length a plucky fish of about 1 $\frac{1}{2}$ lb. was in the bag.

The rather rumped March Brown was quickly smoothed out, and once more drifting down close past the sedges. Again a good rise, and another fish made a hard fight for life, but he, too, was before long safely in the bag.

As I was inspecting my tackle preparatory to making a third venture, I saw for the second time a goodly trout jump straight into the air, as if anxious to discover what accident could have befallen his comrades so rudely plucked from their proper element. Before the noisy splash and commotion caused by the return of the inquisitive fish to his haunts had ceased, my fly fell almost in the centre of the widening ring. Almost instantaneously a trout seized it, rushed away down stream, struggling even harder than his predecessors in misfortune; but he, too, soon followed his forerunners to the bank. My hopes of a decent basket began to rise rapidly, for a number of good trout seemed to have collected along the edge of the weeds, and to have suddenly become almost madly hungry.

Another cast or two brought yet another rise. But this time the trout had the best of it, for after some wild, frantic rushes up and down the stream, the hook came away, and the bag was no heavier by that fish. Thinking it quite possible that after this a short rest might be advisable, I waited a few minutes before setting to work again, meanwhile changing the fly from a March Brown to a White Tip. I had no sooner worked the new fly close in towards the sedges than it was swallowed by a greedy trout, destined, before many minutes had elapsed, to join his comrades in misfortune. Whilst I was playing this last, another fish jumped high into the air, and I fully believe that I hooked and landed that particular acrobat very soon after.

However, to cut the tale short, I landed from a stretch of water, certainly not exceeding 15yds. or 20yds. in length, twenty-three trout, weighing 3 $\frac{1}{2}$ lb. My bag was crammed, my capacious landing net was full, and at least two miles of very rough walking were before me. But for these hindrances my score would have been considerably augmented, for when I had determined that both net and bag were choke full, I crept on hands and knees very cautiously along the bank of the pool and peered down into its depths, where some twelve or fourteen good trout could be seen, all of them close into the sedges, from whose edge so many weighty fish had already been obtained on that afternoon.

What attraction had collected so many trout in that particular piece of water I cannot guess; but there they were. It was a very even basket I brought back, nothing under 1 lb., and only two or three above 2 lb., and these only a trifle. One of the oddest things about that day's fishing was the frequency with which fish not hooked threw themselves straight into the air. I saw these jumping performances at least six times in the course of the afternoon, and feel pretty certain that no fewer than three of these acrobats were eventually caught by me. All this militated very considerably against my ideas as to jumping fish never taking a fly, and always foreshadowing bad sport. Very few fish escaped when once hooked, and if such a break in my good luck did happen I changed the fly, and waited a few minutes before making a fresh cast. No doubt much of my good luck was to be attributed to my seeing that particular trout move which was lowest downstream of all the collection, and to being able to turn the heads of the hooked fish downstream, and thus not disturbing those lying higher up the pool.

It goes without saying that I was not a little pleased with the afternoon's sport; but I am nevertheless bound to confess that before I reached the soter door my load had become quite sufficient, the more so as slipping on some wet ground I tripped and tumbled into a bog hole,

luckily without doing much damage beyond bruising my leg and side, and getting a pretty complete wetting—an accident which did not make the rough walking and steep rise at the finish at all easier to negotiate.

The burn, which was the scene of these events, will for the future be regarded with feelings of the deepest respect. Hitherto, I had looked upon it merely as a pleasant place to ramble along on an off day, rod in hand, where one was sure to see any quantity of small and some few bigger trout, but whose greatest attraction was to be found, not so much in the fishing as in the number of birds, more or less rare in Great Britain, who made its willow-fringed banks their haunt. No doubt some years of preservation have at last begun to tell on the stock of trout, and the fish being no longer speared or netted in season and out of season, begin to repay the bother and outlay connected with the difficulty of inducing Hans, Per and Ole to observe the law. THYMALLUS.

A REMINISCENCE OF WINTER ROACH FISHING.

FIFTY-SIX or fifty-seven years ago Good Friday happened, I think, on Lady Day, March 25, when, as a lad, aged fifteen years, I had just left school.

That 25th of March was my birthday. I remember it well, because a fortnight's keen frost, such as this of the past week, had ice-bound many of the rivers and most of the ponds. The large lake of the Dartford Mills was frozen over, and I skated there that morning until nearly noon, when a rapid thaw set in; so I unbuckled my skates and made for home, meeting on my way Jack Ridley, the roach fisherman, who was my mentor in that branch of the gentle art. He said: "Alfred, the frost has ended; it is warmer; roach will feed; let us go at once, and fish for them in the creek at Stringer's Hole"—a pool at the top end of a backwater where numerous dykes and ditches discharged their waters through a culvert into Dartford creek, and where a young man named Stringer was drowned from a seizure of cramp when bathing. In the backwater or pool I have mentioned was a three-foot rise and fall of tide, and we were lucky to arrive there just as the ebb began. Owing to the frost, worms were not procurable, and gentles of course, were equally unobtainable, so we used bread paste and the tails of boiled shrimps, which I always found a killing bait in the creek waters.

We had three hours of very nice sport, each of us taking about a score roach and a brace of trout; these, and some of the roach, weighing 1 lb. each.

Ridley brought his gun—an old flint-lock musket, altered into a percussion—and on our way home, through the marshes by the dykes, he shot a hare, a couple of wild duck, and a mallard. Thus we returned with a mixed bag, of which, as my share, he generously made me a birthday present of the hare and mallard.

ALFRED JARDINE.

SOME PECULIARITIES.

I WOULD not give twopence for the angler who did not follow his own ideas as much as possible with respect to catching fish. His style of angling, like his style in writing, should be absolutely his own; not only this, there is a singular pleasure in successfully carrying out one's own ideas.

It is just possible that, in following one's own methods one may be called an "old fraud," a "know nothing," &c., and yet, in spite of these forbidding epithets, I have often known an "old fraud" catch fish when other anglers have failed. There is a certain class of angler who often proves how very ignorant he really is, by attempting to show how very clever and knowing he is. I have repeatedly witnessed it. Other anglers again possess such wonderful skill, unbounded knowledge and experience that, when I have been in their company I have felt such very small potatoes that I have been almost afraid to even look at the river, much less venture an opinion. As stated, the "old fraud" and "know nothing" has often caught fish when these gentlemen have signally failed.

The fact is, on these occasions there has been some peculiarity in connection with the swim, the tackle, and bait employed, or some sudden, unaccountable, and extraordinary habit in the fish for once in a way that the "old fraud" has taken full advantage of and other anglers have not. I shall mention one more peculiarity which will be more the nature of a warning than otherwise, and those who do not care to read it can peruse the next article.

In your rambles should you see a row of anglers enjoying fishing a match, eager to catch fish weighing, say, as little as an ounce (I mean fish that would grow to pounds), all I can say is, if you do not want to be thrown into the river, shut eyes, shut mouth, shut ears, and say nothing; for, so far as I can see, nothing will ever stop this useless and unnecessary slaughter but an Act of Parliament.

On one memorable occasion over 1000 fish (amongst which were baby roach, chub, and dace) were slaughtered in a favourite river in a few hours, nine-tenths of which, I have no doubt, would eventually find their way to the dustbin. Further comment is unnecessary. A.

THE FISHERIES EXHIBITION.

By an oversight we omitted to notice the exhibit of Mr. J. Ogden Smith, of Twickenham, last week. This, with a few other matters will be noticed next week.

PISCATORIAL SOCIETY.

ANNUAL DINNER.

ANY popular institution like the Piscatorial Society—which first saw the light of day in the good old time of William IV., or, to be more precise, in the year 1836, a twelvemonth before even the accession to the throne of Her Most Gracious Majesty the Queen—must of necessity hold a high position in the particular sphere in which its operations are conducted. It speaks volumes for the able manner in which the society has been handled during so long a period as sixty-three years to find that not only does it continue to flourish in 1899, but to increase in importance and favour as time rolls on. Such an interesting social function as the dinner tends greatly to bring together those old friends who, despite advancing years, are still as devoted as ever to the sport of their youth—those past masters in the piscatorial art who look forward to these gatherings with no little degree of interest, and with the pleasurable anticipation, too, of having an opportunity of fighting o'er again, for the benefit of the younger generation of anglers, their battles with monster salmon or big trout in the days which are gone beyond recall. But the Piscatorial goes a step further than any other angling fraternity in that it invites the fair sex to share its hospitality, realising to the full the additional brilliancy, charm, and lustre the presence of ladies gives to their annual banquets. Monday evening saw congregated in the Grand Venetian Salon of the Holborn Restaurant a right goodly company of ladies and gentlemen to the number of over 130. Under the Chairmanship of Mr. Chas. Butler, and with Mr. W. Thomas in the vice-chair (assisted as they were by Stewards so competent as Messrs. Robt. C. Blundell, H. Neville Campbell, Regd. E. Booker, Frank Ward, and H. Harden), the proceedings from first to last were of the most enjoyable character. One thing, and one only, marred somewhat the unqualified success of the evening, and that was the enforced absence of Mr. Edward Foreman, the society's hon. treasurer. For weeks past this gentleman (than whom no one is held in higher esteem by the whole body of members) has been confined to the house by illness, and although it was almost confidently hoped and anticipated that he would take his accustomed place at the festive board, yet at the last moment a veto was put upon his participating in the festivities by his medical adviser to the unfeigned regret of himself and the very keen disappointment of his many friends and acquaintances. The menu discussed was worthy of the best traditions of the Holborn. Indeed, Mr. T. J. Hamp (himself an old Piscatorial, by the way) surpassed, in the opinion of those competent to judge, all his previous efforts in the direction of providing a really admirable dinner.

At the conclusion of the repast

The CHAIRMAN gave the toast of "The

Queen," remarking that there was no body of men more loyal to Her Majesty than anglers. (Applause.) The toast was drunk with enthusiasm.

The CHAIRMAN then gave "The Piscatorial Society." He said: Ladies and Gentlemen,—The first toast which I have to propose to you this evening is that of the Piscatorial Society. (Applause.) In other words, "ourselves." To me personally it is a very great privilege to have the honour of proposing this toast, as I believe we stand in the proud position of being second to none as regards any other angling society in this country, and probably in any other. (Applause.) From the annual report which has just been issued, you will have seen that the society, I think I may fairly claim, is in a substantial condition. We have a balance at our bankers—at least, I should say a balance on the balance-sheet on the right side, and we have a "plum" also at the bank, designated a reserve fund. This is strictly preserved, and is labelled "Not to be touched" or even looked at by any designing member. (Applause.) Now, it is well known to most anglers that the past season was one of very indifferent sport—(hear, hear)—but every one is anxiously looking forward for better luck during the fishing year which is coming. (Hear, hear.) The Piscatorial Society has lately acquired the lease of some new water at Uxbridge, on the river Colne, which, we are told by those gentlemen who have practically tested it, will prove a very great acquisition to the society, and I have no doubt that it will turn out to be all that can be desired as what is termed a coarse fishing water. In this connection I may say that the best thanks of the members are especially due to Messrs. R. C. Blundell and E. Foreman for their untiring efforts to secure this water on behalf of the society. (Applause.) As a fly water we have not, up to the present, had an opportunity of judging of its value; but before many days are over it will be put to the test by those well qualified to pronounce an opinion upon its merits, and I hope that our new committee, full of energy, and comprising many gentlemen who are expert anglers, will see their way during the year to re-stock the water with good trout for the benefit of the fly fishers within our ranks. (Applause.) This gathering, ladies and gentlemen, is, I think I am right in saying, our sixty-third annual dinner, and I have no hesitation in stating that the society is growing in prestige as its age goes on. (Hear, hear.) I feel sure, too, that every member will exercise the same strict caution in the election of new members to its folds that he has ever done, and that we shall continue to increase in numbers and influence. The objects of the society, I believe, are the cultivation of the art of fishing, together with the dissemination of the knowledge of fish culture, and I think, with those aims in view, we need not fear but that progress will attend us and prosperity also. I give you "The Piscatorial Society;" long may it flourish. (Applause.)

The toast was warmly received.

The CHAIRMAN: Ladies and Gentlemen, I have now a very pleasing duty to perform, and that is to present the challenge cups to the winners during the past year. Those cups are, first of all, the "Twenty-one Guinea Private Challenge Cup," which has been carried off by Dr. P. D. Head. (Applause.) I am sure that every member of the society will agree with me when I say that no worthier member could have secured the handsome trophy. (Applause.) The next cup is the "Hamar Cup," won by Mr. Harry Wilson, and I regret very much to say that as that gentleman resigned the society at the end of the year, I have not the pleasure of being able to hand him the vase. The next cup is the Brunton "Grayling Cup," which has been won by our dear and respected friend, Mr. H. Harden. (Applause.) I must tell you, ladies and gentlemen, that this cup has been won outright by Mr. Harden, that is to say, it has been won three times by the member named. It is well known to every member of the Society that whoever attempted to take it from Mr. Harden would have found him a "hard 'un" to beat. (Oh, oh, and laughter.) Then there is the "Booker Cup," won by Mr. W. T. Gomm, who is well known amongst anglers as one of the best Thames trout fishermen. I think he is the most successful of almost any man who has fished the Thames, and

I regret very much that he is suffering from influenza, and is unable to be present with us this evening to receive the reward of his skill.

The cups were then handed to Dr. Head and Mr. H. Harden amid manifestations of pleasure on the part of the company.

Dr. CHARLES S. PATTERSON gave the "Press." He said: Mr. Chairman, Ladies, and Gentlemen,—There is no one more than myself regrets Mr. Fred Russell's engagement at the Alhambra (referring to that artiste's apology for responding to an encore for a capital ventriloquial sketch). He would have given me a further five minutes to have prepared a speech to deliver to you this evening. Now I made some very careful notes, amounting to fifteen and a half pages of foolscap on the subject of my toast, that of the "Press." I regret, however, to say that owing to a momentary absence of mind I forgot to bring my "groundbait." Therefore, I appear before you having prepared nothing, and trusting only to my slight memory of the Press to place before you one of the leading toasts of the evening. I say it is an all-important toast, because what would the Piscatorial Society do without the Press? We have had sixty-three years of life, and during that long period we have had the Press always supporting us. Everything we have done in this society has been chronicled in the Press. If Mr. Jones shows a 15oz. roach, it is recorded in the Press; if Mr. Robinson catches a 28lb. salmon, it is chronicled in the Press, and the position of the Piscatorial Society, which the chairman has remarked is the leading society in England, is entirely due, in my opinion, to the manner in which the Press has supported us. Now, you will excuse me, Mr. Chairman, for making a very short speech, for the simple reason that I can hardly speak, physically. This is due wholly to the fact of the prevailing epidemic—not that I have had the prevailing epidemic—but I have experienced so many vicissitudes of heat and cold during the past three or four weeks, that I have acquired a very fine bronchitis "on my own." The thing that troubled me in preparing my speech for the Press, was to know who was going to reply to the toast. For many years we had here, on one side of the chairman, Mr. R. B. Marston, of the *Fishing Gazette* and Mr. W. Senior, representing the *Field*, on the other. Neither of them are with us to-night; but we have present amongst us the sub-editor of *Land and Water*, Mr. Cavanagh. (Applause.) It does not require many words on my part to recommend *Land and Water* to your notice. It is one of the oldest of sporting journals. It was started by a member of this society—the late Frank Buckland—and any paper that had any connection with that hard working enthusiast requires no words of recommendation on my part. I would draw your attention to the fact that during the past six months a very valuable memorial has been prepared, which was presented last week to the Privy Council, praying that the museum inaugurated by this hard working enthusiast should be preserved for the nation—(applause)—and I am pleased to say that that memorial has been signed by some of the most influential men in the country. I will not detain you longer except to ask you to drink the toast of the "Press," coupled with the name of Mr. Cavanagh, the sub-editor of *Land and Water*.

The toast was duly honoured.

Mr. H. CAVANAGH in reply, said: I do not suppose that there is a colleague of mine here to-night but would be proud to be in my position, and to reply for the Press, and I cannot say that I would not be very glad to give up the honour to someone else. Dr. Patterson has put me in somewhat of a "hole," and I hardly know how to respond. He has made his cast, and has not caused very much of a flutter. I am below the surface, and have taken the fly because I simply had to do so. But I will say this: That, as far as I know as representing Frank Buckland's paper, the Piscatorial Society is one of the best societies I have ever met with in my life. I hope it may long continue so. Now, as regards the memorial, to which Dr. Patterson alluded just now, in connection with the Buckland collection at the South Kensington Museum, we have backed it up as far as we possibly can, we—*Land and Water*—are prepared to continue to support it right through to the end. (Applause.)

MR. HORACE H. BROWN proposed the "Visitors

and the Ladies." He said: Mr. Chairman, Mr. Vice-chairman, Ladies, and Gentlemen,—We anglers, I think, are generally looked upon by the public at large as a sort of solitary sparrow on the house top, but I assure you that we are naturally gregarious, except perhaps when we are fishing, and then we like the whole stretch of water to ourselves, not selfishly, but for the sake of sport. Yet we are never happier than when we have the privilege and the pleasure of asking visitors to meet us at the festive board. (Hear, hear) We are always exceedingly delighted to see our brother "sports," and more than delighted when they are ably supported by their sweet-hearts and their wives. (Applause.) I have heard it suggested that we offer a little hospitality to the ladies as some return for their good nature in permitting their "hubbies" and sweet-hearts to go angling. I scorn the idea (Laughter.) We would never consider it possible in one evening's entertainment, to make an adequate return to the ladies for their undoubted good

get up early in the morning to have breakfast ready and in time, so that pa shan't lose his train. (Laughter.) It's awfully kind of them. I have noticed when down at Newbury—a place some of you know—how beautiful it is to see all the ladies at work making every effort so that we should have our breakfast at eight o'clock. (More laughter.) I say this with an object. I am going fishing there probably this Easter, and think it perhaps as well to mention the fact that we always *do* get our breakfast at eight o'clock. Now I would only ask you now to join me in heartily drinking to the health of our visitors, both ladies and gentlemen, wishing the single married, the married happy, and all gentlemen the greatest happiness I can wish them—to become members of the Piscatorial Society. (Applause.)

CAPT. A. H. THORPE, in replying for the ladies, said: "As the last bachelor who has had the pleasure of joining the society it devolves upon me to respond on behalf of the fair sex. I am only very sorry I was not aware that as a

heartily, on their part, for the very kind way in which you have drunk their healths, and for the most pleasant evening we have all spent here to-night. (Applause.)

MR. GEO. CAMPBELL replied for the visitors. He said: I suppose the distinction which has been conferred upon me arises from the fact that I have had the pleasure of enjoying the hospitality of the most hospitable society it is possible to meet with for many years. We have had a delightful evening, as we invariably do have whenever I have been privileged to attend your entertainments, and on the part of the visitors I thank you for the manner in which you have treated us. (Applause.)

The VICE-CHAIRMAN (Mr. W. Thomas) submitted the health of the Chairman. He said: Every gentleman who has the honour of proposing a toast to such a gathering as this flatters himself that the toast intrusted to him is the most important one of the evening. I do not claim that myself to-night, because I consider that the toast given by the Chairman, that of the "Piscatorial Society" stands first and foremost. Next to that must, of necessity, be that of "The Ladies." But to-night, Mr. Chairman, and Ladies and Gentlemen, I regret to say that that toast has not been submitted to you by the proper person upon an occasion like the present. We all know the elocutional abilities, genial and kindly feeling with which Mr. Horace Brown is capable of undertaking any important duty; but I think that a bachelor has no right to propose "The Ladies." (Laughter and "Question.") He knows nothing whatever about them—(more laughter and "Oh!")—and is thoroughly unacquainted with the best part of their nature and their loving disposition—(roars of laughter)—having gone so many years without knowing the faces and features of these delightful specimens of humanity, who form part and parcel of ourselves, and mould us to be kinder, gentler, and more amiable. I demur altogether to the view that a bachelor should be intrusted with such a toast, and I hope Mr. Horace Brown will never be asked to do it again—(laughter)—at least not until, on some future occasion, when he has mended his ways and improved his position. Then he will have acquired a certain amount of respect, and we will listen to him with indulgence. But he must even then make up a lot of leeway before he can be considered capable of speaking to married men like myself. (Loud laughter.) Our chairman has told us that this is the sixty-third annual dinner of the Piscatorial Society. I was very young at that time. I don't remember so long ago as that. (Laughter.) At the same time I do think that the success the society has met with and the progress it has made are very important. Our chairman had also said that the object of the society is to practise the gentle art and also to develope the science of pisciculture—and we do all that. But my toast is a very important one, inasmuch as I have to offer to you a sentiment which I am sure will be well received by all present—that of your chairman. (Applause.) The committee must have exercised themselves very seriously to find a gentleman capable of carrying on the reputation of those who have presided at these annual gatherings when ladies have been present. At ordinary meetings it is the cultivation of the gentle art that is in question, but when we have the fair sex with us, as we have to-night, our aim and object is to acknowledge the friendship and bear witness to the happiness which ladies can bestow upon us by permitting us to fish twelve months in the year without any grievance on their part—not, like our brother Brown said, that they must get up and get our breakfasts ready by eight o'clock like slaves. (Laughter.) I am perfectly sure that the committee could not possibly have selected a more genial gentleman, and a better angler, or a man who carried out the ideal of Izaak Walton as a piscator, a gentleman in feeling, sentiment, and kindness of disposition, than my old friend, Mr. Butler. (Applause.) Owing to the decorations in front of me on the table, I have not been able to see much of his face during the evening. I wish they were cast to the winds or burnt, so that I might get a good sight of him. However, I am sure that so long as the committee of the Piscatorial Society are able to select so worthy a representative and brother

MR. W. C. BUTLER.

nature, that lasts all the year round. (Laughter.) But, gentlemen, I do not think that the favours are all on one side. I was out the other day, and I happened to meet a bright, nice, sharp little fellow, and I said to him, "Good-day, Tommy. Father coming up to the society to-night?" He replied, "I hope so." I said, "Father better?" Reply, "I think so." "You hope father will come, eh?" "Yes," said the boy; "I do hope so." This was very good-natured of Tommy. But he added, "When pa's away me and ma and the girls *do* have a spree." (Laughter.) So I really think that the Piscatorial Society has, as it were, something to ask from the ladies for the privilege they confer upon them by taking pa out. (More laughter.) It does pa a lot of good to go out for a day, or to come up to the society for an evening. Then, again I say it is a beautiful sight for those old friends who are married (lucky dogs) to see ma

bachelor it would be necessary for me to answer for the ladies, otherwise I might have arranged that I should have been here as a Benedict. (Laughter.) That, however, remains to be seen. I feel I am perfectly inadequate to the task set before me. It would have been much better, in fact, if you had asked some lady to have spoken, but a friend tells me they are all "dumb belles." (Laughter.) I am, however, confident of this—that we are most pleased to see them here to-night, and I am equally certain that, on behalf of all the ladies, I may say that they, too, are gratified to be present at the annual dinner. I may add, that should you have more dinners of a similar nature, they will be delighted to come yet again. (Applause.) Some one said that they thought it would be very nice if, in the summer, we had some picnics to which ladies were invited. I am sure that would be a success, at least, I may say so on behalf of the ladies. I thank you very

angler to preside here, the annual dinners will be a success. (Applause.)

The toast was drunk with musical honours.

The CHAIRMAN, replying, said: I thank you, Mr. Vice-chairman, for the very kind and cordial manner in which you have proposed my health. I am not vain enough to think that I deserve all the good things you have said about me, but there is one thing that I feel I can say, that is, that I have an interest in the Piscatorial Society—(applause)—and as far as my ability goes I will do my best to advance its well being. I understand that my friend Horace Brown has a grievance—(Mr. Horace Brown: Yes)—and I hope you will listen to him after I have done. I take this opportunity of proposing a toast, which is second to none which have been offered, and that is the health of our worthy Vice-chairman. I am sure you will agree with me that he has well filled the vice-chair to-night. (Applause.) I have had the pleasure of knowing Mr. Thomas for some twenty years or more. I have always found him a genial fellow, a good companion, and a thorough sportsman—(applause)—a man worthy to be a member of our society. I have only one regret, and that is that we do not see him often enough, because my experience of our worthy vice-chairman is that the more you know of him the better you like him. (Applause.) I am sure I express the sentiments of every member of this society when I say that we should like to see him more frequently at our weekly meetings. (Hear, hear.) He has spoken to-night of the ladies in a very nice manner indeed, and I am sure that his worthy partner would not object to him coming more amongst us, so that we might have the benefit of his practical experience and his good fellowship. I have met him on various occasions at another society to which I belong, and of which he is also a member, and I can assure you that he is always received there with the same good feeling as he has been welcomed here to-night as your vice-chairman. (Applause.)

MR. HORACE H. BROWN said: Ladies,—I feel that I really must apologise for a fellow clubman for making such an attack upon you to-night. It is not my fault. (Laughter.) My heart has been broken very frequently, I assure you. (More laughter.) I am afraid that perhaps I made one little mistake in proposing the toast, and that was when I said that sometimes the ladies were glad to get irritable men out of the house on any excuse whatever. That is where the shoe pinched—(laughter)—and if Mr. Thomas will ask his wife if it is so or not, he will cease to be "doubting Thomas." (Great laughter.)

The VICE-CHAIRMAN: Time is ever on the wing, and the time of the most delightful evening like this has been, must come to an end, so I rise at once to thank you, Mr. Chairman, for the kind way in which you have proposed the health of the vice-chairman. It has been a great pleasure to me to occupy this chair, and I will also say that all I can do to promote the best interests of the Piscatorial Society shall be done. I cannot attend your weekly meetings as often as I should like. I can, however, tell our friend Brown—Brown of the Piscatorial Society and bachelor (laughter)—that if he had such a genial wife as I have, and such genial wives as we all have who are married (and as we hope, too, he will himself some day have), the shoe will not pinch at all, for he will have perfect freedom and liberty such as he has never experienced as a bachelor. (Loud laughter.)

The CHAIRMAN, before closing the gathering, said: Ladies and Gentlemen,—There is one matter I should like to speak of before we part, and that is the regret of every member of the Piscatorial Society at the absence of our dear old friend Mr. Edward Foreman, our hon. treasurer. (Applause.) I am sure each and every one of us is exceedingly disappointed that he is unable to be with us to-night through illness. I look upon him as one of the pillars of the society—(hear, hear)—and one of our dearest and most respected members. No more genial gentleman ever existed or was ever one of our members than our old friend Mr. Edward Foreman, and I am sure that I voice the sentiments of all present when I say that our sympathy is with him, and that we hope that before long he will be amongst us again, restored to full health and vigour. (Loud applause.)

"Auld Lang Syne," led off by Dr. Brunton, brought a most enjoyable evening to a close.

It may be added that during intervals between the toasts an admirable selection of music, &c., was given by the following well-known artists, Mr. J. A. Collings acting as accompanist: Miss Edith Sexton, Miss Emily Foxcroft, Mr. Dyved Lewys, Mr. R. A. Roberts (musical sketch), and Mr. Fred Russell (ventriloquist). The grand piano was kindly lent by Messrs. Maple and Co.

KINGSTON PISCATORIAL SOCIETY.

THE fourth annual meeting of the Kingston Piscatorial Society was held at the Sun Hotel, Kingston, on Monday, Mr. A. W. Homersham, J.P., in the chair, Mr. W. H. Cate being in the vice-chair. About fifty members and friends were present, including Mr. A. E. Hobbs (Henley and District Preservation Association), Mr. W. A. Smelt, Mr. J. R. Richardson, Mr. Offer, Mr. Percival Turner, Mr. F. Littlewood, Mr. Sinibaldi, sen., Mr. T. Baxter, Mr. G. H. Howard (*Fishing Gazette*), Mr. W. Evans, Mr. A. Drinkwater, and Mr. M. Enright.

The CHAIRMAN read telegrams regretting absence from Mr. G. D. Deuchar, Mr. Arthur Matthews, and Mr. Malins.

After the loyal toast, "The Kingston Piscatorial Society, coupled with the health of the President," was proposed by Mr. W. H. Cate (vice-chair), he said that the K.P.S. had jumped into the foremost rank of angling societies. They

MR. A. W. HOMERSHAM, J.P.

had about 100 members, and that they were keen and skilful anglers there was every evidence by the fish which were shown in the room. The members travelled to remote parts of Ireland and Scotland, even to the Orkney Isles, in search of sport, whilst others have been content with the Thames and the Broads. They had caught pike of 24lb., and bream of 8lb. 9oz., which was an unparalleled size. They were not content with taking fish out of the river, but were strongly identified with the Thames Re-stocking Association, which was founded by their hon. sec., Mr. Amphlett. They had a worthy president, who was always willing to do all he could to further the interests of the society. He was a gentleman in the best sense of the word. It was a pleasure to meet him at their meetings, and he deeply regretted to hear of the illness of Mrs. Homersham—(hear, hear)—for it was mainly owing to that that their president had not of late been able to follow his sport among the fish; but they all hoped for better things for him in that respect, and that his wife would soon be restored to health. Might the club and its president long flourish.

The toast was accorded musical honours, and

Mr. A. W. HOMERSHAM, in replying, said he should like to see the membership of the society increased to 250, and if every individual member would help this could be achieved. Each member should, before the next annual meeting, introduce a new member. (Hear, hear.) He congratulated the club upon its specimen fish, especially Mr.

Hayer, Mr. Sinibaldi, and Mr. Gunn. If they could not get to Timbuctoo to fish they must be satisfied with the Thames. (Mr. Arthur: "A very good river, too.") The Thames and the Broads wanted a lot of beating. It was his hunting ground. It was where he obtained most rest after hard work; and his wife generally accompanied him on these trips, and also fished, for she was a most ardent angler—(hear, hear)—and they had had many a good day's fishing. He would like to see the members attend well on "show days," that was when fish were weighed-in on competition days. He hoped that the club would continue to flourish, and that it might always be known in this little Britain of ours for many years to come. (Cheers.)

Mr. T. LYNE then proposed "Kindred Societies and Visitors." He said, he naturally felt a great interest in this toast, for the cementing of good social amity amongst anglers was an important point. Their visitors belonged to other angling societies. He was glad to see Mr. M. Enright present, also Mr. A. E. Hobbs, whose splendid record amongst Thames trout must be a source of great gratification to him. They had also Mr. G. H. Howard present. They were glad to know "Dragnet," for he was recognised throughout the angling world as the angler's guide, philosopher, and friend. Therefore, they welcomed him with heartiness. They kept only one brand of welcome, and that was the very best, and he would ask him to kindly respond.

Mr. G. H. HOWARD, in responding, addressed them as "My lords and gentlemen of the jury," and said he appeared on behalf of his client, and was there to obtain damages for the loss his friend had sustained. He begged pardon, but was slightly mixed, having just been cabined in the jury box at the Law Courts for seven hours, and he had told the judge just what he thought of the case, and asked him to settle it quickly, as he had to get away to the K.P.S. annual dinner. While counsel were arguing, he had written down something about kindred societies, but had left his note-book in the jury box. (Laughter.) He was glad to meet the members of the K.P.S. and to hear friend Lyne propose that toast, for it was more in his line. If they put their shoulder to the wheel they would soon have one of the best societies in the world. They had eleven angling functions fixed for that night, but, nevertheless, he had come to Kingston in a blinding snowstorm. But someone had said, "one touch of nature makes the whole world akin," he believed it was his old friend Charles Dickens. (Laughter.) Perhaps he was thinking of kindred societies. (Laughter.) He echoed the sentiments of the other visitors when he said that they had been heartily invited, warmly welcomed, and splendidly entertained. He hoped the society would long live, and try and increase its sphere of influence. (Hear, hear.) He hoped to be invited again next year or there would be a row. In conclusion he said, "The K.P.S. is alive. Keep it alive and thou shalt live." (Laughter and Cheers.)

Mr. A. E. HOBBS, who was also called upon to respond, said he was most pleased to be present. He had bargained with Mr. Amphlett to be left off the toast list, but the chairman had succeeded in getting him on his legs. The work of the Henley Association was not at all easy, through the lack of interest amongst anglers; but he was gratified to announce that he had lately received donations that had not been definitely asked for. He appreciated that, for the principle which prompted those clubs to give towards his association was a very honourable one. If only one half of the great angling societies were to give a little, much good re-stocking work might be done in a quiet way, which would take a deal of beating. Every penny was spent in re-stocking and preservation work, and he hoped that what had been accomplished was only an instalment. If any of those present wished to go to Henley for a Thames trout, and if he (Mr. Hobbs) knew of one, he would be only too pleased to put them on to it. He could, of course, not guarantee that they would catch a fish, but he would show them one. (Hear, hear.) They must go early in the season, as in the later months they were not blessed with a good water supply, and the stream became very slack except at the weirs.

The CHAIRMAN then proposed "The Prize Winners." They had an excellent list of prizes,

and he took that opportunity of thanking the donors. He congratulated the winners. They had probably spent a good deal of time before they secured a specimen. They only gave prizes for specimen fish—(hear, hear)—and the members had, doubtless, caught many other fish besides those which had won their prizes. He felt sorry that he did not figure in the prize list, and that his silver cup had not been won. He had two taken last year. One was won, and the other was stolen. (Laughter.) He should offer the cup again, and he hoped that it would be taken during the coming season.

The prizes were then distributed, the following being for specimen fish:

SILVER CHALLENGE CUP, Mr. M. GUNN.

Description.	Name.	Weight. lb. oz.
Thames Trout ...	G. Sinibaldi ...	7 6
" " " " " "	P. Armfelt ...	6 4
Barbel " " " "	M. Gunn ...	9 11
" " " " " "	F. H. Amphlett ...	8 1
Pike " " " " " "	M. Gunn ...	15 15½
Roach (Silver Cup) ...	F. H. Amphlett ...	1 15½
" " " " " "	F. J. Girling ...	1 12½
Bream " " " " " "	D. Hayer ...	8 9
" " " " " "	H. E. Lukyn ...	4 6
Tench " " " " " "	D. Hayer ...	4 9
" " " " " "	H. P. Hill ...	2 3
Brook Trout " " " "	" " " " " "	3 0
Chub " " " " " "	P. Armfelt ...	4 12
Perch " " " " " "	M. Gunn ...	1 5½
" " " " " "	F. Littlewood ...	1 5
Dace " " " " " "	T. Lyne ...	0 13½
" " " " " "	M. Hill ...	0 8½

Several prizes were also awarded for competitions.

In presenting the challenge cup to Mr. Gunn, the Chairman said that as the cup had to be won twice before it became the property of the winner he hoped that Mr. Gunn would be again successful next year. (Hear, hear.)

Mr. GUNN said he was very proud to be the winner of the cup and his other prizes, for they were not easily won. His fish had all been caught within five miles of Kingston, and owing to the excellent work of the T.R.A. there should be very little excuse for not getting good fish from the Thames. They were there, and only wanted finding. He had noticed six otters at work at Hampton, and there was evidence of destruction daily. Two trained otter hounds and a man ought to be employed, and he would subscribe to a fund for such a purpose if it were started. They had tried traps, but the otters were too artful. He would like this matter brought before the interested persons.

Mr. A. DRINKWATER then proposed "The Hon. Secretary and other Officers," which, he said, he did with the greatest feelings of sincerity. They knew what Mr. Amphlett's work had been in that club, and of his courtesy, friendliness, and immense energy, which had been the main factors that had brought the club to its present position. He was proud to know him, and trusted that he would long know him as a personal friend. The committee, too, was composed of excellent workers, and as long as they had such a set of fellows the club could not but go on and increase in prosperity. (Hear, hear.)

Mr. F. H. AMPHLETT, in response, said that he thoroughly appreciated the kind remarks of Mr. Drinkwater; and he agreed that the committee worked conscientiously, and whether it was a new member or an old one they had the same treatment. Members appreciated short after-dinner speeches, so he would condense what he had to say into headlines, as follows:

Kingston Club—very strong;
Full of life—nothing wrong.
100 members—love the lot;
Splendid record—not a blot.
List of prizes—very fine;
Fishing for them—sport divine.
Clubhouse question—same old tune;
Need not worry—settled soon.
Subscriptions due—from some of you;
So hurry up—or you will rue.
Enjoyed your dinner—quite a treat;
Here I ought—to take my seat.

But before doing so he would like to add that during the close season the rules of the club would be brought up to date. They had a punt on the Thames for the free use of members, and this ought to induce some London anglers to join, as it would be a great financial saving to them. He believed it was the wish of the members that at the next annual meeting Mr. A. Drinkwater should be elected a vice-president of the society—

(loud cheers)—and Mr. Drinkwater well deserved it. In reference to the otters, the T.A.P.S. had bought twelve traps, and they were all distributed, but he had not heard that any otters had been caught by them. The T.R.A. did not profess to be a preservation society. It confined its work to restocking, and that day he had received a letter from a Mr. Charles Dejonge from Malta, inclosing a donation. This showed that the work of the T.R.A. had already become known outside of this country. The hatchery for the Thames would only be started if sufficient funds were received to enable the association to do it properly, and an effort was now being made to raise the necessary funds. He thought, too, that the K.P.S. should subscribe towards the Henley Association. (Cheers.) Mr. Littlewood had been obliged to resign the assistant-secretaryship of their society, and he thanked him for his past work, and announced that Mr. Armfelt had agreed to undertake the duties in future. (Cheers.)

Mr. F. SANDS also responded, and said, as treasurer, he would urge members to put their names in his account book as soon as possible, so that the accounts could be settled promptly.

Mr. J. R. RICHARDSON, in proposing the "Press," said he had had the pleasure of proposing that toast at each dinner the society had given, and he had nothing but what was good to say of the Press. They regretted the absence of Mr. Senior, of the *Field*, and Mr. R. B. Marston, of the *Fishing Gazette*, but he had been worthily represented by Mr. Howard. They also regretted the absence of Mr. Matthews, of the *Angler*. Three local newspapers were represented, and they must not forget the editor of *Thames Angling News*, whose new paper they took such a pride in. (Hear, hear.)

The *Surrey Comet* representative having responded, the prize list was sent round, and over £25 was offered in the room.

The following new members were proposed: Mr. Percival Turner (of Hampton Hill), Mr. T. Baxter, Mr. E. Fielder, Mr. E. Caines, Mr. M. Enright, Mr. W. R. Nightingale, Mr. Newman, Mr. H. Offer, and Mr. H. Ivimey.

During the evening a splendid musical programme was rendered, the artists being Mr. D'Anville (Prince of Wales Theatre), Mr. Fred Edwards, Mr. M. Enright, Mr. W. H. Cate, Mr. A. S. Martin, Mr. F. Arthur, Mr. T. J. Smith, and Mr. W. R. Nightingale.

THE HOME OF BIG ROACH AND BREAM.

HAS it ever been your lot, "Gentle Reader," to be placed in that happy position of not being able to add a single specimen of an undersized roach to a bag that would probably plump down the beam at 35lb.? In a spot where sport continues throughout the all too short winter's day, and when thumper after thumper, and tonker after tonker, has found its way to that receptacle in the punt, from which it is conveyed to the setter-up? Such has been my good fortune on several occasions during the last three years, upon which occasions I have never brought home a roach under 1lb., nor a bream under 3lb.

I would premise by saying that, in early life, I held rank as a good cricketer, in fact, had my engagements permitted it, I should have, in the early sixties (being invited by Mr. Burrup), appeared for the county of Surrey. I was, upon one occasion, playing in Battersea Park, against the Civil Service, and fielding at long-on. A ball was hit to the long-off, when the fieldsman, running backwards, at full-speed, essayed to take the ball, as a chance. Instead of holding it, he so badly judged it, that it fell upon the top of the third finger of his right hand, driving the nail down into the "quick." The man fainted from pain, and I held him, while a medical man, who was upon the ground, extracted the nail. Thirty years after this, a gentleman was driving a dog-cart through Epsom. As he passed, he and I looked hard at each other, and simultaneously nodded. I had seen the face before, but could not recall to my mind the when or the where. Observing that he pulled up at the King's Head, I retraced my steps, where I found him at the bar. The time and circumstance then flashed across my mind, and I put the question to him: "Did you, about thirty years ago, meet with an

accident in Battersea Park, at a cricket match?" "Yes!" replied he, "had my nail driven down by a falling ball; and you're the man who helped me." "I thought I had seen you before." Of course, another bottle was ordered, and we drank to past memories. In the course of conversation it came out that I was an angler. "Would you like a few days where the roach and chub are very large, and where the bream, for size, are not to be beaten?" was the question put to me. Of course, I jumped at the offer, and paid my first visit to the chain of fishing stations, from which I have never taken a roach under 1lb. in weight. There are three stations in all, from which the fortunate angler, who obtains the necessary permission, may exercise his vocation, the best being the centre one, to fish which leave is very rarely given. In the eight or ten miles through which the stream passes, there are abundant lay-byes, small lakes, and other places, which act as stews for replenishing the stream, while at the southern end, where the tributary flows into the larger river, a huge pentstock crosses the stream, and effectually bars the escape of the corpulent roach, the aldermanic bream, and the big logger-headed chub.

The time, that is to say, the best time, to fish these stations is when a strong freshet comes down from the uplands to colour the water, and a few days ago, the opportunity presented itself to me. I started off the night before, in order to be at the fishing ground by early dawn, which I easily managed, by arranging for a bed and early breakfast at an inn in the neighbourhood. I found the punt all ready in the morning; but, as the help of an attendant fisherman was strictly forbidden, I had to do my own punting, and my letter of instructions and introduction expressly said that I was to hold no conversations with workmen, and that smoking was strictly prohibited. I found it easy to comply with both regulations, as I never smoke when angling, and no workmen passed the spot where I was located. Time was when I was a fairish puntsman, but advancing years, and the amount of adipose matter which one puts on as those years advance, made my progress up stream rather a difficult one; but at last I reached the desired spot, and anchored by one of the small inlet islands. Trees and shrubs were thickly planted everywhere, and I saw the big roach dodging in and out among the boughs of those trees that stretched out into the stream. Plain bread, well soaked, so as to flake at intervals is the only way to ground-bait, and bread-crust is popularly supposed to be the only bait that will bring the roach to the creel. I carefully squeezed a part of a well-soaked loaf, and quietly allowed it to slide from my hand into the eddy. Then, with new tackle ("Hercules cast"), to which was attached a No. 9 hook, I sent my dainty bit of red and white crust upon the waters. The first swim was a failure, so I worked the bait well into the spreading boughs, and hitched the No. 1 plait-line over a piece that jutted higher than another, to keep it in position. In a few seconds the float began to shiver, or tremble, rather, and then it disappeared like a flash. I struck, and drew the struggling and powerful fish round to the outside of the punt, played him there, and lifted him, as soon as I possibly could. He turned out to be a splendid specimen roach, apparently about 1½lb. in weight. I could not help stopping to admire him, as he lay on the straw at the bottom of the punt. I then placed him in the well, and went on with my work. From the same spot I took two others, nearly the same weight. Then I saw that the fish had moved lower down, no doubt, from being disturbed. I therefore followed them, and pursued the same tactics, tying one end of the punt to a bough, or twig, rather, and just slightly fixing the punt-pole at the other. Fortunately, the water was on the thick side, as, when the stream is flowing gin-bright, the routine is one fish and a move, and occasionally, one fish, and only one, after a long wait, and several moves. From the next pitch I took three fish, the largest of which went just over the 2lb., and still the immense shoal of big roach moved onward with the stream to the next clump of spreading bushes, where I gently followed them. The water at this point ran somewhat deeper, and inclined into a little bay, that looked as though it held the fish. I was not mistaken; there they were, and from this spot I took six fish, all of the same pattern as

the former lots. I had now shifted down to the spot where the bream were to be found, so, as I was about a mile from the spot from which I started in the early morning, I determined to leave the roach for a time, and to try for bream. I cast the broken lohs well down the stream, and trotted down to their hole, or habitat. The float sailed gently away, and then slowly disappeared. Striking, I found that I was well into a fish that felt like a roach; but I was mistaken. It was no roach, but a splendid bream, and what appeared in the preliminary canter to be merely a 2lb. fish was really one of the largest bream that I had ever had the pleasure of impaling upon my hook. It was quite a minute before the real struggle began, and then he commenced to show his true colours. Once I brought him close to the punt, and saw his white belly, when down he surged again, in the direction of his haunt. Certainly I had never had a bream to give me so much play; but at last he turned upon his side, and I placed the landing-net under what proved to be a 6lb. fish. I took two smaller ones from the same run, when I had a period of quietude, and I began seriously to think of again going for roach. But after another swim or two the bait was taken, close up to the punt, and in response to the stroke another beautiful fish fought out his last battle. He took me all over the water, and at one time I must have had out 40yds. of line. Once, I thought I had lost him, for, in removing my right hand from the reel, the handles caught my fingers, and jarred tremendously. But my good fortune continued, and I still held him; but it took a good ten minutes to bring him to the punt in a condition for lifting. On placing him upon my steelyard, his weight proved to be 6lb. 3oz., the largest bream it has ever been my lot to capture. Owing to the hustling rushes of the last fish, the bream went off, and as it was past 3 p.m., I spread out my lunch, uncorked the "Bass," and spent at least an hour at my repast, and in admiring my fish. The roach in the well gave signs of "turning it up;" but the bream were very lively. I therefore took the roach out, and gave them their quietus. At 3 p.m. I recommenced lower down and took three more roach and one bream, when, as the day was waning, and the clouds became lowering, I decided to give up for the day. For scientific reasons, and for reasons otherwise connected with the manufactures that are carried on, permission to fish this water is rarely given. The fisherman whom I wished to take with me informed me that the company refused their own relatives, and that there was no chance of him being allowed to accompany me. But by a "side wind" I obtained leave for myself, and as I before remarked, have for the last three years fished one or other of the stations described.

STRAW HAT.

A WINTER VISIT TO A NORWEGIAN RIVER.

ONE day towards the end of last summer we happened to remark, probably for the nine hundred and ninety-ninth time, that the "Stangdal," a stream in Southern Norway, on whose banks our lot was temporarily cast, could not possibly get any lower; whereupon, our ally, "Stor Johan" (as he was called, on account of his many inches), annoyed probably at the frequent enunciation of the statement, suggested that if we would only visit the river in question during the winter we might alter our opinion. In a rash moment we ventured to declare our absolute disbelief in the possibility of such a state of matters, and, furthermore, that in order to prove ourselves right (or, as it turned out, *wrong*), we would visit the valley the following January. Hence this brief paper, some interesting experiences, and our present abode.

Having reached the Danish capital overland just after the New Year, we thought we might, without serious discomfort, venture on the voyage to Norway (usually a matter of some thirty hours, or even less) by steamer; but at a dinner party we heard such awful accounts of the weather in the Kattegat and off the Swedish coast, and of the fogs in the Christiania Fjord, that we elected to stick to the railway as being the more certain mode of transit. From Copenhagen *via* the ferry between Elsmore and Helsingborg (over which the mail train is conveyed bodily), Göttenburg and

Frederikshald to Christiania is a journey of about twenty-two hours. Under ordinary circumstances it is *not* exciting, but, unused to travelling in the north in winter, to us it was interesting. Everywhere there was snow and ice; along the margin of the fjords, and on the bays and inlets thereof; on the innumerable Swedish lakes, streams, and canals; on the dreary moorlands and morasses, and throughout the interminable forest tracts. Heavy masses of snow weighed down the pines, and the leafless trees and shrubs were outlined, every branch and twig, with hoar-frost, which glittered beneath the rays of the cold winter sun; while icicles of stupendous dimensions depended from and clothed the rocks on either side of the many deep cuttings. At the Sarpsfoss (over which the line passes) we received a shock, and for the first time began to entertain serious doubts as to the correctness of our judgment in regard to the summer and winter levels of the Stangdal. No mighty torrent rolled down the pass with sullen roar; no cloud of spray hovered o'er the tortured waters and glittered beneath the moon; the great cataract was reduced to such insignificant dimensions that the most energetic sightseer would have scorned to cross a space as wide as Piccadilly in order to inspect it; while above the fall the bed of the Glanmen stretched away hare, dreary, and lifeless—a steamer or sailing craft, high and dry every here and there, giving evidence of the tremendous shrinkage of the great river.

In Scandinavia they think much of Christmas. Some people, indeed, reckon that there are twenty Christmas Days, counting from Dec. 25 in each year, and act accordingly in the matter of festivity. So, indeed, it appeared, and although the first week of the new year had very nearly expired, the population seemed to be decidedly on the *qui quae*. The restaurants at the various stations were all gaily adorned with Christmas trees, and full of somewhat lively natives; the hells of sledges, full of holiday folk, were everywhere in evidence, and queerly attired little children humped and bounded in "kilks" down the slopes in every direction. Ice, snow, sleighs, and furs permeated the atmosphere, and, except on the railway line itself, wheels were invisible.

Over Christiania hung a pall of fog, and within the town, owing to the comparatively slight quantity of snow that had fallen, sledging was a somewhat doubtful pleasure; ere long, however, and by various stages, we reached our destination, a pine-clad valley sheeted in winter garb (down which trickled a streamlet, in the iron grasp of King Frost), and finally, at the head thereof, a comfortable homestead.

A big capercailzie (victim of "Stor Johan's" rifle) and smoked trout, washed down with libations of remarkably good home-brewed ale, constituted the evening meal; then many pipes, and—to bed at a disgraceful hour. Our host had been fortunate enough to kill three elks the previous autumn, one of them an "egte stôr ox," whose great palmated horns adorned the "spise sal"; wood game birds had been fairly plentiful, and foxes were less numerous than usual, owing probably to the presence in the neighbourhood of a small troop of wolves. But Johan abused the latter freely, and had done his best to trap or poison them, as they had done a lot of damage, not only among the flocks and herds, but among the elk, upon which he set much greater store! There had been a fair show of salmon upon the spawning beds, and a terrible big chap—local gossip said of 30 kilos—had been speared up near the foss. And so on; a lot of "haivers," pleasant to listen to and discuss over the baccy and the whisky toddy, the principal ingredient for which we had brought from beyond the Tweed, to rejoice the heart of our host, and to comfort our own withal, in these northern wilds.

The next morning at 9.30 we breakfasted by the light of the rising sun, which shone red and frosty across the snow covered landscape. Shortly afterwards a merry jingling of bells announced the advent of our sleigh, and in a few minutes we were flying over the snow, clad from top to toe in furs, towards the "Red Pool," behind the "blaa hest," a worthy animal, which, in spite of his thick, rough coat, made much better time in winter than he was wont to do in summer, when the meadows are gay with wild flowers and the haycrop is not yet gathered. "Now we shall see,"

remarked Johan from the depths of his wolfskin garment, as after a delightful spin through the buoyant air we reached the end of the woodland path that leads to that famous cast. One glance sufficed to assure us that our companion had been very much in the right; no one, indeed, who has not visited a Norwegian river in winter can imagine the shrinkage that takes place when the earth and the snow on the mountains are frost bound, and when all the springs and confluent from which the main stream derives its volume of water are from the same cause rendered inoperative. The cliffs on the opposite bank (from whose colour the pool derives its name) were sheeted in ice, and huge icicles depended on either side of the little fall at the head; it was as much as our life was worth to venture along the ledge, from which in summer time we are wont to throw *la ligne volante*, and to play the fish attracted by our offering of fur and feather; while the cast itself was a truly melancholy spectacle. Between two sheets of snow-covered ice, which commenced on either side of the miserable dribble that filtered down the fall, and which ran the length of the pool, a narrow stream of black looking water flowed; the erstwhile great rapid below (down which, encased in waders, we have struggled times without number in the endeavour to land salmon imbued with an insane desire to revisit salt water) was pretty nearly filled up to the surface with ground ice, and every rock and boulder had its crystalline covering. A grand salmon cast, indeed, and a grand piece of spawning ground below it, forsooth!

At first it seemed as if there had been some mistake, and that Johan, with intent to "frivol," had taken us to another locality altogether—another world, one might almost say. But no, the place was the same, the circumstances only different. There behind us stood the great red pine, beneath whose "spreading shade" we had been wont to rest (and drink libations of Norsk Ol) between the periods of pounding; the black point of rock upon which Johan used to stretch himself, gaff in hand, in act to strike, jutted out into the ice below; and in the hirsch thicket that crowned the opposite cliffs we could descry the little hay house, a familiar feature, deeply buried in the snow.

The temperature of the air was hardly suited for *al fresco* pipes, so once again mounting the chariot drawn by the "blaa hest," we glided down through woodland tracks to inspect some of the lower reaches. If possible these were more altered in appearance and surroundings than the casts above. Ice extended over their greatly narrowed width from bank to bank; here a collection of logs protruded above the frozen surface, and there a melancholy looking boat was dimly discernible through a dense coating of snow and ice. Of bird life in the woods there was none—no more magpies or croaking grey crows, no chirping of small birds among the branches; but down near the fjord a few depressed looking gulls were picking up a precarious livelihood along the frozen watercourse. It was enough; a Norwegian river in June or July, with its plenitude of power, its brimming pools and foaming rapids, winding between leafy woodlands and pine-crowned cliffs, is an altogether delightful spectacle; but in winter—well, we do not intend repeating our recent experience!

Three more days with good old Johan—days in the forest, rifle in hand, in search of the wily capercailzie "paa top," succeeded by restful evenings in the quaint old farmhouse (inhabited by our host and his forbears for generations), and here we are at a well-known winter resort in the neighbourhood of the great valley of the Drammen river. Although in front of the house there is a nice trout lake, angling can hardly be referred to as one of the pursuits indulged in therefrom at the present season of the year; still there are plenty of fishing yarns about, with which of an evening the brethren of the rod encourage one another. Except sleighs "ski" may truthfully be described as the only means by which people of all classes, men and women, young and old, now condescend to get over the ground from any one point to any other, be the distance 100yds. or 100 miles. Inside the sanatorium rows of "komager" and fur garments of every sort and description adorn the passages and halls; outside there is any amount of snow and 10° Réaumur of cold. Clad in suitable

clothing, and shod with the long ski, every living soul turns out, irrespective of weather, after breakfast, either to perform artistically upon the snow-clad surface or to tumble about ignominiously (but apparently with equal pleasure) *en amateur*. It is all very well for bairns to learn to go upon ski—they have not far to fall—but for the “grown pusson” it is (literally) an altogether different pair of shoes. We speak from painful experience!

On one occasion, while making our way very gingerly through the woods, we overheard sounds—those of the human voice—which recalled to our memory times passed in the society of certain kinds of beasts of burden (Cape oxen, Spanish mules, camels, Hampstead “mokes,” and the like) which required elaborate language on the part of their drivers to induce them to do their duty. It was an American colonel taking private lessons on ski!

Reference has already been made in this paper to the Glommen, which, after draining over 40,000 square kilometres of country, forms the Sarpsfoss and discharges on the coast of Smaalenorut Amt at Frederikstad. Some idea of the volume of water which this, the largest river in Norway, discharges, and of the fluctuations to which it is subject, may be formed from the following, translated from a Norwegian official work:

“The volume of water in Glommen varies greatly at different periods of the year. Exceptionally high floods occurred in the years 1675, 1740, 1773, 1789, 1808, 1827, 1828, 1846, 1850, 1860, 1863, and 1867. The flood of 1860 is the highest known on this water system. According to measurements taken at Blaker, above “Oieren” (an extensive lake from which—some fifty kilometres above the Sarpsfoss—the Glommen flows) the volume of water in transit was then 3,900 cubic metres per second. At the Morkfoss, immediately below “Oieren,” and at Sarpsborg water gauges are placed. At the former zero stands 97.8m., at the latter 25.1m. above the sea. The average height of the water during the period 1847-1876 was 4.8m. in Oieren, and 0.75 at Sarpsfoss. When at this level the Glommen discharges 650 cubic metres, which may be taken as its average.

“In 1860 the water marks showed a height at the Morkfoss of 10.45m., and at the Sarpsfoss of 7.86m., while the lowest known level at the former is 1.27m., and at the latter 2.67m. Like all Norwegian rivers, the Glommen is at its lowest in February and March. During the preceding months the country which it drains has been under the influence of hard frost, and the sources of supply have therefore been reduced to a minimum, while any fall that may have taken place has been in the form of snow. To such an extent does this apply to Glommen that in some parts at that period of the year its breadth is reduced to one-tenth of its summer size, and tracts of sandy mud brought down by the floods are exposed to view. In winter these mudbanks being, of course, frozen over, people can walk and drive upon their surfaces; but when the thaw comes in spring, quantities of fine dust are blown from them on to the grass, upon which it has an injurious effect, rendering it unhealthy for cattle.”

Excellent trout and grayling fishing may be enjoyed on the upper waters of the Glommen; but although perfectly accessible as far as the Sarpsfoss, a distance of eighteen kilometres from the fjord, remarkably few migratory fish ascend it. Salmon and sea trout have been and still are occasionally taken with the rod among the heavy rapids below the great fall, but in such insignificant numbers as hardly to be worth mentioning. Whether this singular antipathy on the part of the salmon to a great volume of fresh water is due, as many people believe, to the masses of clay which the river discharges, to the quantities of refuse from the numerous saw-mills, or, as Herr Landmark, the Government Fishing Inspector would appear to think, to the lowness of the water temperature in spring and early summer, it is hard to say; the fact remains that the Glommen is not a salmon river in the proper sense of the word.

In conclusion, it may be remarked as illustrative of the character of Norwegian rivers, that the Glommen and the Drammen, two of the most important water-systems in the country, and which drain nearly 60,000 square kilometres, are accessible to migratory fish for some fifty kilometres only.

“RUGDE.”

THE BUCKLAND MUSEUM.

THE memorial praying that the Buckland Museum of Economic Fish Culture shall be maintained and kept in an efficient manner, in accordance with the terms of the bequest accepted by the Department of Science and Art, has been numerously signed, and this week was forwarded to His Grace the Duke of Devonshire, Lord President of the Council, and the Right Hon. C. T. Ritchie, President of the Board of Trade. Full details of this movement were published in the *Field* of Dec. 3, and it may be remembered that it arose from the recommendation presented to Parliament last year by a Committee for the abolition of the museum. Previous recommendations to the same effect had been made, one of the allegations being that the collection was dangerous, because of the amount of alcohol in which the fish were stored. Another objection was that the museum was obsolete, and did not carry out the obligations under the testamentary conditions of Frank Buckland's will. There was no public attempt to obtain signatures, but a thoroughly representative list was obtained. Amongst others the memorial is signed by the Dukes of Richmond and Gordon, Beaufort, Bedford, Northumberland, Sutherland, Westminster, and Abercorn, the Marquises of Tweeddale, Bute, Dufferin and Ava, Worcester and Granby, the Earls of Home, Stamford, Sandwich, Jersey, Portsmouth, Radnor, Kimberley, and March, Lord George Hamilton, M.P., Viscount Powerscourt, Viscount Folkestone, M.P., Lords Chelmsford, Tweedmouth, and St. Levan, Lord Justice A. L. Smith, Sir William Harcourt, Q.C., M.P., Mr. Justice Ford North, the Hon. A. Lyttelton, M.P., the Prime Minister, the Fishmongers' Company, Mr. R. B. Martin, M.P., Sir Watkin Williams Wynn, Sir W. Wedderburn, M.P., Sir E. Grey, M.P., Sir E. Birkbeck, Sir L. Lyell, M.P., Sir E. Hill, M.P., Sir Spencer Walpole, Sir T. Brady, Sir W. Priesdy, M.P., Judge Bompas, Mr. Aird, M.P., Mr. Bousfield, Q.C., M.P., Mr. Buxton, M.P., Mr. Burdett-Coutts, M.P., Mr. Cradock, M.P., Mr. J. H. Johnstone, M.P., Mr. Lough, M.P., Col. Wyndham Murray, M.P., Mr. Pinfie, M.P., Mr. Pollock, M.P., Capt. Pretyman, M.P., Mr. Walton, Q.C., M.P., Mr. J. Williams, M.P., Mr. H. Pfenell, Mr. R. B. Marston, Mr. W. Senior, the Rev. Walter E. Buckland (nephew of Frank Buckland), Mr. George Cox Bompas (brother-in-law of Frank Buckland), with representatives of many piscatorial societies and the chairman of various provincial fishery boards. The memorialists point out that the select committee consisted of fifteen members, of whom seven only approved the report, three, including Sir John Gorst, voted against it, and five abstained. Against the opinion of Sir John Donnelly and Major-General Festing is cited that of Sir Richard Owen, who considered that the collection would be a most valuable appendage to the Salmon Fisheries Commission and Office. The memorial relates the history of the museum, and submits suggestions for extending its usefulness as suggested on different occasions by the Prince of Wales and by Professor Huxley. For this, the co-operation of the Board of Trade is considered essential. It should, it is submitted, be made a part of the duties of the Inspectors of Fisheries to preserve and deposit in the Museum of Economic Fish Culture any objects of permanent interest which may come under their notice, together with photographs or models of improvements in fish-passes, fish-culture apparatus and appliances, and other matters useful for reference or record; while the inspector's knowledge and varied experience may perhaps be further utilised for the public benefit by lectures in connection with the museum. The secretary and inspectors of the Fisheries Department, together, perhaps with representatives of the Fishmongers' Company, or other important bodies connected with the sea and river fisheries, should, it is suggested, be appointed visitors to advise on and aid in the management of the museum. The memorialists have asked the Duke of Devonshire and Mr. Ritchie to receive a deputation, to be introduced by the Earl of Portsmouth. The Duke of Devonshire, however, will not be able to receive them till after Easter.—*Field*.

BRISTOL GOLDEN CARP ANGLING ASSOCIATION.

ON Wednesday last the twentieth annual dinner of this association was held at their headquarters, Crown and Dove Hotel, Bridewell-street, when between sixty and seventy members and friends sat down to a capital repast. Mr. R. D. Frost presided, Mr. D. M. Ford occupying the vice-chair.

The chairman, in submitting the loyal toasts, spoke of the Royal Family as being ardent anglers, and he believed there were no more loyal subjects than the angling fraternity.

The vice-chairman, in a lengthy speech, submitted “Old England's Defenders,” and Trooper T. F. Griffiths suitably responded, remarking that good old English pluck still existed amongst our ranks.

Mr. C. Franklin proposed “The Bristol Golden Carp Angling Association,” coupling with it the names of Mr. R. D. Frost (president) and Mr. Lewis C. Wride (secretary). As one of its oldest members, he felt proud to propose the toast of the evening. He felt sure the secretary's work was not an easy task; nevertheless, Mr. Wride had one object in view which he worked very hard to maintain, that object being to keep the G.C.A.A. at the top of the tree, and as long as they had a good man at the wheel they had nothing to fear.

Mr. R. D. Frost ably responded.

Mr. Lewis C. Wride thanked Mr. Franklin for coupling his name with the last toast, also for his very flattering remarks. He agreed with Mr. Franklin that there was always plenty of work for the secretary to do. Still, no matter how good the secretary may be, he must have a

good working committee if success was to be obtained, and he was pleased to say they had a committee second to none, which was the backbone of the society. He was also pleased to state that the treasurer had a substantial balance in hand.

A great many names were standing on the books for admission, but as they were limited to 120 members, there were no vacancies at present. He would remind them that the Golden Carp had been established twenty years, and although seven clubs had branched out from this society, they held the proud position of being the largest of its kind in the west of England.

Mr. W. H. Mallard proposed the health of the visitors, who had so kindly assisted in making so large a gathering, which was ably responded to by Messrs. J. Webb and N. C. Hariman.

Mr. E. Havill proposed the health of the president and vice-president, remarking that they were not only two jolly good fellows, but were also two jolly good workers. Mr. R. D. Frost responding, thanked those present for their kind support.

A hearty vote of thanks was accorded to Host Crombie for the manner in which he had catered; also for his general kindness to the society.

LEWIS C. WRIDE.

WHY NOT SOCIAL ANGLING ASSOCIATION (WOLVERHAMPTON).

THE sixth annual dinner was held at the Why Not Inn, Stetthouse-lane, on Tuesday evening, the president in the chair. Amongst the company, which numbered over fifty, were Alderman Craddock, Councillors T. H. Parky, G. F. Steward, and A. Lamsdale, Messrs. E. Potte, F. J. Nickless, W. Stevens, H. O. Lowe, W. Smith, S. Severns, J. B. Hennefer, A. Jessop, E. Hartshorn, W. Cleve, B. Jones, W. Blues, F. Brommage, H. Rollason, W. Rutter, J. Simmons, W. Bennett, &c. Letters of apology for non-attendance were announced from Alderman McBean (ex-Mayor), Councillor E. C. Pratt, Messrs. G. Craddock, T. H. Sawyers, and F. Myatt. An excellent repast was provided by the host and hostess, Mr. and Mrs. Knottley. Afterwards, the loyal toast being honoured, Alderman Craddock most ably and wittily proposed the toast of “The Association,” and remarked upon the successful results which had attended its past year's working. Financially, they had a balance in hand of £7 18s.

Mr. Councillor Johnson suitably responded.

Mr. Stevens (chairman of the association) proposed the health of the vice-presidents, the list of which, he said, would compare favourably with that of any similar association throughout the country. (Cheers)

Mr. Councillor F. H. Parkyn responded.

Mr. Councillor G. F. Steward proposed the health of the president Mr. Councillor Johnson, and stated he would be pleased to give the association a prize. The chairman having responded, an excellent musical programme was proceeded with, amongst the contributors to it being Messrs. E. Eccleston, H. Rollason, F. Brommage, H. Jones, B. Jones, &c. Mr. S. Lamsdale ably accompanied on the piano.

J. W. VANN.

HAWES AND HIGH ABBOTSDALE ANGLING ASSOCIATION.

THE annual meeting of the above society was held recently in the Crown Hotel, Hawes. There was a large attendance, Dr. Grime in the chair. Mr. Platt gave the financial statement, which showed that the total receipts had been £72 10s., and that a balance of £36 12s. 11d. remained in his hands to the good of the association. The report also stated that 2000 yearling trout had been purchased and put into the tributary waters during the year. The Earl of Wharfedale was re-elected president; Mr. T. E. Platt, treasurer; Mr. B. Thompson, secretary; and Mr. James Fawcett, Crown Hotel, assistant ditto, from whom all tickets are to be obtained. Mr. E. Moore, Harrow, was added to the list of vice-presidents. A resolution was carried to purchase and insert 2000 additional yearling brown trout in the tributary streams at as early a date as possible. The annual dinner was held at the Crown Hotel on Wednesday evening, March 22. Mr. G. Broderick occupied the chair, and, in addition to the members of the association, about sixty farmers having water used by the association attended with free tickets, and an enjoyable evening was spent. Toasts to the Queen, the Hawes and High Abbotsdale Angling Association, the farmers present, and the host and hostess were unanimously given, in proposing which Capt. Fryer, Mr. Moor, and others strongly condemned spawn fishing and other illegal baits, and hoped every member would do his level best to have those practices suppressed.

J. ROUTH.

LARGE PIKE.—It was reported last week that Mr. A. Menzies, of Watgate, Grantham, had taken out of the canal water, connected with the Grantham Angling Association at Denton Bridge, a handsome pike, weighing 16lb. 2oz., and since then Mr. R. G. Briggs, of Leicester, has landed one of similar weight out of the Denton Reservoir, which can only be fished by permission.

TOO MUCH STRESS cannot be laid on the fact that in the whirl of unnatural excitement, and in the struggle for existence in this generation, to attention whatever is vouchsafed to the most ordinary rules of health. When the muscles become relaxed, the nerves over-sensitive and delicately strung, and the brain wears at the slightest task, these symptoms are part of Nature's warning that the delicate organism of the human frame is out of gear. In most cases a gentle stimulant and mild restorative is all that is required to impart fresh vitality to the jaded nerves, and it is a well-known fact that a few doses of Holloway's Pills work wonders, and restore the lost tone of the nervous system.

REVIEW OF PAST SEASON'S ANGLING AT OVERSCAIG.

Now that the trout angling season in the North of Scotland is approaching, it may be of interest to give the following statistics of the sport obtained by anglers from Overscaig Hotel, on the Duke of Sutherland's estate. The details are taken from the well-kept register provided by the estate, and filled up daily at the hotel, but here we only give summaries, which are as follows:—

Months.	Salmon.	Weight.	Ferox.	Weight.	Trout.	Weight.
	mon.	lb.		lb.		lb.
March and April	—	—	—	—	51	25
May	—	—	—	—	102	57
June	4	40	—	—	2396	985
July	—	—	1	5½	4787	1820
August	—	—	4	34½	2606	958½
September	—	—	2	13	367	177½
Totals.....	4	40	7	43	10,309	4023

In the course of the season the various waters yielded as follows:—

Months.	Salmon.	Weight.	Ferox.	Weight.	Trout.	Weight.
	mon.	lb.		lb.		lb.
Loch Shin	4	40	—	—	3011	1495½
Loch and river Merklam	—	—	1	9	1962	1115½
Loch Grian	—	—	1	10	1196	504
Garvie, Gorm, Carru, and other minor lochs and streams	—	—	1	5	4140	908
Totals.....	4	40	7	53	10,309	4023

The sport of season 1898 has been a record one so far as known. The following abstracts will show at a glance the total takes and total weights for each season during the past five years, viz:—

	1894.	1895.	1896.	1897.	1898.
Total fish (all kinds)	5038	8093	7450	7992	10,309
aggregating	0	1	1	1	1
ton.	0	1	1	1	1
cwt.	0	1	1	1	1
qr.	0	1	1	1	1
lb.	0	1	1	1	1
Grand total in five years	38,893				

Regarding the largest number of trout to one boat in one day it may be mentioned that during the season sixty-eight baskets made forty trout and upwards, nine baskets eighty to one hundred trout, and eight baskets 100 up to 185 trout each in one day. The heaviest of individual baskets for one day ranged as follows: Seventeen baskets ranged from 15lb. to 20lb. each, thirty-five baskets from 20lb. to 30lb., and five baskets from 30lb. up to 36lb. in one day. From the foregoing it will be seen that July is the most prolific month for sport, while Loch Shin yields by far more fish than any other loch. Its trout are also the heaviest, being in round numbers about ½lb. each for the whole season. B.

BAD BOLL FLY FISHING CLUB, LTD.

(NEW REGULATIONS GREATLY IN FAVOUR OF NON-MEMBERS.)

The fishing of the club extends to sixty miles, both banks of the river—which is practically the whole length of the River Wutach.

About eight miles of this (i.e. four miles in the immediate vicinity of the hotel, and four miles at a distance of about ten miles) is free to visitors stopping at the hotel.

Weekly tickets enabling visitors to fish the whole of the river, price M. 12.50, and (Government Licence M. 12).

The whole of the river is carefully preserved and stocked by the club—no fish under 9in. may be taken out. All applications for books should be forwarded to—

HERR BOGNER,
Bad Boll Hotel,
bei Bonndorf, Baden.

Or, Herr Fritz, Ochsen Hotel, Thingen, Baden.

There are three ways of getting to Bad Boll:—

1.—To Biele from thence to Thingen and Weizen—drive about fourteen miles to the hotel.

2.—To Freiburg via Strassburg—from thence by rail to Neustadt (twenty miles)—thence drive of about fourteen miles to the hotel.

Freiburg may also conveniently be reached from Biele in about fifty minutes by rail.

3.—To Donaueschingen via Strassburg, from thence drive of about fourteen miles to the hotel.

By either route a carriage would on application be sent from the hotel to meet visitors.

Fare, return to Biele, 1st class, £8 3s. 9d.; 2nd class, £5 19s. 8d. Available forty-five days.

Best train 11 a.m. Victoria, arriving at Biele 6 a.m. next morning; Thingen about 8.30.

The hotel tariff is from six to eight marks per day, exclusive of wine.

Visitors, of course, must adhere strictly to the fishing rules of the Club, which can be seen at the hotel.

The surrounding scenery is lovely, and the river undoubtedly affords good sport.

Any enquiries can be addressed to Mr. Bogner, at Bad Boll; or to Mr. K. Munro, at No. 1, The Sanctuary, Westminster; or B. A. Bevan, Esq., Horsgate, Cuckfield.

SCHOOL BOOKS, DICTIONARIES, &c., including Mr. Jackson's Upright Writing Copy Books, in English and other Languages, published by Sampson Low, Marston & Co., Limited, St. Dunstan's House, Fetter Lane, London. Can be had on application.

LOUTH AND DISTRICT ANGLING ASSOCIATION.

THE annual meeting of the members of the above association was held in the Rising Star, Eastgate, on Monday evening last. The president (Mr. C. W. J. Bell) occupied the chair. The hon. secretary (Mr. Jos. Osborn), read the report and statement of accounts, which showed that the total receipts (with £9 9s. 6d. brought forward from last year's account) amounted to £17 7s., and the expenditure to £9 19s. 6d., which with £44s. for one year's rent of water at North Reston, due 1st June, 1899, would leave a balance in hand of £3 3s. 6d. The report showed that three angling competitions had been held during the past season: two down the canal on June 16 and Nov. 3 last, at which there were four and three prizes given respectively. The other was at Hobhole on Sept. 22, three prizes being awarded on that occasion. The weather on each day was all that could be desired. Lord Henegave gave the members permission for a day's fishing on his preserves at Benniworth on Sept. 1, a good number of members taking advantage. A fine trout was caught by Mr. Clements at this outing, which weighed 4lb., and which has since been preserved by Mr. Kew. Mr. Elsey, of Baumber, also gave permission to the members for a day's outing, on Jan. 19 last, to the lake and ponds at Stourton Hall, which was greatly enjoyed by the members who availed themselves of the opportunity. Very good sport was obtained. The Chairman moved that the report and statement of accounts be passed. Mr. Cartwright seconded, and they were unanimously adopted.

REPORTS FROM RIVERS, LOCHS, &c.

River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The weather has not been genial enough for the trout to make any movement in the river to give evidence of their whereabouts, and inspire the anglers with any encouragement for the opening day at the end of next week. It will be the first time in the history of the Thames river-keepers' dinners I have been conspicuous in my absence, and under any circumstances it could not have been avoided owing to my being physically unable to put in an appearance. There is no denying the fact, these friendly re-unions were of my own origination, and there was no function in connection with the river I enjoyed more than to meet the keepers and others on that occasion. All I could do this year was to send the usual subscription. My great supporter in the first movement was the present Baroness Brndett-Coutts, and it was through her liberal support it was successfully carried on, and limited to the society's own men, and others who were helpers in the work. It was the custom of the late Mr. Gowland, of Crooked-lane, to present on each occasion a choice fat goose; and amongst other contributions in kind was a splendid York ham from the late Rev. J. Drummond Money, then residing at Weybridge, who was brother-in-law of the baroness, and I believe one of his sons is now the popular rector of Weybridge. These recurring events remind me of many happy gatherings of various kinds during my long period of office. I have also been compelled to decline this week the kind and courteous invitation of the committee of the Piscatorial Society for the annual banquet on Monday last, and at which I have regularly attended, except last year, for over thirty years, and also one I received from Mr. Amplett some little time back for the annual dinner of the Kingston Piscatorial Society, which he has made so eminently successful. This bitterly cold weather is a stoppage to everything. Head river-keeper William Douglas informs me as regards the perch, "They have not begun spawning yet." He also says: "The jack up the country have begun, but this cold weather will keep them back again." There can be no doubt directly we get a mild change the perch will be ready, and no doubt the T.A.P.S. will get the swans away.—B.

(**Eton.**)—The prospects for the opening of the season for trout on the 1st is far from promising at the present time, snow having fallen during the past two days, and the frost being more severe than at any time during the winter. Needless to say, not a single trout has been seen on the move during the last week, with one exception, that being 1000 turned into the river on the 20th by the Windsor and Eton Preservation Association, every one of which arrived in the most healthy and lively condition, and which were turned into their new home without delay, 500 being taken upstream by Messrs. Stevenson and Strange, piloted by James Bunce, and 500 downstream by the popular chairman of the association, Mr. Arthur Brown, and your humble servant. A number of trout anglers assembled opposite Her Majesty's waiting-room at the G.W.R. station to inspect the above consignment on arrival, and the one gratifying expression to be heard from one and all was: "I never saw a better lot in my life."—CECIL HOWLETT.

(**Hampton Court.**)—This is the only report of any consequence, and William Milbourne writes: "I have seen several trout move between here and Thames Ditton, but most of them have been small ones. This cold weather will keep the big fish down, and it is impossible at present to say what big fish we have got."—B.

(**Lechlade, Crick ade.**)—The coarse fishing season closed in these districts under favourable conditions as far as water and weather was concerned, the water being in capital condition, and the weather left nothing to be

desired. Some excellent sport brought the season to a close at St. John's Bridge, a gentleman here getting a splendid catch of roach and perch, several of the former being 1½lb. each. In the Kempsford and Castle Eaton waters some good sport was had with perch and pike, a lot of the latter falling to Mr. Falkner's rod. A résumé of some of the best specimen fish taken during the past season may not be out of place. A pike of 19lb. in the Radcot waters, one of 19lb. and another of 13lb. in the St. John's Bridge waters. A barbel of 9½lb. from the same waters, and a perch 11b. 13oz. From the Inglesham waters a brace of perch of 6½lb. weight, and a brace of chub, caught on my own rod with a Brown Alder, at the mouth of the Coln, weighed 6½lb. Several dace of 12oz. and 14oz. have been taken, and on the Leach near to the Thames one night, in two hours, fourteen nets were good for nearly 600 very fine crayfish, baited for with bullock's liver. Troutling prospects at present are excellent, the water being in fine condition.—RAMBLER.

(**Richmond to Staines.**)—Head river-keeper William Douglas made his customary visits on the two first days of the fence season throughout the entire district watched over by the T.A.P.S., and, after carefully searching all the parts, he reports having found them all clear of any fish.—B.

(**Ancholme District.**)—Angling operations are quite at a standstill owing to severity of the weather. We have sharp frost and a coating of snow. Before the storm, one young gentleman took four trout, and several aquatic flies were beginning to hatch out, as well as a few land flies.—THOMAS FORD (Caistor).

(**Bottisham Locks (Waterbeach, Cambs.).**)—The last three days of the past season finished up with summer weather. Numerous anglers took advantage, when fifty pike were had round the Lode up to 5lb. each. Considering the quantity had here during the last three months it must improve the roach angling the next season. On this water the fish generally are early spawners, but this year they are full six weeks earlier. Taking everything into account, this river, with its many drawbacks with the continued drought, compares very favourably for sport upon the whole.—J. O. GEORGE, Beche-road, Cambridge.

(**Bure (Norfolk, Wroxham District).**)—March 21.—We have relapsed into mid-winter—six inches or more of snow and stinging frost, accompanied, curiously, by one or two claps of thunder, and flashes of lightning. Wind N., bitterly cold, threatening more snow; river full of snow broth. Angling is consequently off. There will not be much more done now before the summer season commences, about the latter part of June. Pike fishing has been rather poor during the past season, and roaching only fair. During the bright, though cold, days succeeding the 15th I sampled a trout stream, and found fish in fair condition. There is, however, practically no public, and very little subscription trouting in Norfolk, though the private trouting is generally equal to any obtainable elsewhere. There are changes at both the Wroxham riverside inns, but anglers and visitors will still, I believe, find good accommodation for fishing and boating.—C. H. TAYLOR.

(**Dart (Totnes and District).**)—Some very nice baskets of fish were creel'd at the end of last week. Mr. J. Edmond had a fine lot of four dozen, fishing the waters from Totnes up to Buckfastleigh, and Mr. H. Wright, of the latter place, has had more good sport. On Saturday he basketed three and a half dozen, and two dozen the previous day, the fly mainly used being the Blue Upright. Other takes were somewhat small, but the fish taken are in good condition. This week very little has been done, the snow water from the moor, together with the sharp frosts, having made the water too cold. The river is too low for salmon fishing, and it is hoped that there will be a flood down soon, which would tend to improve sport considerably, as fish are plentiful. The same flies (Edmond's Palmer, Half Stone, and March Brown) may be used.—DEVONIAN.

(**Devonshire streams.**)—The streams are running very low, and a good spate is needed to brighten sport up. The water, too, is very cold, owing to the frosts and occasional snow showers, so that only small takes have been made. The Dart has shown about the best sport with trout, but salmon fishing has been almost entirely unproductive. The March Brown and Uprights are most used. The northern streams are well stocked, but baskets are small; and on the southern rivers the cold snap has interfered with the good sport which was being obtained. Eight inches is the limit now placed on trout taken from the Otter, and, as fish do not run large, anglers will be considerably handicapped. The first two salmon taken from the Teign fell to the nets, and trouting has been practically nil in the lower waters, although bass are plentiful.—DEVONIAN.

(**Exe and Canal (Exeter).**)—Weather has now taken a very wintry turn, the wind hovering in the east, accompanied by light falls of hail, sleet, and snow. Trouting is, of course, slightly "off" for the present. Several rods have been out during past few days, and in spite of cold and generally bad conditions some fair creels have been had all round. One fish (of three brace), which fell to Mr. Hussey's rod on Saturday last, was exceptionally well-conditioned, and weighed 1½lb. Salmon fishing is at a standstill now for want of water, even the rods at Salmon Pool having to give over. Messrs. Baker have killed ten springers, all being had in first week or so of season, and a day or two since Mr. Baker, jun., landed a well-mended kelt after an hour and a quarter's play weighing close upon 4½lb.—RED PALMER.

(**Fen Dittri (South Lincs. and Cambs.).**)—A cold snap which set in last week has delayed for the present all thought of pursuing the dainty trout in this district. There are one or two items worth mention for the last days of the coarse season. A fine perch, scaling

2lb., was secured from Jackson's Hole at Surfleet. There were also some good specimen roach secured. Trout prospects are by no means good at present.—LIMPET.

Idle District (North Notts).—Coarse fish anglers have laid away their tackle for three months, and only a very few anglers will yet be tempted to turn their attention to trout. There are a few of this species in the unprotected waters of the main stream, but the protected waters of the Idle and its tributaries are well stocked. Proprietors of fisheries, however, do not trouble them till about the middle of April. For a week or two, therefore, angling will be at a discount.—L.

Lake Vyrnwy (North Wales).—Arctic weather has prevailed during the week, and, in consequence, anglers have not been able to do very much. On Saturday, however, there were a couple of hours of mild sunshine, during which Mr. David Pine creeled twenty-five fish, 14lb. 2oz. On the 15th, Mr. Briggs took four fish, 2lb. 13oz.; Mr. Pine, five, 3lb. 12oz.; Mr. Horne, three, 2lb. 5oz.; and Dr. White, one, 12oz. On the 17th, Dr. White killed five, 4lb. 3oz.; Mr. Pine, three, 2lb. 1oz.; Mr. Crowther, four, 2lb. 7oz.; and Mr. Horne, two, 1lb. 9oz. On the 18th, Dr. White took seven, 3lb. 5oz.; Capt. Tomkin, four, 2lb. 11oz.; Mr. Horne, four, 2lb. 9oz.; and Mr. Crowther, five, 2lb. 11oz. On the 20th, Mr. Crowther killed six, 2lb. 14oz.; and Mr. Pine, five, 2lb. 7oz. On the 21st, Dr. White killed four, 2lb. 1oz.; and Mr. Crowther, two, 1lb. 5oz. The best fish of the week was taken by Dr. White—weight 1lb. 4oz.—LONG DRIFT.

Lea.—Friday, March 31, is the last day up the Lea for retaining roach, chub, bream, &c., and at the time of writing, prospects for the wind up of the season are far from encouraging. Snow has fallen in the Lea Valley, and the weather appears very unsettled. Bitterly cold winds have been experienced lately, and no sport worth recording among the roach is reported down to the time of writing (Wednesday night). The water has been very bright. Should the weather improve, a good many anglers may be expected to visit the river this next week. There are a number of club matches fixed for to-morrow. The opening of the trout fishing season is a month later than the Thames, viz., on May 1, and when the weather was more genial, several fish were noticed on the move in the upper reaches. The present season for roach has been the worst experienced for years on this river. Earlier in the season want of water was undoubtedly one of the prime causes of the wretched sport experienced. There are plenty of fish about, however, most anglers being united on the point.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these noted trout streams still keep in capital order for angling, being clear and a nice level. The weather was fine and suitable for angling up to the end of last week, but a sudden change took place, and snow and sharp frosts have been had this week which has quite upset anglers' calculations, and has also been the means of preventing a good number of flies coming on the water. The flies to use when the weather gets warmer are the February Red, Blue Dun, and Palmer. A good few March Browns were coming on, but the frosts have been against them. Sport will be quiet until the weather takes up for warm, but more snow has to fall before we get that. The Pinsley is running clear and in order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in good order, but the weather is a complete bar to sport. Severe frosts by night, and every sort of weather by day—fog, snow, and sunshine—with wind for the most part north or east. Very few flies to be seen, and scarcely any trout rising. I see no prospect of improvement till a favourable change occurs, and the atmosphere becomes warmer and more spring-like.—R. T. WILLIAMS.

Nene (Peterborough).—The pike fishing season is generally considered to have been a fairly average one, and finished with several good catches. Fishing at Blatherwyche, near Oundle, a Stamford gentleman caught a pike scaling 18½lb., and a short time previously he caught two others, weighing 14lb. and 14½lb. respectively. Mr. A. Menzies, who is well known in Peterborough, while fishing near Grantham, secured a splendid pike of over 16lb. in weight.—E. A. S.

North Staffordshire Rivers.—The lovely spring weather of last week has been superseded by the severest winter. Snow, ice, and cutting winds have once more proved the variability of the English climate. All this has given a check to angling. Rivers are tempting enough so far as their appearance is concerned, but fishing is off. Last week a few reds tried the fly and obtained sport, notably Mr. Alderman Hampton, who fished the Dove at Clifton, and succeeded with Blue Dun, March Brown, and Coachman. The lucky angler on the Sow referred to last week caught a burbot, not a "barbel," a very scarce fish.—F. W. DALE.

Plymouth.—The rivers are running down to summer level, and trout are sporting fairly well. The moors are now covered in snow, so I expect for a few days nothing will be done. A new rule to be enforced on the Tavy and Plym district is that all fishermen using day tickets must have them with them or they will not be allowed to fish. Last year a fisherman living at Mannamoor or Devonport could post a 1s. postal order, and say he had gone fishing; and the agent could fill out the card and keep it for him to send to the keeper. This he cannot do now; he must obtain it before he goes out. The Dart has provided some good baskets, and the Moavy also; but it has been too cold for the upper waters on the moors yet.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—On Tuesday last there was a very heavy fall of snow in this neighbourhood, which did not remain very long on the ground, but in consequence of this state of affairs all these rivers are tinged with snow water, and very little sport has been had by anglers. In the Severn and Vyrnwy several large pike have been taken, and at

present they are getting more voracious every day, so that trollers have every prospect of good sport during the Easter holidays, and all trout anglers will most heartily thank them for their efforts to rid these rivers of the most deadly enemy of the trout. For some reason or other, best known to themselves, no permits have as yet been issued by those in authority on the Tanat, but it is hoped they will see their way to do so very shortly, so that visitors to this pleasant place during the ensuing holidays may be allowed to fish in this noted trout stream, which, like the Cain, holds trout of the very best flavour.—VYRNWY.

Sussex Rivers and Chichester Canal.—From recent reports the past season for coarse fish has not been up to the average. Drought in the early period of last year interfered materially with sport; and year after year, despite improvements in tackle and skill, fish keep pace in wariness. How many big fish have been hooked and lost in all waters? It is always the biggest fish that break away, and the lesson learned is not soon forgotten. We have had the first foretaste of winter in the south now that spring is upon us—snow and frost in a slight degree. Rivers are in good order, and the Conservators of the Ouse have decided to keep the water open between the Flour and Oil Mills for pike fishing, as the rainbow trout are having a bad time of it with *Esox lucius*. The water will be kept open until the end of April for coarse fishing, excepting pike and dace. The Rother is worth a visit later on, as it holds some good trout up to 3½lb. The canal at Chichester has, as far as I can glean, yielded over 200 pike this season, the heaviest 7½lb. There are some heavier fish in the water, and with the enormous quantity of small fry, pike thrive well here. Harbour fishing will soon be remunerative among the smelt. A few have been taken with ragworm from the sluice at Appledrum, but warmer weather is needed to bring them up in quantities.—GEORGE F. SALTER.

Taff (Llandowor, Carmarthenshire).—We have had a fresh, and the river at time of writing (March 20) is a good colour. A few nice fish have been caught. Weather very cold.—H.

Taw (North Devon).—No rain for weeks, and fishing has been very bad, the rivers almost down to summer level, clear as crystal, and the mornings frothy. No fisherman of any knowledge would attempt it at present. The flies which are tempting are the Blue Upright (real), hare's flag, gold twist, with a hackle colour of dry rust, and the same with Red Upright, with black list. March Browns, this fly is not plentiful on the waters yet. Rain must come soon, or no Easter fishing. A gentleman returned to-day with a dish of trout, averaging 6oz.—RUSTY GAME.

Teifi (Campeter, Cardiganshire).—Fishing not so good as last week owing to low state of the river and nightly frosts.—H.

Teme (Ludlow).—The Teme in this part is running clear and a nice level, and in good order for fishing. The weather up to the end of last week was good for fishing, and since then we have had a change, and winter has come on us quite sharp. On Monday night there were sixteen degrees of frost, and on Tuesday the weather was very cold, and snow fell at intervals, and covered the ground about an inch deep, and this was followed by a sharp frost. To-day (Wednesday) the sun is shining brightly, but is very cold, and snow threatens, and before any warm weather will be had we shall have more snow. The snow and frosts have been against the flies coming out, and March Browns were coming on in good numbers, and the fish had begun to take them, but they will be thrown back, and the prospects for sport with them is little. Angling this week has been very slow, and only a few rods out. Fishing on Friday, Mr. R. Smith, with the minnow under Whitcliffe, landed two small pike, and run a third. The same angler on Monday took a nice trout nearly 1lb. weight. The Ony, Corve, Clune, and Ledwyche are all running clear and a nice level, and in order for fishing. The snow has made no difference to them, and with warmer weather there will be some good dishes of fish taken with fly and worm.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is continuing to run in good order for fishing, being clear and a nice level. The weather of the last few days has been very severe, and there has been quite a return of winter, and snow has been had, followed by very severe frosts at night, and has been against anglers going out. The fish have not been moving well, as the cold has been against flies being on, and the March Brown, which was coming on in good numbers, has been thrown back, and the outlook for sport with it is not at all promising. The best flies to use are the Blue Dun, March Brown, and February Red.—WORCESTER.

Urk and Tributaries (Senny Bridge).—Rivers at present are very low, with cold easterly winds, and very little fishing done just now. Another flood is needed very much.—PONTSENNY.

Witham, &c. (Mid-Lincolnshire).—In consequence of the cold and wintry weather anglers of this district are not inclined to turn their attention to sport. We shall want more sunshine and a more genial atmosphere. The last days of the coarse season were notable for the captures of pike. At Bardney Lock a Lincoln sportsman caught eighteen, and another fifteen, averaging 4lb. each. A short distance off a couple of sportsmen got fourteen brace of pike up to 6lb. Many pike were caught between Tattershall and Boston. Several heavy fish were also reported.—LUCI.

Wye (Builth Wells).—River very low. No angling done. Very cold, and slight snow.—W. B. ROBERTS.

Yore, Swale, Wharfe, Aire, Rye, &c. (Yorkshire).—The trout fishing season opened with very low water and remarkably hot weather, and on Thursday and Friday last the few anglers out caught some nice fish with

the minnow on fine Ariel tackle and with the worm fished well up stream, but in no single instance was anything like a decent basket made, and piscators who tried the fly met with very moderate sport. During the hot weather a good few flies were to be seen on, but now all are gone, for on Saturday the weather changed from summer to winter, since then the fearful north-east and north-westerly winds with keen frost and blizzard-like snowstorms have played havoc with outdoor pastimes and work, and the farmers with early lamb flocks are having a sorry time of it, in some places in Yorkshire 13, 16, 20, and 24 degrees of frost having been reported. I need hardly say few anglers have been out this week, and the few that have braved the intense cold have only met with very bad sport. The contrast between the aspect of the country now and a week ago is great, and Wensleydale, as I see it to-day, looks far more like grayling fishing than trout. Everything and everybody looks shrivelled up, and until a much desired change takes place trout fishing is out of the question, many of the trout streams being frozen.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—Respecting the Nidd, Mr. Riley Fortune writes, angling matters are very quiet. Several of us, tempted by the fine weather on the 16th, had a day, but very little was done. We got a few, but they were not in good condition. The hard frost has sent them off again, and brought grayling on. A good number have been hooked and returned. It was ever thus! No sooner has the close time arrived for either trout or grayling than they commence to feed madly. Rainbows were in evidence. A fair number have been landed. They have increased in size considerably from last year, and were in very much better condition than brown trout. The Harrogate Angling Association turned in 500 brown trout (yearlings) into the water. The energetic Farrar Stead is still on the warpath, and at Richmond-on-Swale Charles Spencer has fished £4 12s. 6d. for suppling salmon roe for angling purposes. The storm continued very severe, with every prospect of a continuance, according to indications, for the aneroid is rising.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddie.—Although the weather is gradually becoming more genial for angling purposes, sharp frosts have been frequent during the last ten days, and few anglers have been out. Spring salmon are still scarce, and little sport has been got with them. Trout are improving in condition, and a few have been creeled in the Canonbie water and in the upper reaches. Salmon kelts are still in the river, but fewer than in some former seasons previous to the advent of April. Mr. Mason hooked a salmon in the Metal Bridge water, but after a brief run, it escaped. The river is now running low and clear, and a flood is badly wanted to sweep away the remaining kelts. The Netherby reserved water has yielded nothing up to the present worth recording.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—Sport has been so poor—almost nil, in fact—that several anglers, including Messrs. Young and Simmonds, left for London a few days ago. Mr. and Mrs. Barratt are still on the Invercharron waters; but, unfortunately, there is not the ghost of a chance, owing to the severity of the weather. Snow lies from 7in. at sea level to 1ft. in inland districts, where wreaths accumulated, and road traffic is suspended.—B.

Deveron (Banffshire).—The rod and net salmon fishings on the river Deveron has been very unproductive during the past week. Up to the end of the last week the water was getting low and clear, but on Saturday a snowstorm of unusual severity broke out, and showed little abatement in the middle of the present week. The heavy snow fall brought down masses of snow, which put the river into very bad order. Angling, meantime, is at a standstill. The net fishermen continued working the nets on the river, but scarcely a fish was got. One caught on Monday scaled 9lb. On the coast the fishermen have not been at sea since Friday of last week. The heavy gale from the north brought in a tremendous sea, sweeping the nets at the various stations from their position, and it will take some time when the storm subsides before they can be repaired and put in position. For this week only one light box of fish was railed to the market.—H. W.

Lairg (Sutherland N.B.).—A few days ago Mr. H. Mackay was out for a couple of hours on the hotel waters, Loch Shin, and landed nineteen trout, aggregating 7lb., which is considered very good so early in the season. At the beginning of this week a very severe snowstorm set in.—B.

Loch Naver (via Lairg, N.B.).—Mr. John Fraser, head keeper, Altnaharra, was out on the 9th inst. and caught a salmon of 8lb. On 14th he landed two, weighing 7lb. and 10lb. At present the whole country has a deep coating of snow. Such a storm in March has seldom been experienced.—B.

Loch Ness (Foyers Hotel), N.B.—On Monday, March 13, Mr. James R. Sloan, Glasgow, killed one salmon, weighing 9lb.; and on March 18, one of 16lb.—S. TILSTON.

Loch Tay (Kenmore, N.B.).—On the hotel water, 16th, Mr. Smerdon Roe killed salmon, 18lb. 15th, on the reserve water, Mr. McIntyre killed salmon, 22lb. 16th, on reserve water, Mr. McIntyre killed salmon, 19lb. 20th, on the hotel water, Mr. Smerdon Roe killed salmon, 18lb.—W. KNIGHT.

Loch Tay (Killin).—On March 15, Mr. Ware had two salmon, 18lb. and 20lb. 16th, Mr. Ware, one, 20lb.; Mr. Menzies, one, 19lb. 18th, Mr. Pigou, one, 19lb. 20th, Mr. Clephan, three, 21lb., 20lb., and 19lb. 21st, Mr. Clephan, one, 17lb.; Mr. Ware, two, 30lb. and 22lb.; Mr. Pigou, one, 20lb. Two boats out; loch in good ply.—H. J. MAISEY.

Naver (Bettyhill, N.B.).—On 13th, Mr. Campbell, Dalvina Lodge, got a salmon on Beat No. 1; and Colonel Fryer, Dalvina Lodge, two, of 19lb. and 9½lb., on No. 4. On 14th, General Hume, Syre Lodge, landed two salmon on No. 3. On 15th, Mr. Campbell caught on the same beat. On 16th, Mr. Earle Drax, Skelpick Lodge, had one salmon on No. 2; and on 17th, two on No. 3. Very severe weather at present prevails.—B.

North-East of Scotland.—The blizzard towards the close of last week, and the severe snowstorm prevailing since then, has almost put sport out of the question for the nonce. On the upper reaches, however, a few fish have been got, although the Duke of York, who is staying at Abergeldie Mains, has scarcely wet a line since coming north. With a thaw, however, matters will be quite different. On the Ballater Hotel waters, Mr. Bristowe had two, of 20lb. and 8lb., one of 7lb., one of 7lb., and two, of 7lb. and 8lb. respectively, on different days out; while Mr. Ferguson had two, of 17lb. and 13lb., and one of 12lb. On the private waters at Invercauld, Mr. H. L. Craik had two, of 7lb. and 8lb. On the Cambus O'May water, Mr. Tyingbam creelred one of 8lb., and Phillip (gillie), one of 8lb., while Mr. Granville had one of 12lb. Col. Felix Rhodes has taken the Morven fishings for the season. On the Monaltrie water, Sturton had one of 8lbs. and one of 7lb. Fish are plentiful and quality steadily improving. On the Glentana waters, Col. Brinkman (from Profits) had two fish, of 7lb. and 10lb., and one of 8lb. On the Huntley Arms reaches, Mr. White Jervas creelred one of 7lb.; Mr. Scott, five, about 8lb.; and Mr. Crawshaw had four, from 13lb. to 22lb. A freshette is much needed, and will improve sport vastly in these parts. On the Ballagie water, Mr. Edward Drummond creelred one of 7lb., three, of 7lb., 8lb., and 10lb., and one of 8lb., during the past week, while Sir John Gladstone, on the Blackhall water, had six on the 13th, 14th, and 15th inst., ranging from 6lb. to 14lb. in weight. On the Lodge water, Mr. Wm. Lamond creelred his first fish for the season, of 8lb., while Major Davidson had one of 7lb., and one of 7½lb., two days out on Dess waters. On Carlogie, Dunn (gillie), had a small fish of 5lb. On the Cairnton, Mr. T. Turner, Farley, had several of average weights. There is a scarcity of fresh run fish in the lower reaches. WEDNESDAY EVENING.—The snowstorm still continues, with heavy frost accompaniment. Rivers full of ice floats, and anglers fairly snowed off. Lord Garioch and the Earl of Lisburn arrived at the Borrowstone fishings on the 18th. They found their quarters at Potarch Inn occupied, which were secured in October last, and have raised an action against Machray, the proprietor, in the Aberdeen Sheriff Court, to obtain access to them. Four days have been granted wherein to lodge defences. Such an action is quite peculiar in the north. The salmon fishings on the east coast have been almost nil. Prices reached the top figure of the season to-day, when salmon sold for 3s. 1½d. per lb. The Ythan tidal has been yielding good sport till present storm intervened. The Duke of York has not been able to be on the river but at very trifling intervals all this week past. No signs of abatement of storm; rather the opposite.—G. M.

Shin (Inveran, N.B.).—On 6th inst, Mr. Park, fishing from Sutherland Arms Hotel, landed a 10lb. salmon. On 7th, Mr. Slater caught a 7-pounder. On 10th, Mr. Menzies got one of 9lb. On 14th, Mr. Park landed one of 10lb.; on 15th, a 12-pounder; and on 16th, one of 8lb. This week, weather stormy and sport blank.—B.

South of Scotland.—The bleak weather experienced during the closing days of last week has been followed by most severe wintry weather. The frost has been most intense in this part of the country since Sunday night. The river Annan was frozen over in some of the still running pools on Monday night. Such severe frost in the third week of March has not been registered for a great many years. The power of the sun soon asserts itself but where the sun's rays does not reach the ice holds. To-night (Wednesday), the temperature is again extreme. Angling has been out of the question this week, no one caring to face the cold north winds. In the Annan, on Monday, two or three salmon, all kelts, were hooked and landed. These were of course put back to the water, uninjured. No rods have been out trout fishing this week, but a few trout were caught last week by a number of anglers. It is yet too early for river trout, as they are not in condition for taking; those that I have seen have been lank and out of order. There has been no rise of fly on the water except the February Red, which I saw a fortnight ago. No March Brown have batched out this season. The prospects for the Easter holidays are not very bright for anglers this year. The waters are very low and clear, and with no more rain between now and Easter trout will take some catching with fly. Any of the small baskets lately caught were taken with the clear water worm at the head of pools. In the Solway the nets have been having a poor time of it lately. At one of the chief stake net fishings not a single salmon was caught during the whole of last week. Some of the other stake net fisheries on the Scotch side of the Firth have been taking a few odd salmon, but there is not a sixth part of the fish caught as compared with the corresponding period of last year. The fishermen were getting 3s. per lb. for salmon at the end of last week. The Nith, of Dumfries, the Galloway rivers, as also the streams of Ayrshire show no sport to anglers at present, and nothing is being done in the tributaries. In the Derwent the sea trout kelts are making their way down to the Solway now in numbers. We want a good fall of rain to take away the frost. With a turn of mild weather and south-west winds some sport would probably be had by anglers during Eastertide. There is no appearance of a change, but this severe weather cannot last long at this time of year.—HEATHERBELL.

Tay.—Fishing on Taymount water, on the 15th inst., Mr. Ronald Murray landed one fish of 17lb.; and on same water, 16th inst., Mr. Cox, Dungasthill, had two, of 26lb. and 17lb. Mr. Herbert Lewis, fishing on Stanley water, on 16th inst., caught three fish, weighing 23½lb., 20½lb., and 17lb. On Dulguise water, on 17th inst., Mr. R. H. Mackworth Praed landed two fish, of 22lb. and 15lb. Fishing the Upper Delvure water, on 15th inst., Mr. Leaf had a fine salmon of 15lb.; and on 17th inst. he had another of 20lb. Out on the Tay, from Fisher's Hotel, Pitlochry, Dr. Anderson had one salmon of 19lb.; and Mr. Younger, one of 18lb. on 18th inst. On the hotel water, on the Tummel, Mr. R. McLaren landed a salmon of 21lb. On Faskally water, Mr. Henry Peters, on 18th inst., killed a splendid new run salmon of 20lb.; and on 22nd inst, one of 22lb.—A. A.

Tweed, Teviot, and other Border Rivers.—The uncertainty of the weather in this northern climate of ours has been signally verified since my last notes. Last week up till Friday night the weather was almost June like; since then, however, the scene has changed, and winter—frost and snow—reigns supreme, while the cold, north-east winds are enough to pierce one to the marrow. Of course, there has been no fishing this week owing to the weather conditions, and should the temperature not change soon anglers will be disconsolate. Of those who had the best baskets of trout last week, when it was fishable weather, Mr. David Maxwell, Kelso, had two fine baskets of 10lb. and 5lb., both got on the Teviot with fly, while Mr. James Affleck, clothier, Heiton, had one of 4lb.; Mr. James Robertson, Kelso, one of 5lb.; Mr. Robert Robertson, one of 8lb., and 4lb. of grayling, and on another fishing day he had a dish of 2½lb. of nice trout. Mr. William Barff had a dish of 3lb.; Mr. W. Thompson, 6lb.; and Mr. Robert Ferguson, one of 2½lb. Other baskets have been killed varying in weight from 2lb. upwards to 3½lb., but those given above are the best. Pike fishing still goes on apace here, and on the Teviot last week Mr. Frank Stephani, Kelso, had one of 5lb., with spoon bait; Mr. James Affleck, one, on the same river, at a favourite place above "Gogran," which scaled nearly 6lb., and on Friday last he had one at the same place of 5lb. weight. Mr. A. Denholm, on the Tweed, has had a basket of 4lb. of grayling and trout mixed, while Mr. Richard Newton had 8lb. of trout and grayling in the Tweed and Teviot combined in one day's fishing. I have just learned that a beautiful basket of trout, weighing 13lb., was killed on the Eden and Tweed by Mr. John Mercer, fishing tackle maker, Kelso; but this was a whole day's fishing, not merely an hour or two. On Friday last, Mr. Charles Hunt, Commercial Hotel, Kelso, had a fine basket of two dozen of Tweed trout, all in good condition, and all killed with fly. Of salmon fishing there is not much to speak of. A few have been killed on the various waters, but fish seem to be very scarce. On the Hendersyde water (Sir Richard Waldie Griffiths's), Mr. Thomas Pringle, Westwood Cottage, Kelso, has had three good size salmon, and again this week I understand he has had two more. On the Tweed, at Tillmouth, Capt. French had a nice salmon of 7½lb. I hear that two fish have been got on the Floors upper water, but no authoritative record has come to hand regarding this take. No fishing has as yet taken place on the lower Floors water, nor yet on the Ednam House casts, while the same remark applies to the famous stretches at Makerston and Rutherford. I may state that the common yellow trout are not yet rising freely to the fly, and that a great preponderance of these fish are to be found in all trout anglers' baskets. These fish are very numerous at present in both the main rivers, Tweed and Teviot, and are taking the fly freely, but they are now beginning to spawn, many of these fish having been seen lately on their favourite spawning grounds at the West end of Kelso Bridge. The Tweed net salmon fishing during the past has not been as satisfactory as could be wished, having been somewhat worse than the previous week, which was bad enough. Salmon show no improvement in numbers, and there has been a slight decline in the number of trout caught in the river and on the sea coast. At the sea coast fisheries matter are even worse. Prices are high: Salmon, 2s. 11d. per pound; trout, 2s. per pound; as compared with 2s. 2d. per pound, and 2s. for trout.—MAXWHEEL.

IRISH REPORTS.

Boyle.—Fishing here has just commenced, and notwithstanding the cold weather, those who ventured out are having very fair sport. In fact, for the last few weeks, fishing has been better than the opening of any season recorded. Mr. Wills, Rockingham, fishing Lough Key has got more trout up to to-day, March 21, than he killed all last season. Hopwell J. S. Morrell, Esq., Corradoo Hall, fishing on Lough Arrow is also having very good sport; up to the present his best day was five trout and six pike. A local angler on Lough Gara, Friday, March 17, hooked and played six good trout but only killed two of them, and this was casting from the boat with the artificial fly, which speaks well for the Fish Preservation Society, as five years ago such fishing at such a place would be folly. Owing to the extensive netting carried on there, and which I am glad to state is not heard of now. May Fly fishers to Lough Gara this year have a glorious time before them, as I know the lake is much better stocked with trout than last year, and then it was the best lake in Ireland for dapping. Mr. Dickie and two friends killed in one day last May, twenty-two trout over 40lb., and Mr. F. Monson, same day, killed twelve trout to his own rod. They weighed 28lb.—GEORGE TAYLOR.

Boyne (Navan Section).—Notwithstanding the adverse conditions in respect to weather and low water, a few fish are being taken on the best fisheries. Indeed, on the Slane Castle water, Capt. Coppinger and friend have had good sport, having, I hear, taken about forty fish since the season opened, including several about 30lb. It

seems that the first run of big fish did not, as supposed, pass this section in the big flood in the latter part of January, but were stopped below Slane by the hard weather. A strong westerly breeze two days last week has, however, brought forward a springing of these, with the result that on Upper Black Castle Mr. Francis Ley and his fisherman have during the past week taken eleven fish, average weight 18 lb. On Ardmulcan four were taken, including one 28lb., and I understand two or three fish were taken in the Stackallan Reach. On Lower Blackcastle, and on the Blackwater, the river is far too low, and angling is useless on these until we get a flood. At present the water is lower than it generally is in the summer.—CLARET FLY.

Caragh Lake (Caragh).—Fishing since last report has not been up to the mark. However, trout fishing on the mountain lakes is better. Mr. Steele took a spring salmon 8lb. weight on the lower Caragh river; Mr. Eyre Stack, a trout, 3½lb.—G. C.

Cork Rivers.—Salmon angling returns from all the principal rivers open for angling show generally an improvement, though matters are still far from satisfactory.—T. J. D.

Corrib (Galway).—The river is running down fast. Spring fish are showing up better, and there must be a fair stock in it. The takes up to date do not number a dozen spring fish. The weather is bright, but cold and frosty.—J. A. B.

Cummeragh and Inny.—Sport has shown much improvement on the above waters, and baskets of two dozen brown trout were common last week. The fish had were, on the whole, of a small size.—T. J. D.

East Tyrone Rivers.—Angling is almost at a standstill on the Blackwater and Ballinderry, owing to the "cold snap" and low water. There will be little or no sport till the temperature rises.—J. A. B.

Erne (Ballyshannon and Belleek).—Trout did not rise well on this river during the greater part of the past week, in consequence of north-east wind prevailing since last report.—M. ROGAN AND SONS.

Kerry Rivers.—Sport at salmon has been of the dulllest description on all the Kerry rivers where angling has commenced. The weather has been, on the whole, favourable since last report, though the water in some instances was not in the best order. Brown trout fishing, on the other hand, has been of a good description, generally speaking.—T. J. D.

Lee (co. Cork).—The continued north-east wind and clear sky is anything but inviting from a fisherman's point of view, and few, except "hardy" anglers, have been out for the past week. However, those who have ventured, have been fairly successful. On Warrenscourt, Mr. J. A. Jameson, 13½lb. On Lee Mount, Mr. W. T. Crawshaw, 9½lb., 8½lb.; Mr. A. C. Bonring, 9lb. On Upper Nettleville, Col. Broderick, 10lb. On Oak Grove, Mr. F. M. Leader, 9lb., 11lb.; H. G. Stanley, 12½lb. On Ballineadig, Capt. Richards (Hants Regiment), 7lb., 12½lb.; Mr. S. Haynes, 8lb., 15lb.; Mr. J. Bullen, 9lb.; and R. St. John Belbin (London), 16lb. On Cronody, Capt. Gubbins, R.A., 7lb., 7lb. At the waterworks numbers of fine fish are congregating, waiting for a rise in the river, to move up, and a few have been taken by the rod anglers. Mr. R. Murphy, 12lb., 10lb., 6lb.; Mr. J. Caulfield, 10lb.; Mr. J. O'Donnell, 9lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Salmon angling continues very bad on Lough Currane, the principal free water at Waterville. Only two salmon have been had since last report—one of 14lb., by Major G. Cresswell, Butler's Arms Hotel, and one of 10½lb., by E. Denneby, a local professional angler. The brown trout fishing, on the other hand, has given good sport to the few anglers that have been out occasionally specially after these fish.—T. J. D.

Lough Mask (Clonbur, co. Galway).—This water is in excellent order for fly fishing, and although the weather is cold, several baskets of trout were killed this week. The best trout I have heard of yet was a 6lb. one killed by a local gentleman. Everything points to a successful season.—J. A. B.

Lough Melvin.—During the early part of the past week the weather was very mild for the time of year, and consequently salmon anglers availed themselves of the opportunity afforded, and tried their luck amongst the salmon, and had some first rate sport for the few times they were out. Mr. J. McCorry, Mr. J. R. Mulholland, and Mr. Murry arrived at Scott's Hotel, Garrison, on March 16; and on the 17th Mr. J. McCorry landed a beautiful fresh run salmon of 19lb. weight, and another of 10lb. weight; Mr. J. R. Mulholland landed one, on same day, of 10lb. Mr. Walter H. Wilson landed a nice fresh run salmon weighing 9lb., on the 16th; and the Rev. Wm. Verner landed one of 10lb. on same day, and a fine trout (*Salmo ferax*) of 5lb. Mr. H. G. landed a handsome fresh run salmon of 11lb. on a trout fly on the 18th; and the Rev. Wm. Verner, on same day, landed another fresh run salmon weighing 11lb., and a splendid brown trout of 5½lb. Mr. C. P. Blackham landed several nice trout recently from 3lb. to 4lb. Mr. Blackham also took a fine plump sea trout weighing 2½lb. This is an unusual occurrence in the lake, as sometimes years elapse without a sea trout being caught in it. Trout anglers did not do much owing to keen north-east wind and bright sunshine during the latter part of the past week, but in the early part of the week some nice baskets of gillaroo and brown trout were taken. At time of writing the weather is looking settled, and good sport is now certain.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlaugh End).—The past week was one of many weathers, changing suddenly in the early part to bright summer-like days, and again in the latter part to real winter showers of snow, with hard frosts at night, almost enspending fly angling. Some nice gillaroo and brown trout were had

trolling with artificial minnows, from 1lb. to 3lb. Milder weather, with some rain, must be had before angling is again a success.—P. GALLAGHER.

Mountain Lakes (Waterville, co. Kerry).—Sport has been very good on the above waters since last report. Prospects for next week are not as good as could be wished for, as, owing to dry weather, which is likely to continue, the waters will be getting low rapidly.—T. J. D.

Mourne (Newtownstewart, co. Tyrone).—Unless a flood comes in the meantime this fine river will be rather low for the opening day—Saturday next, April 1—a very suitable date for those who believe in the Johnsonian dictum. The prospects are very good. The past spawning season was a successful one.—J. A. B.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Owing to the cold north wind and snow showers sport was dull for the past week. Mr. Benson and Mr. Bailes landed several kelts. Few kelts were landed on the lough. Also quite a number of clean fish are to be seen in the pools on the river.—PAT HEARNES.

Shannon (Castleconnell).—On Doonass, Mr. G. C. Williams killed two salmon, 32½lb., 39lb., on 20th. On Hermitage the fishermen killed one salmon, 20lb., on 16th. On the Castle fishery, Mr. G. W. Greenhill killed one salmon, 38lb., on 16th, and one salmon, 18lb., on 20th. The weather is now a trifle colder, with a few very light falls of snow.—J. ENRIGHT AND SON.

SEA FISHING.

Deal (The Pier).—Though several local and visiting anglers have almost daily spent a few hours upon the pier, not a single fish of any kind has been caught during the present week. The water has been so much disturbed and thickened by recent strong breezes from north-east and north-west, that fishing prospects are exceedingly poor. Several falls of snow have taken place during the last three days, and the weather is still bitterly cold.—J. RICHARDSON.

Penzance.—Pier anglers have only had very poor sport during the past week, and now we are having snowstorms from the north. Long liners have been catching great quantities of ling during the past week—two to four hundred a boat—and selling at the absurdly low price of 7d. a fish. Mackerel boats off 20th, but no fish as yet.—H.

Plsmouth.—I am writing this under more favourable circumstances than last week, when I had a nasty fall over the stone steps at West Hoe Pier. I don't know which is worst, stepping on orange peel or sea weed. I have had ten days' confinement, anyhow, through it. The weather is summer one moment and winter the next, with snowstorms. Not much doing with sea fishing in such unsettled weather. A few pollack about, but small; bass also are shy, owing, I expect, to the snow water from the rivers. The trawlers have been having good catches, but being Lent, of course, prices have been high. Not much benefit to the trawlers, though; the retailer gets the biggest pull. Some of our hooking boats that fish with boulders, having as many as 2000 hooks, have had bad luck, losing their lines through the heavy catches of fish—gear all parted, and they have lost all. They use, as a rule, lines of sixty fathoms length, and sometimes from six to a dozen of these tied to each other, so the loss is considerable. Two or three boats have lost their lines through fish carrying them away. There has been a lot of porpoises in the bay lately, and sharks also. This may, in a measure, account for it; they are very fond of fish.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—March 23. Fishing here continues at a standstill. The weather is very cold, and for the first time for three years there has been a considerable snowfall. Some members of the B.S.A.S. have been trying their luck, Messrs. Parker, Handley, and Smelt amongst the number, but, I regret to hear, with poor results. I cannot recommend fishing here just now as the weather is Arctic, and there are no fish, even the trawlers have been doing little. Barometer 29.6in., with upward tendency. Wind N.E., variable. Sea smooth. Weather clear.—CHARLES HUSSEY (B.S.A.S.).

EASTER HOLIDAYS.—SPECIAL NOTICE.—In order that the *Fishing Gazette* may be published at one o'clock on Thursday, March 30, to ensure delivery in all parts on Good Friday morning, all river reports intended for insertion for next issue must arrive NOT LATER than four o'clock on Wednesday next, March 29.

Reports from Clubs

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £2 4s. 6d., Albion Brothers, and £2 2s. 9d., Royal George Angling Societies' donation boxes.—R. GURNEY.

Anglers' Association (No. 1 EASTERN DISTRICT) Visiting List.—The next return visit will be to the Brunswick Brothers A.S., Cherry Tree, Brunswick-road, Bromley-by-Bow, on Tuesday next, March 28. Anglers who will favour us with their company will oblige.—G. MANNING.

Anglers' Association (No. 2 EASTERN DISTRICT) Visiting List.—On March 21 the Edmonton and Tottenham Angling Society's A.B. box was opened by Mr. La Mond, and contained the sum of £5.—T. R. C. LA MOND.

Anglers' Association (No. 2 DISTRICT) Visiting List.—Will the North London let me know the date which they wish to have their return visit, as I wish all societies on my list to take a visit while the fence months

are before us? Will my friend Stretch kindly announce date in *Fishing Gazette*?—BEN ABRAHAM.

Anglers' Association (WESTERN DISTRICT) Visiting List.—The next return visit takes place on Monday next, 27th inst., at the Harcourt A.S., Harcourt Arms, Harcourt-street, Marylebone-road, near Metropolitan Railway, Edgware-road Station.—BEN ABRAHAM.

Acton Piscatorial Society, George and Dragon, Acton.—Last punt competition of the above took place at Twickenham (six punts engaged for same), with following result: Messrs. N. Chick, first; F. Blake, second; and A. G. Cole, third. Roach over 5in., dace over 7in. only weigh; club size. Mr. N. Chick and friend, fishing at Shepperton, with G. Rosewell, caught nine jack (largest fish, 8lb. 10oz.); also landed trout of 9lb., in very poor condition, which was carefully returned by puntsman to become wiser in future.—W. HOWELL.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—On Monday, the 13th inst. we had our return visit, fourteen clubs being well represented, our clubhouse being filled to overcrowding. A most enjoyable evening was spent. Mr. Manning being asked to speak, said it was without a doubt one of the best attended visits it had been his pleasure to be present at. He could safely say he had never been present at a visit where so much care had been taken to make it a success. After a few words to the members and friends present re concert in aid of the restocking, he announced the amount in the Benevolent Box—£2 4s. 6d., which was received with loud applause. Our chairman, Mr. C. J. King, responded, thanking Mr. Manning and all clubs represented; passed a vote of thanks to the *artistes*, which was responded to by Mr. A. Carey, vice-chairman, after which the entertainment was kept up until closing time.—C. J. KING.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—On March 22 was quarterly night at the above society, when the following officers were elected: Mr. E. Jackson, chairman; Mr. C. Turner, vice; Mr. A. Campion, check secretary; Messrs. Blades and E. Jackson, A.A. delegates; Messrs. Barker and Turner, auditors; G. Prouten, tyler. An important special general meeting takes place on April 5, when all are requested to be present. I must also draw the attention to absentees to Rule 23 and 25. Messrs. Jackson and Blades gave the A.A. delegate report of 20th, and was passed. Several of us were out on 26th, and the only one who saved us from a blank was—BEN ABRAHAM.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—In my report last week, I gave notice that we were to have a smoking concert on behalf of the Anglers' Benevolent Society on April 17, but finding that Mr. Wade is to give a lantern lecture on that date, I have postponed it until May 1, when I trust to have the hearty support of brother anglers. In giving this long notice I trust brother secretaries will avoid clashing if possible.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—Several of our members were out on March 19, but had very poor sport. I beg to remind all members that next Wednesday being quarterly night I shall be glad to see them all on that evening, when we shall have to elect new committee, new chairman, and new secretary. Report sent in last week was reported one rudd, 11lb. 10oz., should be 11lb. 10oz.—F. W. MARTIN.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—Only one member weighed-in on the 19th, Mr. J. Hobbs, 20½lb. of roach; one fish, 11lb. 2oz. None of the five members who were eligible to fish for the four consolation prizes in the Lea succeeded in taking a fish, so the four prizes are still open for them to fish for on the 26th, under the same conditions as last week. Mr. W. Wade will give a lecture, accompanied by lantern views, on a fishing trip on the S.E.R., on Tuesday, April 18 (not Monday, the 17th, as announced last week), followed by a smoking concert in aid of the A.B.S. at this society, when the company of brother anglers and friends will be esteemed a favour.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—Our members who attended meeting Wednesday evening have subscribed a prize outing for March 26, to take place from Rye House (roving) as a consolation prize for members not having taken a prize during season. Also there are two prizes for all members to fish for. Start 9 a.m. train. Our three leading prize winners for the season are Mr. Merrygold, Mr. G. Howard, and Mr. J. Wheelhouse. I shall thank members to settle up soon, so as to bring off supper and distribution at an early date.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On March 19 Mr. C. Davis weighed-in dace. Mr. J. Taylor has offered a special prize for the specimen roach from the Lea on March 26.—T. PATEROSTER.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On the 19th several of our members journeyed up the Lea as far as Hertford, but met with the first blank this season. On the 21st there was a fair attendance of members, when Mr. E. Luffingham was elected an honorary member. Our worthy host has given a timepiece to be fished for on March 26, River Lea only. Prize winners are eligible. Next Tuesday (28th) will be quarterly night.—P. E. LOFT.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—Our competition on March 5 proved very successful, Mr. Frank Monks taking first prize with a good show of jack, and W. Wallis running second with perch. Our final prize outing took place on March 12 for three prizes, Mr. Frank Monks again taking first prize with jack; Mr. B. Lowrence,

second, with fine roach and chub; J. Smith, third, with jack. A good attendance is requested next Tuesday to arrange for annual dinner.—S. VIOLET.

Clerkenwell and District United Visiting List.—A successful visit on the above was paid to the Prince of Wales's A.S. on Monday evening. Mr. Pevril in the chair, faced by Mr. Baxter. The following twelve societies being well represented, viz., Lincoln, Eustonians, North London, Royal George, Queen's Piscatorial, Prince of Wales', Dibden, Harcourt, Camden, Brompton, Cobden, and Golden Barbel. They had a room full of company and plenty of talent. The next visit will be to the Dibden, date later.—F. CASTLE.

Cobden Angling Society, Kensal-road, W.—On March 28 the financial year closes. I hope members will come up and clear the books, and also pay up for the concert tickets taken last October. All members not clear by April 4, will be fined as per Rule 43.—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Members are informed that the St. Alban's A.S. take a visit on the S.L.U.V. List on Monday next, March 27, at their clubhouse, the Rising Sun, Prince's-road, Kennington Cross. Members please attend and give them a bumper. Members mustner next Wednesday evening for important business.—W. H. STAFFORD.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On March 19 several members competed for five prizes in the Lea at St. Margaret's. Messrs. J. Eagles, first; H. Poore, second; and W. Thompson, third. The two remaining prizes will be competed for on March 26, at St. Margaret's; same conditions. Members please note that next Tuesday will be quarterly night.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—At Wednesday's meeting the date of visit was settled for Monday, April 10 (first Monday after Easter). Clubs will be duly notified by post. Delegates' report stands over until next week. The members then adjourned to Bostonian A.S., and spent one of those evenings for which that club is noted.—JOHNNY EDWARDS.

Eagle Angling Society, Red Lion, Tottenham.—On 13th inst. Mr. T. F. Barlow had a fine show of roach, twenty-eight fish scaling 14lb.; Mr. J. Dyer had 7lb. of roach and perch; and Mr. F. Reed, 4lb. of roach. On the 14th Mr. G. Baynter had a nice show of roach. On the 15th Mr. T. F. Barlow had 10lb. of jack.—W. S. PRICE.

Good Intent Angling Society, The Crown, Church-street, Shoreditch.—Several of our members were out on the 19th for the three lapsed prizes, but only one was taken, by Mr. J. Lloyd. The remaining two to be fished off on March 26, on same terms as last week, namely, roaming of the Lea, towing-path only.—R. MURPHY.

Grange Angling Society, The Earl of Derby, Grange-road, S.E.—The fortnightly meeting was held on Tuesday last, Mr. Chris Green occupying the chair. A lantern lecture on fishing in Norfolk and Suffolk, to be kindly given by Messrs. W. J. Wade and F. Lee, was fixed to take place on Tuesday, the 28th inst., at 8.30 p.m. Brother anglers and friends are specially invited. A collection will be made on behalf of the Thames Angling Preservation Society.—W. K.

Harcourt Angling Society, Harcourt Arms, Harcourt-street, Marylebone.—We had a poor show from the Lea on March 19, in fact, almost a blank. Our return visit takes place on Monday next, when our old friend Mr. T. Twyman will take the chair.—A. E. PAYNE.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road.—On March 19 Mr. J. Wiltshire saved us from a blank, with roach. On the occasion of our next Bohemian concert, on Tuesday, April 11, Mr. G. B. Shipton, host of Sturt Arms, New North-road, has kindly consented to occupy the chair; faced by Mr. E. Brockett, secretary Original Alexandra A.S., in the vice.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—Several of our members were out on March 19, but returned with a blank. We met on Tuesday last, Mr. Howard in the chair, when the minutes were read and confirmed.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—There are two special prizes to be competed for on March 26, on the Lea, between the Rye House Bridge and Ware Park Mill. There are also two to be fished for on Wednesday next, 29th inst. Same conditions as on March 26.—H. B.

Liverpool Angling Association, Bee Hotel, Queen-square.—Our last competition for the season 1898 was not a pronounced success, as only a small number of members attended it. The day was remarkably fine, bright sunshine being in dazzling evidence all day. The water was very low and clear, so much so that thousands of fish could be seen on the gravel beds, evidently preparing for family duty. The first prize was not won, the limit of weight not being reached; but the second prize was won by Mr. Jefferies, and the third by Mr. Pierce. So far the trout taken from the Reservoir at Pen-y-Cae are backward in condition, as it is a later water, but by Easter they ought to show up much better. For the fine competition promoted by Capt. Ormrod, Wyresdale Fishery, which is fixed for 24th and 25th inst., the five prizes for which are live trout for stocking purposes, Mr. Hunt has been elected to represent this association. Capt. Ormrod clears the fifty competitors from all expenses of refreshment and lodging, and has arranged the programme very methodically. The trout given, which are principally rainbows, are of considerable commercial value, nearly £100, and the Captain has done the thing thoroughly and well.—RN. WOOLFALL.

Liverpool East End Angling Association, Court House Hotel, Commutation-row.—Now that the

ose season for coarse fish has arrived, the members are requested to do all in their power to protect them. The lawful season for fish being observed by this association, fish out of season will not be eligible for specimen and other prizes; new members note this. The above-named association having secured a place in the Wyresdale fishery competition, they have decided to send the chairman as their representative. Members are requested to attend the meeting on Monday next.—JAMES REYNOLDS.

Maldon and Heybridge Angling Society, White Lion Inn, Fullbridge, Maldon, Essex.—During the last week of the season few roach were taken, but pike anglers had had a fair share of sport. Several fish up to 5lb. were caught from Uting Hoe Mills, Sugar Bakers, Beeligh, and Langford waters. Messrs. S. Vince, S. Isaac, T. Springett, F. Keen, H. Cuthbee, A. Everitt, and several others were successful on the 11th and 12th inst. I beg to acknowledge the receipt of tackle given by Mr. C. Evans for the last monthly competition, and have much pleasure in thanking him on behalf of the winners for his kindness in giving the prize, which was much appreciated. I shall be pleased to hear from the subscribers to the Langford Fishery, if they will renew their subscription next season in the event of the waters being again rented? Please reply to F. Keen, 26, Spital-road, Maldon.—F. KEEN.

North-East Brothers' Angling Society, Star and Garter, Green-street.—On Wednesday, March 29, we hold a special meeting to arrange date for supper, when the secretary will read balance-sheet; and also prizes won by members during season.—A. LEWIS.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Members please note that Tuesday next, March 28, will be quarterly night. Our distribution of prizes will take place on April 25.—E. BROCKETT.

Prince Albert Angling Society, Prince Albert Hotel, Woodfield-road, Harrow-road, W.—We hold a smoking concert, in aid of the funds of A.B.S., on Thursday, April 13. We have the promise of many good artists, and hope to make a grand success of it. We finished the season with a good show of fish. Mr. Stainford had a fine show of chub and roach, largest chub 3lb. 9oz.; Mr. Burrows, barbel; Mr. Fricker, perch and dace; Mr. Boverstocke, roach. Several others had fish, but didn't weigh-in. The tickets for the above concert will be ready on Thursday next.—W. B. F.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On March 12 the following weighed-in: Messrs. J. Reeve, C. Shepherd, W. Shepherd, G. Parker, T. Elcome, and J. Taylor; and prizes were won respectively by J. Reeve, W. Shepherd, C. Shepherd, and G. Parker. Special prize for the largest roach was taken by C. Shepherd, a fish of 1lb. 2oz., and the second special prize by W. Shepherd. Could a few members possibly attend on Tuesday next, to do a little business?—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—We were fairly represented at our last meeting, and got through what business there was to be done. Will members kindly make it convenient to attend next meeting night, as we have some very important business to be discussed, and should like to see all members in their places. Any member requiring Aquarium tickets can get them by turning up next meeting night.—J. GIBBONS.

St. Albans Angling Society, Rising Sun, Prince's-road, Kennington.—General meeting called for 29th inst. It is also quarterly night. All members must attend. South London visit next Monday, March 27, in which we trust to be well supported.—H. ALLAN.

Second Surrey Angling Society, the Sun, Boniface-street, Westminster Bridge-road.—We fish on the 26th, at Ware, for three prizes left over from the previous week.—W. ANSTED.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Monday next at the St. Alban's A.S., Rising Sun, Prince's-road, Kennington Cross, when I should like to see a good muster.—ALF. PAINTER.

Stockwell Angling Society, Old Queen's Head, Stockwell-road, S.W.—The grand evening concert at Gresham Hall on March 20 was a huge success, as far as the entertainment was concerned, but beyond our own members anglers were conspicuous by their absence. I regret that the object in view, i.e., the aid to the A.B.S., will have to be postponed. This is my first attempt in the interests of this society, but I am not discouraged.—THOS. LUCAS.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—At the meeting on March 21, Mr. Garwood in the chair, some nicely framed etchings of the River Thames for the club-room were presented to the society by Messrs. Garwood and Brougham. The chairman announced that the hon. secretary had received a deputation from the Thames Conservancy as an honorary assistant river-keeper.—W. E. G.

Uxbridge Rovers' Angling Society, Queen's Head, Windsor-street, Uxbridge.—The annual dinner was held on March 15, at the clubhouse, when there was a good number of anglers present. A capital spread was supplied by host Harry Sanders; Mr. H. Payne, treasurer, in the chair, and Mr. G. Stacey vice-chair. The prizes were presented to the successful members, to the value of £8 7s. 6d. The chairman stated that the society was in a very prosperous condition, both numerically and financially, there being a fair balance in hand to carry forward to the forthcoming season after meeting all liabilities. The season of 1898-9 has been a record one. Seven specimen prizes were taken, together with four special prizes for gross weights. On one occasion 72lb. of roach and dace were landed by six rods, at Maidenhead; and on another occasion 18lb. 2oz. and

11lb. respectively were landed with two rods, the last take being on Monday, March 13, at the same place. The remainder of the evening was spent in harmony.—SECRETARY.

Waltham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Our roving match on the 12th inst. was successfully contested, Mr. Price proving the victor. The weights were as follows: Messrs. Price, jack, 2lb. 9oz.; King, roach and perch, 2lb. 3oz.; Achong, roach, 2lb. 2oz.; Alder, dace, 1lb. 5oz.; Dungate, roach, 12oz.; Duffield, perch, 10oz. On March 15 Mr. Price received his prize. Our annual dinner will take place at the clubhouse some time in May.—W. H. BATCH.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—It was decided at our meeting that the fish caught on Good Friday will be weighed-in in our club on the night.—R. LOWTHER.

West London Angling Club, Dartmouth Castle, Hammersmith.—A special meeting is called for Thursday, March 30, to arrange the annual dinner and other important business matters. Members having any arrears in their subscriptions are desired to clear the books on the above night to enable our auditors to balance the accounts for the past season.—J. J. HUNTER.

Westminster Angling Society, The Telegraph, Regency-street, S.W.—At the adjourned meeting, held on March 22, all officers were re-elected, Mr. Dickens being elected junior auditor.—S. H.

White Hart Angling Society, The White Hart, Tottenham Vale, N.—On March 22 our return visit on behalf of the A.B.S. took place, we being well supported by the following clubs: Enterprise, Eagle, Houndsfield Otters, and Forest Piscatorial. Pianist, A. F. Dubbins, R.A.M., L.C.O.; chairman, W. F. Butler; vice-chairman, W. Butler. The following artists supporting us: Messrs. Wilson Farrington, prestigator, Mr. Gus Robinson, H. Sawyer, Mr. Lefevre, A. Langton, J. Allen. During the interval £1 6s. was handed over to the visiting officer, Mr. L. A. Moud, as proceeds of the club box and collection during the evening. The health of the Queen, and success to the A.B.S. and White Hart Angling Society, closed the very enjoyable evening.—W. E. BEAUMONT.

Wolverhampton (North) Working Men's Club.—On March 11 the members of the fishing club journeyed to Penkridge in quest of a little sport with the rod. The party, numbering close upon thirty, left the High Level by the 2.30, arriving at the historic little village shortly before three. They then proceeded to the riverside, and were soon eagerly watching their floats, their patience being amply rewarded. Returning to the hotel at dusk, an excellent repast was served by Host Robson in his usual admirable manner, the tables being tastefully decorated. After doing full justice to the good things provided, Mr. J. Hill was voted to the chair. Mr. J. Mason officiating as vice. After various toasts had been proposed and responded to, the remainder of the evening was spent in conviviality and harmony, to which several members contributed by a display of their vocal abilities. During the evening a hearty vote of thanks was accorded to the host for the splendid way in which he had catered for the party, and his health was drunk with musical honours in his presence.

Angling Fixtures.

March 26.

Allason United: Consolation prize outing.
Amicable Excelsior: Match at Egham.

25.—Drayton Park Piscatorials: Annual dinner.
25.—Gresham: Annual dinner.
25.—Original Alexandra: Distribution.

Doings by the Way.

Will correspondents kindly note, that, in order to ensure delivery in all parts, on Good Friday morning copy must arrive, addressed "Editor, St. Dunstan's House," NOT LATER than four o'clock on Wednesday, March 29. The *Fishing Gazette* will be published at one o'clock on Thursday next, March 30.

ON April 25, 1896, under the title of "Anglers of the Day," a portrait appeared of that well-known and highly respected all-round angler, Mr. J. W. Clifford. It is with great regret that I have to announce his death, on March 18, in his sixty-third year. His remains will be interred at Waterbeach, where he had been staying for some months, in order to recover his health.

"I HAVE always thought," says "Halcyon," in *Weekly Supplement* to the *Leeds Mercury*, "that sooner or later, the question of salmon roe would come to the front, and the following is only the first of a series of cases that will shortly come before the courts: At the Auckland Petty Sessions, held March 13, a man, residing at Bishop Auckland, was charged with having in his possession 19lb. of salmon roe. Mr. J. T. Proud prosecuted on behalf of the police, and Mr. T. Dowling appeared for the defence. Mr. Proud said that it was the first prosecution of the kind that had appeared in that court. The proceedings were brought under the Fisheries Act of 1861, the fourth section of which described what was salmon roe, which included bull trout. The act also gave power to issue a search warrant, and in this instance one was obtained. Sergeant Barlow said that he and Inspector Cowen went to the house of the defendant, who, after some parley, admitted the offence, and produced nine 1lb. jars and five 2lb. jars, which were exhibited in court. There was a certain element of humour about the case, for the defendant told the police officers to keep the roe in a damp place, as he should want it back again, and was evidently anxious that its welfare was properly provided for.

"IN the Durham district the local name for salmon roe is 'candy,' in the Hawes district 'Wensleydale cheese,' and I have even heard of it being called 'paste.' Mr. Dowling's defence was most certainly ingenious, but failed; he said that the roe was not for fishing purposes, but to be eaten on bread and butter. Five shillings per pound was the price asked for the roe to a man who wrote for a supply from Middlesbrough, so, to my mind, for edible purposes it would come in rather expensive, especially to a working man. Dripping possibly would come in cheaper, and most certainly be more palatable. The result of the case was £5, or a month, and the 19lb. of roe to be forfeited.

"ANOTHER case was heard against a Bishop Auckland man, who had 4lb. of salmon roe in his possession. In this instance Inspector Cowen went to his house, but the defendant, with a childlike smile, like unto that of the Heathen Chinee, denied all knowledge of such a thing. Now, whether his loving and affectionate spouse had got an attack of influenza, or whether her lord and master was in her black books, or what, history deponent not, but the fact remains that the lady rounded on him and produced a 4lb. jar from the pantry. Upon seeing that practically the game was up, the gentleman grew defiant, and said that he could get plenty more, upon which statement the bench smiled benignly, consulted together, and fined the defendant £2 and forfeiture of the 'stuff.'

THE proposal at present mooted to do away with the Frank Buckland collection at South Kensington, says *Truth*, which illustrates various interesting principles of fish breeding, is rather too sweeping. What is required is a transfer of the collection to the adjoining Natural History Museum. It is at present very anomalously placed in the Engineering section, where naturalists are not likely to look for it; and the engineers in charge of the section, though they may be excellent men in their own line, can hardly be expected to have much acquaintance with matters piscatorial.

ACCORDING to the *Daily Mail* the Zoological Gardens will be pleased to receive live British specimens of the pole cat and pine marten, now almost extinct. Mr. Claud Alexander has kindly presented the society with a genuine wild cat (*Felis Catus*), caught in a trap at Invergarry, Inverness-shire. It is with great regret that the public will learn that this noble animal is fast becoming extinct, and only a very few specimens are to be found in three counties of Scotland, where once they were freely distributed. Thanks to the "sportsmen" (?), gamekeepers, and taxidermists of the present day, these will all soon be no more found. The society have a beautiful pair of Irish otter, which differ from the English otter in colour, size, and shape of tail, and the small amount of damage done by otters in a salmon or trout stream does not justify their wholesale slaughter. The Duke of Richmond and Gordon has lately presented a common seal, and a badger has been procured from Worcester-shire. Now is the time to obtain a complete collection of the fast disappearing species of Britain's most ancient quadrupeds.

Just a reminder that the grand champion concert at the "Champion" will take place in aid of printers' charities on Saturday evening, March 25. Doors open 6.30. Commence at 7 sharp. Those who want a seat must come early. A splendid programme has been prepared.

DAISY has evidently been reading that "par" re the "atmospheric strata" from the Twickenhamites last week, for I found the following pinned to my coat-tail last night:

"Fine days!" my dear "Jack," of Twickenham,
You cannot expect to go pickin' 'em;
I'd give it you "strata," but have no more "papa,"
And supper's just ready—it's chicken-ham."

[N.B.—I'm going to buy Daisy a Walker's Rhymer.]

As Messrs. John Ray and M. O'Carroll, of Madeley, were pike-fishing in the Severn, at Atcham Bridge, near Shrewsbury, on the 17th inst., they captured a beautiful fish, weighing 18lb., and 3ft. 3in. in length. Both fishermen were using live-bait—gudgeon—and as the fish would not take this bait—although it followed it to the surface of the water—a live roach was put on. After a couple of minutes this was successful, and the pike gave very good sport for close on twenty minutes, dying game. The fish was only hooked on the lip. It is being preserved.

THE Westminster Aquarium attractions will have a sensational addition on Tuesday, when Dr. Walford Bodie, described as "The greatest scientist on Earth," is to commence proceedings by "Electrocuting" a subject. I understand the result will not be the same as an American "Electrocution," as the subject will be utilised for future appearances.

WE hail thee, we hail thee.
Glad Springtime, we hail thee!
Azure violets blowing,
Limpid waters flowing,
Songs of love and glees
Ringing merrily;
All earth and air resound,
And join the joyful sound,
She comes—the glorious spring!

Let us hope the bnlk is not equal to the present sample!

I HEAR our Eton correspondent, Cecil Howlett, has again been returned unopposed as the Rural District Councillor and Guardian for the classic town.

MR. GEORGE SMITH, with whom I have often fished, writes: "Dear Drag,—Looking round the Aquarium, on Saturday evening last, for the cases of stuffed fish, I was very much impressed with the beauty of several cases of plaster casts, beautifully painted in oils, taken and executed from life, by a working man angler, an amateur, and result of his first attempt. The prodigious patience, persistent perseverance, and priceless skill, brought to bear on such exquisite works of art, deserve recognition, and are beyond all praise. My fishing experiences have been few and far between, this winter; but I had my usual Boxing Day's fishing with Lumsden, of Datchet. After live-baiting for jack for some time with varied results, hooked a pike well in his teens, which rushed upstream under the punt. Keeping a tight line on him, turned him, and brought him up to the net, when suddenly he left go the bait, which came back, scored well behind the hooks. Afterwards tried the paternoster with minnows for perch; got amongst them; and, having fished a length of camp-sheathing, resolved to go back and try it again, the puntman easing down with hands on the bank. Suddenly, a great gale of wind arose, and he crying aloud 'Look out!' I turned round, the punt's nose struck a post of the bank, and landed me on the top. I clinging with both hands and arms, the punt rebounded, leaving me with my legs in the water. I calmly hung there until the punt returned and rescued me from my perilous position. Finding there was no early train back, and emptying my boots of water, I wrung out my socks, replaced them, and went on paternostering. Caught two perch, 1½lb. each, and four jack after; these being small, were duly returned to grow larger."

Oh, the joys of winter angling!
They are keen, and rich, and rare;
Especially when you're dangling
On camp-sheathing, in mid-air,
And the punt has missed its mooring,
And your legs in icy stream,
And the wind and torrent roaring
Surpass a poet's dream!
Do you doubt this simple story?
Or think he slings the hatchet?
Go! share the joy and glory—
Fish on Boxing Day at Datchet.

A FISHING TACKLE TRADES' DINNER will be held at the Holborn Restaurant, on Thursday, March 30, at 7.30 p.m. Chairman, Mr. A. Carter. Vice-chairman, Mr. A. Meyer. Morning Dress. Mr. Mike Enright and Mr. Frank Clay have arranged a musical treat. Visitors who would like to be present at what promises to be a most enjoyable function may obtain tickets or any further information, of Mr. Frank Clay, 137, St. John-street-road, E.C. Invitations have been sent to all the principal trade houses.

THE mail steamer *Norham Castle*, having on board Messrs. Williams and Fip Pulham, of the Lychnobite Angling Society, arrived safely at Capetown on March 22.

MR. W. WADSWORTH, water bailiff at Offord D'Arey, Hunts, says that during the close of the season some good pike have been taken. Mr. Vessey eight, one of 8lb., and Mr. Beecham, one of 15lb. Application should be made to Mr. Wadsworth for particulars as to joining the Offord and Buckden Fishery Association.

"THE time has arrived," says the *World*, "when the thoughts of the keen salmon fisher incline to the glancing streams and sullen pools where dwell the silvery objects of his ambition. As, in pensive mood, he watches the blue smoke of his after-dinner cigar curling and wreathing aloft, he wonders if the river is in order, fears that the apates will have injured the pools and changed the 'lies' of the salmon, and hopes that a goodly number of cleau fish have found opportunity to ascend. His eye lights on a bundle of rods in the corner, on an array of tin cases ranged on the shelf above. He remembers to have found that eighteen-foot greenheart a trifle heavy last season, and, recalling the ease with which he wielded it a few years ago, he conjures up a bit of Latin—'Ehen, fugaces!'—to express his sentiments on the march of time. One of the tin boxes comes in for a share of his attention. Flies of many colours, patterns, and sizes, casting lines, traces, phantom minnows, are there bestowed in numbers suited rather for a tackle-shop than a private collection. How shall a man choose from such abundance, and how, having chosen, can he be sure of the soundness of the tackle?"

"UNUSED, brilliant of hue as when it left the tier's hands, that Jock Scott may yet be unsafe. With the lapse of years—and its owner cannot place the date of its purchase—the whipping may have dried on the shank of the hook, and the pull of a ½lb. trout may suffice to withdraw it from the accompanying gut. There is danger in the multitude of flies, in an accumulation of miscellaneous tackle, and a day or two is well employed at this season in discarding everything that is doubtful. Reel lines, also, should be subjected to careful scrutiny, for in these machine-made days it is hard to resist the temptation of a low price when combined with a good appearance. In no sport is economy less advisable than in salmon fishing. How miserable are the reflections of the too-careful angler when that 40-pounder—atmost goal of his desires—departs with fly, casting line, and half a dozen yards of the cheap reel line be considered such a bargain at the time of purchase! Sadly he contemplates the point of fracture, and his opinion of the man who sold him the line is expressed in language which cannot be reproduced. Tackle makers there are, in plenty, who can be trusted to sell first-rate articles at fair prices. With such, only, will the experienced salmon fisher deal."

T. S. H. (Llanymynech) sends the following:
PRO BONO PISCES.

If you're ever in doubt, whilst fishing for trout,
Regarding the most deadly tackle,
If the water is thick, with the stream running quick,
Try a lobworm—without any hackle
Should the water be clear, go ahead without fear,
Your basket to fill without failing,
For as sure as a gun, with the Red Tag or Dun,
You'll get a few trout—if not grayling!
When the water is low and you find it "no go"
With the fly or the worm threaded artful,
With a wee bit of lead, spin the minnow instead,
You may catch 'em on this by the cartful
When the winds in the east, you then have the least
Chance of creeling the fish that you follow
When it's in the sou'-west, then the spoon "does the
rest,"
And beats all the other baits hollow.
And now comes the rub, when the fly and the grub
Are lures after no fish will linger;
You then try the paste, which may be more to their
taste,
And land 'em—the length of your finger!
And here, sad to relate, such is my hard fate,
When fishing the Tanat or Vyrnwy,
The wind's either wrong, or the whisky's too strong,
Which accounts for an oft fishless journey!
But little I care, I enjoy the fresh air,
The sight of the stars—say Orion,
The fishermen's tales, the stunning Welsh ales,
And the "wines from the wood" at the "Lion."

YOUR Englishman is a curious animal; never given to gush, and extremely chary with whom he makes friends, and then laconic to a degree in his speech, as witness the following, overheard on board a Cunarder in mid-Atlantic: First Englishman (making himself known to a fellow passenger): "Going across?" Second ditto: "Yaas, are you?"

TALKING about Transatlantic travelling reminds me of another yarn. Two American bagmen, and extra voluble at that, told an English gentleman their names, where they lived, where they had been, and all their business. The Briton listened, but said nothing in reply, notwithstanding the fishing inquiries of his interlocutors. At last one of them said straight out, "Wal, stranger, and what might your name be?" "Sir," replied the Englishman, "it might be Beelzebub, but it isn't."

"It may seem a paradox," says the *Western Mercury*, "to assert that people living in towns have the advantage of their country friends in studying nature, but in one respect, at least, they have. Mr. W. H. Hudson has demonstrated by his book on birds in London that quite an intimate acquaintance can be made in the Metropolis with many species that are haughty and distant in the country. It is an illustration of the old fact of adversity humbling, in this case, the perky from their seats in the

trees. The writer of the article has observed wood-pigeons freely eating from the band of a man in Rotten-row who had never shown them any kindness before, the truth being that it was his first experiment in this kind of charity. Then again, it is possible in St. James's Park, on occasions, to watch the grebe diving with its young, and so initiating them into the mysteries of angling.

"These performances, which surpass any comedy on the stage, would not be given in the presence of spectators had not the birds become accustomed to the stir and babble of human life. The starling succeeds in rearing, even in the worst seasons, a family in the parkless districts of London. Mr. Hudson relates an account of the way in which these very coy visitors became quite confidential and chatty when they were fed on the window-ledge of a London top-floor. The struggle, in these cases, of the feathered tribes to accommodate themselves to its uncivilized expanse, as it seems to them, with its crowd of strange and uncanny savages, is amusing and instructive. The Metropolis is for them what the backwoods of Canada are to the European. The birds, however, soon get to distinguish; and they rarely make mistakes in their judgments of character."

THIS comes from Ireland. A mighty salmon angler was staying at Ballysloughguttery, or some other place with an equally unpronounceable name, in Connaught, for the pursuit of his favourite sport. "Larry," said he, to the hotel waiter, "bring up my brogues, please." "Yes, sorr," was Larry's reply; and he returned with a heavily nailed brogue in one hand and a patent leather shoe in the other. "What do you mean, you fool?" angrily demanded the fisherman; "can't you see that is not a pair?" "Well, sorr," replied Larry, apologetically, "it's a most extraordinary thing, but there is another pair just like them downstairs!"

ACCORDING to the Paris correspondent of the *Daily Mail*, M. Jean Charles, a sausage merchant of the Rue Notre Dame de Lorette, has for some time past noticed that his sausages, which he manufactures himself, in the courtyard behind his shop, disappear in large quantities. He has dismissed several of his employees from time to time, suspecting them of the theft, but it made no difference, the sausages continued to disappear; and he could not blame the passers-by, for they disappeared from the courtyard before ever they entered the shop. Yesterday afternoon M. Charles stood in his courtyard, looking at a heap of sausages and wistfully wondering how he was to catch the thief, when, to his amazement, he saw the top sausage of the heap rise slowly into the air and vanish from sight. M. Charles rubbed his eyes in amazement. He knew that his sausages were made of fresh meat, and yet—Presently he smiled, laid one finger against his nose and disappeared in search of a *sergent de ville*. And ten minutes later Monsieur Jules Dubois, whose apartment upon the third floor looks out upon the courtyard, was carried off to pay a visit to the neighbouring police commissariat, where he was charged with—possibly—fishing without a licence.

If any aits (eyots) have disappeared lately from the Thames, this is the reason: Kate Tate at a tête-à-tête at 8.8, ate 8 aits.

"Not care for shooting, man? What's life without it? All nature shoots. Say, what's the earliest thing Boys learn at school? Why, shooting in the ring. The seed you sow must shoot before it grows; We feel the very corns shoot on our toes. We shoot our bolts, our game, our foes, what not? We're told where even rubbish may be shot. The stars shoot in the sky—nay, I've heard say, Folks sometimes 'shoot the moon' on quarter day; And voyagers upon the stormy seas Off 'shoot the cat,' their qualms to ease."

PAPA: "Tommy you should have got those breeches four inches longer. In two months they won't fit you." TOMMY: "But if I got them four inches longer they wouldn't fit me now. And isn't now the best time for them to fit?"

AN old salmon fisher, whose piscatorial aspirations extended even beyond the grave, made a speech at an anglers' dinner, and said: "When I die, should I go to heaven, I will fish in the 'Water of Life' with an artificial fly 'dressed' with a feather from the wing of an angel; but should I be unfortunately consigned to another place, I shall, nevertheless, hope to angle in the river 'Styx' with 'the worm that never dies.'"

"You say you have the fishing right of this water?" "Yes." "Well, you're welcome to the water, too; for there's no fishing left."

TO-DAY, March 25 (go d old quarter day!), the race for the ribbon will be rowed on F's her Thames. I am asked to "please give me your opinion as to which crew should win?" The best, certainly. I remember when both won. The result came out like this, "Cambridge won; Oxford too." That was a dead heat. I always have a pair of gloves on this classic race with Mrs. "Drag." She's "gone" on Cambridge; but if the Oxford crew are all as good as "Gold" then there's (?) a pair of gloves for DRAGONET.

Eighth Annual Fisheries Exhibition.

DAVID SLATER,

(Stand 24)

OF NEWARK - ON - TRENT,

MAKES THE FOLLOWING

SPECIAL ANNOUNCEMENT.

RODS.

THOSE in want of either Rod or Reels will consult their own interests by inspecting David Slater's Magnificent Exhibit at the Royal Aquarium (now open).

Built Cane Salmon and Trout Rods, with or without Steel Centres, for excellence of workmanship and reasonable prices stand second to none. Inspection invited.

Superior Greenheart Trout Rods from 10s. 6d. to 21s. Two tops, and Best Universal Winch Fittings.

See our Greenheart Salmon Rods. Best quality only.

Our Noted Pattern, the Newark Perfection, specially designed for the Nottingham style of fishing, price 21s. each.

Pike Spinning Rods in East India, Cane and Greenheart from 10s. 6d. to 21s.

REELS.

Slater's New Aluminium Alloy Salmon and Trout Reels. These Reels are perfection; they combine great strength with extreme lightness; hardened steel works, and beautifully finished.

Sizes.	Prices.	Sizes.	Prices.
2½in.	15s. 0d.	4in.	28s. 0d.
2¾in.	17s. 6d.	4½in.	32s. 0d.
3in.	21s. 0d.	5in.	35s. 0d.
3½in.	25s. 0d.		

The Fly-Fishers' Winch (registered). This reel is made in two sizes; can be had with click or silent check. It has two special recommendations—extreme lightness and quick winding.

Also a large collection of the following patterns: Ordinary Wood Sea Reels, The Future Sea Reels, Slater's Combination in Wood and Ebonite, The "Zephyr," the lightest Nottingham, Gun-metal Salmon and Trout, Bronzed Salmon and Trout, &c., &c.

We have a few old patterns Combination Wood Reels, also Ebonite Salmon and Trout, which will be sold regardless of the cost of manufacture during this Exhibition.

Mr. David Slater will be in attendance at the Royal Aquarium during the Fisheries Exhibition, which closes on April 5.

Established
1819. **H. WHITTY,**
15, Basnett Street, Liverpool. Telegrams, "Fishing, Liverpool."

Split Cane, Whole Cane (speciality), Greenheart, Hickory Rods built on the premises by experienced workmen.

Will Customers wishing to have their Rods, Reels, or other Tackle repaired, kindly send them this month so as to avoid delay.

Reels, Lines, Nets, Flies, Bags, Wading Trousers, Brogues, Coats.

LIVE FISH FOR STOCKING.

BOOK AT ONCE FOR EARLY SUPPLY.

The Price List (gratis) contains the Largest Variety of British and Foreign Fish offered by any dealer in the world. It includes Trout (all the leading kinds), Salmon, Grayling, Char, Pike, Eels, Goldfish, Tench, Carp (sundry strains), Orfe, Perch, Roach, Dace, Bream, Chub, Rudd, Gudgeon, Burbot, Minnows, &c., &c. Apply to

THOMAS FORD,

MANOR FISHERY, CAISTOR, LINCOLNSHIRE.

N.B.—Special Lines in Rainbows, Carp, Fish Food, Ground-bait, and Perfection Carriers.

J. W. MARTIN, "The Trent Otter"
(LATE OF NEWARK-ON-TRENT),

Invites all friends, customers, and visitors to inspect the splendid collection of

Rods, Reels, Lines, and General Tackle,

that he is this year showing at

THE FISHERIES EXHIBITION,
AL AQUARIUM, WESTMINSTER,

Or he will send post free to any address a copy of his special EXHIBITION CATALOGUE, which every angler should procure. This list contains particulars of some rare bargains in General Fishing Goods, at from 30 to 50 per cent. cheaper than can be procured in a general way. Send for a copy at once. Mr. Martin is in personal attendance.

ONLY ADDRESS:

J. W. MARTIN & CO.,

8, SEYMOUR STREET, EUSTON SQUARE, LONDON, N.W.

FISHING RODS and TACKLE.

JACK RODS.—Brazen upright rings, winch fittings, 3s. 9d.; Hickory do., 2 tops, 5s. 6d. to 0s. 6d.; Hickory or Mottled Cane, 15ft., bronze or German silver fittings, solid rings, division bag and spear, will make Jack Rod, 10ft. 6in., 12s. 6d.; do., double brazed, 14s. 6d. to 21s. 6d.

REELS.—Nottingham Wood, polished, 3½in., 1s. 9d.; 4in., 2s. 6d.; movable check, 3½in., 4s.; 4in., 5s.; bronze revolving plate, check reels, 3in., 6s. 6d.; 4in., 9s. 6d.; hemp, ¼d. per yard. Plaited Flax Lines, 20 yards, 7d.; Tanned, 8d.; 60 yards, 2s. Cable Laid Cord, 50 yards, 7d.

TRACES, Gut or Gimp.—Two swivels and lead, 5d.; Twisted Gut do., from 7d.

SNAPS, &c.—Ryder's, 2d.; Pennell's, 2½d.; Jardine's, 3d.; Double Live Bait Hooks, 1½d. each; 1s. 3d. per dozen.

BAITS.—Spoon, from 6d. each, very best quality; Silver Plaited, from 1s.; Devons, Totnes, and Minnows, from 6d. each. GUT LINES, from 1d. per yard; Best, 3 yards, 6d.; "Fishing Gazette" Gossamer, 8d. Flies dressed to any pattern.

Postage Extra on all Orders. All Orders must be accompanied by a remittance.

G. W. HEMENS (late A. BULMER), 62, WANDSWORTH ROAD, S.W.
(Corner of Nine Elms Lane.)

CATALOGUES POST FREE.

OGDEN AND SCOTFORD,

PITTVILLE GATES, CHELTENHAM,

Are showing a splendid Assortment of Salmon and Trout Rods, Reels, Lines, Flies, and General Tackle at Stand 20, Fisheries Exhibition, Royal Aquarium, Westminster.

Branch: 19, LEICESTER SQUARE, LONDON. CATALOGUES GRATIS.

GRESHAM ANGLING SOCIETY.

At the society's ordinary meeting, on Tuesday last, Mr. Fourmy, of Chesham, occupied the chair. The members had very little to report as to recent fishing, but Mr. Fourmy captured a very handsome pike of 15½ lb. from private water, besides many others; and a friend who accompanied him caught several pike, largest 10½ lb. The annual dinner will take place at the Mason's Hall Tavern, Coleman-street, E.C., on April 25 next, when Mr. C. H. Cook ("John Bickerdyke") will occupy the chair. Members are requested to make early application for tickets.

ALEX. WRIGHT (Hon. Sec.).

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Cannon-street Hotel on Wednesday, March 22, at 8 p.m., Mr. H. Edwards in the chair. Mr. Parker recorded some boisterous weather at Southend, accompanied by hut poor sport. An interesting discussion took place on depletion of the sea by steam trawling, and Mr. Little, our Southend agent, spoke on the subject. The question of long, large-barrelled and multiplying winches was discussed, Messrs. Bates, Gardner, Norman, Parker, and Graham taking part. Members were reminded that the annual dinner will take place on April 12. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

THE annual smoking concert, held at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday evening last, was in every way an unqualified success, and, notwithstanding the recent structural alterations and enlargement of the concert hall, there were many visitors unable to find standing room. This is not a matter of surprise when it is considered the committee always submit a good programme. The many talented artists who gave their services on this occasion certainly deserved the unstinted praise given by an appreciative audience. Mr. Walter Emden, J.P., L.C.C., presided in his usual cheery and genial way, being supported by the president (Mr. Medcalf), vice-president (Mr. W. H. Elsmore), Mr. T. Crumple, nearly the whole of the committee, and a host of well-known people. The programme was contributed to by the following gentlemen: Messrs. Walter Hunt, C. Winter, J. Game, J. Taylor, Will Musgrave, F. and W. Menage, Tom Tiner, A. Evans, J. Batten, S. Worland, Dan Dent; and Mr. Cyril Lester's performance on the mandoline was exceptionally clever. Mr. A. H. Brooker efficiently acted as accompanist throughout the evening. During an interval Mr. Medcalf submitted the toast of "The Chairman," remarking the association greatly appreciated the honour conferred by his attendance, and anglers were greatly indebted to him for his kindness and influence as a member of the L.C.C. and in many other directions, the toast was received with great enthusiasm and accorded musical honours. Mr. Emden, in reply, thanked the members for their kind reception, stating he was exceedingly fond of all sports, encouraging them whenever possible, and would gladly assist angling interests on the council at any time, congratulating the association on its success, also for the generous assistance it had given to the Charing-cross Hospital and restocking the Thames; to the surprise of the company, he then produced a very handsome twenty-guinea silver cup, which he wished the president to accept, and suggested that it might be the means of rendering some assistance to the Queen's Jubilee Nurses Fund, an institution which had proved of immense service to the London poor by going into their homes, nursing the sick, and generally ministering to their wants in time of illness. Mr. Elsmore also stated he should be pleased to give a second cup value of £5 for same objects. Mr. Fordree promised a picture of the pegged-down match. Mr. W. Parkins, an old member of the committee, was presented with a silver mounted malacca walking stick with ivory handle, which had been subscribed for by members of the committee as a token of their regard and esteem. A very hearty vote of thanks was accorded the chairman, artists, and pianist for their kind services. The meeting concluded with the National Anthem.

RIVER DOVE ANGLING CLUB (KIRBY-MOORSIDE, YORKS.).

At the annual meeting held the other day, the president, J. Reginald Shaw, Welburn Hall, and the committee were present. There was found to be a small balance after paying all expenses, and arrangements were made for improving the numerous beats, extending over several miles, and making them more accessible. The Yorkshire Fishery Board have already granted 500 yearling trout, which are to be added on the 23rd of the present month, and will be turned down on the upper and middle beat of the Dove, where there are plenty of gravel streams for protection. Seeing that fish cannot proceed further north, owing to the running underground of both rivers (Dove and Hodge), before appearing again at the commencement of our club waters, their retention in the same is a natural consequence. This applies also to the fresh run trout, coming up stream from the Rye (in the next farm). Howkeld Beck (a spring containing the volume of water from the Hodge), about two miles in length, is within a mile of the town, and enters the Dove some two miles below the town. This is a clear fishing stream similar to the Costa, but with less volume of water, and strangers should note the fact that good fishing can be had here when the surrounding waters are in flood. Trout have had this heat little disturbed on account of the numerous bushes; but the committee have commenced to

judiciously thin out places for fishing here and there. Dry fly fishers should have good sport during the season, as trout have become numerous, and run up to 1 lb. each. The two lower beats (containing the whole of the volumes from Hodge and Dove), become a different class of fishing, much deeper, with large pools here and there, and quite free from hushes. There is a direct highway from the railway station which cuts off a considerable distance, and arrangements are made to run parties down at a nominal charge of 1s. a trap load, or return for them if preferred. Strangers unable to obtain fishing in the Rye can here have similar fishing by day ticket any time during the season, as well as access to all our club fishings, on payment of 2s. 6d. per day, 7s. 6d. per week, or 20s. per season, without entrance. There is no lack of accommodation in and near the town of Kirbymoorside, and charges are most moderate. To those who are not so particular as to size of fish, or specially preserved club waters, the Duncombs Park Estate Office ticket, at 1s. per week (or less by month or season), gives a ramble amongst lovely scenery extending north of the town for twelve miles or more, with purely trout fishing. The committee have taken into consideration the exceptional length of fishing and the numerous heats, and are still disposed to issue a few more season tickets, without entrance for the present season.

J. C. FRANK.

THE WIND-UP.

MARCH 14 was not an ideal day from an angler's point of view. Nevertheless, meteorologically speaking, there have, during the season now ended, been many worse days, and, as anglers are, or ought to be, a hardy race, a little fog and a good deal of cold do not count for much. But it is an incontrovertible fact that the man, or woman, who goes fishing desires above all things to catch fish, and if matters in this particular respect on the old river generally were at all akin to the state of affairs which existed at Twickenham on the 14th inst., the wind-up of the 1898-99 season will not be entered in many diaries as a red letter day. Just why the fish were not in evidence nobody on the spot seemed to know. When our little party, consisting of a lady and two mere males—all novices, one male very much so—turned out, it was distinctly foggy, but in other respects not very unpleasant, the sun giving good promise of shining later, a promise, by the way, it failed to fulfil. A move was made for the deeps off Pope's Villa, where, when we arrived, at least six punts were already moored. We took up our position to the rear of the crowd, and from this point of vantage it was amusing to see the abortive efforts of those in front of us to kill anything, the burly Spong, of Two Sawyers celebrity, especially being like a pea in a frying-pan, shifting from one place to another and yet another in his vain efforts to hit upon a likely spot for his two clients. Personally, we went off with a bang, our lady angler hooking three small bream in about five minutes. At any rate, no more fish came to hand during the ensuing two hours, and the arrival of an immense steak and the et ceteras—hot *à la carte* meals are a feature of Twickenham fishing—constituted a welcome break to a very monotonous time. That steak was good, but we did not allow it to drive our thoughts from the real object of our outing, and so soon as it was disposed of moved down to the front of the fleet, which had increased to nine. Here the lady once again distinguished herself, by immediately hooking a dace, but nothing more occurring in the course of one hour, and the jocular remarks of those at the back of us convincing us that others were faring very ill, we cleared off down stream to a swim almost at the end of the island, passing, en route, the genial Jack Spong, with one of his enthusiastic clients fast asleep! Ye gods! and this on the last day. Fishing in about 4 ft. of water with the bottom clearly exposed to view, we at length managed to capture a few dace and roach, but they were all on the small side, and the majority went back to grow. In this shallow water our novice created some diversion by frequently landing his tackle right into the punt, greatly to the danger of the faces and clothes of the rest of the party. Poor fellow, it was his first day's fishing, and in all probability will be his last. Not one solitary fish came to his rod after six hours hard work. Certainly the others of the party had not much to boast of. We sallied out, armed with two fish baskets, and the catch altogether only weighed about 2 lb., nearly all the fish falling to the lady's prowess. To add to the chagrin we felt at our want of success, on landing we met a friend who had ridden over on his surplus stock. When subsequently we foregathered at the Two Sawyers with other brave spirits, we had at least the satisfaction of learning that if we had done badly others had done still worse. We could not, therefore, lay the blame for a blank day on our professional helper—Draper. As a matter of fact, "Jack" is all right, but the weather, or the water, or something or other, was all wrong. I am now looking forward with great interest to the next issue of the *Fishing Gazette*, to see if some learned contributor is hold enough to tell us the actual cause of such a shockingly bad wind-up.

FRED BUCKLE.

EASTER HOLIDAY ARRANGEMENTS, 1899.

THE GREAT EASTERN RAILWAY

Announce that in addition to the tourist, fortnightly, and Thursday, Friday, or Saturday to Tuesday tickets to the east coast and the Norfolk Broads district (Yarmouth, Lowestoft, Cromer, Mundesley, Southend-on-Sea, Clacton, Walton-on-Naze, Dovercourt, Harwich, Felixstowe, Aldeburgh, Southwold, Hunstanton, &c.), which are issued from Liverpool-street and their other London and suburban stations. They will on Thursday, 30th March, issue special cheap excursion tickets from London (Liver-

pool-street and suburban stations) to most of the above stations; also to Norwich, Cambridge, Wisbech, Lynn, Fakenham, and the other principal stations in the eastern counties, and by the cathedral route to Lincoln, Doncaster, York, Leeds, Manchester, Scarborough, Darlington, Newcastle, Berwick, Edinboro', Glasgow, &c., and to Chesterfield and Edwinstowe (for the Dukeries). Cheap week-end tickets will also be issued on Saturday, 1st April, to most of the G.E. country stations. Tickets (both ordinary and excursion, &c.), can be obtained in advance at Liverpool-street station, and at the company's West-end offices, 2, Cockspur-street, Trafalgar-square; 51, New Oxford-street; 215, Edgware-road; and 120, Brompton-road, and at their other City and West-end booking offices. In addition to relieving trains, special trains will be run from Liverpool-street on Thursday, at 8.30 a.m., 1.35, 4.5, and 7.12 p.m., to Ipswich, Yarmouth, Lowestoft, &c.; at 1.30 p.m., to Ipswich, Norwich, Cromer, &c.; at 1.30 and 4.5 p.m., to Walton-on-Naze; and at 1.30, 4.5 p.m., and 12.3 night (snapper train), to Colchester and Clacton-on-Sea. On Good Friday, at 5.10 a.m., to Colchester, Ipswich, &c.; and at 8.55 a.m., to Ipswich, Yarmouth, Lowestoft, &c. For the accommodation of persons detained at business until late in the evening of Saturday, special midnight trains will leave Liverpool-street at 12.0 for Norwich, via Cambridge, and at 12.30 for Yarmouth and Lowestoft, via Ipswich, calling at the principal intermediate stations. The 12.3 supper car express to Colchester and Clacton will run as usual. On Easter Monday special excursion trains will run from St. Pancras to Cambridge, Ely, and Yarmouth, and from Liverpool-street to Southend-on-Sea, Clacton-on-Sea, Walton-on-Naze, Cambridge, and Ely. Excursion tickets will be issued to Epping Forest, Broxbourne, and Rye House. A special service of trains will be run from Liverpool-street, Fenchurch-street, and Gospel Oak to Epping Forest, and from Liverpool-street to Rye House.

SOUTH EASTERN AND CHATHAM AND DOVER RAILWAYS.

The above companies announce cheap day excursions on Good Friday and Easter Monday from London to Tunbridge Wells, Hastings, Ashford, Canterbury, Whitstable, Herne Bay, Deal, Walmer, Ramsgate, Margate, Broadstairs, Hythe, Sandgate, Folkestone, Dover, Aldershot, Gravesend, Rochester, Chatham, Sheerness, &c. On Easter Monday frequent special and ordinary trains will run to and from Holborn, Victoria, Ludgate-hill, St. Paul's, and intermediate stations and the Crystal Palace (High Level Station). Return fare, 1s. 6d., third class, including admission. Special trains will be run to Hayes, Blackheath, Greenwich, Gravesend (for Rosherville Gardens), &c. The usual extension of time for certain return tickets during the holidays will be allowed. A cheap Friday to Wednesday excursion leaves Charing Cross and Cannon-street at 2.45 p.m. for Boulogne, and 9.0 p.m. for Calais, on Thursday, March 30, and from Charing Cross, Victoria, Cannon-street, and Holborn at 9.0 a.m. for Calais, on Friday, March 31. A cheap Saturday to Monday excursion leaves Charing Cross, Victoria, Cannon-street, and Holborn, at 9.0 a.m. on Saturday, April 1, for Calais, and Charing Cross and Cannon-street, at 2.45 p.m., for Boulogne, available to return up to the 7.50 p.m. Cheap tickets to Paris will be issued, leaving Charing Cross, Victoria, Holborn, and Cannon-street via Calais and Boulogne. Tickets available for fourteen days. Cheap tickets to Brussels, via Calais or Boulogne, will be issued from March 29 to April 3 from Charing Cross, Victoria, Cannon-street, and Holborn. Tickets are available for eight days. Tickets will also be issued to Brussels, via Ostend, March 29 to April 3, from Charing Cross, Victoria, Cannon-street, and Holborn. Tickets available for eight days. Special day excursions will be run on Good Friday, Easter Sunday, and Easter Monday, leaving Charing Cross, Victoria, Cannon-street, and Holborn for Calais, and from Charing Cross for Boulogne. Cheap eight day tickets to Amsterdam, Arnheim, Rotterdam, Utrecht, and The Hague will be issued each day from March 29 to April 3 from Victoria, Holborn, St. Paul's, and Herne Hill by the 8.25 a.m. day service via Queenhoro' and Flushing. A special boat train will leave Victoria (Chatham and Dover) at 9.5 p.m. on Wednesday and Thursday before Good Friday for Dover, in connection with the boats to Calais and Ostend.

NEW PISCATORIAL PATENTS.

THE following particulars are compiled by Messrs. Hughes and Young, Patent Agents, 55 and 56, Chancery-lane, London, W.C.

24,802. Fish, threading on wire. Patentee: Mr. E. Andersen, Stavanger, Norway, relates to apparatus for threading fish on wire in a regular row, preparatory to smoking them, or for any other purpose. The fish are placed head downwards between a series of wedge-shaped projections along the edge of a table, and are held in a folding frame formed by two hinged pieces, each formed with a series of tapering notches. An elastic band runs behind the notches, and when the fish are held in position they are pressed against this band by a hinged angle-iron. The wire is then threaded through the hole formed by two corresponding grooves.

4175. Charles Hellyer, St. Andrew's Dock, Hull. "Improvements in shoes for otter boards and the like."

15,886. Trawling. Patentee: Mr. H. Smethurst, Polham-terrace, Grimsby. To dislodge the mouth of the net, floats are fitted to the head line.

Notes from the North.

THE great event in angling circles in the north has been the defeat of the Aberdeen Corporation Bill, in the Select Committee of the House of Lords, as far as the clauses pretending to deal with the Don were concerned, and they have accordingly been dropped at the instigation of the Don Fishery Board.

It speaks well for the future of the Donside Fishery Improvement Association, that within four months or so of its formation, it should practically have been the means of gaining so signal a victory. The association includes the members of the Don Fishery Board *ex officio* and prefers to work through it. The association confining its operations to raising the needful.

The association has its work cut out for it for some time to come—pollution, dam-dykes, abstraction of water, and other abuses, which must be tackled and overcome before the Don can regain its ancient prestige as a salmon river of the first water; and all for want of a stitch in time ten or a dozen years back.

It was a telling bit of evidence which Inspector Martin gave to Lord Northbrook and the Lords' Committee, when he said that some two or three years ago the Cruives fishings on the Don were worth £500 annually. Now they cannot find a tenant. The rent is practically *nil*.

It is funny of the Aberdeen Corporation to have taken Dr. Macadam to London to say that the mill (paper) effluent was not hurtful to the Don, and now to raise a fuss over the same effluent polluting the North Sea at the river's mouth.

The Duke of York has been again unfortunate with regard to his advent on Deeside this spring from a weather point of view. A veritable snowstorm has raged since the morning after his Royal Highness's arrival. The same thing happened last year at the time of his visit, and continued all through his three weeks' stay.

Provost McConachie Fraserburgh was entertained to dinner in recognition of the many valuable services he has rendered the fishing community, and especially in the establishment of a fish mart, which was opened the other day.

Owing to the advent of a fresh snowstorm, sport for the nonce has practically been suspended. The trout (yellow) season had hardly set in, although a few have been trying it, and it will be April 1 now before anything like a basket need be looked for.

The "ripper" consists of a flight—string would be a better appellation—of clear galvanised fish hooks of the largest cod size, and is worked by hand from a boat or pier. It is an engine of the "snigger" order, and is often used by trout poachers where finnock and sea trout abound along our coasts and even in the estuaries.

Last week, a Fraserburgh fisherman, while looking for cod (?), caught up a halibut on the ripper, which was better, as it fetched him £2. The halibut weighed 1 cwt. It is the first time such a fish has been caught after this fashion.

Colonel Fairfax Rhodes has taken the Morven shootings and fishings belonging to the estate of the late Mr. Keillor on Deeside for the season.

Nicoll, keeper to Lord Garrioch on the Borrowstone Dee water, had a fine fish of 25lb. last week. This is the top weight for these parts.

Only an occasional fish is being got on miles of Spey water, and on not a few sections nothing has yet been done since the season opened.

The salmon fishings on the east coast are as backward as ever, but, then, so is the weather. Till the latter alters for the better, neither need any encouragement be looked for from the former.

A regular blizzard has prevailed all over the North since Saturday morning. The wind was not so violent on Monday, but more snow fell. Arctic conditions reign supreme.

The Balmoral and Invercauld estate managements have an agreement not to use spinning baits on their respective waters till May 26 in each year, so that the fly is alone permissible on their sections of the Dee for spring angling.

Both above and below these parts, however, all conceivable legal lures may be used *ad libitum*. However, the fly has been the favourite lure since the season opened.

April is the best month for early Don and Deveron trouting on the lower waters. On the upper waters, again, May and June yield the best baskets.

Most of the tidal waters, such as the Dee, Don, Ythan, Ugie, &c., are closed during the first three weeks of May, on account of the smolt season. The restriction, with its opening and closing dates, is purely local. With an early advent of smolts in force it is soon over, especially if a timely flood sets in. Angling is even then only suspended in the purely tidal waters of the respective rivers.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

In my notes, a short time ago, I mentioned that Mr. G. Stanley, of exhibition fame, was about to open an exhibition at Bingley Hall, Birmingham, and that he had placed himself in communication with the secretary of the Birmingham Angling Association with the view of getting a display of specimen fish, at the same time offering to pay the expenses of getting the fish together and giving the sum of £20 to the owners of the best specimen and rare fish. The secretary, Mr. C. White, accepted the offer on behalf of his association, and commenced to get the fish together. This has exceeded his expectations, inasmuch as a large number of grand fish that had been kept from the public gaze were collected. They now occupy three very long shelves at the exhibition, and number some 180 cases containing fish of almost every kind. Pike and bream are very plentiful, the former fish commencing at 27½lb. and the latter at 7½lb. The roach class includes the giant roach, 3½lb., lent by Mr. R. D. Frost, of Bristol. The perch commence with a 4½lb. fish. The dace are not very numerous, but, still, some good specimens are to be seen, the largest 13oz. Chub are to be seen, but not in great numbers, the largest being over 4½lb. There are two very fine carp in the show, but not for competition—the largest over 17lb. The show all round is very fine, and well worth a visit. There is a falling off in the trout and barbel, but with the other fish it has been said by good judges that it is the best show of fish outside London that has been seen for years. The rare fish include a barbel of 4½lb. and several smaller ones, a gudgeon over 4oz., a ruff 5½oz., and a bream roach. The exhibition was opened on Monday last by the Lord Mayor of Birmingham, who, in referring to the show of fish, said that it gave him great pleasure to see that Birmingham had so many expert anglers, and also to know that all the stories they told of their large fish were not altogether exaggerated. The exhibition will be open until May 13, during which time excursions will be run into the city to see the exhibition, which contains a large number of attractions independent of the show of fish. The Birmingham Anglers' Benevolent Society at their last meeting decided to take time by the forelock and consider the future arrangements for their annual contest. It was decided that this year it should be a day contest. Four places were selected, namely, Tewkesbury, Alrewas, Fenny Compton, and Pershore; and the matter as to the railway fares to the places mentioned were left in the hands of Mr. C. White. The Visiting Committee gave in some very flattering reports, and a number of new members were added. It was decided to visit the Baltic, Green Lanes, Hope and Anchor, and Salmon clubs prior to the next meeting of the committee. The Camden Society held their annual *soirée* at the Camden-street Board School, on Saturday evening. The affair was a success, and the prize fund will be assisted by the financial result. The Vine Unity held their first concert on behalf of their prize fund on Tuesday evening last; this was also a success; and another concert will be held on next Tuesday. The meeting of the committee of the Provincial Angling Association will be held on Saturday, March 25, at the Sportsman Inn, Wood-street, Kidderminster; chair taken at five o'clock. At the close of the meeting, Mr. T. Coles, the president, will be presented with his testimonial. Several of our clubs are making rapid headway numerically. Some of them have more than doubled their strength this year. We have several more new clubs being formed with a view of joining our association. The Severn Fishery Board are again issuing permits for the taking of coarse fish during the close season. When shall we be able to prevent this kind of thing?

FROM THE FEN DISTRICT (LINCOLNSHIRE).

The season for coarse fishing has now closed, and, taken as a whole, the sport obtained in the Fen district was up to the average of former years. The mild winter enabled anglers to pursue their operations without any interruption, and the closing weeks were remarkable for the splendid results obtained by both pike and roach fishermen. The premier water—the Witham—has been responsible lately for some excellent bags, and it is doubtful whether better sport has ever been obtained towards the end of the season. The Forty-foot, too, has yielded exceedingly well, and the champion fish, a 14-pounder, was secured a few days before the season ended. The weather has now taken a wintry turn, in fact, the temperature has been lower this week than any recorded during the winter, and there have been several falls of snow. Under these circumstances trout fishermen will not bestir themselves just yet, and, moreover, some rain is wanted to improve the condition of the streams.

FROM HULL AND DISTRICT.

During the past few days, in this district, we have experienced some unlooked-for heavy falls of snow, and snow is continuing to fall, more or less, causing all our local waters to be out of condition and full of "snow-broth"—quite a contrast from the beautiful summer-like weather of the previous week—and the weather is also extremely cold, with hard frosts, so that it will be some days, should an agreeable change take place, before anything successful can be anticipated in trout fishing, and the drains and havens are also in bad condition for worm fishing for flounders and eels. Therefore the prospects are not very promising for our Easter holiday matches, which will be a great disappointment to our local anglers, for several of our societies have made their opening fixtures of the season and arrangements for that time, the river Hull and the Winstead Drain at Patrington being the waters selected for their operations, which are

pretty fairly divided. On Good Friday the Hull Ramblers' will fish on the river, at Minto Flatts; the Stoneferry Star A.S., at Figham; the Brunswick and Waltonians, at Weelferry; the Duke of York A.S., at Grovehill; the River Hull Club, on Swinemoor; and the Derringham A.S. at Hull Bridge; whilst the Albion, Alexandra, Excelsior, and Hull Town Angling Societies have selected the drain at Patrington for operations. On the Saturday, the Sisson's Brothers A.S. and Clarence A.S. will visit the river at Weelferry, and the Tigress A.S. will fish on Minto Flatts; the County, East Hull Band, and Izaak Walton Societies, fishing at Patrington; and on Easter Monday the Progressive and Albert Societies opening their season at the same place; Messrs. Amos and Smith's club, choosing the river at Hull Bridge for that day. On the closing day for coarse fish, one of our local anglers, Mr. G. H. Caley, a member of the Royal Albert Angling Society, secured two nice sized pike in the neighbourhood of Hull Bridge, the best fish scaling 8lb. 6oz., and the other 4lb.; three more decent fish were also taken on the same day, near to Wawne; and on the opening day for trout one was caught near to Burton Hall that scaled 11b. 7oz. It was only in poor condition, but it is full early for trout on this river, even if the weather was favourable. The Bowling Green A.S. fished their first match of the season on the river at Weelferry last week, but unfortunately not one of the competitors caught a fish, so that the match will have to be fished over again on some future date. This club held their annual dinner at headquarters the other evening, which was a very enthusiastic affair, and several valuable prizes were given for competition during the season. On Monday evening next the East Riding A.S. will hold their annual *soirée* and ball; and on Monday, April 3, the Clarence A.S. also hold their annual ball. Last week the Hull Stipendiary Magistrate (Mr. E. C. Twiss) gave his decision in an important case under the Salmon Fisheries Act, instigated by the Fishmongers' Company, in which a Melton Mowbray gentleman and three Hull fish merchants were mulct into heavy costs for being in possession, for sale, of certain salmon, on Oct. 27 last, contrary to the provisions of the Salmon Fisheries Act, 1873 (86 & 27 Vict. cap. 71, sec. 19).

FROM THE LAKE DISTRICT.

Since the end of last week the weather in this district has become a topcoat colder. Although the sun has shone brightly in the daytime, biting nor'-east winds have swept down the hills, followed by sharp frosts at night. Ten and twelve degrees of frost have coated sheltered pieces of water with ice, and some of the mountains have had a coating of snow. As a consequence angling is somewhat off just at present, but fair sport was enjoyed towards the end of last week. All the rivers in the district are now open, and fishing may any day be in full swing. A very sensible decision has been come to by the Derwent Fishery Board, namely, to abolish their system of "suspects," and all who wish to apply may now obtain a fishing permit. It is to be hoped that one and all will in future fish fairly, and that no more cause may be given for the enforcement of rules which have caused irritation and cast suspicion on possibly innocent persons. Trout appear to be in fairly good condition in the Cumberland streams (Derwent, &c.), single fish up to nearly 3lb. in weight having already been taken. A favourable opening was made in the Keswick waters, particularly the lake, and baskets of over a score of fish have been secured, Messrs. J. Lowther, Wilkinson, Denwood, Hill, and Beadle being most successful. A few small pike have also been taken, the best 9½lb. It seems strange after so abnormally wet a winter that there should so soon be an onrly for water. Two or three wet days, however, would be welcome.

FROM LANCASHIRE.

Of course the great event at Wyresdale is a topic very extensively discussed, and, while admitting the right of the proprietors to conduct the event on their own lines, it is admitted that they would have done better had they consulted some experienced officials used to arranging large competitions. An event of this kind cannot be criticised as many events open to the public are, but a little more explicitness in the general conditions would have been advisable and have saved a lot of disappointments. The St. Helens Angling Association, on the 23rd, suitably acknowledged the lengthened services of Mr. R. Ball to the interests of angling in the district. "Lancashire" was invited, but he could not go—his health stood in the way of honouring one of the very best of men and anglers. Mr. Editor, there is not enough of this kind of thing amongst fishermen; not enough of gratitude to the self-denying hon. sec. or hon. office bearer in any capacity; but there is always plenty of holes to tear in his coat. Well done Warrington. Last week we had to record good work in getting the Shropshire Union Canal closed until June 16, and this week comes the news of the acquisition of fresh waters for both themselves and others. They have secured a length of the Bollin between Bollington Mill and Warburton Mill, the nearest railway station being Heatley; and another resort is a length of the Weaver, at Newbridge. The nearest railway stations are Hartford or Over and Wharton. There is plenty of good roach fishing in this water. The Warrington hatchery and its rearing ponds are admittedly well equipped, and they will shortly receive for treatment 10,000 rainbow ova. The fry, when ready, will be turned into the foregoing waters. The best thanks of the fraternity are due to this body of sportsmen for trying and accomplishing some good for others outside their own town, and not like some, trying to use outsiders to benefit their own townsmen. Staleybridge and district are also doing good work up to the last, for within two days of the close season they placed the final consignment of coarse fish in their private waters, consisting of 200 exceedingly fine roach.

TOTTENHAM COURT ROAD LONDON & PARIS

If any of our men want a really good out at Easter let them go to Clonbar and try to emulate Mr. Gavan, who, on one day, took 29lb. of trout with the fly, the largest 33lb.; and on the next day a pike of 29lb. and a trout of 11lb., with the minnow. Truly good sport.

FROM MANCHESTER.

The annual meeting of the Baldwin Angling Society, Hulme, has recently been held, when the balance-sheet and report were found equally satisfactory, and the following were elected to office: President, Mr. D. Dixon; vice-president, Mr. R. Grayson; secretary, Mr. D. Butler; assistant secretary, Mr. J. Woodley; committee, Messrs. H. Hills, J. Shaw, W. Hilton, T. Baldwin, and C. Smart. The last match of the South West Manchester was an enjoyable event, but sport was poor, Mr. W. A. Leigh, with one fish, took both first and special prizes, and, strange to say, both were timepieces—he now knows the correct time. The Pendleton Angling Society held a very successful concert on the 22nd, but too late for any detailed notice. The event was a most enjoyable one. The Welcomb Angling Society, Hulme, negotiated the second half of their concluding item on the 17th with a smoker and supper at headquarters. One member says they bit freely, and had the fish done the same in their last match more fish would have been caught. The programme was contributed by Messrs. F. Smith, T. Foden, T. Ashworth, and H. Hyde. The Moss Side Socials had a good time at their social evening, everyone enjoying themselves thoroughly. There are a lot of preparations in hand for the Easter holidays. Many of our citizen fishermen intend going to Llanymynech, as usual, where for years they have spent Easter. The existing inclement weather has put a damper on all enthusiasm, and just as tackle dealers were experiencing a revival in trade a sudden reaction has taken place, and the old dull times returned. On Tuesday last the Manchester Angling Association, at their March meeting, had a paper from Mr. R. Burn, entitled "The Best Fly for the Tarn." Experience showed that for the last twelve years the March Brown, in various sizes according to the season, had proved by far the best. The Alder Fly in June, only when it would be in season, had also been successful, but was of little or no use in any other month. The results for the past twelve years have been carefully scrutinised before the above decision was given. Messrs. C. H. Robinson and A. Smith have opened the season as usual in the old style with good baskets, fifteen brace in all. At this rate last year's large total may possibly be passed. It is a pleasure to learn that Mr. J. Pendrigh, president of the C.P.A.A., and manager of Messrs. Hardy Brothers' Manchester depot, is so far recovered from his serious illness as to contemplate a return to duty before Easter. The concert at Openshaw on the 27th is to receive the official support of the C.P.A.A.

FROM NOTTINGHAM.

Odd salmon anglers have again patronised the weir head at Holme, Pierrepont, but up to the period of writing no fish had been run. The weather, since my last, has been bitterly cold, and snow must fall before it becomes warmer. News is extremely scarce, for, as yet, it is premature to speculate on the chances of trout fishing. There is said to be a good head of fishing in the Greet, and on parts of the Dover Beck, but operations do not usually begin until the first of May. The Nottingham Shoulder of Mutton Association held their annual business meeting at headquarters on Wednesday night (March 15), when Mr. J. Truman presided over an extremely large attendance of members. Mr. D. S. Garner, the enterprising secretary, submitted the yearly report, from which it transpired that the association have a balance in hand of £35 odd. The reports and accounts were adopted, and subsequently the whole of the old officers were unanimously re-elected. The banquet was fixed for last Thursday night, when it was understood that Lord Henry Bentinck, M.P., would preside. Mr. J. W. Foster, honorary secretary of the Trent Anti-Pollution Society, has received official intimations from his lordship, Mr. Bond, M.P., and Mr. Yoxall, M.P. (these are the three local representatives in Parliament), to the effect that they intend supporting the Rivers Pollution Bill in the House of Commons. The annual meeting of the Trent Fishery Board was held at Derby on Tuesday afternoon, under the presidency of Mr. A. F. Hunt, when a voluminous report on the subject of pollution and the security of salmon in the rivers under the jurisdiction of the board was read by Mr. C. K. Eddowes, the clerk. The board have a balance in hand of £29 7s. 7d., and it was stated that nearly the whole of the income of the board was derived from the sale of trout licences. Next to nothing was got from coarse fishing. After discussion, the report being adopted, it was decided that a question raised as to the re-stocking of trout streams with trout should stand over for another twelve months on account of the financial question involved. But it was decided to give the consent of the board to netting for pike in the Dove so as to protect salmon, parr, and trout.

FROM SHEFFIELD.

The bitterly cold weather of the last few days has put a stop to fishing, and consequently there has been no sport to record during the past week. The last few days of the coarse fishing season, which terminated on March 15, were taken advantage of to the fullest extent, and as the frosty weather had put the fish well on the feed, the excellent catches made compensated in a certain degree for the lack of sport met with in the beginning and middle of the season. Some splendid chub and pike were caught in the Trent during the closing days. The prospects for salmon fishing in the Trent are said to be remarkably promising, large quantities of heavy fish having been seen at Shardlow and King's Mills and other places. Rod fishing will commence shortly. The termination of the coarse fishing season in the Witham, the Glen, and the Bain was fairly

satisfactory, the principal catches being composed of pike. Trout anglers are anxiously waiting for April 1, when sport commences in the Wye and in the majority of the best waters in Derbyshire. Anglers who wish to have a little sport in the Wye between Bakewell and Rowsley during the Easter holidays should make application for tickets at once, as the number of rods is strictly limited. In the Derwent the number of rods is not limited, and the charge is moderate; whilst excellent accommodation can be obtained at the hotels in Chatsworth and Edensor by those who wish to fish the Derwent in that locality. In the private waters near Matlock Bridge some very nice trout have been taken, whilst all the Derbyshire streams are said to be well stocked with fish this year. The annual meeting of the Trent Fishery Board was held on Tuesday at Derby, and the report contained many instances of the rivers and streams being polluted by sewage and other refuse. The question of encouraging trout fishing by re-stocking the rivers was left over on account of the financial question involved. The board decided to give permission for the pike in the Dove to be netted, in order to protect salmon and trout.

FROM YORK AND DISTRICT.

The old song, "Rivers low and clear," had a pretty general application at the end of last week, though the weather was fine for the opening of the trout season. In the Yorkshire Fishery Board's district this commenced on the 16th inst. On that date the atmospheric conditions were delightful, and fly fishing was fairly successful. Rods out on the 17th also did well on the Wharfe and the Yore. Trout fishing on some of the club lengths, however, does not begin until the 25th, and on others until the middle of April. The open winter has been very favourable to trout, and the streams being well stocked, there should be fine sport later on. But for some days the cold has been intense, and the most doughty anglers have not been anxious to face the biting north winds and the driving snow showers, with the accompaniment of a cutting frost. It is, then, a time of waiting just at present. We have now entered upon the close time for coarse fish, which ends on June 15. The White Rose Friendly A.S. have just held their annual dinner in York. The club has been in existence for four or five years only, and yet the members in each year have held the record for the best average catch in club matches. One of the speakers suggested that prizes should not be given for the smallest fish, it being contrary to the laws of fishing to catch and retain the small fry. The River Dove A.C. have held their first yearly meeting at Kirbymoorside, when a gratifying report on the past season was presented. Five hundred yearling trout granted by the Yorkshire Fishery Board would, it was stated, shortly be turned into the water. On Tuesday, at the Richmond Police Court, Mr. Chas. Spencer, gunsmith and dealer in fishing tackle, was fined the full penalty of 40s. and £2 11s. 2d. costs for illegally dealing in and selling salmon roe for bait. It was stated that this practice had become very common in the Yorkshire Fishery Board's districts. It was not only damaging to the salmon food, but also very destructive as a trout bait. The defendant admitted the offence, but pleaded that it was committed in ignorance.

Correspondence

AFTER MAHSEER IN INDIA.

[A correspondent sends us the following interesting letter from a friend describing mahseer fishing in India.—Ed.]

MY DEAR SAM,—You have asked me to do a rather difficult thing, and in such a case I must do my best and act in sympathy with the poet's thought, "he that doth his best, angels can no more." You want such a description of Mahseer fishing in India as will enable you at the distance of 12,000 miles to realise the way one enjoys that sport in such a distant country. It occurs to me that this can be most effectually done by taking you on one of my fishing expeditions, giving you a full description of all its varied details, involving the preparation for the start, provision for the journey, and how life is spent in camp.

A fishing expedition in India is a much more serious undertaking than it is at home. In the former you are obliged to carry all your requirements with you, food and tents, and numerous servants, who have all to be provided for as well as yourself. You have then to estimate the length of the journey, the quantities of the supplies, and the number of the coolies that may be requisites for their transport. No more enjoyable life is conceivable than camp life in such a glorious climate as that of the Himalayas in the cold weather, when the climate is the finest in the world, the fishing all free, and such a thing as poachers unknown, for the fish are held sacred by the natives, who, in point of fact, are literally the water bailiffs or guardians of the rivers.

And now let me entreat short my prefatory remarks, and take you with me on one of those expeditions which occupy so sunny a spot in the fields of memory.

In the spring of the year 1876 we decide on visiting a lovely river about sixty miles north of Simla, and about ten marches from our starting place. As to scenery, this river was most picturesque, abounding in splendidly-wooded banks, many gorgeous rapids, and well filled with fish throughout. On the day previous to our starting we engage the requisite number of coolies through the agency

of the Bazar Kotwal, who is found to supply us with any number of coolies required. These are warned the night before to be ready for starting at dawn next day. Next the various supplies for our commissariat, including rice, sugar, tea, bacon, and tinned goods are all packed in small kiltas (hampers) specially made for being carried on the coolies' backs. These are made of bamboos split, and are very light and strong. These are sometimes covered over with leather, which, of course, add to their durability for long journeys. All the provisions are carefully packed the evening before our start. The kiltas alluded to very much resemble in shape those used by the Swiss peasants during the vintage. For the supply of milk we take a small flock of goats, numbering ten or twelve, and half a dozen sheep for that of meat. When the latter have been consumed we renew our flock somewhere on the march where more sheep are procurable. We do not indulge in the luxury of bedsteads, as there would have but a short existence in a state of entirety, being liable to speedy dislocation or broken legs, quite inevitable from the roughnesses of the journey. Our beds consisted of dried ferns placed on the bare ground, and a waterproof sheet spread over them, affording a most comfortable bed, quite suitable for any of the seven sleepers.

Well, all is now ready, and to-morrow at dawn of day we start! The morning is a lovely one, the sun rising in Oriental splendour into a cloudless sky, every sight and sound those of beauty and joy. The first sounds we hear are the cooing of the doves, soon to be followed by the chattering of the coolies as they arrange and settle what loads they are to carry respectively.

The extreme loveliness of a summer morning in India is a thing that must be seen to be realised. The sun rises into a cloudless sky, the air is cool and refreshing, the whole of Nature gradually wakes up and becomes vocal with the songs of birds, the air is perfumed with the flowering jasmine that grows in profusion, while the rhododendron trees, some 30ft. and 40ft. high, and profusely covered with their scarlet flowers, clothe the hillsides.

As soon as we have assigned to the coolies their respective loads, we mount our hill ponies and start. These ponies are most delightful and valuable animals—small, but very strong and docile, and as sure-footed as goats. They are never shod, nor are the hoofs ever pared or interfered with in any way, while their power of endurance is great.

We ride on ahead, leaving the coolies to follow, in charge of a head man, called a Chuprasse. In about an hour and a half they arrive, and in a very short space of time our tents are pitched. All hands speedily collect wood for the fires, which are soon lit; the cook sets the kitchen in order, and in an incredible short time breakfast is ready. These coolies all cook their own food, consisting invariably of boiled rice and flour cakes, cooked on a species of girdle—simple fare, to which they do ample justice. At night they sleep under the trees or rocks, simply wrapped in a coarse kind of home-made blanket, which envelops them even to covering their heads.

Each day's march involves a very similar routine, and at the end of ten days we arrive at the happy hunting ground. We find our river in splendid order, running plenty of water, beautifully clear and of a pale greenish colour. During the time the snows are melting the water becomes a milky-white colour, caused chiefly by the immense quantity of sand mixed in it. At this time the fish will not take any bait, owing to the disturbance caused by the flood and the low temperature of the water. As soon as the flood subsides, the water again becomes as clear as crystal, and the fish take freely. At the conclusion of the fishing season all the large fish go up to the higher reaches for the spawning. When the process of incubation is completed, and the young fry take to the shallow water, the parent fish happily cannot revisit the regions where they are, and thus the young fry escape being devoured by their parents. We selected a lovely spot for our camp, on a rising ground close to the river, where a grove of mango trees shade protected us from the heat. We arrived about 10 a.m., and our first impulse was to go to the river for our morning bath. My friend chose to bathe, while I elected to try my luck by committing a spoon to the lovely pool and rapid in which my friend was bathing. After fishing it up till quite close to him, and in less than five minutes I hooked a lovely 10-pounder. He gave me grand sport, and finally landed him, to the astonishment and delight of my friend, who had hitherto laughed at my piscatorial experiment. We then returned to our tents, where we breakfasted and rested for the remainder of the day. I need hardly tell you that we were provided with all manner of splendid large salmon flies, which had cost us a small fortune.

As the water was in splendid order we decided to try the powers of fascination of these flies. But, alas! to our horror and disappointment, that instead of proving the great attraction we anticipated they scared the fish. We distinctly saw the fish approach them, and then quickly run away affrighted at them. We soon discovered that a medium-sized fly was the best for the smaller fish up to about 5lb. to 8lb.; and for any about this weight the artificial minnow of gutta percha, about 6in. long, and the spoon, about 3in. in length, was the most killing bait. The very large fish rarely rise to the fly.

On the evening of our first day, when the sun showed signs of going to bed, we made our way to the river. We fished from 6 p.m. till 9 p.m., bagging in that space of time nineteen fish, aggregating 190lbs., our heaviest fish scaling 34lb.

Our usual plan was to fish in the mornings from 5 a.m. till about ten o'clock, and in the evenings from 6 p.m. till nine o'clock. We always returned with as many fish as a coolie could possibly carry. We supplied our men with fish, the surplus we pickled in salt and lime-juice, and completed their cure by hanging them in the sun for

twelve hours. On our return from our present tour we brought back 200 cured fish. From these an excellent dish is made by shredding them finely and mixing potatoes and baking them in the oven.

The time now arrives for us to move to fresh fixing ground, so we go two miles higher up the river. On our way we came across a very curious and interesting application of hydropathy much resorted to in many parts of the Himalayas.

At a most picturesque spot shaded over by lofty and umbrageous trees, where a small stream trickled down the mountain side, we met with an old woman taking care of a number of mere infants of various ages, from one to three years old. The children were tightly swathed with cloth to flat boards, and these were placed at different altitudes up the side of the stream, each child being so placed that a jet of water played on their foreheads through a leaf folded funnel-shape, so as to form a kind of small spout. These children slept soundly for the greater portion of the day. Such an arrangement allowed the mothers to attend to their outdoor and domestic duties. This one old woman acted as nurse for the whole village, and in the evening the respective mothers came and carried home the children. The principal reason of the adoption of so strange an arrangement and treatment is founded on the belief that it wards off a fever to which most children are liable in these places.

Very close to our next place of encampment we came on a very small lake of about half a mile in circumference and surrounded by a dense pine forest. It was simply swarming with mahseer of enormous size from 40lb. to 60lb. weight, but no effort on our part could induce them to take any bait. The natives of this locality fed them daily with Indian corn, and it was a wonderful sight to see them at the usual feeding hour, 4 p.m., all crowding to the particular place where they were daily fed. The weather continued fine, we had excellent sport in the river, bagging a considerable number of large fish.

At our next encampment we saw a very curious native piscatorial contrivance for catching the larger fish. The river here flowed between two large masses of rock, with a wall of rock stretching across the middle, over which the water rushed with considerable violence. On each of the projecting rocks at the side men stood holding a large sheet just over the intermediate wall. When the fish, in trying to jump over the fell, failed to do so and fell back, the sheet was adroitly lowered and the falling fish was captured. We saw a number of fish taken in this way. In these rivers it often happens that dead bodies are carried down, and, after decomposition, may be seen lying at the bottom of the pools, and the mahseer feeding on them. From a long experience, I am of opinion that in the early morning the fish take most freely. The large fish are found generally near the top of the rapids, down which, when hooked, they rush with great velocity, sometimes taking out at one rush as much as 100yds. During the rush any attempt to stop them is fatal. When the first run is over, gently wind up and bring them towards you, and you probably will find the first long and furious rush is merely an exhaustive effort, and that an easy compliance with your wishes speedily follows.

In many cases Indian rivers are most dangerous from the size and number of the boulders and the frightful weight and rapidity of the water, rendering crossing on foot impossible, except at the risk of being swept down or drowned. And I may here mention that in such cases you may often make use of your pony.

I remember on one occasion having been tempted to try crossing on foot, but when about midway lost my footing and was carried down, rod still in hand, a considerable distance, but being a good swimmer, I kept my presence of mind amidst the roaring torrent, and gradually reached the bank in safety lower down.

These hill ponies are never shod or even the hoofs pared, a fact to which may be attributed their marvellous sure-footedness.

No doubt you will be wondering how food is provided for such a regiment of men as we had with us, especially in a country where the villages are so small, and so far apart that you may travel for twenty miles, even more, without seeing a human habitation. But the custom of the country meets this apparently unsurmountable difficulty. The headman of the village on the arrival of our camp waits on us, and gets the number of the coolies. He then levies contributions from each household of as much rice or flour or butter as may be required. Having done this, the whole of the provisions is brought to the camp, where it is duly distributed, each man's due portion being weighed out. These coolies are for the most part excellent and most willing servants, and I can only remember one occasion when malingering broke out, and we found them dropping out and lying down on the march on the pretence of illness. In cases of illness in the jungle we have generally immediate recourse to quinine or brandy, the latter medicine being by far the most popular with these men. On one occasion in our early morning march we came upon two coolies who had lain down besides their loads, complaining of severe pains in the stomach, which they attributed to the extreme cold of the morning. We at once administered a suitable dose of brandy, which speedily enabled them to proceed on the march. Next day, to our disgust, we found three men complaining of the same kind of pains as our patients of the day before, and which we had so pleasantly and effectually cured. But it at once occurred to us that these were malingers pure and simple, and, accordingly, thought it best to adopt quite a different treatment. On our morning march we always carried our guns with us, in case of our meeting with any game, and the happy thought occurred to us that gunpowder in a certain form might prove an effectual cure. We soon prepared (with some moistened gunpowder) what we, as boys, called a devil, in the shape of a small cone. We then persuaded patient No. 1

to lie down on the broad of his back, telling him that in the first instance his stomach must be well rubbed. We then so placed ourselves as to prevent him seeing our preparations for his cure. As soon as the little devil was ready, we adroitly placed it on the centre of his stomach, and immediately set fire to it. On its explosion the terrified patient jumped frantically up, and implored a discontinuance of our operation. It is almost needless to add, the others preferred to bear their pains to adopting the gunpowder cure! After this we had no more cases of malingering. As a cure we gave gunpowder the palm, being cheaper and more rapid in its operation than brandy! Our patient on this occasion was only slightly scorched, and took our practical joke most good humouredly.

And now what more shall I say? All nice things come to an end too soon, and so with this expedition on which you have accompanied me. As I look back upon it my spirit whispers the wish, "Long may my heart be with such memories filled." If there is anything else you wish to know about camp life in India, you have only to write and indent on the humble store of the experience of—Your old friend,

FLY.

PROPOSED BIRMINGHAM FLY FISHERS' CLUB.

DEAR SIR,—Although the idea of a Birmingham Fly Fishers' Club has been suggested on several previous occasions, yet it is believed that up to the present no active steps have been taken to put the matter into definite shape.

An opportunity has, however, now presented itself of obtaining the fishing rights on a stretch of the Staffordshire Blythe (both banks), about three-quarters of a mile in extent, at the village of Hametall Ridware, near Armitage, and as this water is eminently adapted for fly fishing purposes, and well suited for stocking with trout, it is thought that a fly fishing club on a modest scale might be formed to take over the fishery, and stock it for immediate use.

The water is situated about two miles from Armitage Station (L. & N. W.) from which conveyances are obtainable, and at present contains a few trout and a large number of grayling. Dace and chub also provide good sport for the fly in the summer months.

The present scheme is that the club should have a limited number of members (say thirty or forty), with a moderate subscription for the first year, and that the water should be stocked at once with a few hundred two-year-old trout so as to ensure good sport being available at an early date. It is also proposed to cultivate the social side of the sport by the holding of monthly meetings for the discussion of matters of interest to fly fishers, &c.

Intending members should make early application.

A meeting for the organisation of the society will be convened at an early date; meanwhile, any further information can be obtained from—Yours sincerely,

ARTHUR T. SADLER
(Hon. Secretary, pro tem.)

Water Orton, Near Birmingham, March 14, 1899.

SEA TROUT IN THE SEVERN AND VYRNWY.

DEAR SIR,—It has been stated on very good authority that sea trout were, some years ago, not uncommon in the Severn and Vyrnwy, and, as the matter is interesting to anglers in Shropshire and Montgomery, some correspondence which has taken place is, I think, well worthy of publication.

The gentleman who first raised the question is the Rev. J. B. Meredith, of Kinnerley Vicarage, near Oswestry, and he asserts very definitely that sea trout were at one time caught by angling in the River Vyrnwy. He is an observant naturalist and a good angler, and his testimony in the matter is so clear as to be practically incontrovertible. He was in the habit of exchanging notes on natural history with the late Mr. Beckwith, a naturalist of high repute, and, in one of his letters to this gentleman, Mr. Meredith wrote as under:

"I am much interested just now in a natural history question rather out of your line. For the last few years I have now and then caught fish in the Vyrnwy, which I strongly suspected to be sea trout. I had been pooh-poohed by local fishermen, but on Wednesday last I had an old college friend with me who has been regularly fishing for sea trout for years past in Scotland, Ireland, and Lancashire, and who has caught lots of them. I caught a very pretty thick fish, and as soon as he set eyes on it he exclaimed 'Why, that's a sea trout.' We caught several brown trout the same day and the difference was most marked in shape and spots."

A subsequent letter from Mr. Meredith to Mr. Beckwith contained the following:

"Vyrnwy Fish.—I can give you a tolerable list, having sampled them pretty freely myself—salmon, sea trout, trout, grayling, chub, roach, bream, dace, bleak, pike, perch, ruff, gudgeon, roach, minnows, bullheads, and sticklebacks. I have caught all these. Sea trout I have taken undoubtedly several times. I thought so for some time, and poor Henry Shaw laughed me to scorn; but one day I had a friend with me—one Harry Potts, the owner of the Glaurafon estate, near Mold, who has caught hundreds of sea trout in Ireland, and in Lancashire. I have not said a word to him about the existence of sea trout in the Vyrnwy; but I was having a controversy with a very lively fish of about 1lb., and he came and landed him for me. Directly he got him into the net he exclaimed, 'Why, it's a sea trout.' And a further examination confirmed his first impression. So I take that as proof positive."

On Jan. 12 in the present year the Rev. J. B. Meredith wrote to Mr. H. E. Forrest, of Shrewsbury (who is now publishing a work on the "Fauna of Shropshire," and

including fishes therein), a letter in which he refers to sea trout as below:

"I cannot give the year; the particular one I mentioned was not the first nor the last which I took in the Vyrnwy. I have not, however, seen one for some years, certainly not since the formation of Lake Vyrnwy. Those I took occurred in the days before they began to stock the Severn at Shrewsbury. I have no doubt as to the fact that they were sea trout. My friend Mr. Potts, who identified one, was a very keen fisherman, who had years of experience in Scotland, Ireland, Wales, and Lancashire, and sea trout fishing was quite his favourite sport. I remember at the same time I came across a Scotchman, a rare good angler, who told me that he had taken one or more heavy sea trout just above Shrewsbury. Moreover, since those days I have made the acquaintance of sea trout at Cricketh, and in some of the rivers of Carnarvon, and they were of the same type as the Verniew fish, only a trifle brighter, owing, I imagine, to the proximity to the sea."

"I have an idea about the sea trout and Lake Vyrnwy. Since its construction we have never had floods equal in magnitude or duration to those of the old days until this winter. Now, will the sea trout re-appear?"

In a later communication to Mr. Forrest, Mr. Meredith writes:

"My theory rests upon Mr. Potts's identification as a sea trout of one of the fish which I took, which certainly differed from the ordinary trout."

"Another fact is worth noting—I always got these fish out in the stream. The regular Vyrnwy trout almost always lie close under the banks; at least, those of any size. My sea trout always fought very hard, and ran from 3lb to 12lb. in weight."

If you, Mr. Editor, or any of your readers, can furnish information upon the subject, it will be appreciated.—Yours, &c.,

HAFREN.

RIVER AND LOCK-KEEPERS' DINNER.

DEAR SIR,—I have received and formally acknowledged the following subscriptions, since your last issue:

FROM ANGLING SOCIETIES.

St. Pancras, Great Northern Brothers, Cobden, Piscatorial, Holloway, Jubilee, Earlsfield, Amicable Waltonians, Cosy, Silver Trout, Olde Clapham Rovers, Westbourne Park, Chiswick, Wenlock, Anglers' Association, Ormonds, Globe, and Alma.

FROM SUBSCRIBERS AND FRIENDS.

F. G. Clark, W. Back, A. Collis-Browne, L. Macdonald, Mrs. E. Saddler, G. Tagg, and W. S. Harding.—Yours faithfully,

H. W. HIGGINS.

THAMES RE-STOCKING ASSOCIATION.

DEAR SIR,—Will you kindly allow me to state that I have received 10s. from Mr. J. W. Zaehnsdorf as a donation towards the T.R.A. I have also received from Mr. Charles Dejonge, at Malta, 2s. 6d., and 1s. from Mr. Stuart, of Chancery-lane. Mr. Zaehnsdorf has informed me that he will subscribe 10s. annually. The money has been forwarded to Mr. Hankins, hon. sec. of the T.R.A., who will send receipts.—Yours truly,

F. H. AMPHLETT.

WHEN AND HOW TO USE GENTLES.

DEAR SIR,—In reply to "Fosdyke" in the *Fishing Gazette* of March 18, who says gentles are not to be had freshly bred, if he sends me his address I will send him some which will convince him he is wrong in his statements. I have bred them for years artificially. I found out a way last year how to preserve from hatching until required the ova of the blue-bottle fly, which is the best way, as most can be bred when most will be required by this process.—Yours faithfully,

FRANK FISHBURN, Entomologist.

Silsden, near Keighley.

YOU NEED NOT GO HOME WITHOUT CATCHING ANY.

DEAR SIR,—I should like to know if it is usual, on hiring a punt, to be told there is something in the well, so you need not go away with an empty bag? Fishing recently, for the first time, we (a fellow member, myself, and wife) had a punt at Twickenham, and while being pointed to the swim I had selected, that is what our puntsman said. I brought the fish to my club to substantiate my statements as to this, in my humble opinion, grossly illegal proceeding. The punt was hired of—

JOHNNY EDWARDS
(Member of the Dibdin A.S.,
66, Camden-street, N.W.).

TRAILING AT PULBOROUGH.

DEAR SIR,—As you will probably publish the fact that a good jack was captured in the Arnn, at Pulborough, on March 12, it may interest you to know that one was caught by some persons (? anglers) trailing spoon baits from a boat. The fish weighed about 10lb. The trailing business is practised a good deal at Pulborough, and not much by locals, and I think it some angling clubs wish to keep their reputation up for fair fishing, a weeding out of a few members might have a good effect, both for the clubs and sport.—Yours obediently,

T. WILLIAMS.

DEATH OF MR. GEORGE MASON.—The veteran host of the Wherry Hotel, Oulton Broad, has passed away, in his 79th year, and was well known and respected by many of the Thames anglers and rowing men. He has been the proprietor of that famous hostelry for over a quarter of a century, which is now pulled down, and a more palatial structure being erected in its place.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to B. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Months	5s. 4d.
Three Months	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

THE WM. BLACK MEMORIAL.

WE are glad to be able to report that the William Black memorial is now taking a definite form. At the first meeting of the committee various suggestions were made and discussed as to the form of the memorial. The one most generally approved was the *Lifeboat*, and it was decided to aim at raising the sum of £2000 necessary to endow one. Other suggestions were, a cot in a Highland hospital; a fisherman's or shepherd's shelter near Oban; a bursary at a Scotch university. Let us hope that many of our friends who are admirers of Mr. Black's delightful works, will be glad to subscribe towards the provision of such a memorial as the committee may finally decide on adopting. Lord Archibald Campbell is hon. treasurer, and Miss A. L. Stronach, 118, Warwick-street, Eccleston-square, London, S.W., is hon. secretary. We are glad to learn that subscriptions are coming in freely.

A SEA TROUT PROBLEM.

"IN the multitude of counsellors there is wisdom," saith the proverb, but we think Sheriff Burnett, of the Aberdeen bench, who presided over an important angling prosecution last week, will, from his past experience, be inclined to favour the rendering of the wise saw otherwise, and fall in with the view that in the multitude of anglers' opinions "there is muddle." The learned judge was called upon, after a judicial manner, to say what a sea trout was, and he practically did so by saying what it was not. To help him to this open opinion he had the aid of a round score of practical fishermen and anglers, who were called upon *seriatim* to put their views before him from the witness box in a case which arose after the following manner, and which, as it now stands, is of more than local interest, in addition to being generally highly instructive as well:

Mr. Robert Archibald, an angler of undoubted standing, was brought into the Sheriff Court at Aberdeen on Thursday last charged with catching sea trout in the tidal waters of the Dee. There was no charge of poaching, and the *bona fides* of Mr. Archibald as an angler were fully safeguarded by the prosecution, which was at the instance of the Dee Fishery Board. The case was regarded by both sides as a test one, and the defence was that the fish in question were finnock—or whiting, as they are termed in England, and as they are also legally known in Scotland, although popularly termed finnock in the north generally, and particularly so in the Aberdeen district—and not sea trout.

For some years back there has been a disposition on the part of the proprietors and lessees in the north to claim the finnock or whiting as their property; and, on the other hand, there has been, if not so strong, yet as persistent a disposition on the part of tidal anglers to resist the claim. The law is certainly on the side of conserving all proprietary rights; but "use and wont" instigates the tidal angler to set up a certain claim, however shadowy, to the finnock swimming in the tidal waters. It is only in recent years that any claim has been put forth by proprietors, and is no doubt the outcome of the growth of angling, and a sign of its increasing popularity north of the Tweed. At one time finnock and finnock waters were not worth considering, and that not very long ago either. They were in the same category as the brown or yellow trout in the paying sportsman's eye, and were not of any consequence as far as the rent roll was concerned.

This indifference to the value of brown trout and finnock waters in the past has led, not only strangers, but folks at home as well, to regard these waters as free to all, and as such they have been angled on from time immemorial. Of course the idea is quite erroneous; but "use and wont" has made it very hard for proprietors, on the one hand, to assert their just rights, and the angling public on the other to part with their supposed ones. Hence it is no uncommon thing to find trout fishers wandering all over the country enjoying the sport of making record baskets when they can, in the quite innocent belief that as long as they stick to brown trout they are all right. Of course there are others who know better, and even on a mountain burn would no

more think of trespassing without leave than of entering the royal preserves at Balmoral themselves.

On tidal waters again, and especially near towns and burghs where the foreshores are town's property, the "use and wont" claim comes more into prominence. When there is a riparian proprietor to insist on his right of property in the fishings—whether salmon, grilse, brown, or sea trout, finnock, or whiting, as the case may be—the matter is simplicity itself. Either the offending party can then be prosecuted for poaching or for trespass. If it is "fish of the salmon kind" he has been angling for and taken, then it is a case of poaching; and if, again, he is angling for brown trout or finnock, then it is a case of trespassing on proprietary rights, and he can be interdicted from such interference. This was the outcome of the famous Spey trouting case, which established without doubt a proprietary right, which has not been disputed since. When the foreshores belong to corporations or burghs, or are otherwise Crown lands, there is no restriction on the angler so long as he confines himself to brown or yellow trout. The salmon fishings on such parts may be let at high rentals, and may be under a different proprietorship even from the lands adjoining, and yet the brown trout angler can go on his way rejoicing, for there is no one he can possibly trespass against. But the pity is that such places are scarcely worth his time and attention, for there the brown or yellow trout love not to dwell, or, if they do, they are pretty well accounted for, and soon kept pretty well within bounds. On the other hand, the finnock or whiting affect these quarters, especially in the spring and autumn, and fatten in their prolific currents.

For some time back, owing to the growing popularity of angling, as we have hinted, and the demand for sporting quarters, salmon fishing lessees have been gradually asserting their claims and disputing those of the tidal or free (?) angler to the finnock or whiting. "He may kill brown trout as he likes," they say, "but finnock or whiting are 'fish of the salmon kind,' and are our property as much as salmon, grilse, or sea trout undoubtedly are." In short, if finnock or whiting are the young of sea trout, then the salmon lessee has a claim upon them. If, on the other hand, they are not, then they are as free to the tidal angler as the brown trout are; but there's the rub.

The agent for the prosecution said, "If I had been charged with killing four whiting or finnock I would have pleaded guilty at once," but he was charged with killing four sea trout, and it was round this point that the evidence was led. It fell to the witnesses for the fishery board to prove that Mr. Archibald's four white trout were sea trout. It was not disputed, as a settled point in law, that an angler was not entitled to catch a finnock if it was a sea trout. But said the defence, "Prove it." It was here the muddle of the multitude came in, and probably gave the cute and learned judge the chance he seized of deciding the case, not on its merits, but by a sort of legal quibble, if we may be pardoned for using the expression. The sheriff himself will, we are certain, heartily agree with us, and it is hoped that when a similar charge is preferred in future the sheet may show that the fishery board is not afraid to use the word whiting or finnock, and then a more authoritative finding may be had.

It is of little moment to enter upon all the details of this most interesting case—the most important, in many respects, since the Speyside exciseman's prosecution, which was ultimately decided in the Court of Session. There were some brilliant examples of the "experienced fisherman" of from twenty to forty years standing who had theories of their own, not only on finnock and sea trout, but on salmon and "fish of the salmon kind" generally. They had a chance to air them, and they did not hesitate to do so. Probably they had a distant feeling that it was the last and only opportunity of illuminating the world (interested in *Salmo salar*) generally, and the dark intellects of scientists (in this particular line) in particular, as to their convictions that "grilse and salmon were different fish"; that "a finnock or whiting were never more than a year old," and so on. Nor were the regiment of anglers (tidal) less dogmatic in their beliefs, although their theories were mostly con-

DEATH OF DR. JOHN BRUNTON, M.D., M.A.

It is with great regret that we announce the death of that well-known veteran angler Dr. John Brunton, which took place after only a few hours' illness last Saturday evening (March 25). The genial Doctor had been out visiting his patients up to the day before his death; and we are sure that all who knew him will join us in expressing to his widow and his family our sincerest sympathy with them in this great and sudden loss. We hope to give a portrait and some account of our late friend next week. It was only very recently that he called at our office to have a chat, and he was then looking as well as we have seen him for a long time. Dr. Brunton was an original member, and for years a member of the committee, of the Fly-fishers' Club; he was also one of the oldest living members of the Piscatorial and Gresham Angling Societies. He was an accomplished all-round angler, and one of the first contributors to the *Fishing Gazette*. He has not long survived his old friend Dr. Ramskill, whose obituary notice he wrote for our columns. It is sad to think we shall none of us hear his cheery "Hullo! how are you, my boy?" or see his pleasant face again.

finned to the matter under dispute and of a purely negative order.

The sheriff was not without a flash of humour in his decision when he remarked that he was not called upon to determine the "origin of species," and then to pass judgment after the following manner: "This complaint against you must be read that you did, contrary to an Act of Parliament, take four sea trout on a certain day from a certain river, and I hold that it has not been proved that you did that. . . . It is not whittings that you are accused of having taken, and the prosecutor attempts to bring the circumstances within his complaint by trying to show to me that whittings are sea trout. I am not prepared to express an opinion upon that, but I think all the prosecutor has proved here is that whittings, whether they ever become sea trout or not, are not, at the time they are whittings, sea trout, although they may be 'fish of the salmon kind' ? Therefore, I find this charge not proven, and I dismiss you from the bar."

We have given the decision in full as it is very instructive. "Fish of the salmon kind" will not do in an angling prosecution of this kind. They must be specified, and surely, in these days of scientific research, there should be no difficulty in establishing the "legal" connection between a whiting and a sea trout. On the other hand, there are migratory trout (tidal at least) which offer some colour of doubt as to their distinct class. They are mostly hybrids, and the outcome of artificial propagation—over which it is right to pause, for they all go under the name of "finnock," when found in the tidal waters, silvered, after the sea trout order, but which may not be sea trout. As artificial propagation by importing trout ova from hatcheries is more and more on the increase, and likely to become more so in the near future, this doubt has all the more weight. But when a test case is brought into the court by the tacit consent of both sides, it is a great pity that a legal quibble should be even permitted to come in and shelve it, for we look upon it as absurd to find a case of "cattle lifting" not proven, because they happened to be calves, as to find Archibald's case not proven when he had four whiting instead of four sea trout.

G. M.

SPECIMENS OF FLIES SEEN BY ANGLERS WANTED.

MR. R. B. MARSTON, editor of the *Fishing Gazette*, St. Dunstan's House, Fetter-lane, London, will be much obliged to anglers who will be kind enough to send to him specimens of flies which they meet with on rivers and lakes in any part of the world, with the following particulars:

- (1) Name of water, locality, and date of capture.
- (2) Local name of fly if it has any.
- (3) Name and address of sender.

THE LAKES OF KILLARNEY.

AMONG the thousands of people who visit Killarney every year many anglers and a considerable number are anglers. We make this distinction advisedly, for hardly a pleasure boat traverses the lakes but flies, from a rod of some sort, trail in its wake, and hardly a fly is trailed without at some time or other hooking a fish. There are not many, probably, who visit these far-famed lakes for the sole purpose of fishing. The scenery is the first, the angling but the second consideration. Indeed, most brethren of the rod prefer to seek more secluded spots, where they meet none but kindred spirits upon the water. Killarney is certainly too touristed to make ideal angling quarters. The hotels are hotels, not fishing inns, and are consequently expensive; still, there are people to whom comfort goes for something; and, moreover, many men who are blessed—shall we say?—with a wife and family find it a delightful place in which to spend the summer holidays; for while, to amuse the ladies, tennis, golf, boating, and society are available, they may still enjoy capital fun with their beloved trout literally at their very doors.

The formation of the Killarney Fishing Development Association should mark the beginning of a new angling era in this district. Energetic measures are being taken to cope with poaching in all its branches. The *Irish Times* states that

night lining has already been suppressed, a statement we are inclined to think a little premature, and we believe that the association has not so far succeeded in obtaining the abolition of cross-lines. It is to be hoped that their laudable efforts will be supported. What these lakes suffer from is over-fishing, and the damage done to sport by cross-lining can hardly be over-estimated. But the association does not confine itself to the prevention of poaching. During the last few years a large number of Loch Leven trout have been turned in, and the lakes are now to be stocked on an extensive scale with rainbow trout. It is thought that as the temperature of the water is singularly uniform, these fish should thrive and multiply. The experiment will be watched with keen interest by pisciculturists.

The prospects of the salmon fishing this year are exceedingly good, owing to all the heavy floods which we have had. A good head of fish are already reported, and there is every reason to hope for better sport than that recorded for some years past. The favourite flies for salmon are the Fiery Brown, Golden Olive, Jay's Blue, Thunder-Lightning, Blue and Black Doctors, sizes No. 1½, 1, 2, 3 D. L. hooks, old numbers. The best spinning baits are rather small Brown Phantoms and Devons, or blue ones when the lake is discoloured. It is, however, as a trouting resort that Killarney is particularly famous, and to trout we accordingly turn our attention. The average size is rather under the half a pound, but fish up to two or two and a half pounds, though infrequent, are not rare.

The lakes proper are three in number. The lower, and largest, Lough Leane, holds many small and some good trout; but it is much fished, or "hacked," as the locals call it. In the middle lake, Muckross, there are better fish. The upper lake, Torc, holds fish in plenty, but they do not run large. Flies and minnows for all of these should be small. The angler cannot do better than put himself in the hands of Mr. Haynes, Patrick-street, Cork, who knows all the best patterns, and may be relied upon to supply those suitable for the time of year. The grouse, green, blue, or orange are always good, and the Zulu is, perhaps, more killing than anything. On a good day the basket should contain one fish of a pound, several between ½ lb. and ¾ lb., and many of about five and six ounces. The trout in these, as indeed in all the Kerry loughs, are exceedingly sporting, and fight surprisingly well. They are pretty fish, and excellent eating. Within easy distance are many mountain tarns, where dozens of tiny trout may always be taken. The same may be said of the mountain streams. The river Flesk was affected by the bog slide, and has not yet entirely recovered. It is only good in high water. Near Headford Junction, the next station on the Dublin line, runs the Anna Cree, a river with a great reputation, to which Killarney boatmen much enjoy an excursion. The latter are deserving of all praise. Keen, quiet, and steady, they combine a thorough knowledge of their work with the simple courtesy so characteristic of the Irish peasantry. Many of the hotels supply boats (to fishermen) free of charge. The cost to the angler is thus reduced to the 5s. a day and lunch, which is the boatman's wage.

We have preferred to mention last the bit of trouting, which we regard as the best in this district. Some three miles away, beneath the precipitous slopes of Crohane, lies a spherical lough named Guitane, a name variously rendered in maps and guide-books as Gutane, Guttane, or Kittane, which all signify the same sheet of water. Its shores are bleak, and bare of vegetation. It has no further claim to beauty than the weird contrast between its placid surface and the rugged mass which towers above it; and is consequently less frequented than its more entrancing neighbours, being seldom visited, as we read, except by fishermen.

Mr. Jones, let us say, has been fishing Lough Leane, and, owing, no doubt, to the bright sun and stilly air, and beyond all question not to the fact that Mrs. Jones, who accompanied him, persisted in displaying a red parasol, to which he himself attributes his failure, has been much disappointed in his hopes of a bag. Wiping his bald head with a green pocket-handkerchief, he at length lays his rod along the sides of the boat, and turning to Mikey, says, with some irritation, "I don't believe there's a blessed fish in the lake;

confound the sulky brutes." "Faith, sor," replies that worthy, "they're not taking at all, bad luck to 'em. I never knew sich a day." "What's to be done, then, Mike?" "Begor, sor, an you'd thry Guitane, you'd have a bit of sport. That's a fine lake, and there's a power of fine trouts in it, too." Jones says no more, but thinks a lot; and that evening, when Mrs. Jones has gone up to dress for dinner, he arranges with Mikey to leave for Guitane at eight o'clock the following morning, an hour at which he knows very well his faithful spouse will not be stirring.

Punctually the car is at the door. Our friend betrays his Saxon origin by holding on to the rail behind, and it is just as well he does so, for Jarvey cuts the corners fine, and they swing round them in a manner calculated to disturb a tyro. A little excitement is supplied by a collision with a milk cart, which Jarvey and Mikey take with philosophical unconcern. Not so, however, the indignant Jones, who informs the driver that he is the worst man behind a horse he (Jones) had ever seen. "Ah, sure," said Jarvey, "it's a very awkward beast to drive, and when you've an awkward horse you must have an awkward man to drive him." They arrive at their destination without further mishap, and proceed to bail out the leaky boat, whose dirty condition is sufficient evidence that this is no resort for pleasure parties. "You may try a larger fly than down along," says Mike, as our friend is adjusting his tackle. Accordingly he mounts a Claret and Blue at the tail, with a fiery Brown and Blue Towser for droppers. Nor has he long to wait ere he is justified in his selection, for by the end of the first drift half a dozen pretty little fish are lying in the basket. There is a southerly breeze, a nice ripple on the lake, a cloudy yet not overcast sky; all the attributes, in fact, of an ideal fishing day; and the fun is fast and furious. Sometimes two, and once three, of the ravenous *fario* are captured at one cast, yet Jones is not satisfied, for though they have thirty fish by luncheon time there is not one over the half pound. It is pleasant to land after a morning afloat; the meat pies and beer are also good; so is the soothing pipe, which has a relish all its own on these occasions. There are few things sweeter than a pipe by the water-side. He smokes his peacefully beside a little stream which trickles from a mountain lakelet into the silver lough; along its shores the butterwort and bog plants thrive amazingly. Their rest enjoyed, they embark again, and Jones, who has already captured more fish than he knows what to do with, determines, to Mikey's delight, to devote the rest of the day to trolling for a big one. It is not till evening that his patience is rewarded, but then there is a pull that bends the rod top (which by the way is not a spinning one) to the water's edge, and he is certainly fast in a good one. He obligingly follows the boat for some way, and is within fifteen yards before he seems to grasp the situation. Then, quite suddenly, as if for the first time realising his danger, he runs out several yards of line, and our worthy friend's heart is fairly in his mouth as a magnificent golden fellow, whom he mentally puts down as at least a 3-pounder, leaps into the air. "Begor!" exclaims Mike. "That's a great fish! Five pounds, if not six." But Mike is a master of the multiplication table. Who but the man with the rod in his hand can experience the exquisite thrill of pleasure which vibrates through every nerve as a gallant trout struggles gamely to the end? Such a mixture of joy and anxiety now agitates Jones, as he deftly drops the rod point, and finds the fish, in spite of these gymnastics, still well and firmly hooked. Minutes, which seem hours, of desperate play ensue before, after a splendid but unavailing effort, the quarry comes heavily alongside, and is instantly landed by Mikey's practised hand, anon to propitiate the angry goddess, Mrs. J., for her husband's desertion. Jones was a proud man that night, and decided to spend yet another week at Killarney.

MARK BENCH.

WE have received the first number of a new publication entitled *The Thames* (price one penny), dated March 25, dealing with all things connected with the river, and those who are in the habit of passing their leisure time on the water will find it very interesting. The first number contains a supplement giving the portraits of the Oxford and Cambridge University crews.

OTTERS AND CRAYFISH.

In some parts of Germany otters are still so numerous as to cause great loss to fishery proprietors. The President of the Thuringian Fisheries Society, Colonel von Egloffstein, writes to our contemporary, the German *Fishing Gazette*, about baits for otter traps. He says that otters are so fond of crayfish that they do not trouble about other fish if they can get them, and that the best bait for an otter trap is crayfish. Colonel von Egloffstein has killed as many as five otters in one place. As regard the question, can otter flesh be eaten by man, he says it can, but that those who have once eaten any are not likely to make a second attempt.

"BLAGGLEWAITHE v. FATE AND ANOTHER."

In one corner of my friend Blaggelwaithe's study is a small glass fronted cabinet, and in one corner of the cabinet, amidst china pots and other gewgaws, is a rusty mackerel spinner and a few yards of frayed line attached. Mrs. Blaggelwaithe, a most proper and particular lady, permits it to remain in that honourable position, and even once in my hearing spoke of having it placed in a separate case and a better position.

Dinner was over, and the ladies had retired into the drawing-room. B. pushed his cigar case across the table, and I selected one of the tapering beauties and sent a wreath of grey-blue smoke curling around the decanters. Then said I:

"Blaggelwaithe, is there a story attached to the spinner in your study?"

"A story indeed!" he replied. "Never heard of such a story before! Marvellous! Happened to me, too!"

"Would you tell it to me?"

"Certainly my boy, with pleasure. You play cards, I think, occasionally?"

"A little whist, that is all."

"Well, you will then understand that whist is a queer game. Sometimes your hand is good, and your opponents' bad; more often the reverse, and now and then all four hands are 'much of a muchness,' which increases the necessity of good play to give you the odd trick, to say nothing of honours. But did you ever play at whist with Fate, my boy—double dummy? That's a very different game, and yet I once played so—and won. I will tell you how it happened."

"If you have been to Penzance you will remember the old 'Dolphin Inn' on the Quay, a queer old place, half smuggler's holes, now filled up with fish boxes and cordage, half underground apartments, now filled with casks of good honest ales and spirits. I well recollect the clock case in the bar parlour which swings back and reveals a dark grimy passage beyond leading either into the bowels of the earth or the chimney."

"A few years ago I was staying at this same hostelry, and having a right good time fishing around the rocky coast; and a rocky coast it is, too! Huge green and yellow coated boulders piled one upon another, with the transparent blue water eternally dashing and howling around them; great snarling crags, topped with emerald moss—and all the rest of it. My visit was nearly at an end, so I resolved that I would have one last day among the mackerel—great pearly-flanked fellows, with skins like broken rainbows."

"Now, at Penzance there are currents as well as rocks. If you lose an oar at Marazion, you pass the Wolf Lighthouse—miles down the coast—before you have finished ejaculating 'Oh, bother!' or words to that effect, according to the morality of the loser; and you stand a fair chance of being able to ask a homeward-bound liner off Cape Clear for the loan of another before you really emphasise the remark. My reason, my boy, for explaining all this is to prove that a really competent idiot is justified in dispensing with the services of the man-who-knows-the-coast, and he can whiff for mackerel alone, leaving the current to work the boat. Having chartered my craft, I gathered together the implements for my sport, and stowed them in the bows fitted for immediate action; then I returned to the inn for my luncheon."

"When I returned to the boat I found the stern seat and three-quarters of the bottom occupied

by a stranger. He was a tall man, bronzed by the Cornish sun, and fast asleep. His apparel denoted him a man mixed up with the fishing industry—peaked cap, guernsey, heavy cloth trousers tucked up his legs, and wearing no boots. He was Fate's first card.

"Wake up!" said I. He snored long and deep. "Wake up! this is my craft," I repeated. He only snored again.

"If you don't clear I'll pitch you out!" I shouted. It was an idle threat, for I stand but five feet in my boots; whilst he, my boy, lay six without 'em! A man sitting on the harbour steps called out, "T'won't matter, Sir; take him along with you! He may be useful!"

"I did so, and Fate pulled in the trick with a grin. Rowing is hard work in a small whale boat when the whale is inside. I pulled one way, and we surged slowly ahead, whilst now and then the sleeping man snored a long and vibrating snore; then the boat moved faster. In this manner we gained the outer waters and the currents. There were two of the latter at that spot, and the boat lay undecided, when the man's cap fell overboard as he lurched violently from one side to the other. One current took that, and the other, satisfied with the division of the spoil, took us."

"As quick as thought I seized the rod, and, with a grand 'whirr-r-r,' sent the spinner flying and curving after the fast receding headgear. It missed by a few yards. I reeled in again, and the cap disappeared."

"Said I to the sleeper: 'Wake up; your cap is gone!'"

"He snored, and a hideous fear came oozing out of my forehead. Suppose the man was drunk? I pinched his arm hard, and yet harder; only grunts in response. Clearly the man was drunk. Fate's hand was a good one."

"However, I trumped that move, for I stuck a pin into him and took the trick. He did not though—at least, not in the spirit I had intended—for he sat up with a jump, found himself all at sea and alone with a smaller man than himself, therefore he came floundering over the seats towards me. His eyes were half closed, yet through the slits I saw mischief gleaming, so I retreated hurriedly into the bows. Still he came on. I retreated farther into the bows; they couldn't last for ever—all bows come to a point—and yet he advanced in so wobbling a manner that cradles were not in it beside that boat. Suddenly he collapsed over the bow seat, and hung sprawling over the side. I had a most decided wish to administer a slight push in order to relieve my adversary of a useful partner, yet ordinarily I am an honest, perhaps timid man, who shrinks from the thought of murder. However, I fought over the temptation, and pulled him inboard, so giving Fate the trick."

"All this time we were drifting speedily out to sea, and I cast an anxious look ahead, for I had no wish to go ashore on the coast of Ireland at our present alarming velocity. A short distance ahead of us I saw an iron post with a curious openwork ball poised on the top. It rose above the waves majestically, and seemed a hope-inspiring beacon to my weakened nerves. The boat took us towards it, and I calculated that if we passed within five yards of it I would make the leap or die in the attempt—most probably the latter!"

"My companion made a drunken effort to get at my legs, and the current took us some distance to the right of the pillar. That was Fate's play. Seizing my trusty rod once more, I made a cast for life."

"I can, when attacked by nightmares, see that post yet, and all the incidents attending the throw. Again the boat hurtles over the deep blue waters of Mount's Bay. Again I see those beetling crags beyond Newlyn, emblematic of stony failure, and again around the barnacle-grown base of the iron pillar the tide froths up into myriads of swirling bubbles with the deep throbbing sound of the ravenous sea. The silvery spinner flashed through the sunny air as true as ever a cast was made, and circled again and again around the rusty post. I have been told it was placed there to afford shelter and clinging room to shipwrecked mariners. No mariner ever looked on it with more joy than did I, for it was heaven to me as a refuge from the dev—, I mean from the man in the boat."

"Never did experienced angler use his rod and

line more delicately. I prayed that the boat might get out of the horrible vortex which was fast drawing us to America, and my prayers were answered, for the craft swung gracefully round into calm water, when I had but a few yards of line left on the reel."

"I gently wound in toward my novel catch, and when at last we reached it, I threw my arms about it from the point of vantage in the bows and kissed its rusty surface, crying aloud, 'Hurrah! My trick!'"

"Horror! Accumulated agonising horror! The boat's nose bumped affectionately and slid away at a tangent, leaving me with but one foot hooked over the side—the other in the water—whilst my arms firmly clasped the pillar, and my body—Ugh, my poor body!—doubled down like a tightly strung bow."

"I had to leave the boat, the pillar, or both, so I chose to stick to my pillar, because at that moment my foot slipped, and never did that cold iron feel a warmer embrace than mine as I spluttered around its base."

"My agonised eye sought the cage-like ball above. There was an opening in it large enough to admit my body if I could but reach it; and although portly in figure, and not used to violent exercise, my boy, I did it, after a world of scraping and slipping, pulling myself into the globe with a thankful sob."

"When I had regained my breath I looked below again. My rod had so hitched in the woodwork of the boat as to be fixed fast, whilst at my end the line was securely tangled. So the wayward craft was moored to my metallic island. Its occupant was asleep again. Penzance lay white and glistening in the centre of the bay, the houses being clearly visible, so I set myself to think out a means of attracting attention. Clearly the best thing would be to wave something—my coat—through the bars. It was feasible, and might be visible, so I began wagging it backward and forward slowly, for it was wet and heavy. I wagged for a long time, when, at last, my straining eyes detected a movement at the harbour mouth. What was it? A boat! Yes, a blessed little boat, like a black spot, came dancing over the waters, and I watched the rowers bend and pull—bend and pull as they made their way towards us."

"As they approached I cheered them, for I thought that I had now finished the game, and when they were within a quarter of a mile I put on my wet coat again and slowly lowered myself through the hole till I had a good hold of the pole, when I slid gently down it. Down, down until my feet came heavily on the line which moored our boat, so suddenly that the frayed cord snapped, releasing its charge, which immediately found a current bent on business elsewhere, and went along with it without a thought of how much inconvenience it was causing. Fate had played a high trump indeed!"

"The fishermen of Penzance, who occupied the oncoming craft, saw a draggled morsel of humanity clinging to his last hope; they also saw a boat—their boat—speeding away before them, and they followed the boat."

"Ah! could they but have known how weary were my arms, how heavy my body, they would have aided me first. Fate's trick, plainly!"

"I shrieked after them. I cursed them, as a foiled villain curses in a provincial melodrama, and I slipped down my pole a little. I tried to climb again, but an unseen hand had grabbed my coat collar and pulled me down, so I slid a little farther."

"No hope! No chance! One more effort to reach that beautiful cage; one slip more, and I released my hold, falling gently into the warm blue waters, which gurgled me a horrid welcome. The end had come!"

"Then why did I not sink? I didn't, my boy! And began to wonder whether my brother-in-law was right when he called me a hollow fraud? If so, perchance I should float. Then I felt that same invisible grip behind me holding me up. Carefully I put my hand round to my coat collar, when the mystery became clear. The behooked spinning bait had caught my coat as I slid, and that blessed little piece of steel held me above the suffocating flood. I dared not sneeze or move for fear that the strained line would break; and so the Penzance fisherman found me when at length they returned with the runaway boat in tow. So I won."

"They kindly unhooked me and pulled me in, when I at once told the still sleeping beauty what I thought of him. I did it in so complete a manner that the men treated me with marked respect all the way back. You see, my boy, language, and a command of it, are good passports in fishing circles. Eh! Take another glass of port and pass the bottle!" KRYPTOS.

TWO PICTURES.

AN article of mine, entitled "Then and Now," which appeared in these pages last summer, and dealt with subscription fisheries past and present, and their frequenters, touched such a responsive chord in the breast of an old Lea angler that he was led in turn to contribute a very interesting account of Flander's Weir, in which he mentioned the names of some good anglers who were very well known to me (Mr. Grimmo, to wit), although I could not quite identify the author—"Lea Valley"—himself. It is quite possible, however, that we have spent together many days, bad and good, on the banks of that most alluring stream.

Doubtless it is difficult for a North British angler, who never thinks of applying the description "a fish" to anything but a salmon, to understand the overmastering charm which the sluggish southern Lea exercises over so many of his fellow-sportsmen who dwell within, say, a twelve-mile radius of Charing Cross.

The memory of Walton and his work is, of course, responsible for much of this charm. The scenery, too, of the backwaters especially, is quietly beautiful; but the chief fascination, I think, of Lea fishing to its followers lies in the extreme wariness of the fish, which necessitates, in those who would capture them, the employment of tackle almost daring in its fineness, together with judgment and experience in a greater degree than perhaps any other kind of fishing in the world.

It is all very well to say, as some people will, that the fish so caught are, after all, not worth much as food; but the red-coated sportsmen, who find so much pleasure in hunting Master Reynard, never by any chance think of eating him.

I have been led thus to think and write of this old angling love of mine by the sight of two pictures just lately in a West-end shop. They are entitled respectively "Fly Fishing" and "Bottom Fishing," and are coloured engravings, first published, I should think, quite sixty years ago. Odd copies of them are still to be seen in old riverside hostelrys, but in too faded or smoke-dried a condition to render inspection of them interesting. The two under notice, however, being quite clean and well preserved, allowed me to easily identify the two scenes represented. "Fly Fishing" depicts two anglers engaged in casting fur or feather on the surface of the stream, one of the two in a most theatrical attitude, from the Walthamstow side of the Lea, exactly opposite the old wooden house once occupied by one Ford, whose name was long associated with the adjacent fishery which is now well known as Game's.

Anyone acquainted with the house would at once recognise it in the picture, although the row of poplars, there shown as flourishing, have of late years sadly decayed, as is the nature of poplars; while the apparently swiftly flowing stream is now replaced by something much more sluggish. A reader desirous of making a similar picture from the same point of view would have to take his stand on the bank of a new channel, cut for the purposes of a water company. Two channels for only the same quantity of water will account for the lack of pace in the stream now.

One of the cleverest anglers and best men I ever knew served his apprenticeship to the rod on this same water in the days of Ford, and many a happy hour (which, alas! for one of us, can never be repeated) have we spent together on the banks of that water, or, when weather or appetite rendered it necessary, in the old house itself. I believe that some anglers who knew poor Dick B. still frequent the fishery and obtain good fish from it; but no more 10lb. barbel, as he did.

The "Bottom Fishing" picture, again, undoubtedly shows a portion of the old Lea with much the same old-fashioned sportsmen fishing for roach or perch. On the bank of the river is a house of refreshment, which I at once recog-

nised as one which still stands between the old river and the navigation at Angel-road. It is a house which one might well imagine to be haunted by the shades of many sterling anglers, for was it not once occupied, as the signboard in the picture denotes, by "Benjn. Wicks," a famous angling host of days long past, who was widely known and respected by London anglers in his time, and is a household word to many of the more modern school.

This is the house, too, of which Baddeley, the true Waltonian, wrote in 1834:

"The old wooden house occupied by Matthew Cook has been pulled down

Near Old Cook's Ferry, Benjamin Wicks,
Has turn'd the wooden house to bricks."

I understand that the barge cut of the Lea near here has been so well stocked recently with fish from the East London Water Company's reservoirs by the London Anglers' Association that the ghosts of some of the departed veterans referred to previously might well be tempted to come back again in the twilight to fish their favourite stream. If only one could fall in with them while so engaged what hints they could give, what sorrow they would express for certain changes in the district, and what copy they might afford!

CLAYR KENWAL.

CRUISES ON THE COAST OF NORWAY.

THERE is not much use nowadays in poking ones way in rowing boats up out-of-the-way fjords on the coast of Norway in search of streams where salmon are and fishermen are not. Such an expedition is pretty sure to result in the discovery of several scores of previously unheard of bagnets, while should an inflowing stream with water enough to fill a ½ in. pipe be fallen in with, on its banks will be found a house "where the Englishman" lives, or an encampment of knickerbockered young men. But it was not by any means "ever thus," and we can recall sundry prospecting expeditions made on the strength of chance local information that did not turn out at all badly, and the results of which compare favourably with the extremely modest ones so frequently obtained nowadays in exchange for enormous rents.

On a certain occasion we had been urgently pressed by a worthy Norwegian to attend a ball which was to be given at his house for all the people in the neighbourhood of his abode. To get at the place it was necessary for us to row down a long fjord for quite twenty miles, but the particular river on which we were at work had run down below proper level, our friend promised us great fun, and he finally clinched the matter by expressing a desire that we should try, as often as we liked, a stretch of some five miles of semi-tidal water on a large river where he owned the rights, and which had never been let. Although from the description we did not expect to add much to the season's bag, still it was an experience, and as "members of the house party" we attended the function in question, which commenced at a very early hour in the evening, and at midnight looked like going on for ever. As the company danced with ever increasing energy the noise made in the great wooden house by the numberless pairs of heavy boots became appalling, and beginning to perceive sundry "hiddicks" in process of manufacture we determined on disappearing, without ceremony, as quickly as possible. An opportunity shortly offered of suggesting a visit to the river to our host's principal boatman, who was, of course, one of the guests, and he being a keen fisherman at once acquiesced. *Vi et armis*, he unceremoniously grabbed and bore off from a fair partner's society his eldest son, who was in the very thick of the festivities, and within ten minutes we were pulling across the fjord, the sounds of revelry dying away behind us on the still air, and the faint light that comes before dawn tinging the mists and snowdrifts that lay on the higher tops far above us.

The entrance of that river (now, by the way, one of the best known salmon streams in Norway) struck us as very grand. The great walls of rock—a couple of thousand feet high at least—that environed the fjord, closed in at the head, and through the magnificent gateway thus formed

the broad stream flowed in majestic silence. In the dim light it was not easy to determine where fjord ended and river began, but within an hour from the start, the increasing difficulty of progression intimated the existence of a current, and beneath a great wooded bluff we commenced operations by letting out a blue and a silver Phantom, as being more adapted to the style of water than the fly. The place did not appear a likely one, there being no pool outlined or other feature symptomatic of a salmon cast and the water flowed with slow even current, showing hardly a trace on its smooth surface of submerged boulders, or other objects likely to prove attractive to fish; but the bank on one side was rocky and abrupt, pine trees maintained precarious hold on the supervening ledges, and old Ole said it was a good place when the tide was out for a fresh-run "lax."

And sure enough he was right, for the minnows had not been five minutes in the water when the blue one was taken quietly under water, the reel screamed, and a bar of living silver sprang a yard into the air. About a quarter of an hour later, as a matter of fact, that fish reposed in the bottom of the boat; but that he remained on was little short of marvellous, for the performances he went through before Ole got the clip into him were perilous to a degree. In spite of these, however, and the softness of his mouth, the tail triangle held, and we started the morning's bag with a beautiful 10-pounder, straight from the sea, plentifully studded as to the lower part of his person with sea lice. During his comet-like progress, two or three other fish threw themselves, astonished no doubt, at the extraordinary excitement displayed by their friend, but they would not take, and a sea trout of 3½ lb. was all we could secure before Ole announced that it was time to go elsewhere. The next spot was very similar in character (or, to be more accurate, in absence thereof), but the surroundings were very beautiful; great wooded bluffs and terraces towered one above the other in endless perspective on either side, slight wreaths of mist clinging here and there to their rugged sides, while in a sheltered nook on the right bank a little homestead nestled, from which a thin blue column of smoke ascended on the still morning air. Friend Ole was in the middle of a terrific yarn in regard to a gigantic halibut, which on a certain occasion he had been instrumental in slaying, and his hopeful son (who pulled bow) was grinning over his parent's shoulder as at a tale he had heard before, and mayhap with variations, when bang went both reels almost simultaneously. For a brief space the two salmon kept fairly clear of one another, and we had just time to indulge in the faint hope that with care and patience both might ultimately be landed, but the next minute the lines fouled, and disaster succeeded. One fish made a most astonishing jump, and shook himself clear of the hooks, while the other secured his liberty by smashing the trace and walking off with minnow and everything. Greatly disgusted were we all with this catastrophe, and as we pulled ashore to repair damages, each man expressed his belief that never had such a thing happened before, and the weight of the fish that annexed the phantom was liberally estimated, 30 lb. being the very lowest suggestion. There was nothing for it, however, but to try again, so having adjusted a fresh minnow in place of the lost one, and seen that the other was once more equal to the ordeal of battle, we again put forth. This time we were more fortunate, and succeeded in capturing, without either grief or loss, three good fish of 12 lb., 18 lb., and 21 lb. respectively, all, it need hardly be added, as clean as salmon can possibly be, and in the height of condition.

The morning mists had now entirely disappeared, the air was much warmer, and the whole of the beautiful valley bathed in sunshine—so much so that only where a bluff intervened, and threw its shadow across the river, was there any use in trying. On arriving at one of these places, which Ole intimated must be our uppermost limit for that day, the water looked so clear and comparatively quick-flowing that we thought well to replace the minnows with flies—a double Silver Doctor and a Namsen. The head of this cast was too shallow, and nothing showed in it; but a little way down the stream passed over a submerged ledge of rock, on the lower side of

which the water was much deeper, and along which, it soon became evident, the fish lay. First of all, the Namsen scored with a handsome 15-pounder, which fortunately elected to rush down-stream the moment he was hooked, and right out into the sunshine, where he disported himself to admiration, pretty nearly his every movement being visible from the boat. Then, as we once more essayed the same spot and the flies dropped over the ledge, a fish dashed wildly at the "Doctor," sending the water flying all round, missed with his mouth but got hooked foul. A nice dance he led us before the gaff transferred him from his native element to terra firma, but like his immediate predecessor, he also elected to play in the open, and amiably refrained from disturbing the water upon which the shadow of the friendly bluff still lay. As a result of this considerate behaviour on his part, we were enabled to seduce two more salmon (15lb. and 21lb.) from their comfortable quarters beneath the ledge, before the sun came round the corner; to say nothing of a grilse, which, by its violent antics, effectually destroyed any chance that might have remained.

Having duly admired our eight fine fish, and covered them over with fresh bracken as a protection against the heat of the sun, we started on the return journey, all greatly elated with the night's sport. Prior to pushing off, however, we shipped a fourth individual, who was fated later on to exercise an unfortunate influence on our fortunes. This was Ole's dog Jeppe, one of the regular Norwegian type, whose tails never, under the most depressing circumstances, deviate from a complete upward circle, whose ears are always cocked, and whose coats—even in the height of summer, are invariably of enormous thickness. No doubt he had wandered off from his owner's house (which we passed on the way up) in order to have a bit of sport on his own account, and probably hearing his master's voice when excited over the capture of a fish, he elected to join our party. When in the boat, however, he would not remain still, got mixed up with a phantom minnow, and made himself such a nuisance that it was determined he should be shunted. There remained one more spot which we had not tried on the way up, where it appeared there was still a chance if we got there before the tide began to affect it. On arriving there, therefore, and in order to make the best of the time, Ole walked off home with the dog, leaving us to fish the pool with young Johan as oarsman. The place was deep, slow flowing, and by no means attractive; but it was destined to afford the excitement of a by no means uneventful day. We fished it over without a stir of anything, and, having taken in one rod, were about to do likewise with the other, when the top of the latter was slowly bent, and, on picking it up, there was a dead pull suggestive of nothing but the bottom or a snag. In this we were confirmed by our youthful boatman, who said that somewhere close by there was a sunken pine root on which he had known his father foul his line on several previous occasions, and as no strain that we could apply with the rod had the smallest effect, we proceeded to put the boat over the supposed obstacle, in order to get a straight pull, and save as much of the gear as possible. Catching hold of the line close to the water, we held on, the gentle downstream motion of the boat communicating a steady drag, that seemed certainly bound to effect a disconnection in some form or another very quickly. But suddenly the line was wrenched away (most fortunately, no hitch occurring), the reel revolved at terrific speed, and we realised that, instead of a snag, we were fast in a very heavy salmon. For a good quarter of an hour he travelled all over the place, never remaining still for an instant, and never approaching the surface, Johan being hard put to it in order to keep up with his movements, over which, owing to his great strength, we had no control. At the end of that time Ole turned up, and promptly realising the position of affairs, yelled an urgent desire to come on board again, a desire which, it need hardly be said, was fully shared by his son and by ourselves. An effort was made with that object; but just as we had got within a couple of yards of the rock on which the excited Ole was balancing himself, preparatory to making a spring, the fish started off in most determined fashion for the opposite bank, and we had to follow at best speed. Then he shot off

down stream, and the opportunity of obtaining effective assistance was lost. After travelling for about a quarter of an English mile in his wake in most erratic fashion we encountered the tide, and as a long stretch of brimming waterway extended below devoid of obstacles of any sort, we began to entertain hopes of an ultimately successful issue to the adventure; but, singularly enough under the circumstances, our friend evinced no desire to return to salt-water, and as soon as he had investigated the altered conditions, made a "volte face" and began the return journey upstream.

The sun was now very hot, and a strong breeze blew down the valley, which, meeting the volume of water pressed up from the fjord, created quite a nasty little "sea," while the fish's eccentric mode of progression—a series of fierce rushes—made the work still harder for Johan. At intervals we could hear his worthy father struggling through the brushwood on shore, anathematising everything he could think of in fluent Norsk—the dog which had brought about his absence from the boat he was now trying his best to reach, the innumerable obstacles that interfered with his progress, the cussedness of the fish we had hooked, the heat, the flies, his inability to find another boat with which to join us, and so on. All this was amusing enough to recall afterwards, but at the time we were far too much occupied in "holding on" to appreciate the humour thereof. To make a long story short the salmon succeeded in making his way back to the very point from which he started, and we—after many hairbreadth escapes from being run out—in following him. A couple of hours' hard travelling had told its tale, and we had the satisfaction of forcing him to the surface once and getting a glimpse of his huge proportions. It was the last and only one, however, for in spite of our most strenuous endeavours he managed to get back to the abominable snag, beside which he had no doubt been lying, and broke away.

Thus with a great disaster ended a fine morning's sport upon a piece of water which at that time—nearly thirty years ago—might have been leased for £10 a year. As it is a portion of "a famous river" the rent is now a stiff one, even for Norway; moreover, the fjord is now full of bagnets, and a day such as the one crudely described above is absolutely unknown.

"RUGDE."

(To be continued.)

A TARPON ANGLER AND ARTIST.

MR. ROWLAND WARD, F.Z.S., 166, Piccadilly, is showing some pictures of tarpon by Mr. Mielatz, an angler and artist. Mr. Mielatz combines the painter, etcher, and lithographer with all the enthusiasm of the thorough sportsman. In the spring of 1897 Mr. Mielatz made a yachting trip along the coast of Florida, dividing his time between shooting, fishing, and painting. Here it was that he first became acquainted with the tarpon, and proved himself the keen sportsman he is by landing over thirty of them for his first season. He could have caught twice as many, but a great deal of his time was given up to making studies and sketches from life of the tarpon. A small houseboat was secured and fitted up as a studio. A scaffolding was erected at one end for hauling up and posing a tarpon—no easy matter to pose a fish weighing over 100lb. Some of the sketches were made by Mr. Mielatz from tarpon fresh from the water, when their colours were still marvellously bright with opalescent flashes, and the fins, &c., retained all the rich hues of life. His study of a king fish hooked in the Gulf Stream is from a fish fresh caught. It is this conscientious working out of details on the spot that gives his pictures their brilliant colouring. To us here in dingy London such colours seem false, but the real fact is, as anyone knows who has seen a tarpon freshly caught and the indigo blue waters of the Gulf Stream, all the colours are really toned down.

One of Mr. M.'s pictures represents some tarpon blowing in a pool up the Caloosahatchie river after sunset, representing, as it does, the quiet stillness of the scene, with the smooth surface of the water broken here and there by tarpon curving quietly out and in, with the peculiar puffing sound so well known to the tarpon angler.

These etchings are the forerunners of a set of about a dozen, which Mr. Mielatz is preparing for an art book on the subject of Angling in Florida. It is his intention to combine sport and art in this book.

At Captiva Pass, in Florida, where Mr. Mielatz spent several weeks on the yacht *Decoy* angling for tarpon, and then using them as models, he met with several most interesting adventures. One, in which a 15ft. shark figured, was a great dramatic success from the artistic, but a decided failure from the sporting, point of view, as the said 15ft. shark, after a most exciting chase, in which the boat was nearly upset several times, stole a magnificent tarpon, taking it in in two bites, although the tarpon was close on 7ft. long. Another time Mr. Mielatz had caught his tarpon, and, having passed a rope through his gills, was towing him ashore to use as a model, when there was a heavy jerk, which stopped the row-boat, throwing Mr. M. and the guide down. On getting up, and looking behind, the water was seen stained with blood, while twisting around in the current at the rope's end was seen the tarpon's head, with a few shreds of skin hanging from it, the water gurgling through the mouth and out through the throat, now wide open. Mielatz did not paint that day, for he had no model, and, to tell the truth, he had no desire to paint or angle for models, for the shadow of evil, in the shape of some large shark, had come too near for comfort of mind.

However, one gets used to everything, and after a while it became on some days so customary, this playing hide and seek with sharks in an endeavour to get the tarpon ashore before the shark got it, that it created but little comment.

It is amusing to see Mr. Mielatz start off in his boat with:

1. Art side—palette, paint box, easel, brushes, &c.

2. Sport side—tarpon rod, reel, hooks, gaff, &c.

When he gets his first tarpon ashore, then comes the struggle between his artistic and sporting temperaments. Up goes the easel on the beach and the umbrella, the tarpon is posed, gleaming and glistening like a big jewelled work, and for a while all goes well; then Mielatz's eyes would wander off over the waters of the Pass. A tarpon or two would appear, puff, curve over, and disappear. Mielatz would move restlessly and resume his painting. Again his eyes would wander over the Pass; this time perhaps a dozen tarpon would appear simultaneously. This would prove too much for Mielatz, who, leaving his easel, umbrella, brushes, &c., on the beach, would call the guide, jump into the boat, and hurry out to see if he could not get another of the big chaps. That he did this with success at times is proved by the fact that on one day he landed five tarpon to his one rod. It is this mixture of the artist and sportsman which makes Mielatz such an interesting personality. A favourite with all who know him, he is acknowledged by artists to be one of the most promising of American painters, etchers, and lithographers; by sportsmen he is acknowledged to be thoroughly "one of them."

MESSRS. HARDY'S NEW EDITION OF THEIR CATALOGUE.

WE have so often referred at length to this excellent catalogue, and pointed out that it contains practical hints on angling, that it is only necessary to refer briefly to a few of the new features in the new edition.

In the first place, there are many new illustrations in those pages devoted to articles on fishing of all kinds; in fact, they appear to be all new, and we hope Messrs. Hardy will later on lend us one or two of the very attractive fishing views.

Another improvement, and one sure to be greatly appreciated, is that, in the new full pages of flies, tackle, &c., the actual sizes are given and the references in the text made to correspond with each illustration. This is far better than trusting to ordinary by-numbers, since the different scales of numbers in use are so utterly confusing. Then, again, if you want to order one of Hardy's capital "Crocodile" spinners for spinning a natural bait, you have on the plate facing p. 127 photographic reproductions of the actual sizes (five) in which

the spinner is made, from No. 4, 2in., for minnow spinning for trout and perch, up to No. 1, which takes a 4in. dace for pike fishing. The same applies to the plates of prawn tackle (facing p. 128), Hardy's "Wobblers," for wobbling a bait; the original pattern of this is as old as they make them, but was "perfected by the Right Hon. Earl Cairns," and it is certainly much improved. Then the illustrations of salmon and trout flies show the actual sizes. These plates are so useful that we shall have a set framed for reference.

Illustrations are given of Messrs. Hardy's new patterns of rods, reels, &c., which we noticed recently, and which can be seen at their exhibit at the Royal Aquarium. Their guinea greenheart fly rod can now be had with a cork handle, and either stiff, whippy, or medium action. It is a first-rate rod, and has given great satisfaction.

This is much the best list Messrs. Hardy have produced, and that is saying a great deal.

MR. J. OGDEN SMITH'S EXHIBIT AT THE FISHERIES EXHIBITION.

ALTHOUGH his show is not a large one we had no intention of overlooking it in our notice of the Fisheries Exhibition the other day, and we have much pleasure in now calling special attention to it (his address is 9, London-road, Twickenham). As a rule, an angler feels mistrust of any general rod made to do for different kinds of fishing, and our experience of these rods, until we tried Mr. Ogden Smith's, was not encouraging. But after twelve months' trial of his three guinea Combination, making up into twelve rods, or, rather, rods for twelve kinds of fishing, we can thoroughly recommend it, especially to the angler who is going to some district where he does not know whether fly fishing, or coarse fishing, or sea fishing, or pike fishing will offer most attractions. With Mr. Ogden Smith's "Combination" he is ready for any fresh or salt water fish (except salmon with the fly), from salmon to smelts.

For spinning from the Nottingham reel we have never used a better rod than the pike rod in this combination, and it is a perfect pleasure to fish with it, so light that, after eight hours' spinning, you feel no wrist ache, and yet so powerful that it makes long casts without a sign of strain. Mr. Ogden Smith makes all the rods of whole cane, with greenheart tops, with cork handles to the butts, and will make the two fly rods to suit individual requirements, as nearly as possible. Except for fly fishing for salmon, we should feel safe in fishing for any fish with this handy combination rod.

At 25s. he makes another good combination, making up into rods for six styles of fishing.

A novelty worth the attention of cyclists is Mr. Smith's Bicycle and Pocket Rod for fly-fishing, and ditto for general fishing, at £1 1s. His Thames Trout Rod at 25s., and whole cane Punt Rod, at 6s., can be recommended. An ingenious addition to the shoulder strap for the pannier is worth noting. Being a practical angler himself, Mr. Ogden Smith soon gains his customer's confidence, and keeps it.

SLATER'S ALUMINIUM ALLOY SALMON AND TROUT REELS.

MR. SLATER, of Newark (now exhibiting at the Westminster Royal Aquarium), is now making his celebrated "Combination Nottingham and Ordinary" reels partly in aluminium alloy and partly in gunmetal, the bearings and running parts being of the latter metal. This makes a very strong, light reel, and the price is about the same as the ordinary reels.

Mr. Slater sends us a reel he made specially some years ago for a very good salmon angler, Mr. Reginald Corbet. It is a 5in. "Combination Nottingham and Ordinary" reel, made of brass and ebonite, with ordinary optional check action, and there is a separate silent check also. You turn a screw on the back of the reel until you have the amount of stiffness you want. When both checks are taken off the reel runs freely, and can be used for casting from in the ordinary way or for letting a long line run off the reel. In sending this reel back to Mr. Slater in order to

have another made on the same lines, slightly modified, Mr. Corbet says it has given him every satisfaction, and adds: "My reels get pretty hard work. I killed in the North of Norway last year, in six weeks, over 3000lb. of salmon with this

reel; and on two separate days seventeen salmon, averaging 21lb., and fifteen on another."

This is very high testimony to the good work in the reel, which is practically as good as ever. Of course, the teeth of the cog-wheel show some signs of wear after killing so many fish, but will last a long time yet.

CARTER AND CO.'S NOVELTIES.

THE accompanying illustration is a novelty of Messrs. A. Carter and Co., of 137, St. John-street Road. In our notice of the Fisheries Exhibition of March 18 we said: "Another novelty is their trout reel in aluminium—very strong shape—the cheapest reel of the kind we have ever seen. Such a reel would have been £5 a few years ago,

before aluminium dropped so in price." This aluminium trout reel has gun-metal spindle and fittings. The two side bars are revolving; the friction of line over bars when playing fish is thus minimised. Weight, about 3oz.; size, 2½in. Price, 8s. 6d.

We also said on March 18: "Now that special wire reel lines are being used and advocated by some members of the British Sea Anglers'

Society, it has become necessary to enlarge the revolving wheel in the pulley arrangement at the end of the top joint, and this Messrs. Carter have done." It is called the "Big Wheel" sea loop, made specially for use with wire lines. The pulley wheel is somewhat larger than a shilling piece, and, being countersunk, hitching of line is impossible. The loop is so made that it adjusts itself to any direction the line takes.

PISCATORIAL SOCIETY.

THOSE who were present at the annual dinner held on the 20th ult., and heard the late Dr. Brunton lead off "And Lang Syne," in accordance with his usual custom, little imagined that ere the week had closed their old colleague would have passed away. From information imparted to Monday's meeting, it would seem that the Doctor was taken with an apoplectic seizure on Friday afternoon last, after returning from visiting his patients. A bloodvessel on the brain subsequently burst, and he was hardly conscious up to the time when death ensued on the next day (Saturday). This sad intelligence cast a gloom over the members assembled under the chairmanship of Mr. Robt. C. Blundell. Only a couple of weeks previously the Doctor had contributed an interesting paper on the Uxbridge Fishery, taking, as he did, an absorbing interest in the new acquisition. His popularity was undoubted, his kindness and frankness of disposition rendering him a great favorite with all with whom he came in contact. His courtesy was acknowledged on all hands, for never was he happier than when he was imparting information to the younger members of the society—information which it had taken him years of thought, study, and observation to get together. As an amiable companion he had few who could surpass him, and many will have cause to regret not only the loss of a brother piscatorial, but of a true and genuine friend also. His counsel and advice, always at the disposal of the society, proved of invaluable assistance, for his lifelong experience as an angler gave him that insight into all that pertains to angling which stamped him as an authority on many branches of Walton's favourite pastime. The area of his piscatorial knowledge was extensive, although as a fly fisher of the wet school he perhaps shone most brilliantly. As a raconteur he was invariably amusing and entertaining, possessing, as he did, a rare fund of humour. His perceptive faculties were exceptionally strong and discerning, added to which his judgment was sound, true, and to be relied upon. By his untimely decease under such peculiarly sad circumstances the society has had removed from its ranks one whose place it will be impossible adequately to fill. It was no matter for surprise, therefore, that the members consoled most sincerely with Mrs. Brunton and the family in their untoward bereavement. Very kind and sympathetic reference was made to the event by Mr. R. C. Blundell and the chairman of the late dinner, Mr. C. Butler, who have had the pleasure of knowing the doctor for many years past. The society were represented at the funeral, the members being anxious to pay this last tribute of respect to one whom they knew and esteemed so well as a friend, colleague, and adviser.

Next Monday being Bank Holiday there will be no meeting. The water on the Ver having been disposed of, it will no longer be available for members to fish. A postcard to this effect will have been duly received from the hon. secretary. M. G. E. DE C.

GRESHAM ANGLING SOCIETY.

AT our ordinary meeting Mr. C. S. Bentley occupied the chair. The occasion was a sad one, as it had to be recorded on the minutes that we had lost one of our honorary and honoured members, in the person of Dr. John Brunton, M.A., M.D. He attended the previous meeting of the society, and was attending to his professional duties on last Friday, but was taken ill during the evening, and died on the Saturday evening. He has always been a very good friend to the Gresham, and I am certain that every member will mourn his loss. A deputation will represent the society at the funeral, which takes place to-day (Wednesday), at Finchley Cemetery. The angling world in general, and the Gresham Angling Society in particular, have lost a good and honest angler, and angling writer. *Requiescat in pace.* Members are reminded that the annual dinner will take place on April 25, when Mr. C. H. Cook ("John Bickerdyke") will preside. I shall be glad to receive applications for tickets as early as possible. ALEX. WRIGHT (Hon. Sec.).

THAMES RIVER KEEPERS' DINNER.

THE river keepers and those who assist them in the good work of preserving and watching over the Thames, in the interests of anglers, between Richmond and the City Stone at Staines were, in accordance with the annual custom, entertained by the Thames Angling Preservation Society on Thursday night, the festive gathering taking place in the Prince's Room of the Criterion Restaurant, Piccadilly. Mr. Alfred Nuthall, J.P., chairman of the society, presided, and the vice-chairs were occupied by Messrs. F. Berry and T. Crumplen. Letters of regret and absence were announced from the president (Mr. H. L. W. Lawson), Mr. W. F. Grimmett, Mr. R. B. Marston (editor of the *Fishing Gazette*), and others. The latter gentleman, with his usual kindness, sent a consignment of pipes for the men, these were handed to them during the evening by Mr. W. Douglas, head keeper. Among those present were: Messrs. C. E. Nuthall, J.P., J. H. Gough (secretary Thames Conservancy), G. J. Chatterton, A. Price, A. Nuthall, jun., Pincott Hill, W. H. Elsmore, J. Hongh, G. J. Shepherd, F. Berry, A. R. Mathews (the Angler), W. Mardsden Smith, S. Shum, W. Meakin, G. Tagg, W. Back, J. Sandbrook, W. H. Brewer, W. H. Holland, F. Walker, A. Weston, W. Dongworth, J. McDermott, J. F. Marchant, &c. The keepers, lockmen, and Conservancy officials present included: Messrs. W. Douglas (Hampton Wick), J. Johnston (Kingston), J. Knight (Kingston), H. Buttery (Thames Ditton), W. Milbourne (Hampton Court), E. Rosewell (Halliford), G. Rosewell (Shepperton), H. Curr (Weybridge), A. Harris (Laleham), C. Hone (Staines), A. Pryor (Walton), E. Clark (Sunbury),

G. J. Rongh, sen., G. J. Rongh, jun., J. Barker, W. Marsh (Chertsey Lock), Wilson (Sunbury Lock), Walters (Teddington Lock), Steve (Shepperton Lock), Delany and Fielder (Brentford).

In proposing the usual loyal toast, which was heartily received, the Chairman, referring to the Duke of York's visit to the Dee for the salmon fishing, said they all very much regretted to hear that His Royal Highness was snowed up, and, so far, had not been able to follow the sport. The Chairman next gave the health of Mr. J. H. Gough, secretary of the Thames Conservancy, remarking that he was delighted to see him among them once again. (Applause.) Mr. Gough not only held a high position in connection with that board, but was a true friend to all anglers. (Applause.) He took a great interest in the Thames fisheries (applause), and he sincerely hoped he would always honour them by his presence at their gatherings.

Mr. Gough, in responding, thanked those present for their kind reception, and said it always gave him great pleasure to meet the T.A.P.S. representatives. It was also very pleasing for him to meet his colleagues of the Thames Conservancy, and the keepers and fishermen on the river. (Applause.) He had known some of them for a good many years. As secretary of the Thames Conservancy, he could assure them that the conservators took much interest in the fishery of their great national river, and when he (Mr. Gough) received from the T.A.P.S., through Mr. Higgins, any communication with reference to the fishery, everything they asked for was so intensely reasonable that the conservators were only too delighted to give them their help. (Applause.) The society recently had expressed their opinion that it thought the cast net was being used too much. The society considered for the purpose of supplying live bait to various parts of the country the river was being depleted. He (Mr. Gough) spoke to Sir P. Dixon Hartland, M.P., their chairman, on the subject, and he at once agreed that it would be a desirable thing to have the cast net restricted. The society suggested that it should be used by professional fishermen only, because they could rely upon them, and so the use of the net had been confined to such river keepers as were registered professional fishermen. (Applause.) He believed that it would be to their great advantage to maintain a good head of fish in the river and give continued sport to the anglers growing up with that society. (Applause.) Continuing, Mr. Gough said that Sir Dixon Hartland, who was a most active and popular member of Parliament, had, in his examination recently before the Royal Commission on the London water supply, told them that the conservators had in contemplation a proposal for the re-stocking of the Thames with salmon trout. The matter was under the consideration of the board, and the conservators were in communication with some very influential gentlemen who also had the same object at heart; and he might tell them that there were proposals to breed in the Upper Thames, then to take them into the tideway when they had attained a certain size, with the hope that they would return to that portion of the river. (Applause.) He could assure them that the Conservancy would always endeavour to promote the interests of angling and the interest of lovers of that important sport, from Twickenham up to Cricklade; and they could rest assured he should have much pleasure in assisting them at all times. (Applause.) Referring to the Conservancy men, he paid a high tribute to the way in which they carried out their work, especially mentioning Mr. Rongh; and said they had got a very high class and trustworthy body of men looking after the river. (Hear, hear.) He also thought the Thames fishermen were a very highly respectable and honest body of men. (Hear, hear.) As for Mr. Rongh, he was one of the truest men that ever trod shoe-leather. (Applause.)

The next toast was the toast of the evening—"Success to the River Keepers, Lockmen, and Conservancy Officials." Proposing it, the Chairman remarked that he had been known to many of them for over twenty-five years. The fact that the society did not have many convictions for illegal fishing showed that the river was well protected, and that the keepers and those who assisted them were doing their duty. (Hear, hear.) At the same time, he could not help asking them to continue to do their utmost to prevent anything like poaching. The more they looked after the fish, the better it would be for the keepers. They would earn more money, because more patrons would come and fish with them. He also urged them to give attention to the novice angler, and anglers who fished from pleasure boats in the summer, as they frequently caught undersized fish, and he (Mr. Nuthall) had made many return them as he took his morning walk on the banks of the Thames. Referring to the re-stocking work carried on by the T.A.P.S., he said he believed the large specimen roach which had been caught during the past season were the result of their nettings at the reservoirs. He was convinced they could do nothing better than continue to net those reservoirs, and place the fish in the Thames. (Applause.) He was very pleased to hear from Mr. Gough that it was on the tapis to place salmon trout in the Thames. His old friend, William Milbourne, would remember the time when Frank Buckland said that he would wager a big sum that salmon would return to the river, and also that he said he would offer a prize for the first salmon taken in the Thames. In his opinion it would come to pass that they would see these fish in the Thames again—(applause)—because the river in the tidal waters was becoming cleaner and purer, as Mr. Rongh would hear him out. They now caught smelts right up the river, and that was an important point in favour of the return of the salmon to the metropolitan river. In view of the great work being carried on by the County Council, Conservancy, and other bodies to purify the river, he did not doubt for one moment but that they would have salmon back again in the Thames. (Applause.)

Mr. ROUGH (Thames Conservancy) responded, and said that the river was very much purer now than it had been for some years, while in the tidal waters they had more fish. The smelts were on the increase, and a gentleman and his son who fished for smelts with rod and line at Kew Bridge had taken over 200 dozen during the past season. Little illegal work was now going on on the river, and he was pleased to say that all his men kept a sharp look-out with regard to netting, &c. He thanked them for the kind way in which they had received his name. (Applause.)

Mr. W. DOUGLAS (head river keeper) also suitably acknowledged the toast, and said he thought certain anglers at Kingston who took so many fish from the Thames might subscribe towards the T.A.P.S. (Hear, hear.)

In eulogistic terms Mr. T. CRUMPLEN proposed the health of the Chairman, who, he said, for many years had been one of the most devoted workers in the cause of the Thames preservation; and

Mr. ALFRED NUTHALL (who was received with musical honours), in reply, said he hoped to do in the future as he had done in the past as regarded the T.A.P.S. (Applause.)

The health of "The Vice-chairman" having been heartily honoured,

Mr. C. E. NUTHALL, J.P., proposed the toast of "The Hon. Secretary and Hon. Treasurer," and spoke very highly of the great interest Mr. Higgins took in the welfare of the Thames Angling Preservation Society. The society was in splendid hands, and he felt certain that Mr. Higgins would maintain the prestige it had gained in the angling world. (Applause.) Mr. Higgins was a most kindly and genial angler, and he knew of no one who desired to forward their interests and the interests of Thames anglers more than Mr. Higgins. (Applause.)

The company having sung "For he's a jolly good fellow,"

Mr. HIGGINS responded. He said his sole desire in taking over the hon. secretaryship of that society was to encourage, and, if possible, improve the sport in the river in that portion over which, by the kindness of the Conservancy, they had quasi jurisdiction. The society was striving to do all it could for the great body of anglers and the professional fishermen who fished the Thames, and he was only too delighted, he could assure them, to do what he could to promote sport in that splendid natural fishery. (Applause.) He knew something about water, and something about angling, and he was sure that from Staines to below Twickenham they had one of the finest pieces of water that Providence could have endowed them with for the sport—the noble sport—which took them away from the toils and cares of business, and tended to improve them in all ways. (Applause.) He should be only too pleased to work with the professional fishermen, and to forward the common interests of our sport. (Hear, hear.) He (Mr. Higgins) was assisted by a splendid executive committee, the chairman of which was their dear old friend Mr. Nuthall—than whom a better sportsman never breathed—and they worked hand and glove together. (Applause.) They had no hole and corner meetings. They would welcome new members. They wanted to do something more than make a name. Continuing, Mr. Higgins paid tribute to those who had worked for the T.A.P.S. years ago, and, referring to the Thames as a salmon river, said he did hope that the efforts of the conservators might be crowned with the success they and the T.A.P.S. most heartily desired. As regards the T.A.P.S.'s protest against the taking away of fish for sale as bait, he believed the society would have the support of all the professional fishermen. (Hear, hear.) Millions of fish were taken from the Thames and sold to the bait dealers. He knew that for a fact himself. He sincerely hoped that the fishermen would work with him in his efforts to improve the fishing in the Thames. He thought there had been better results since trailing and netting had been put down, and he hoped before long that they would have some of the "beautiful gobblers" off the water. (Laughter and hear, hear.) Now the T.A.P.S. had decided to remove them, however, lots of objections were being raised, but they intended to fight them honestly, let the swans belong to whom they might. (Applause.) The Lord Chamberlain now objected because there were 150 barren swans to take off between Teddington and Staines, and the swanherd had stated that it would cost £100 to house them. He (Mr. Higgins) should not be surprised, however, from inquiries he had made, if they could find fifty barren swans, and if they were to pay 2s. a week for each of these "feathered otters"—(laughter)—they could do it for about £30. Mr. Lawson, their president, had promised to bear the cost of the removal of the barren swans, and the society would see that the proper number and no more were paid for. As regarded the society, they wanted the sinews of war to carry on the work, and he was very pleased to be able to announce that Mr. C. E. Nuthall had that night promised them £5 5s. (Applause.) Mr. Nuthall was not an angler himself, but he was, as they knew, one of those kind and noble hearted men who were only too pleased to promote the interests of sportsmen and their fellow men, and make happiness wherever they could. (Applause.)

Mr. BUTTERY (Fisherman, Thames Ditton), in the course of the proceedings, complained that the ducks—the half-bred wild ducks—devoured a great deal of fish ova in his district. They could dive, and caused much harm.

During the evening there was an excellent programme of music—thanks to the efforts of Mr. Walter Back—among the artists being, including the worthy musical director, Messrs. John Sandbrook, A. Nuthall, jun., Feversham, Harry Payne, C. E. Nuthall, C. Hone, W. J. Marsh, E. Cox, &c., and the proceedings eventually closed with "God Save the Queen."

BIRMINGHAM FLY FISHERS' CLUB.

A LARGELY attended meeting of Birmingham fly fishermen was held at the Great Western Hotel on Monday evening last, the 27th ult., to discuss the proposal lately brought forward to form a local fly fishers' club. Mr. Hugh A. N. Smith was elected to the chair, and after hearing a number of letters of apology from gentlemen unable to attend, several of those present submitted their views and suggestions as to the form the proposed club should take, and, after considerable discussion, it was unanimously agreed that a club should be formed under the name of "The Birmingham Fly Fishers' Club," with the object of furthering the interests of this particular branch of sport in the city, and of acquiring, at the discretion of the members, such suitable waters as may come into the market, with a view to stocking and otherwise developing the same to provide fair fishing in the neighbourhood of the city. It was also arranged that a short length of the river Blythe (Staffordshire), at Ham-stall Redware, should be forthwith leased; but as this particular fishery is of only limited extent, it was thought desirable that the rods should not—until further water is obtained, for which negotiations are already in progress—exceed twenty. This number of members was immediately enrolled from amongst those present, and a committee, consisting of Messrs. Hugh Smith, W. S. Pritchett, H. B. Hagne, A. E. Cooper, and W. H. Flint, with Mr. A. T. Sadler, of Water Orton, near Birmingham, as secretary, was elected to prepare a code of rules, &c. Mr. Arthur Round, of Birmingham, consented to act as honorary solicitor to the society. The secretary is already in possession of the names of a number of gentlemen who wish to become members when more fishing is available, and he will be pleased to furnish any particulars to other fly fishermen who may be desirous of adding their names to the list. HON. SEC.

EASTER HOLIDAY ARRANGEMENTS, 1899.

THE GREAT EASTERN RAILWAY

Announce that in addition to the tourist, fortnightly, and Thursday, Friday, or Saturday to Tuesday tickets to the east coast and the Norfolk Broads district (Yarmouth, Lowestoft, Cromer, Mundesley, Southend-on-Sea, Clacton, Walton-on-Naze, Dovercourt, Harwich, Felixstowe, Aldeburgh, Southwold, Hunstanton, &c.), which are issued from Liverpool-street and their other London and suburban stations. They will on Thursday, 30th March, issue special cheap excursion tickets from London (Liverpool-street and suburban stations) to most of the above stations; also to Norwich, Cambridge, Wisbech, Lynn, Fakenham, and the other principal stations in the eastern counties, and by the cathedral route to Lincoln, Doncaster, York, Leeds, Manchester, Scarborough, Darlington, Newcastle, Berwick, Edinburgh, Glasgow, &c., and to Chesterfield and Edwinstowe (for the Dnkersies). Cheap weekend tickets will also be issued on Saturday, 1st April, to most of the G.E. country stations. Tickets (both ordinary and excursion, &c.), can be obtained in advance at Liverpool-street station, and at the company's West-end offices, 2, Cockspur-street, Trafalgar-square; 51, New Oxford-street; 215, Edgware-road; and 120, Brompton-road, and at their other City and West-end booking offices. In addition to relieving trains, special trains will be run from Liverpool-street on Thursday, at 8.30 a.m., 1.35, 4.5, and 7.12 p.m., to Ipswich, Yarmouth, Lowestoft, &c.; at 1.30 p.m., to Ipswich, Norwich, Cromer, &c.; at 1.30 and 4.5 p.m., to Walton-on-Naze; and at 1.30, 4.5 p.m., and 12.3 night (snapper train), to Colchester and Clacton-on-Sea. On Good Friday, at 5.10 a.m., to Colchester, Ipswich, &c.; and at 8.55 a.m., to Ipswich, Yarmouth, Lowestoft, &c. For the accommodation of persons detained at business until late in the evening of Saturday, special midnight trains will leave Liverpool-street at 12.0 for Norwich, via Cambridge, and at 12.30 for Yarmouth and Lowestoft, via Ipswich, calling at the principal intermediate stations. The 12.3 snapper car express to Colchester and Clacton will run as usual. On Easter Monday special excursion trains will run from St. Pancras to Cambridge, Ely, and Yarmouth, and from Liverpool-street to Southend-on-Sea, Clacton-on-Sea, Walton-on-Naze, Cambridge, and Ely. Excursion tickets will be issued to Epping Forest, Broxbourne, and Rye House. A special service of trains will be run from Liverpool-street, Fenchurch-street, and Gospel Oak to Epping Forest, and from Liverpool-street to Rye House.

SOUTH EASTERN AND CHATHAM AND DOVER RAILWAYS.

The above companies announce cheap day excursions on Good Friday and Easter Monday from London to Tunbridge Wells, Hastings, Ashford, Canterbury, Whitstable, Herne Bay, Deal, Walmer, Ramsgate, Margate, Broadstairs, Hythe, Sandgate, Folkestone, Dover, Aldershot, Gravesend, Rochester, Chatham, Sheerness, &c. On Easter Monday frequent special and ordinary trains will run to and from Holborn, Victoria, Ludgate-hill, St. Paul's, and intermediate stations and the Crystal Palace (High Level Station). Return fare, 1s. 6d., third class, including admission. Special trains will be run to Hayes, Blackheath, Greenwich, Gravesend (for Rosherville Gardens), &c. The usual extension of time for certain return tickets during the holidays will be allowed. A cheap Friday to Wednesday excursion leaves Charing Cross and Cannon-street at 2.45 p.m. for Boulogne, and 9.0 p.m. for Calais, on Thursday, March 30, and from Charing Cross, Victoria, Cannon-street, and Holborn at 9.0 a.m. for Calais, on Friday, March 31. A cheap Saturday to Monday excursion leaves Charing Cross, Victoria, Cannon-street, and Holborn, at 9.0 a.m. on Saturday, April 1, for Calais, and Charing Cross and Cannon-street, at 2.45 p.m., for Boulogne, available to

return up to the 7.50 p.m. Cheap tickets to Paris will be issued, leaving Charing Cross, Victoria, Holborn, and Cannon-street via Calais and Boulogne. Tickets available for fourteen days. Cheap tickets to Brussels, via Calais or Boulogne, will be issued from March 29 to April 3 from Charing Cross, Victoria, Cannon-street, and Holborn. Tickets are available for eight days. Tickets will also be issued to Brussels, via Ostend, March 29 to April 3, from Charing Cross, Victoria, Cannon-street, and Holborn. Tickets available for eight days. Special day excursions will be run on Good Friday, Easter Sunday, and Easter Monday, leaving Charing Cross, Victoria, Cannon-street, and Holborn for Calais, and from Charing Cross for Boulogne. Cheap eight day tickets to Amsterdam, Arnheim, Rotterdam, Utrecht, and The Hague will be issued each day from March 29 to April 3 from Victoria, Holborn, St. Paul's, and Herne Hill by the 8.25 a.m. day service via Queenboro' and Flushing. A special boat train will leave Victoria (Chatham and Dover) at 9.5 p.m. on Wednesday and Thursday before Good Friday for Dover, in connection with the boats to Calais and Ostend.

MATLOCK AND CROMFORD ANGLING ASSOCIATION.

THE annual meeting of the above association was held in the Devonshire club-room on March 25. On May 21, 1898, 500 well-developed two-year-old trout, bred and reared by the association, were turned into the river—thirty-five brace between the Jubilee Bridge and the railway station at Matlock Bath, and the rest were spread in the river below Cromford Bridge—making a further valuable addition to our already well-stocked waters.

The hatching operations in 1898 were very successful, and there are in the tanks a grand lot of yearlings, running from 3in. to 7in. long, in the pink of condition, and numbering probably about 10,000.

There are also upwards of 1000 two-year-old trout, which are in perfect condition and well developed, running from 8in. to 11in. The committee have decided that none of these shall be sold, but that all shall be turned into the river on May 20. This is a very interesting operation, and should be witnessed by every member of the association who can possibly attend.

In consequence of the mildness of the past winter our stock fish were ready to spawn much earlier than in previous years. We took our first lot of ova on Nov. 16, and finished spawning on Dec. 14. The ova was the finest lot (so Collinson, the keeper, says) we have ever taken, and filled all the trays in the hatchery. This ova has now been hatched out, and we have a full stock of lusty fry, remarkable for their size and strength, which may be accounted for by the fact that our stock fish have now reached the five to six years old stage, and number ninety-six.

The summer and autumn of 1898 was not a good time for anglers on any water, the early part being very wet and the river in flood; later it was very dry, and the water very low and clear. Yet, in spite of this, average baskets were made by those who knew the water and its ways, which knowledge will soon be acquired by our new members.

During the past winter Collinson, the keeper, besides spawning and superintending the hatching of the young fish, has attended carefully to the feeding of our whole stock, so that few have been lost. The trees and bushes on both sides of the river have been carefully topped and trimmed, and trimming for any pike which may have found their way into our water has also been done, but very few have been caught, principally, I think, because there were few to catch.

The members now number fifty, and it is thought this should be the limit, to prevent the water being over-fished.

I deeply regret to say that during the year we have lost, by death, two of our old members—Mr. Skinner, of Matlock Bridge (one of the most energetic of our committee), and Mr. Gibson, Manchester—two good men, and true anglers.

The association is now in a sound and flourishing condition; finances as they should be—a full members' list—and water well stocked with trout and grayling, which will annually be kept up (from our own breeding tanks), and everything points to a good time in 1899, if only the clerk of the weather will favour us with settled conditions.

Mr. Mountney, the landlord of the Holmesford Cottage Inn, has kindly consented to allow our members to fish his three meadows—below the Birchwood stream, on the west bank—on condition that they will ground bait when they reach his hostelry.

HENRY COOPER (Treasurer and Secretary).

"LEST WE FORGET."

MR. J. BAILEY WALKER, Secretary of the Royal Alfred Aged Merchants Seamen's Institution, asks us to insert the following, which we gladly do: "Throughout the United Kingdom, with what keen interest we have been watching for news of vessels overdue, whether it be the grimy little coaster which flies a faded ensign on Sundays by way of a treat, or the great and costly liner which tears its way over the deep like some huge marine monster, and what feelings of relief we experience when their safe arrival is announced. Within the past week, our hearts have been thrilled by the courage and devotion to duty shown by British seamen in the midst of extreme peril and danger, such as that displayed by the crew of the Cunard Company's s.s. *Pavonia*, and our national pride has again and again been awakened. But what of British seamen who after forty or fifty years of hard and perilous service at sea become old, destitute, and 'too feeble for another cruise?' How fitting an expression of this general admiration, if a help-

ing hand be held out to them at such a time. H.R.H. The Duke of York, R.N., has graciously consented to preside at a festival dinner to be held at the Hotel Cecil, on Wednesday, the 17th May next, in aid of the funds of that national and unique Old Sailors' Charity, the Royal Alfred Aged Merchant Seamen's Institution, Office:—58, Penchurch-street, E.C., and the committee are earnestly appealing for universal and annual support for this, 'Poor Jack's List Port.' There are now some 250 British seamen on the list of approved applicants, whose ages range from sixty-five to ninety years—men upon whom have depended the lives and property of tens of thousands of all nationalities—many of them left with nothing but the 'Royal Alfred Institution' between them and the work-house or the grave. The appeal is to all, and though it has been written that—

'Our God and sailor we alike adore
In time of danger, not before:
The danger past, both alike required,
God is forgotten and the sailor slighted.'

the committee hope that this appeal will not be in vain."

SALMON AND FRESH WATER FISHERIES ACTS, 1861 to 1892.

SALE OF FRESH WATER FISH.

THE Fishmongers' Company hereby give public notice that under the provisions of the above Acts it is illegal to buy, sell, or expose for sale, or have in possession for sale, any fresh water fish, other than pollan, trout, char, and eels, between March 15 and June 15, both inclusive, subject to a penalty not exceeding 40s.

By order.

J. WRENCH TOWSE,
Clerk of the Worshipful Company of Fishmongers,
London.

Fishmonger's Hall, London Bridge, February, 1899.

THE FISHERIES (OYSTERS, CRABS, AND LOBSTERS) ACT, 1877.

(40 AND 41 VIC., CAP. 42).

UNSEASONABLE OYSTERS—TO OYSTER PLANTERS, &c.

WHEREAS under sect. 4, sub-sections 1 and 2 of the above-mentioned Act of Parliament, the sale or purchase of deep sea oysters between the 15th day of June and the 4th day of August, and the sale or purchase of any other oysters between the 14th day of May and the 4th day of August (except oysters taken within the waters of some foreign State) is prohibited under certain penalties.

The Fishmongers' Company hereby give public notice that all persons contravening the above Act of Parliament by selling, exposing for sale, consigning for sale, or buying for sale oysters as described in the above-mentioned Act of Parliament, will render themselves liable to be prosecuted.

By order.

J. WRENCH TOWSE,
Clerk of the Worshipful Company of Fishmongers,
London.

Fishmongers' Hall, London Bridge, February, 1899.

REPORTS FROM RIVERS, LOCHS, &c.

☞ River Reporters who want forms and envelopes should send a post card to the Manager of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

ENGLISH AND WELSH REPORTS.

Lower Thames—GENERAL REMARKS.—The reports this morning (Tuesday) are not very favourable in regard to the commencement of the trout fishing season, but with the water being somewhat satisfactory, and the probability of a sudden change in the weather, it would not be a matter of surprise to find the river quite ready for the anglers on Saturday next, which is "the opening day." I can remember the time when angling for trout was permitted by the bye-laws to begin on and after the 25th day of January, though not recognised by the committee of the T.A.P.S., who instead recommended the first day of April as the proper and sportsmanlike time, and in only one instance did they deviate from it, when the Easter Holidays commenced at the end of March, and being so near the time, they passed a resolution permitting the anglers to go out during that holiday period. There was no violation of the law in doing this, but after referring to the permission in the angling Press, someone wrote to the conservators, and complained that I had exceeded my duty in getting my committee to grant this permission. I need scarcely add the board completely negated the complaint, and attributed it to the ignorance of the writer. Such permission could not be granted now, and the anglers will regard Good Friday as a sealed day for commencement, but any time after sunrise on Saturday morning they can make a start, and I have heard of several fishermen who are engaged for that day. All will depend on the weather, as the opinion is general that there are plenty of good fish in the river, and it must not be forgotten there are other species of trout in the river which are not of the Thames kind, and I should think some of those fish which came from Mr. Corrie, of the Itchen species, will have grown to the standard size of the Thames. There were amongst them some very fine specimens, and the weir at Chertsey was well supplied with some of the best, placed there by Mr. A. E. Armstrong in the presence of several gentlemen, and the practical wife of my friend, Mr. C. H. Wheelley, who is as much interested in the Thames fishery as himself, and travelled some distance in

the Conservancy steam launch during their distribution. The river at Staines, opposite the Pack Horse Hotel, had a good supply, which were turned in by Mrs. E. H. Blamey, the wife of the practical host.—B.

Cornish Streams.—Until this week nothing worth mentioning has been done since the trout fishing commenced on March 16. The waters have been low, clear, and the weather bitterly cold. A change has, however, come, and although the rain has not been sufficient to affect the rivers much, yet the wind is warm, and trout are taking. The prospects for Easter are by no means bad. Baskets of twenty and thirty trout have been taken in the Camel and its tributaries, and many of them in good condition. Heavy rain is necessary to help the kelts back. Spring salmon of grilse size have been noticed in the Camel lately.—BODMIN.

Darehth, Farningham, &c.—The water is now in capital order, tending towards being low, and this weather should have brought the trout on the feed. As a matter of fact, it has not. The explanation seems likely to be that the fish are even more backward than usual. If so, little sport can be expected at Easter. Very few fish were visible at all during my walks by the Darehth, and not one rose on either occasion, though the weather was mild and pleasant. The wood at lower end of the water belonging to the Lion is very swampy and muddy, so intending anglers will require waders if they object to wet feet. There is very little fly on. A March Brown would give as good a chance as any.—J. P. T.

Dart (Totnes and District).—The rain of Saturday has put the river in better fishing trim. The spate was needed, as the water was very low. With milder weather this week, several rods have been on the river, but only small creels of trout were made. If the weather keeps fine there should be a chance of good sport for the Easter Holiday rods, and the best flies are Half Stone, Edmond's Palmer, with the Blue Upright or March Brown, whilst on the moorland water the Partridge Hackle with green body is being used. It is not known if the rule of the Fishing Association prohibiting fishing with any bait but the fly within 100yds. of Totnes Weir will be suspended after this month. A few days since Mr. Edgebrook hooked a fine salmon near Buckfastleigh, but lost it after a struggle.—DEVONIAN.

Devonshire Streams.—The cold snap of last week brought sport almost to a standstill for the time, but the weather is now much milder, and more favourable to fishing during the Easter holidays. The rain of Saturday was welcomed, as most of the streams were running at summer lowness, and it no doubt had the effect of clearing out the migratory fish which were lying in the rivers. Sun is badly needed, as the water is very cold. Trout are reported plentiful in the Upper Lyd and Tavy, and there has been some fair sport. Peal, too, are pretty numerous, and it is thought that fishing prospects will be greatly enhanced when the pollution of the rivers is dealt with. The river banks through the famous woods at Lydford have been put in order. On the Creedy, Otter, and other East Devon streams the dark Duns and February Reds are being used, and this latter fly, with the Blue Upright, accounted for the fish killed on the North Devon rivers. A good stretch of water having been withdrawn from the association, anglers in the Tiverton district are handicapped somewhat. Mr. George Hopewell, fishing in the canal at Topham, was fortunate enough to land eighteen pike in three hours.—DEVONIAN.

Fen District (South Lincs. and Cambs.).—The frost and snow last week put an end to all thoughts of fishing, particularly for the dainty trout. Skating was more thought of in the Fen District than angling. Easter, however, will be likely to induce some to try the inland waters. We understand there are a good many trout in the smaller streams that run from Rutland, Northamptonshire, &c., into Lincolnshire and Cambridgeshire.—LIMPET.

Idle District (North Notts).—There is practically nothing to report from this district concerning angling. The return of wintry weather last week put an end to sport while it lasted, and the water is not yet rid of its wintry influences. We hear of some little fishing being done in the Southwell district on streams which fall into the Trent, but this must be limited, as most of the clubs fix May 1 as opening day. Salmon are also reported below the weirs on the Trent between Gainsborough and Newark; but so far there are no reports of captures.—L.

Lea.—In the way of coarse fishing results there is absolutely no sport to record, the unsettled weather lately having been greatly against successful roaching. Good Friday is the last day for retaining roach in the river, and I hope some sport will be met with. To-day (Wednesday) a very boisterous wind prevails, and if fish are to be taken it will have to drop considerably. I have heard of an otter being seen in the old river at Hoddesdon. Good trout have been observed on the move in the upper waters—several at Dobb's Weir—and if the right kind of weather prevails the season for *Salmo fario* should open well on May 1 next.—IZAACK WALTON.

Lugg and Arrow (Leominster).—Both these streams continue to run clear and a nice level. Sharp frosts and snow were the order last week, but it has now turned mild, and some showers of rain have been had; but it has not altered the colour of the rivers. There has been a strong wind since Tuesday, but there has been several anglers out, and the March Brown having been on thick, there has been some very nice trout landed. The outlook for fishing during the holidays is good, and some good sport should be had. The Pinsley is clear. The best killing flies will be March Brown, February Red, Blue Dun, and Cowdung.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in good order. The weather on Saturday last completely changed, and rain fell, whilst the wind got round to the south, where it has been for the most part since.

A few showers, with sunshine intervening, must soon bring out flies and put trout on the move. The prospect of sport during the holidays has decidedly improved, and is encouraging. Flies should be March Brown, February Red, Blue Dun, Red Palmer, and Brown Spinner, and on warm, windy days, the Cowdung Fly.—R. T. WILLIAMS.

Plymouth.—There is much to report from the rivers; the weather has been too unsettled for much sport, still, a few rods have been out, but several blank days have to be recorded. I hear there are several fresh run salmon and pike in the Tavy and Plym, and the day or two's rain we had has greatly improved the fisherman's prospect.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—During the early part of this week all these rivers were much flooded, but are fast recovering their normal condition, and by the end of the week will be in very good condition for fly fishing and other kinds of angling. The snow on the Welsh hills has nearly all disappeared, and the late flood has washed out all the snow water from the rivers, and with the weather at present very mild and seasonable, there is every prospect of good sport during the Easter holidays. Many visitors, taking time by the forelock, have already arrived, and it is confidently anticipated that, should the weather continue favourable, this pretty neighbourhood will be more crowded than ever with holiday visitors. Sport during the past week has been much below the average, but in the Severn and Vyrnwy several pike have been captured, and it is hoped that the flooded state of the rivers will tempt salmon to ascend the upper waters.

Teifi (Lampeter, Cardiganshire).—The river is now in very good condition for fishing, the water being quite up to the banks. Not much sport with trout last week, but during the past few days it has much improved.—H.

Teme (Ludlow).—The Teme in this part is still running clear and a nice level, and in good order for fishing. The weather turned quite warm at the end of last week, and rain fell, but did not interfere with the water. It refreshed the river, and more flies have been out since; and, with the exception of a strong wind on Tuesday, it has been suitable for anglers to get out, and a fair number of rods have been on the river. The flies used are the Blue Dun, March Brown, Cowdung, February Red, and Palmers. Bottom fishing has been tried by a few, and some very nice trout taken. Pike fishing has been very slow this week. At the end of last week an angler on private waters tried the fly, and landed a nice lot of trout, one scaling over 1lb. The Hucks Barn water has now passed into private hands, and the free tickets usually available to visitors will not be obtainable. On Monday, Mr. R. Smith was out on the Teme, and landed six very nice trout with the fly, scaling 3½lb. With the worm some nice trout were taken on Tuesday. An angler says that the river below the town has been "letted of late," as there were signs on the bank where the net was emptied; this does not look promising for sport in that part. The Ony, Corve, Clun, and Ledwyche are all running clear and a nice level, and in good fishing order. Sport in them has been fairly good, and with warm weather good lots of fish will be landed.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is now running clear and a nice level, and in good order for fishing. The weather has now changed from frost and snow to March winds and April showers, but it has not altered the state of the river, and the mild weather has brought a good few March Browns on the river, and the fish have been rising better, and the prospect for sport has been improved. Rain threatens, and it may upset calculations for fishing at Easter, but at present there is every prospect of some good sport being had. The best flies to use will be the Blue Dun, March Brown, February Red, and Cowdung. A few fish landed this week with the fly. The Rea, Kyre, and Ledwyche are in order.—WORCESTER.

Witham, &c. (Mid-Lincolnshire).—Persons who have been in the habit of patronising the Witham District from Yorkshire and Lancashire will, for the Easter holidays, betake themselves to other quarters. Some Manchester men are for trying Llanymynech and other spots in North Wales. Leeds men are going on the Wharfe and Ure, whilst Sheffield will foregather on the Amber and Derwent. Local men have trout nearer than these. The head waters of the Witham and its tributaries above Lincoln are good trout streams, as are also the streams which come from the North or Wold district of the county. From the latter a few brace were captured before the storm.—LUCI.

Wye and Derwent (Derbyshire).—The opening of the trout season on the above streams are as follows: The Derwent, March 25th; and the Wye, April 1st. Only a few anglers have been out this week. Some snow showers fell at the end of last week, and on Sunday a heavy downpour of rain, which caused the Derwent to rise several feet, and was much discoloured. However, it is rising down very nicely. If no more rain falls it will be in order for the fly on Saturday. I am pleased to hear from the water bailiffs in the various districts trout are plentiful, and may be seen close to the side, which is a good sign at this time of the year, and we Derbyshire anglers are looking forward to a much better season this year than we have had of late. The following flies will be useful: February Red, Blue Dun, Cock-winged Dnn, March Brown, and Claret Bumble, this latter to be used as a wet fly.—DOTTRELL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—Luckily for Easter holiday anglers the severe frost and bitter north-east winds gave way to more genial weather. After a fall of sleet on Saturday, the temperature continued to rise on Sunday and Monday, and the rain on the hills brought a freshet down. As there has been little or no snow up the valleys of the Yore, Swale, Wharfe, or Nidd during the late wintry visitation, anglers have not had the

dreaded snow broth to contend against. Melting snow is often the bugbear of the early trout fisherman. Grayling do not mind it much, but snow water is poison to trout, and when it is present in any quantity the fish keep in their holes, and neither worm, minnow, or fly will tempt them to feed. Of course, in this variable climate of ours one is as much likely to be wrong as right in the way of weather prophecy, and there is no telling what may happen between now and next week, but certain it is, as I write, prospects for Easter sport are much better than they were a few days ago, and at the time of sending this despatch they may be described as very fair indeed. All the well-known angling inns through which the above favourite trout streams run have booked rooms for anglers, and, fine or otherwise, we are sure to find plenty of rods at work at the end of this and during next week. The anglers I have met during the past day or two have done fairly well in the Yore. I have had a few hours daily in the Cover, that beautiful tributary of the Yore, respecting which Charles Kingsley wrote to his wife (Charles Kingsley, His Letters, &c.), on May 22, 1845: "What a delight it would be to take you up Coverdale, just half a mile off at the back of the town. You know those lovely river scenes of Creswick's. They are exact likenesses of Little Cover, in his deep-wooded glen, with his yellow rocks and bright white stones, and brown water clearer than crystal. As for fishing, I am a clod—never use finer than our finest. Squire Topham considers my tackle as only fit to hold carthorses." Both Charles Kingsley and the squire have long ago joined the ever increasing majority, but all our local hands still use single hair if they can get it; if not, the finest possible gut casts. I had very fair sport yesterday and to-day, but the weather is very wild and wet this evening, and a lot of fresh water is coming down all our streams. Some fine, settled weather is all that is required now for Easter.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

BY TELEGRAPH.—I hear from Hawes that several members of the association were out yesterday, and by swimming the worm caught from eight to ten fish. I got a score in one of the tributaries. The Yore, Swale, Nidd, Wharfe, &c., are bankfull to-day, and a fierce westerly gale has prevailed for fifteen hours. As soon as the storm is over and the waters subside there will be some good angling. Prospects for Easter good. Light and Dark Woodcock, Dark Snipe and Purple, Needle Brown, Spring Black, Waterhen Bloa, and March Brown are best flies for Easter.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddle.—The recent hard frosts have been much against rod fishing, and very little has been doing in these rivers. Few spring salmon have been seen as yet in Longtown water and the lower reaches. The prospects for the Easter holidays are exceedingly unpromising at present, and it will take a good fall of rain to put the rivers in trim for salmon. Trout are not rising, and the waters are very low and clear. Yellow trout are slowly getting into condition, and a few have been got in the upper and middle reaches. In the Metal Bridge water two salmon have been landed, one by Mr. Chambers, of Longtown, weighing 13lb., and one by Mr. Mason, of Rockliffe, weighing 15lb.—a nice new run fish. Salmon fry are now coming down the rivers. Mr. Budd, Mr. Reid, and others have had runs with kelts. The severe wintry weather in the Solway district has been much against the migration of salmon in the fifth during the past week. There was practically no salmon all the week, and not a single salmon was taken at some of the fisheries. Tacksman have had a good deal to grumble about this spring, as the takes in the nets have not so far paid the wages of the fishermen. At one of the fisheries an odd salmon was taken. The poke net fishers did nothing, and the state of the weather was against the drift netters, many of whom did not leave their moorings. Sea trout have not yet begun to run. On Saturday the fishermen in the Solway were offered 3s. per lb., the Billingsgate prices being 3d. per lb. over that figure. No quotations for sea trout are to hand, but occasionally trout fetch as much as salmon. So far no sport has been had in the Liddle, which will require a flood to put it into angling form, as it is running exceptionally low. Throughout the whole of Liddesdale the weather is snell and keen, and little angling is anticipated until the second week in April.—GILNOCKIE.

Loch Tay (Killin).—March 22, Mrs. Maisey had two nice salmon, 19lb. and 15lb.; Mr. H. J. Knight, one, 21lb. March 23, Mr. Clephan, two, 15lb. and 19lb.; Mrs. Maisey, one, 21lb.; Mr. McIntyre, one, 20lb. March 24, Mr. Clephan, one, 24lb. March 25, Mr. Cameron, two, 23lb. and 17lb.; Mr. H. J. Knight, one, 19lb. Loch in good ply.—H. J. MAISEY.

North-East of Scotland.—Not for twenty-one years has there been such a storm of frost and snow so late in the angling season. Many lessees left early in the week, but others remained, hoping for fresh weather at every turn. The Duke of York, with the others, bravely stuck to the riverside, and faced the elements day after day on the Balmoral and Aberfeldie reaches, but with scant success. On March 26, however, a partial thaw set in, and on Tuesday the fresh was thorough. The rivers are teeming with snow broth, and it will be some days before they are in angling trim. The wind is now from the south-west, and fish are coming on the coast freely. Last week was the worst for salmon angling and netting since the season opened. The record price of 3s. 6½d. was reached on Thursday for salmon in the Aberdeen Market, when only two were exposed. Over sixty were on the slabs on Tuesday, and the number has been increasing steadily since the weather moderated. The brown trout season on the Don, Deveron, and Find-

horn, and other early reaches, which is usually very brisk towards the end of March and beginning of April, will be much later now on account of the protracted storm. A few baskets were made prior to the storm, when there was a slight advent of the March Brown; but a whole fortnight has at least been lost, and it will be some time yet before the water attains its normal temperature, on account of the snow accumulations on its banks and along its feeders. Trout are in wonderfully good condition on the earlier sections, where the feeding is abundant all the year round, and these parts are certain to be much in demand during the ensuing holiday week.—G. M.

South of Scotland.—The severe wintry weather prevailing over this district ended on Saturday morning with a fall of snow, and this was followed with a fall of rain towards night, which had the effect of clearing the snow off the higher hills. In the dale there was a lighter coating of snow on Monday. The rivers were not long in coming into spate. With the heavy fall on the higher hills, and the rain which fell at night, soon put the waters out of fishing order. The temperature has become milder, but the weather is very unsettled. There was a hatch of fly on the waters on Monday, and it was observed that trout were rising freely at the Iron Blue. Torrents of rain fell on Tuesday from morn till night. The rivers were in flood on Tuesday morning, and commenced to rise rapidly at dark. Should no more rain fall now the rivers will be in order by the end of the week for fly. The weather is, however, unsettled, and, judging by a falling barometer to-night (Tuesday), it looks as if the storm is not yet over. The spates are bringing down the kelt salmon, and I hear the nets in the Solway are getting some of these. Of course, the fishermen return all kelt fish to the water. There has been no sport in the Annan since last week. A few kelts have been landed and put back of late, but no new spring salmon have been seen in the river. In the Dumfries-Nith the sport has also been exceedingly quiet for some weeks, but the floods should make an improvement when the waters fall. From the Galloway district the notes that reach me show no angling during the past week, and the reports from the Ayrshire part of the country are something similar. The frost was too severe in these districts last week. In the Solway Derwent a few trout have been caught, and it is reported that a small salmon was taken below Cockermouth last week. Some doubts are entertained as to whether this was a real spring salmon or not. Trout in the Ehen, Calder, Mite, &c., are said to be in fair condition, and some moderate tacksman have been taken. The rivers in this part are in flood, and, given some mild weather, by the end of the week some sport is expected. Nothing seems to be doing in the Metal Bridge portion of the Esk.

SOLWAY.—The severe wintry weather in the Solway district during the past week acted against the migration of salmon in the fifth. There was practically no run of salmon all the week, and not a single fish of the salmon kind was taken at some of the fisheries. Tacksman have had a good deal to grumble about this spring, as the returns from the nets have so far only paid a tithe of the wages of the fishermen employed cleaning and fishing the nets. At one of the principal fisheries a salmon or two were taken of medium weights. The poke net fishermen did nothing all the week, and the state of the weather was against the drift netters, many of whom did not leave their moorings during the week. The temperature of the water is yet too cold for the haaf fishermen entering upon their calling. Sea trout have not begun to run, and it is feared that the snow on the hills, which must keep the temperature of the rivers low for some time, will cause a later appearance of sea trout this season. Snow fell on Friday night, and again on Saturday morning, but a thaw afterwards set in, followed by some rain. Generally sea trout do not commence to run to the border rivers of Dumfriesshire and Galloway before the first week in April, but in any ordinary mild spring they have been taken in March, in small numbers of course. With the scarcity of salmon all over Scotland prices have been high at Billingsgate during the past week for spring salmon. On Saturday the Solway fishermen were offered 3s. per pound, but the demand could not be met owing to the scarcity. Quotations for sea trout were not given, but trout at Easter time generally bring as much as salmon. The prospects for Easter anglers are more promising than they were a few days ago. The fall of rain is likely to bring a flood, which will put the rivers in better order.—HEATHERBELL.

IRISH REPORTS.

Boyle.—Since my last report the weather has changed considerably for the better, as far as fishing is concerned, and for the last three days there were some very good baskets made. Mr. Shera, fishing Lough Gara on March 26, got eight trout and seven pike, his largest trout was a beauty of 6½lb., and his smallest was 2lb. Mr. MacGrath, same day and on same lake, killed four good trout and several pike. Mr. Wills Rockingham, fishing Lough Key, killed four beautiful trout, which weighed 12lb., these were got in two evenings, fishing about two hours each evening. There are several local fishermen fishing Lough Arrow, and all having good sport. John Beirne, on the Boyle river, has been having splendid sport for the last few days; he got several trout ranging from 1lb. to 3lb. each. To-day, March 28, raining, which will still benefit anglers.—GEORGE TAYLOR.

Bann (Toomebridge).—Up-to-date trouting has been poor about here, though the river was in fair order for the time of year. Plenty of pike and perch, however, were killed. A lot of rain fell this week, which will raise the temperature. On the upper tributaries bait fishers this week did pretty well. We understand that the lease of the salmon angling held by the Bann Club expires this season, at the end of which it reverts to Mr. R. L. Moore, lessee of the Foyle and Bann Fisheries.—J. A. B.

Eighth Annual Fisheries Exhibition.

DAVID SLATER,

(Stand 24)

Of NEWARK-ON-TRENT,

MAKES THE FOLLOWING

SPECIAL ANNOUNCEMENT.

RODS.

THOSE in want of either Rod or Reels will consult their own interests by inspecting David Slater's Magnificent Exhibit at the Royal Aquarium (now open).

Built Cane Salmon and Trout Rods, with or without Steel Centres, for excellence of workmanship and reasonable prices stand second to none. Inspection invited.

Superior Greenheart Trout Rods from 10s. 6d. to 21s. Two tops, and Best Universal Winch Fittings.

See our Greenheart Salmon Rods. Best quality only.

Our Noted Pattern, the Newark Perfection, specially designed for the Nottingham style of fishing, price 21s. each.

Pike Spinning Rods in East India, Cane and Greenheart from 10s. 6d. to 21s.

REELS.

Slater's New Aluminium Alloy Salmon and Trout Reels. These Reels are perfection; they combine great strength with extreme lightness; hardened steel works, and beautifully finished.

Sizes.	Prices.	Sizes.	Prices.
2½in.	15s. 01.	4in.	28s. 01.
2¾in.	17s. 61.	4½in.	32s. 01.
3in.	21s. 01.	5in.	35s. 0d.
3½in.	25s. 01.		

The Fly-Fishers' Winch (registered). This reel is made in two sizes; can be had with click or silent check. It has two special recommendations—extreme lightness and quick winding.

Also a large collection of the following patterns: Ordinary Wood Sea Reels, The Future Sea Reels, Slater's Combination in Wood and Ebonite, The "Zephyr," the lightest Nottingham, Gun-metal Salmon and Trout, Bronzed Salmon and Trout, &c., &c.

We have a few old patterns Combination Wood Reels, also Ebonite Salmon and Trout, which will be sold regardless of the cost of manufacture during this Exhibition.

Mr. David Slater will be in attendance at the Royal Aquarium during the Fisheries Exhibition, which closes on April 5.

J. W. MARTIN, "The Trent Otter"

(LATE OF NEWARK-ON-TRENT),

Invites all friends, customers, and visitors to inspect the splendid collection of

Rods, Reels, Lines, and General Tackle,

that he is this year showing at

THE FISHERIES EXHIBITION,
ROYAL AQUARIUM, WESTMINSTER,

Or he will send post free to any address a copy of his special EXHIBITION CATALOGUE, which every angler should procure. This list contains particulars of some rare bargains in General Fishing Goods, at from 30 to 50 per cent. cheaper than can be procured in a general way. Send for a copy at once. Mr. Martin is in personal attendance.

ONLY

ADDRESS:

J. W. MARTIN & CO.,

8, SEYMOUR STREET, EUSTON SQUARE, LONDON, N.W.

FISHING RODS and TACKLE.

JACK RODS.—Brazed upright rings, winch fittings, 3s. 9d.; Hickory do., 2 tops, 5s. 6d. to 0s. 6d.; Hickory or Mottled Cane, 15ft., bronze or German silver fittings, solid rings, division bag and spear, will make Jack Rod, 10ft. 6in., 12s. 6d.; do., double brazed, 14s. 6d. to 21s. 6d.

REELS.—Nottingham Wood, polished, 3½in., 1s. 9d.; 4in., 2s. 6d.; movable check, 3½in., 4s. 4in., 5s.; bronze revolving plate, check reels, 8in., 6s. 6d.; 4in., 9s. 6d.; Brass, solid backs, 3½in., 2s. 6d.

LINES (waterproof).—Plaited silk, stout, 1d. per yard; hemp, ¾d. per yard. Plaited Flax Lines 20 yards, 7d.; Tanned, 8d.; 60 yards, 2s. Cable Laid Cord, 50 yards, 7½d.

TRAOES, Gut or Gimp.—Two swivels and lead, 5d.; Twisted Gut do., from 7d.

SNAPS, &c.—Ryder's, 2d.; Pennell's, 2½d.; Jardine's, 3d.; Double Live Bait Hooks, 1½d. each; 1s. 3d. per dozen.

BAITS.—Spoon, from 6d. each, very best quality; Silver Plaited, from 1s.; Devons, Totnes, and Minnows, from 6d. each. GUT LINES, from 1d. per yard; Best, 3 yards, 6d.; "Fishing Gazette" Gossamer, 8d. Flies dressed to any pattern.

Postage Extra on all Orders. All Orders must be accompanied by a remittance.

TROUT ROD at £1 1 0.

Special Patterns in Salmon Flies for Norway.

Stand No. 20, Royal Aquarium.

Cork Rivers.—There has been a decided improvement throughout the county on all the principal rivers open for angling. Sport, however, is still not up to the average as far as salmon are concerned, but in the trout department the records have been satisfactory enough, when the generally unfavourable weather and water conditions are taken into consideration. On a couple of nights rain fell pretty heavily, and as more is expected very shortly the prospects all round are far better. New fish are now coming up on the principal rivers in better numbers.—T. J. D.

Corrib (Galway).—Since last notes angling improved considerably as spring fish are showing up better, but so far angling has been chiefly confined to professionals. The rain this week discoloured the water. The 36-pounder which Lydon killed recently was the heaviest one taken since 1897, when one of 38lb. was killed. It gave over an hour's play, and took a shrimp. Trout on Lough Corrib was interrupted by the unfavourable weather. It is in contemplation to re-stock it with white trout fry.—J. A. B.

East Tyrone Rivers.—The rain of this week has been of immense benefit in taking away the cutting cold weather and raising the rivers. The Ballinderry and Blackwater up to date have done little beyond pike fishing. By Easter Monday both will be in good trim for the fly. A movement for the resuscitation of the Ballinderry Angling Club would find favour, it is said, but unfortunately, nearly all the old members, who were the backbone of it, have gone away, or have taken their departure to another world.—J. A. B.

Kerry Rivers.—Salmon angling has shown an improvement on the majority of the Kerry rivers open for angling, and brown trout anglers have had generally good sport on all. Since Friday spring salmon have been coming up in better numbers in the Caragh, Curran (Waterville), Blackwater, Feale, Gale, Smeragh, Cashen, and Fartha. Poachers have been quiet lately on all waters, and it is to be hoped that they will continue so, as it is the poaching fraternity that have nearly ruined the chances of sport amongst legitimate anglers in many of the Kerry waters.—T. J. D.

Killarney.—Sport is improving as far as salmon are concerned, and the prospects for the coming week are very materially improved in consequence of some heavy rain which fell on a couple of nights, the fresh causing many new fish to come up into the lakes. Brown trout angling continues to give average sport, and with the advent of more favourable weather sport in this department is likely to be really first class on the lakes.—T. J. D.

Lough Currane (Waterville, co. Kerry).—Sport is still very backward on Lough Currane, the principal free water in the district. Only two salmon have been had since last report by visitors, both being had by Mr. Barry, out from the Bay View Hotel. The professional fishermen have been out only a few times on their own account, and only one salmon was got between them. The brown trout fishing is now giving pretty good sport, and the prospects for salmon angling are very much improved at time of writing, some rain having fallen at a good time.—THOS. J. DENNEY.

Lough Melvin (Lower Reaches, Kinlough End).—Notwithstanding the adverse climatic conditions, good evidence was had during the past week of an abundance of clean run fish in this lake. Several clean run fish were landed, weighing from 9lb. to 14lb., and a number of nice brown trout were also had trolling, from 2lb. to 5lb. Fly angling was not a success. A weighty downfall of rain came off on 25th ult., which improved matters. Quite a number of rodsters have notified the coming to Kinlough and Bundoran for their Easter holidays. All conditions seem combined for a favourable reception.—P. GALLAGHER.

Lough Neagh.—The pollen fisheries are improving a little. Trout netting is also fair, some magnificent fish having been taken lately. Very little trouting is reported from the tributaries.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport continues to improve according as the season advances. Baskets of three dozen brown trout were common last week on all the above waters, and on Cummeravanig on Saturday Mr. J. J. O'Connor creeled four dozen and two in a comparatively short time. All the above lakes are now in nice order for angling, and the weather being now overcast gives better chances. On Coomavoher last week Mr. Grady caught a brown trout of 3lb.—the heaviest fish had on the mountain lakes for a very long time past.—T. J. D.

Mourne (Newtonstewart, co. Tyrone).—The Mourne opens for angling on Saturday, April 1. At present it is rising from the heavy rains, and should be in fair order for the opening day. Some English anglers are due for Easter week. The Derg, Finn, and Glen are in fair order.—J. A. B.

SEA FISHING.

Deal (The Pier).—The recent unsettled weather has disturbed the water to such an extent that it still remains very thick near the shore. In consequence, no one has attempted fishing of any kind during the past week. The weather is now somewhat more settled, with a steady breeze from the south-west, and should these conditions obtain for a few days a little sport among the dabs may reasonably be anticipated during the forthcoming holidays.—J. RICHARDSON.

Deal.—The prospects of sea fishing here are very poor at present. I may mention that I have taken a house by the name of Fair Light Lawn, about one minute from the "North Star," and I intend keeping both houses for the convenience of anglers. The house will be found to be very comfortable. The sanitary arrangements are perfect. Hot or cold baths, &c.—EDWARD HANGER (Agent B.S.A.S.).

Exmouth.—Sport with bass has been fairly brisk, and several good takes are being made. One line on Friday landed 20lb.—B.

Plymouth.—Mackerel are becoming more plentiful, but on account of the Lenten season they are fetching very high prices. They are a long way off shore. They are supposed to be in best condition during this month. The best market for them used to be London. They were packed in ice and sent away as soon as they were landed, but within the last few years the French seem to have developed a taste for them, and the French markets take great quantities, and they pay better prices. As these fish continue in season until October, some idea may be formed of the number that must be caught. In July and August they generally enter the harbours, when they are caught whiffing with the usual gear, and they hover about the coast more or less until September or October, when they go to the ground and are caught on the ordinary bottom lines. Conger are in their prime just now, and continue for some months.—WILLIAM HEARDER (B.S.A.S.).

Southend and Leigh.—March 28, 7 p.m.—Owing to a change of the wind to the west a great improvement has taken place in the weather. It has been blowing freshly from the W. and S.W. to-day, with a little cockle on the sea, and fishing prospects for the holidays are greatly improved. I hear of a few nice fish having been taken on trots—evidence that they are returning—so that those who elect to try sea fishing in this neighbourhood during the holidays are likely to have some sport with the flounders. Barometer 29.98 steady; wind W. to S.W., fresh; weather clear; sea rather rough.—CHARLES HUSSEY (B.S.A.S.).

" 25.—Original Alexandra: Distribution.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—There will be no meeting of the Renting and Preservation Committee on Monday evening next, in consequence of the holidays.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £1 10s. 6d. from the St. Alban's; £5, Edmonton and Tottenham; and £1 6s., White Hart Angling Societies' donation boxes. At the last meeting one application was entertained, which received £6. I hope secretaries who had concert tickets for the Holborn Town Hall will send in returns so I can draw it to a close.—R. GHURNEY.

Anglers' Association.—A most successful visit was paid to the Harcourt A.S. on 27th ult. Ten clubs present. £3 8s. 6d. in their A.B. boxes. Plenty of talent. T. Twyman, of Cobden A.S., chairman. Plenty of roach pole fame present, including Teddy Baxter, the western champion. Everyone was thanked. Next visit goes to the Bomore A.S. Secretary Dagworthy will get some good talent. Date later.—BEN.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The auditors gave their report on March 29, which was accepted. We have a special meeting on April 5 as announced in the *Fishing Gazette* of March 25, when all members must attend. We must also arrange the date of our ninth annual dinner and distribution of past season's prizes, also other business of an important nature. Rules 23 and 25 must not be lost sight of.—BEN ABRAHAMS.

Bomore Angling Society, The Britannia, Clarendon-road, Notting Hill, W.—On March 28 members turned up in great force, when a lot of business was got through. A PATHETIC INCIDENT occurred in the London streets the other night. It was late, and a poor little girl was trying in vain to sell her violets. Suddenly a boy, a typical London arab, who had just sold his last evening paper, and was rattling his paper in his pocket, stopped before her. Taking the situation in a glance, he said kindly, "I'll buy yer 'violetts.' Come on, we'll sell 'em together." The boy evidently was a good salesman, for we passed barely an hour later, and the children were running about together, with only two or three bunches left. We can all help one another if we like. The sick and suffering we can save, if we only point out to them the healing virtues of Holloway's Pills and Ointment.

We beg to remind Mr. Abrahams that it is impossible for our club to take the next return visit, owing to another change of proprietorship this week and the concert room wanted for some time to come. Trusting he will kindly inform club next on the list, and oblige. I wish to ask members and donors of prizes to kindly send them in as soon as possible for distribution. Will members please favour us with their presence next Tuesday night on important business?—H. DAGWORTHY.

Burlington Piscatorials, Burlington Hotel, Burlington-road, W.—A meeting will take place on Wednesday, April 5, at nine o'clock, to arrange a date for the annual dinner. All members (including honorary) are requested to attend. Members in arrears kindly clear the books.—P. LAVINGTON.

Cobden Angling Society, Kensal-road, W.—On April 4 a special general meeting will be held, when very important business will be brought forward. I hope members will attend on this occasion.—T. TWYMAN.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Arrangements for concert, &c., to be discussed on April 3. Early attendance requested.—GREG.

South London United Anglers' Visiting List.—There was a fairly representative gathering of anglers at the visit to the St. Alban's A.S. on Monday evening last. Mr. McPhail occupied the chair, supported by several good artists. The A.B.S. collecting box was opened, and found to contain £1 10s. 6d. On the roll call, thirteen clubs were found to be in attendance. Mr. H. Allan, the respected secretary, returned thanks to the visitors. Next visit will go to the Waggoners' A.S., held at the White Lion, Albert Emhankment, Lambeth. Date later.—ALF. PAINTER.

Doffings by the Way.

WE anglers owe much to the enterprise of the Great Eastern Railway Company for the conveniences they have placed at our disposal in the pursuance of our favourite sport. For the first time this (Wednesday) morning I travelled from Southend by the company's Southend Express. It is a train which is entirely worthy of the line, than which no higher praise can be given. To have breakfast in Southend sea breezes and then to be in London in very little more time than it takes to travel from Brixton or Clapham is a distinct boon, and the train runs all the year round. Stopping only at Wickford to pick up wayside passengers, it runs straight on to Liverpool-street, which was reached in schedule time to the tick. To have Southend made practically a suburb of London, and to give jaded brain workers and business men the benefit of sleeping in sea air is a grand idea, and those who will soon be thinking of "where shall we send the children this year," could do much worse than send them to Southend, and take advantage themselves of the conveniences the G.E.R. offers of running backwards and forwards to business. One great advantage of travelling by the Great Eastern Railway is that from their London terminus there is an unequalled service of omnibuses to every part, a point of no little importance when time is valuable.

I HAVE just received a note from Mr. Howes, of the Bull Hotel, Barton Mills, near Mildenhall. He says they are likely to have a busy time at Easter, especially if the weather continues as at present. It may not be generally known, but fishing for pike is allowed on the Lark all the year round—

They evidently want them out,
For pike do gobble up the trout.

Talking of trout, Mr. Howes saw one of at least 7lb. this (Wednesday) morning; but, as he says, they "want" catching. Although he says they want catching, perhaps they NEED it more than want it.

MR. CHARLES HUSSEY writes me: "Dear 'Drag,'—I have this (Wednesday) morning heard with the deepest regret of the death of our old friend, Dr. Brunton. He was a many-sided man—a kind and skilful physician, a splendid fly fisher, and, to put it in a word, 'one of the best' in this neighbourhood. We only knew him as a sea fisherman, but we who have fished with him are sorry indeed to hear of his decease, and to think that we shall never again be with him in the boat he loved so well. His relatives have our entire and heartfelt sympathy, and although of late years we have not had the pleasure of seeing him often, he will be sorely missed here by his friends who loved and respected him."

As the century grows older, and it is getting very old now, the benefits of science become of more and more practical use to us. The latest published application of research, it has been many years in hand, and been thoroughly tested, is Bovo Gravy, which is now coming before the public in the shape of a limited company. I am a mark on gravy and soup, and if the company's product is up to the sample I tasted, and a glance at the list of directors assures me it will be, I shall always keep Bovo Gravy "on tap" at Drag, Mansion.

BOTH at the Yachting Exhibition and the Fisheries Exhibition at the Aquarium, which last all should see without fail, my young friend, Mr. Angier, of Leigh, has shown some of his admirable sails. When I was at Southend I took advantage of the opportunity to make a call at Mr. Angier's sail loft at Leigh, where his sails are made. It was a most interesting visit, and all his men seemed very busy, which is good hearing. I used to think any-

body could make a sail, but I do not think so now. It wants a bit of doing, and I am indeed pleased to see that friend Angier's talent is being recognised, and he is quietly making, if, indeed, he has not already made, his way to the very first rank of sail makers.

I ALWAYS look with some degree of suspicion on the tales of schoolboys' "bowlers"; but a correspondent whom I know perfectly well sends me an example of what Mrs. Malaprop calls "a nice derangement of epitaphs," which I think is worth printing. Please bear in mind he is responsible for the veracity of the tale, not I. At a school, in a district which shall be nameless, the boys were asked to write a short essay on one of three given subjects, which were:

Oliver Cromwell;
The American and Spanish War; or
Fish and their Habits.

The hero of the tale, which, if *non vero*, is certainly Benjamin travato, chose the last, and this is what he said:

"FISH swims in worter. They are of three kinds, wales, spratts, and larfin ieners. Wales, my teacher tells me, is the cuckoo of the oshun, becoss it never laze its oan eggs. Spratts is of too kines, the silver spratt, wich is ketchid with pickle cabbage in netts, and the smoaked spratt, wich is ketchid in bundils, tide with tard string. Boath is good to ete. They are also used as dog biskits and chickin mele. I have forgot wot I was tort about larfin ieners. This is orl I no about fish."

THIS yarn reminds me of the old schoolboy essay on the "elefant," which was described as "the most largest anymle in the world; itt has a legg at eche corner and a tale at boath ends." I hardly think the writer of the essay on fish is likely to shine as a leading light in biological science; but if he perseveres he may in time make a decent "fish liar," able to amuse and interest us with some fresh piscatorial wheezes. I cannot but regret my young friend should have been so careless as to have "forgot wot he was tort" about that most interesting fish the "larfin iener;" but for that lapse of memory we might all have learnt something at once novel and instructive.

I HEAR that yet another new book on the sport is to be published shortly, "The A.B.C. of Angling." I hope none of us will be D.E.F. to its teachings.

THE "Anglers' Record" for March is to hand, and is well up to its old form. The *pièce de résistance* is an article (illustrated) by R. Fortune, F.Z.S., on sea fishing at Filey. The price of this monthly journal is 1s. per year, post free, and application should be made to the editor, Mr. F. A. Redding, Wellington-road, Leeds.

MR. JOHN LANE is bringing out a new edition of the delightful Natural History of Selborne, demy 4to, and uniform with his "Walton's Compleat Angler." It is too early to criticise the work, as only the first number has appeared; but the editor, Mr. Grant Allen, may be trusted for the accuracy of the explanatory notes.

GILNOCKIE sends me the following eel story. Gil's great on eels. "In the Damfoot pool, nigh Esk and Liddle's trysting place, he hooked the monster. All at once the great brute—black-red, sometimes as ugly as sin, while shining like silver—leapt out of the water, and fought fiercely to be rid of the bit of crooked wire, but all in vain. Then the big 'reptile,' lunging and pulling like mad, rushed through the Willow pool into the surging Cauldron stream. After him goes the agile angler, letting out oceans of rope, through the Thistle pool at the head of the Netherby water, under the railway bridge, and past Kirkandrews auld kirk, at times hanging by the tree rods, and slipping and slipping over the rocks, labs of skin peeling off his shins, tearing his breeks among the bushes, careering over huge boulders, scratching his face and hands among stubborn briars and obstinate prickly thorns, until the tired monster begins to give way, and is brought to the bank a little above Longtown—length, 12ft.; weight, unknown. '12ft.' echoed a bystander. 'Yes, 12ft. long, my boy, a fine fresh-water eel.' Well, I had a nice job with him, for he coiled himself round the body of a passing horse so tightly that I had to take the animal home, and still that eel refused to leave go, then we sawed his head off, and skinned the eel; all to no purpose—we could not separate him from that unfortunate steed, and were compelled to shut them both up in a stable all night. Next morning, neither horse nor eel could be found, but we followed the trail of the monster's blood, and tracked the footprints of the horse, over a potato field and two peat mosses, to the edge of a big scaur overlooking the Border Esk, and then we lost all trace of both; and now the owner of the horse wants me to shell out the price of that nag. Mean! isn't it?"

NON-RESIDENTS in the Royal County who intend to try for trout in the Thames, from Windsor upwards, might not, perhaps, all know that the Berks County Council recently agreed to apply to the Home Secretary for an order, under the Act of '94, prohibiting during the whole year the taking or killing of the bittorn, kite, kingfisher, merlin, owl, harrier, hobby, honey buzzard, &c. This, in such a favourite residential and sporting county (observes a "W. F."), must be a source of great satisfaction to naturalists, and if here and there a leveret, a young

pheasant, or a partridge or two be killed, or trout water lose a few fish, let it be remembered that this is happily a time of preservation and re-stocking of fish, if not also, more or less, of feathered game. Moreover, anglers will doubtless share in the pleasure of noting the gradual re-appearance of the birds of prey, and especially of that large and rare bird, the bittorn, and the sadly diminished kingfishers. Perhaps some gamekeepers might have to be instructed about some of the lesser birds named in the "protected" list, as well as some water bailiffs. But as the Guildford Natural History Society are about to preserve Woolmer Forest and its ponds, and if equally sporting Hampshire should follow the lead of Berks and some other southern counties, rare birds might become comparatively common in a few years time.

THE Royal Aquarium will offer a most liberal shillings-worth to its Easter holiday patrons. From the early hour of 10 a.m. (the doors open at 9 a.m.) until 11.45 p.m. there will be a continuous succession of entertainments of a most diversified, pleasing, sensational, and amusing character. Anglers will have the additional attraction of the Fisheries Exhibition, which will only remain open until Wednesday night, and which is by general consent one of the very best "Fishes" seen at the famous Westminster palace of amusement.

THE Hastings Anglers had a very enjoyable night on the occasion of their second annual dinner on March 22. A large and influential list of members was recorded in the Hastings *Argus*. The president, Councillor Travers, occupied the chair, faced by Mr. F. S. Foster. The function was in every respect a great success. The club numbers 180 members, is in a flourishing condition, and deserves the support it receives, for no better body of sportsmen exists than the Hastings Anglers.

OUR F. G. ALBUM OF ANGLERS.

No. 37 (New Series).

DOCTOR MACNAMARA

Is one of the most popular and vigorous members of the London School Board (writes a correspondent). He is always worth listening to, and his gestures appeal to the eye as his witty words appeal to the ear. I was watching him the other day when he was making a speech, full of fire and enthusiasm, on a subject very dear to his heart, and every now and then, as he made a point or sought to catch at a fact of a most telling character, he threw out his arms as though making a "cast," and I said to myself, "As sure as fate 'Mac' is a fisherman." Soon after I took a plant ten minutes, and, catching the Doctor in the lobby, I accused him of being an angler. He not only admitted the soft impeachment, but waxed immensely enthusiastic over angling and anglers. Dr. J. T. Macnamara, M.L.S.B., was born in Montreal in 1861. He is the son of a "Clare" man, whose zeal for Home Rule was only equalled by the vigour with which he fought England's enemies in the Crimea and elsewhere. Dr. Macnamara inherits his keenness for fishing from his gallant soldier father, who has, alas! just answered the roll-call of the "great majority," and no longer can make flies for his distinguished son, or help him to trim things up at the end of a day's trout fishing in Devon. "Almost the first thing I can remember," said Dr. Macnamara to his interviewer, "is the big rough spoon bait in the Canadian lakes. I fancy the fish are better educated now, and not gulled so easily. As a boy I fished the lower reaches of the Exe (we used to get good dace and roach there in the early seventies), and the Exeter Canal down near 'Turf,' where there used to be a big carp pond, some big perch, and some formidable jack. More than once I have been immersed in both the canal and the river, my father using pious expletives from the bank meanwhile, for I was a pretty frisky young fish myself then. My father was a terrific walker, and took immense strides. As became a soldier's son, I felt from the very outset that I could do not less than 'Kape stip.' How I used to strain my juvenile legs in those early days, doing the seven miles' tramp along the canal

banks to 'Turf'! The result is that everybody who walks with me now complains that I step too long. The talks we had! We were real 'chums.' One of our pet discussions, I remember, was whether eels left the water at night." "You are a bony man, Dr. Macnamara," said his interviewer; "that everybody knows. Do you still manage to find time for a little angling?" "Yes," was the reply; "every year I try to get a little fly fishing in Devonshire, and I run down for occasional week-ends to the Norfolk Broads, my companion invariably being Mr. Organ, of the London County Council, who I persuaded to become an angler some years ago. Fishing is my only pastime. I am a hard worker, as you say, and to get away with rod and bag, even for a few hours, is an immense boon. What can be so refreshing and invigorating as the contact with nature, the fresh air, and the obvious concomitants? But there is something else, not quite so obvious. A real angler is completely pre-occupied. Everything else—even politics—is automatically excluded from the mind directly the cast touches the water. This is the important thing to me, and to those who, like myself, give their days and nights to exhaustive dealing with statistics and abstruse questions. This pre-occupation is the only one I know of which is really invigorating and exhilarating in itself. Do you understand me? If you do not you are no fisherman!" Dr. Macnamara was perfectly understood, and, what is more, he was lured on to talk a little more of his fishing experiences. The Doctor, as is well known, is frequently called upon to address meetings in various parts of the country—mainly on the education question—most week-ends of the year. His good friends in distant localities know his weakness, and three out of four of the invitation letters from the organisers of these meetings wind up with instructions as to where a little fishing can be done while he is in the district. "Yes," said Dr. Macnamara, with his cheery smile; "I have been privileged to learn a thing or two more than can be found in the ordinary fishing 'Guide,' or even in the omniscient *Gazette*. I have come across some rare anglers among the teaching profession, one of the most noted, I think, being Mr. Harrison, of Brathay, a gentleman who regularly boils his egg in his coffee at 2 a.m. every Saturday morning on Windermere when the char are biting. I nearly had a *fiasco* owing to my fishing proclivities not so very long ago. I was fishing at Ormesby, and was due to speak at the Town Hall, Yarmouth, in the evening. Having good sport, I gloriously missed the last train, and I had to drive helter skelter, put my fish in the Mayor's parlour, and get to work on the platform in my rough jacket. I don't think my remarks lost any of their force on that account, for the Yarmouth folk dearly love a fisherman." Dr. Macnamara, it may be remarked, often uses angling illustration to colour his speeches. Not long ago he was talking at the School Board on the irregular attendance of school children in a certain district, when one of his colleagues cried out, "You shouldn't run that district down, there's some fine fishing there." This raised a laugh, but the doctor put the laugh on the right side by his quick retort, "Evidently; and even the children are permitted to take their hook!" Dr. Macnamara has represented the division of West Lambeth on the London School Board for nearly two years. He is the editor of the *Schoolmaster*—a paper which has been singularly strengthened and improved since it came under his charge—and an advocate of the interests of the teaching profession, of which he was for some time an honoured member at Bristol; and he is particularly interested in the welfare of school children. He is a vigorous debater, and is competent to give a bad quarter of an hour to his opponents when occasion requires.

HERE is a true tale from the "Queen's Navee." The first lieutenant of one of Her Majesty's ships, let us say H.M.S. *Magniloquent*, when proceeding to the Mediterranean station, was asked by a lady friend to be kind enough to convey to another friend in Malta a small package. Anxious, like every naval officer is and should be, to oblige a lady, he readily consented, and took charge of the package for delivery. After being at sea two days or so there was an unpleasant smell—a sort of gentle purr was audible in the lieutenant's cabin. By the time the ship reached the Mediterranean the purr had increased to a loud bark, and the gallant officer thought it was time to investigate matters. The trouble was traced to the package in question; it was opened and promptly thrown overboard.

ON returning to London he called upon his fair friend to apologise for the non-delivery of the parcel. "I had to throw it overboard, you know," he pleaded. "Oh! Mr. Blank, it really doesn't matter," replied the lady; "but my friend, Mrs. B., in Malta, is so fond of a piece of fresh salmon. I thought I would ask you to be kind enough to take her a nice fish my husband caught in Scotland." The good dame evidently thought Malta was somewhere in the mouth of the Thames.

HERE is a riddle for some of you. What is the difference between the new woman riding a bicycle and the little dog running beside her? Give it up, of course. The one wears bloomers and the other pants.

"WHERE is Robinson? I don't see him here to-day. Is he here?" asked the man who occasionally dropped in. "No." "He is out, attending a funeral, I suppose?" "Yes?" "Well, he's always attending a funeral. I suppose that two out of three times, when I come in to see him, he is off attending a funeral. Queer fad of Robinson's, isn't it?" "Yes, but he won't attend any more." "No?" "No; he's out, attending his own funeral to-day." DRAGNET.

FISHING COMPETITION AT WYRESDALE.

A LANCASTRIAN sends the following:

"DEAR 'DRAGNET,'—I went down on Friday, at the kind invitation of Capt. Ormrod, to view the novel fishing competition to be held at Wyresdale on Friday and Saturday, the 24th and 25th. I say 'novel' fishing competition because, unlike most other fishing competitions, the competitors were to fish in a reservoir, and the prizes were not cups and shields, but live fish for stocking the waters of the successful clubs. The prizes were as follows:

"1st Prize.—The choice of 1000 best rainbow yearlings, or 500 rather late batched rainbow two-year-olds.

"2nd Prize.—Either of the above which are rejected for the 1st prize.

"3rd Prize.—500 best rainbow yearlings.

"4th and 5th Prizes.—Left to Capt. Ormrod's discretion, but will be fish that are a credit to the Wyresdale Fishery, and probably will be mixed lots, but the fisherman himself will have some choice in the matter.

"Capt. Ormrod had undertaken to bear the expense of bed and breakfast for one night.

"The day was beautiful fine. 'Old Sol' was shining forth in all his glory, and a few clouds were chasing each other across the azure sky.

"About a dozen of us arrived by the 10.15 a.m. train from Lancaster, and we were met by Capt. Ormrod, mounted on a pony, and by Mr. Henry, the energetic secretary of the fishery.

"It was arranged that we should await the arrival of the majority of the competitors by the 10.38 train from Preston way, and when these arrived we started on our way towards the Cleveley Fishery. I may mention that a cart was waiting at the station to carry the rods and baskets up to Nickey Nook, and a great number were glad to avail themselves of Capt. Ormrod's generosity, as it appeared that we were going to have a warm day of it. About twenty minutes' walk up the river bank brought us to the Cleveley Fishery, which is an extension of the Wyresdale Fishery.

"It only seems a short time ago since Capt. Ormrod acquired the Lunedale Hatchery; but within about three years the Wyresdale Fishery has grown so rapidly that he had to be looking for a means of extending it, and I think he could not have hit on a more desirable spot than where Cleveley Mill once stood, or rather, worked, for the mill itself still stands, but it is gradually losing the looks of a corn mill.

"First of all we were taken through this large building, and the different things were pointed out by the captain. On the ground floor there were two large tanks, used as starving boxes; they are for starving the fish in before they are despatched on a railway journey.

"They have to go through this treatment, as they are not able to stand the journey. There are only two of these boxes at Cleveley, but at Wyresdale there are a good number, as Cleveley is not so much a place from which fish will be despatched, but mostly for stocking large fish for breeding purposes.

"On the same floor there is a machine for chopping the food for the fish. The next floor above is used for loading fish on to the carts, &c., and to facilitate this there is a large crane. The upper storeys of the building are used for storing carriers, &c.

"Two very large ponds, which were used for storing the water to supply the mill—the mill was, of course, worked by water power—have been made into ponds for two-year-old fish. There are many thousands of fish of this age in at present, and they are being kept for stock fish; that is, they will be used for breeding when they get old enough. These ponds are connected by screens, which are Capt. Ormrod's own invention.

"The great difficulty with screens used for this purpose is to stop them getting choked up with leaves and other rubbish, but Capt. Ormrod claims that these screens will keep themselves clear of such matter.

"The next ponds contained yearlings, but owing to a little frost during the previous night they were frozen over, and we had to be satisfied with seeing the ponds and taking the Captain's word for it that there were fish in them. The next you see on going up the fishery is a series of ponds, in course of construction. These are being made for fry. The fish in this fishery lead a natural river life, as the river Wyre has been divided into two streams, and one of them flows through the fishery. This manner of supplying the ponds with water tends to strengthen the fish, and in consequence makes better fish than those that are kept in ponds with only a limited water supply.

"About a quarter of a mile further up—and this fishery is a very long one—we came to the spawning house. The house is a study in itself. The floor of the building is divided into sections, in which are placed 'rainbow males,' 'rainbow females,' 'Fontinalis males,' 'Fontinalis females,' 'tripe fish,' &c.

"When the building is closed a canvas screen covers up the different divisions to stop the fish from jumping out of one place into another.

"On the side of this building there are shallow boxes and spawning dishes, and many other appliances for spawning fish, and Capt. Ormrod showed us how a 'rainbow' is artificially spawned.

"These fish are of immense size, some of them quite 10lb. in weight, and it is a boast of the Wyresdale Fishery Co.'s that they never spawn two and three-year-old fish, as is done at a great many other fisheries in the kingdom; indeed, as regards the rainbow trout, they hold the only mature parent fish in this country.

"The roof of this building is covered with some patent stuff which is not glass, yet it allows light to pass through. It is composed of a light wire gauze covered with a solution.

"After we had gone as far as the top of the fishery, where the water enters from the river, we wended our way backwards to the building I mentioned above, where we partook of some refreshments. Here Capt. Ormrod made a neat little speech, in which he said that the water we were going to fish in was owned by the Fylde Waterworks. They had objected to the match being held in their water, and had threatened to lower the water down to 10ft., which he hoped they would not do. He had consulted his solicitors on the matter, and found that, as he had the sporting rights over this water, they could not object to the match being held there; but, to make the matter doubly sure, he had made out a number of permits, signed by him, and these would be given to each competitor before taking his place to fish. He trusted they would be as careful as possible, and not move any stones, &c., so that the waterworks people could not come on him for damage. (Applause) About 12.15 we started towards Nickey Nook, and, after crossing the river and the hills, we arrived at the reservoir a little before two o'clock.

"Here the roll was called, and after every competitor had got his permit, he went to the place he had selected. Each competitor was allowed to select his own station the first day, but was not allowed to go within 12yds. of the competitor on his right or left, and for the purpose of making matters simpler a number of pegs were driven in the ground, 12yds. apart, and on each peg a number was tacked.

"Punctually at the hour stated (2.30) a revolver was fired as a signal to commence fishing. On the first day competitors were allowed to change their places after an hour's fishing, if they got the consent of the referees, but without consent they were not on any consideration to leave their positions originally chosen. There was a gentle breeze blowing, which made a slight ripple on the water. The prizes were for the largest catch of both days added together. The largest weight caught the first day was 7lb. 7oz., caught by the representative of the Freehold Angling Club, Leeds, and the second was 6lb. 3oz., by the representative of the Keighley Angling Club. These two were far ahead of the others, the next weight being only 3½lb. The fish caught were rainbows, Loch Leven, and brown trout, Alpine char, and Fontinalis. At five o'clock the revolver was again fired as a signal to stop fishing, and after the catches had been weighed-in, a start was made in the direction of the Old Holly. Capt. Ormrod had provided a cart to carry those who were too tired—or lazy—to walk back. The others, including myself, of course, walked back over the hills. It was not very clear, but from the top of the hills we had a magnificent view; in fact, it was worth going to Nickey Nook to get this beautiful view from the hill top.

"We reached our rendezvous about half-past six, and waited a short time until dinner was served. After dinner a smoking concert was held in the spacious room belonging to the hotel. Thus ended the first day of the match.

"But, oh! what a difference in the morning—Friday, a fine day and everything that could be desired; Saturday, a cold, damp, miserable day. The ground was covered with snow, and it looked as if we were in for a proper day of it. Everybody appeared to be as jolly as possible, in spite of the damp state of the weather. Breakfast was served at 8.30, and about 9.15 we commenced the second day's tramping. Like the first day, a cart was ready to carry those who preferred riding to walking. Nothing worthy of notice happened before we reached the Wyresdale Fishery. Capt. Ormrod was here to greet us, and so were the referees (Mr. J. W. Blakey, of the Angler, and Capt. Edgar Warner, of Redditch). Columns could be written describing this most interesting establishment, but space will not permit me to do so.

"We were conducted round the place in two lots, Capt. Ormrod taking one, and the head keeper, Chas. Brooks, taking the other. [Bravo, Brooks! when are you going to send me my two-year-olds?] We viewed the hatching-houses and all the many other buildings and ponds, and one pond in particular was well noticed. It contained some gigantic fish. Every time one came near the top you could hear a lot of 'oh's!' 'eh's!' 'ah's!' It was a magnificent sight.

"We were shown some samples of the fish which were for the prizes, and these fish were indeed a credit to the Wyresdale Fishery. When we had had some refreshment it was time to start for the reservoir to finish the match. We arrived here without mishap just after twelve o'clock. All those fishing this day had to draw lots for their respective stations. The same signal was given to start fishing as was given the first day. By now it was snowing hard, and a keen wind was blowing, which made fishing a very difficult task.

"Very soon, first one and then another gave it up, and we adjourned to a boathouse. To enliven things up a little we had some singing. Mr. Fielding, of Bolton, giving 'Scots wae,' 'Annie Laurie,' and 'Old Lang Syne,' and a few other well-known songs in which we all joined in the chorus.

"Cheers were given for Capt. and Mrs. Ormrod and Mr. Henry. Meanwhile, what was going on outside. The referees and about twenty competitors stuck manfully to their posts in spite of the weather. It could be seen that the Leeds representative was not going to have matters all his own way. The Levenshulme representative was pulling fish out 'like steam.'

"In three hours he caught seventy-two fish, and some of the others were catching a good number.

"At 3.30, the revolver was again fired, and there the match ended.

"On weighing-in, it was found that the first prize had been won by Mr. C. H. Robinson, of the Levenshulme Angling Society, near Manchester, with a total weight of 11lb. 5½oz., his catch being 11lb. the first day, and 10lb. 5½oz. the second.

"The second prize was won by Mr. Haddock, who represented the Freehold Angling Club, of Leeds, his weight being 7lb. 7oz., he having caught all the fish the first day, and never got a hit the second.

"The third prize was won by Mr. S. Fox, of the Sheffield Anglers, his weight being 7lb. 1oz.

"The fourth and fifth prizes were won by Mr. Pickers-gill, of Keighley, with 6lb. 12½oz., and Mr. J. Atherton, of Preston, with 5lb. 13oz., respectively.

"Most of us went back home by the five o'clock train, and all acknowledged they had spent two of the jolliest and most interesting days of their lives."

LYCHNOBITE ANNUAL CONCERT.

ON Saturday evening, the 25th ult., the Lychnobite Angling Society gave their fifth grand smoking concert, in aid of Printers' Charities, at the Champion Hotel, Aldersgate-street, E.C. St. George's Hall was crowded by seven o'clock, a large attendance of ladies being one of the features of the evening. The programme was an excellent one, the whole being under the able direction of Mr. Albert Walter, a guarantee of success in himself. Proceedings commenced with a selection from the "Belle of New York," by the Royal White Band, followed by an overture, "König und Bettlerin," after which the rapidly-arriving artists were trotted out in such quick succession that when eleven o'clock arrived Mr. Albert Walter sang the final song and made the fortieth turn of the evening. It is difficult to single out any one artist deserving of more praise than another, as all were so very pleasing. The grand singing and beautiful mandoline obligatos of Miss Amy Brook, R.A.M., delighted everyone, and brought forth a beautiful bouquet from the chairman. Equally good were the excellent songs of Madame Stephanie Olive, Miss Geraldine Hewgill, and Madame A. L. Povey, the latter receiving quite an ovation. Then came Miss Ada Rowella, a clever young lady, whose songs were from the pen of the Lychnobite secretary, and who sang extremely well, followed by Miss Kate McGeeney, who also received a beautiful bouquet from the chairman. The sweet singing of this lady evoked general approbation, and it was deeply regretted that time did not allow a further hearing. Mr. Bertram Gill, Mr. Alf Smart, Mr. Fred Davies, Mr. Tom Mulroy, Mr. Fred Rome, Mr. Joe Levett (an old favourite), and Mr. W. Skinner (extremely funny) all rendered excellent songs and were vociferously applauded. Mr. Cecil Graeme gave a clever performance, entitled "Twenty Faces Under One Hat," while the Alexandra Trio, who appeared by kind permission of Mr. Dundas Slater, of the Alhambra Theatre, met with a well-deserved reception; as did also Mr. Charley Osborne, an ever popular author, who sings as well as he writes, which is saying a great deal. A feature of the evening was the presenters of the bouquets in the persons of Miss Daisy Richardson, Miss Daisy Walter, Miss Lilly West, and Miss Daisy "Drag," all under the care of Mrs. Albert Walter. Much disappointment was felt at the non-appearance of Miss Marie Lloyd (present last year), who was seized with sudden illness earlier in the day, and was compelled to give up all her engagements, including the Tivoli. "Dragnet," of the *Fishing Gazette*, filled the post of chairman, ably assisted by Mr. L. Chaplais, from the "Olde Ben Jonson," the headquarters of the society. Master Albert Walter was suffering from a severe cold, and advisedly stayed away. Mr. Harry Anderson arrived late, Miss Vesta Victoria and Mr. Charles Coborn both apologised on account of business, yet still there were enough artists and to spare. At the piano, Mrs. Newman Harrison and Mr. Jas. Jefferson contributed splendidly to the harmony of the evening, while the excellent arrangements of the hall and the comfort of all concerned were the especial units of Mr. H. G. Atkins, the genial and courteous manager of the Champion Hotel, who was all kindness and attention. On the whole, the concert was a great success, notwithstanding the number of peculiar difficulties with which the committee have been confronted and the mysterious opposition that kept asserting itself in the most unexpected quarters. Had not the committee been made of the right stuff a different result might have been expected. As it is, the thanks of all are due to Mr. Gus Cannell, Mr. L. Swalby, Mr. W. Povey, Mr. G. H. Skinner, Mr. C. Townsend, and to Mr. Tom Pedley, the hard-working assistant-secretary of the Lychnobites, and to those many other friends who so kindly assisted in carrying to a successful issue the fifth annual concert of the Lychnobite Angling Society.

A balance-sheet will be issued shortly, but at present is being withheld, awaiting further expected donations.

H. G. H.

DERWENT FISHERY BOARD AND ANGLERS.

THE angling season being now open, the Derwent Fishery Board at their last meeting decided to discontinue the "Black List" system. In future all who care to apply for permits can have them on the usual terms, irrespective of the suspicions of watchers or the police records. A good many people felt that the boycott of certain individuals adopted by the fishery board was unfair and un-English, but whether this feeling has anything to do with the changed attitude of the conservators, or whether the new policy is dictated by consideration of the board's finances, it is impossible to say. It should, however, be a satisfaction to anglers to know that, for this season at any rate, none of them need tremble lest their permit be refused. It is a case of "Let 'em all come."

GIL.

Notes from the North.

ANGLERS were fairly snowed and frosted off the water all last week. A cast now and again was got in the lulls of the storm, but little or nothing accomplished.

A "dirty" fresh set in on Sunday, and the Dee came down at mid-day "mountains high," carrying everything before it. The wind was easterly till Monday, when it veered round to S.W., and then the snow accumulations got the proper scare. Still, the traces of the late storm will take some time to obliterate.

Such a spell of frost and snow has not been experienced in the north for twenty-one years back at this advanced period of the year. Then the lapwings perished by the thousand, and their dead bodies were picked up by the shore at the riverside. The storm then lasted fully three weeks.

The Duke of York has been most unfortunate as yet in his spring visit to the Dee. He has been on the river almost daily; but, of course, what sport could be expected under such conditions, and the little he has had has been dearly bought. He has nearly a week yet at his disposal, and as fish are plentiful below, the present floods will be all the better for his waters.

A friend has called my attention to some remarks anent angling being suspended on some tidal reaches during the smolt migration in May. Any suspension which takes place is purely local. There is no suspension on the Ugie, and as far as the Ythan, Dee, Don, &c., are concerned, anglers can respect the regulation, or otherwise, as much or as little as they think fit.

No sportsmen kill smolts; and such suspension of angling rights is a bit of bluff on the part of certain local bailiffs, and other interested parties, to scare tidal anglers off the water where the smolts are thickest, and so save watching. Smolts are always protected, and so need no special close time, yet regular notices are issued year after year, warning anglers off the water during the first three weeks in May.

A good few finnock (whitling) are now being got in the tidal waters of the Dee and Don. Better baskets have been made on the latter river since the season opened than has been the case for the past dozen years or more.

The record price for salmon for the season was reached on Thursday last, in the Aberdeen Market, when only two fish were on the slabs, and were taken out at the high figure of 3s. 6d. per lb. On Saturday, the prices fell to 3s. and 3s. 2d.

"Dr. Jim" and Sir John Willoughby have gone north to the Helmsdale for a month's spring salmon angling. Dr. Taylor, London, is coming north to the Ugie on the 5th inst.; and Mr. George Bankart and party, from Leicester, follow him on the 15th inst. for a few weeks among the early yellow trout and finnock.

The Invercauld Arms Hotel, Ballater, so long the resort of salmon anglers to the upper waters of the Dee when in the hands of the McGregors, has been let to Mr. Proctor, of the Gordon Arms, Fochabers. The new lessee will

have nothing to do with the fishings, which are now let separately, at the handsome rental of £1500, to a syndicate of sportsmen, who take possession in May.

Mr. and Mrs. Alexander McGregor, who are leaving the Invercauld Arms in May, were entertained to dinner in the Grand Hotel, Aberdeen, by a number of city and county gentlemen and sportsmen, in recognition of the many kindnesses received at their hands in the past. The guests were the recipients of handsome and appropriate presents on the occasion. The function throughout was superb, and even surpassed Mr. Mann's best.

Capt. C. F. Penny, writing of a week he had on the Ythan whittling fishing, says: "I enjoyed the fishing very much, and Mr. Ritchie was very attentive and obliging." Much depends on the weather, of course; but sport is very brisk just now. SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A committee meeting of the Provincial Angling Association was held on Saturday evening last at the Sportsman Inn, Wood-street, Kidderminster. Mr. T. Coles, of Birmingham, presided; and Mr. R. Wingfield, of Worcester, occupied the vice-chair. All members were present. After the roll call, the minutes of the previous meeting, held at Bristol, were read and confirmed. The secretary read a letter from the Shropshire Union Canal Co., which went to show that he had through the association been instrumental in getting the company to adopt a close season from March 15 to June 15. The letter also went to show that the company had put another 2000 perch in the canal, and that no perch under 7in. were in future to be taken. The letter and the action of the secretary was approved of, and a resolution was passed restricting members from taking the fish mentioned under the limit named. Eight new clubs who had applied for affiliation, which had been visited and found properly constituted, were admitted into the association. The secretary informed the meeting that he had arranged for the Nene Association, Northampton, to be visited, as they were anxious to join the association. The maximum grant of two guineas was sanctioned to be handed over to the Pearson Testimonial Fund. The minutes of the sub-committee meetings, held on Feb. 20 and 22, were read. These went to show that the committee had decided to engage counsel to hold a watching brief at the Court of Queen's Bench when the case of Humphreys *re* the Shropshire Angling Association came on for hearing. Mr. Cook, of Wolverhampton, brought before the notice of the committee the constant pollution of the lower reaches of the river Pent, in which two clubs in Wolverhampton and one in Tipton were interested. This matter was left in the hands of the secretary. Mr. L. Green, of Reading, reported that a great destruction of fish had taken place on the Thames, at Reading, through the construction of the electric light works. This matter was also left in the hands of the secretary. The committee approved of the action of the Warrington Association in expelling three members for bad conduct on the 18th ult. last. This concluded the business of the meeting, when the committee adjourned for dinner, which was provided by the Kidderminster Association. The delegates from the latter association were also present. After the dinner

had been disposed of, Mr. R. Wingfield presented Mr. T. Coles, the president of the P.A.A., with a valuable diamond ring and a cheque for £45, for services rendered to the association during his term of office, which dated back to the formation of the association. Mr. C. White, the general secretary, also presented Mr. Coles with a gold and silver badge of office; and the Reading Association presented him with a special cake, made by Messrs. Huntley and Palmer. The presentation having been acknowledged, the remainder of the evening was devoted to harmony. The following is a complete list of the prize winners in the Bingley Hall fish competition: Pike—first, H. Morland; second, H. James. Perch—first, Mr. Blackwell; second, A. Juggins. Chub—first, A. Perks; second, C. Cottrell. Roach—first, Small Heath Club; second, W. Welsh. Dace—first, J. Jukes; second, J. Webb. Bream—first, J. Attwood; second, W. E. Morris. Two extra prizes were also awarded to Messrs. A. Padgett and E. Griffiths. Trout—first, Deritend Society; second, H. Barton. Barbel—first, A. Juggins; no second fish exhibited. Tench—first, W. Woodful; second, H. James. The following are the winners of the rare fish specimens: Burbot—Mr. Clapshaw. Ruffe—J. Attwood. Gudgeon—Travellers' Rest Club. Golden trout—W. Thornton. Bream-Roach—W. Crosbee. Notice will be given as to the distribution of prizes. The St. Paul's Society intend holding concerts every Tuesday evening during the close season.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

Now that the coarse fishing season is over anglers are beginning to turn their attention to the trout streams, but up to the present the conditions have not been at all favourable for the prosecution of this class of sport. The severe spell of cold weather recently experienced has quite upset the calculations of fly fishermen. Scarcely a fly has been seen upon the waters, which, moreover, are so low, consequent upon the continued dry weather, that even under favourable circumstances satisfactory sport would almost be an impossibility. Happily, the weather has now taken a turn. A warmer atmosphere prevails, but until there is a good fall of rain it is doubtful whether much good can be done. The prospects for the Easter holidays are, therefore, not encouraging. On some private waters pike fishermen continue to obtain good sport.

FROM HULL AND DISTRICT.

A most agreeable change of the weather has taken place in this district, for after being snowed up for about a week we are again having very mild, warm weather, with an occasional copious shower of rain, which will no doubt greatly cleanse our waters, and bring them more in condition for angling during the Easter holidays; in fact, it has gladdened the hearts of our local anglers, who had been thrown into gloom over the extreme wintery weather of the past week, and there is every prospect of fair sport should the weather continue anything like it is at present. A few small trout have been taken in the top stretches of the river Hull, running about 1lb. each, and no doubt a few good fish will be met with at the back-ends during the week. The present state of the weather will also have the tendency to bring the flounders and eels on the run again in the havens and drains, and also in the lower portion of the river. The Brunswick A.S. fished a match on the river at Weelferry, but the weather was so inclement on the day in question that only seven of the competitors managed to catch a fish, the prizes being taken in the order given: Messrs. R. Nicholls, W. Arnold, J. Carter, W. Sellers, W. Dodsworth, W. Thompson, and J. Barnett. This

society have a special meeting to arrange matters for their next, on April 10. The Stoneferry Angling Society have a sweepstakes on April 8; and on the 15th the new society, the Trinity A.S., will fish their first match on the river on Minto Flatts. This society held a most successful smoking concert at the Malt Shovel Hotel the other evening, and several other clubs have held their annual smoking concerts during the past week or so, which greatly helped to soothe the minds of our local anglers during the bad weather. The St. George's Angling Society, of Newton, held a very successful one at their headquarters, over 100 anglers attending, and the vocal and instrumental music was of first class order, Messrs. W. Richardson, T. Chester, J. Foster, Spurr, Rumley, O'Grady, and McLean greatly contributing to the evening's enjoyment. The Victoria Angling Society also held a smoking concert at the White Horse Hotel, in Carr-lane, for the benefit of Mr. Robert Weir, a much afflicted member of the society; but unfortunately, owing to the wintry weather, the muster of anglers was not near so large as had been anticipated; nevertheless, a nice little sum was realised. The North Myton Angling Society will hold a special meeting at the Golden Cup Hotel, on the 5th, to arrange place and date for their first match. This club now numbers about forty members, and is in a very flourishing condition, having some valuable prizes to be fished for during the season. The next council meeting of the Hull Amalgamated Anglers' Association will be held at the Queen's Hotel, on Wednesday evening, April 5th; chair to be taken at eight o'clock. A large gathering of anglers and their lady friends assembled at the Central Hall, on Monday evening, to celebrate the thirteenth annual *soirée* and ball of the East Riding Angling Society, which was a most interesting and enthusiastic affair. This society will open their match fishing season on the river Hull, at Weelferry, on April 22. On May 13, Blundell, Spence, and Co.'s Angling Club have arranged to hold an open angling match on the river Hull, at Dunswell.

FROM THE LAKE DISTRICT.

Although at the time of writing (Tuesday night) it is blowing a gale of wind, accompanied by heavy rain, prospects are certainly better than they were last week. The ten days of wintry weather came to an end on Saturday last, in a blizzard of wind, snow, and rain. Sunday and Monday were moderately fine days, and the rain now falling will have the effect of lifting rivers a bit. There is plenty of time for the weather to "take up" before these lines are printed, and we are hopeful that circumstances may be such that there will be sport in store during the holidays. So far as the season has gone, there has not been a large turn-out of anglers. Many observe Good Friday as their opening day, following this up with a day or two in Easter week, but "we never fish on Sunday" in this district. Visitors should remember that they will be allowed to fish in Windermere from April 1 (Saturday), and should the day be favourable no doubt the privilege will be taken advantage of to the full.

FROM LANCASHIRE.

One of the latest associations to be formed in this county is the Chorley Angling Society, and, from reports to hand, are progressing satisfactorily with the venture. They will open the season on Good Friday with a match for a good lot of prizes. For the future, intending members must be on the nomination list for four weeks before the ballot decides their fate. This is a reasonable and necessary precaution. Lancashire emerges from the great contest on the 24th and 25th ult., at Wyre, with credit by securing easily the premier prize by a surplus of 4lb. in weight and several in count, in addition to which the fifth prize also comes to Lancashire, and the second, third, and fourth to Yorkshire. The St. Helen's anglers, on March 23, publicly acknowledged the services of that veteran angler, Mr. R. Ball, by presenting him with an enlarged photo of himself. The occasion was characterised by a lot of honest enthusiasm. The first annual concert of the Perleton Angling Society was a most pronounced success, the programme being very attractive. The *artistes* were the Ecclesbrook Orchestral Society, the Prince's Theatre Glee Party, Misses Marley and Peplow, Mr. Challoner (humorist), and Messrs. Kaye, Henderson, Gresty, Morris, Hulme, MacKay, Speed, Rowe, and Reynolds, with Mr. Walley as accompanist. A programme of twenty-one items is sadly too much for one concert, if we remember the inevitable encores, and no doubt the second venture will be somewhat shortened and improved. Just at present the anglers of Liverpool are deeply interested with hatchery operations of a kind a trifle out of the ordinary, for nothing but tame fish, *i.e.*, fish artificially reared, have been dealt with, and the success of the experiment is being anxiously awaited. To all appearances the ova is effectually fertilised, and time will show the amount of return the promoters of this enterprise will obtain for all their time and trouble. The Lune and its tributaries, with the uncertain weather and low water, are not fishing well, and all agree that the prevailing pollution is simply abominable.

FROM MANCHESTER.

The annual meeting of the board of management of the Worsley Canal Fishery was held in this city on March 24, Mr. R. Burr, the president of the fishery, presiding. After the usual preliminary and routine business, Mr. W. Prescott, treasurer, presented and read the seventh annual balance-sheet, which, for the third year in succession, proved highly satisfactory. The board has now surmounted all its difficulties, and the fishery having obtained a firm hold on the canal fishing fraternity, the future is calmly anticipated, and success assured. The officers and committee were re-elected, the programme for the ensuing year discussed, and several suggestions made which were calculated to add to the attractions and usefulness of the enterprise. During the past year about £20 have been spent in stocking, and should the income of the coming season

show any improvement, of course, more in this department may be accomplished. Any suggestion as to improving the fishery will be very welcome if sent in to the secretary. The Snn Angling Society, Hulme, at their last meeting got through a lot of business. Several new members were elected, and more nominated. The list of specimen fish reported weighed in since the last meeting included roach of 15oz. and 9oz. by Mr. W. Dyson, jun., and a roach of 9oz. by Mr. Dyke, all caught on March 12, and considered very good from the water fished. They have some desirable waters in view, and are sanguine of soon having control of the same, in addition to those already acquired. Mr. C. H. Robinson's victory in the two days' contest on the 24th and 25th was a very popular one in this city. In the two days, with a total of five hours, he took 11lb. 5oz. of trout, the second man getting 7lb. 7oz. The Moss Side Socials at their last meeting elected four new members, and received four nominations for two vacancies, which will complete the full muster of seventy. At the next meeting the question of substitutes in the championship matches will be discussed, and as this question is important, a good attendance is requested for April 10. The sale of fish out of season still goes on, and there is apparently no hope of getting officialdom to move. A party of our city fishermen are bound for Llanymynech at Easter, amongst whom will be found such well-known names as Messrs. S. Hall, T. Ashworth, Hy. Hyde, and J. Lund, and probably T. Driver and others, the visit being looked upon as an annual one.

FROM NOTTINGHAM.

Weather permitting, rod fishers will be after the salmon known to inhabit the favourite runs at Shardlow and King's Mills during the holidays. The Trent rose a few inches on Monday, and the rise must have again set the fish on the move upwards. At the Greet mouth on the day named a member of the Nottingham Shoulder of Mutton Association caught, with the worm, a handsome brace of trout of 43lb. The fish were in very good condition, and they had evidently come out of the Greet for change of water in the main river. Members of the association held their annual dinner at headquarters on the night of March 23, under the presidency of Mr. H. Fryer, the vice-chair being occupied by Mr. C. W. Rayson. The chairman proposed the chief toast of the evening in highly felicitous terms, saying the society had a big balance (£35 3s. 7d.) in hand; and in response, Mr. D. S. Garner, the enterprising secretary, read a letter from the clerk (Mr. C. K. Eddowes) to the Trent Fishery Board, in which the latter gentleman said: "I am greatly obliged by the receipt from your society of a cheque for £5, granted to the funds of this board. I am sure that the board will look with much pleasure upon the spontaneous action of your club. Were other clubs animated with a like spirit, and showed it in a practical manner, the operations of the board might be considerably extended. Kindly convey my personal thanks to your members." Just before the season closed a fine pike of 16lb. 2oz. was caught in the Grantham Canal, near Denton Bridge, by Mr. A. Menzies of that town. It was sent to Messrs. Cooper and Sons, of London, for preservation. A very good fish was also taken in Denton Reservoir by Mr. R. G. Briggs, of Leicester.

FROM SHEFFIELD.

Up to the present anglers have not been able to congratulate themselves on the sport they have obtained amongst trout, for although the weather was very much better for the closing days of the coarse fishing season, yet since then it has been very cold and wet, with the result that anglers have not ventured forth in very great numbers. The Sheaf, which provided good sport near at home last season, is said to contain very few fish, and in order to improve matters the Sheffield Trout Anglers' Society proposes to dam up the stream in certain places, and re-stock with fish not less than 8in. in length. A week ago the reports from the Loxley, Udon, and Rivelin were to the effect that rain was badly needed, and it is hoped that the downfalls of last week-end will bring about the much desired improvement in the waters. The Sheffield Association has again rented the Wingfield Mill Pool, which provided them with capital sport last year, and it is anticipated that this year the result will be equally gratifying. Some first-class sport was forthcoming in the early days of the season, and in free reaches in the Amber, in the same district, several decent catches have been made. The cold weather put an end to fishing in the Derwent and Wye districts, but anglers are hoping to make amends for this during the Easter holidays, when the Wye will probably be the better stream of the two.

FROM SHROPSHIRE.

March has not, previous to this week, fulfilled its traditions as being a boisterous month, although cold and inclement in the extreme. Mild, rainy, and windy weather ruled when these notes were written, and prospects for the Easter holidays are as yet not over promising. Nevertheless, it is satisfactory that the wind is in a warmer quarter, and that the water will probably be in good order for spinning and bottom fishing. If favourable conditions prevail a good many anglers will doubtless be out with the spinning tackle during the holidays, and the capture of a few good trout should be recorded. Trout fishing, up to the present, has been absolutely unproductive, and this is not a matter for regret, inasmuch as the few fish yet taken have by no means been in good condition. The fact that the local water bailiffs are well on the *qui vive* for illegal netters should be taken as a warning to the Shrewsbury followers of that risky occupation. The bailiffs are now taking to use boats in the execution of their duty, and they made a *coup* recently which, although not entirely successful, was still not fruitless. They found two men illegally netting the Severn at the Isle, a few miles above Shrewsbury, and went for them in smart style. The men managed, in the darkness of the night, to evade

capture, but they left behind them two coracles (from which they had been using their net), the net itself, and about 70lb. of pike, chub, perch, and three ill-conditioned trout. The Rev. J. B. Meredith, of Kinnerley Rectory, near Oswestry, has raised a question of considerable interest to anglers on the Severn and Vyrnwy—namely, whether or not sea trout were at one time fairly numerous in these rivers. In the correspondence columns of the *Fishing Gazette* of last week the reverend gentleman's testimony on the subject was published, and certainly seems well nigh incontrovertible. What may be taken as corroborative evidence is given by Mr. H. H. Hughes, of Shrewsbury, a member of the Severn Board of Conservators, who states that when a youth he used to watch his father angle for and take sea trout in that borough. In opposition, however, we have the opinion of Mr. Alfred George, of Tan-y-fon, Meifod, Welshpool, who in the course of some interesting notes which he has compiled on the question, says he thinks it may be taken for granted that a genuine sea trout has never been captured in the Verniew. He says, however, on second-hand information, that there have been trout caught in the neighbourhood of Shrewsbury quite bright, and very much resembling sea trout, and he believes he has at one time taken one or two of these fish at Meifod. He pronounces them non-migratory trout, which may be mistaken by strangers to the river for sea trout. Mr. George proceeds to say that there is a trout very much resembling a sea trout in appearance and colour caught every year, but not in any numbers, in the Severn at the navigation weirs, from Diglis (Worcester) to Lincomb, the highest of the navigation weirs. These he speaks of as being apparently migratory, and adds that they are always large fish; small ones never being caught. He remembers one of 10lb. 4oz. being taken. It is curious that Mr. George refers to these fish as not being caught in the Severn until the navigation weirs were built. He thinks them to be genuine sea trout. These notes from one who has had so lengthy an experience of the Severn fisheries as had Mr. George, are most interesting, but, inasmuch as the testimony of the reverend gentleman is not actually refuted thereby, it would be well if something more definite could be ascertained. For many years past the Shrewsbury Severn Angling Association has turned trout into the river at Shrewsbury, and it is just possible that the fish referred to by the Rev. J. B. Meredith were imported species of *fario* so very much like sea trout that they were mistaken for such even by experienced anglers. Whether sewin and sea trout were or were not at one time to be taken in the upper Severn is a question which must be decided by old and experienced anglers and ichthyologists, but there certainly seems nothing against the theory that before the time of navigation weirs, over netting, and pollution, these migratory fish were to be found high up the Severn and Vyrnwy, with the shad, twaite, flounders, and lampreys that were once caught pretty commonly at Shrewsbury, and which are referred to in an old Act of George III. in connection with both rivers.

ANSWERS TO CORRESPONDENTS.

BEGINNER.—We can supply the numbers you want, post free, for 2d. per copy.

SUBSCRIBER.—It is a very small place; but, as there is a continual flow of water, you might try a few yearling rainbow trout. You would have to feed them.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

TROUT FISHING IN NORTH FRANCE—EXTRAORDINARY CLOSE TIME.

DEAR MARSTON.—Pity the sorrows of an exiled trout fisher. The local authorities of the three northern departments, the Pas-de-Calais, the Nord, and the Somme, have in their high sapience decreed that trout and salmon angling this year, while opening as usual on All Fools' Day, shall be closed from April 17 to June 17 inclusive, to assimilate it to the coarse fishing close season, the reason alleged being the difficulty of maintaining efficient supervision if certain fishes are to be excepted, taking no account of the fact that trout and salmon fishing has been closed by law since Sept. 30, while general fishing has been open through summer, autumn, and winter.

And there is some rather pretty trout fishing in the said departments, and a lovely rise of May Fly as a rule, lasting, for those who have access to various waters, approximately from May 20 to June 15.

Dear brothers of the angle and deft casters of the fly, fancy being debarred from using it from mid-April to mid-June, and fancy the goodly trout fattening on the elegant Ephemeræ with impunity till, as a great author and fly fisher once said, "Their tummies grow as yellow and shiny as buttercups!"

It seems like an "orrid dream," and he sure that we are protesting and fighting against so abnormal and ridiculous a regulation. But I hear from an official source that it is rather late, almost on the eve of its coming into force, to seek for a revision. But if we should win, and trout fishing be allowed in this year of grace to pursue "the even tenour of its way," as heretofore, I will promptly advise you, for the benefit of any of your readers who may be contemplating spring trouting trips to this side of the channel.—Yours very faithfully, CHAS. A. PAYTON.

Calais, March 23, 1899.

[We are much obliged to Mr. Payton for this useful warning.—Ed.]

FISHING IN ANGLESEY.

DEAR SIR,—As several English anglers annually visit this county over Easter tide, it may not be amiss to try to forecast the prospects of sport during the vernal festival, and having a quarter of a century's experience on the different waters, I may claim to write with some degree of authority. As most of the anglers centre round Lake Coron, Bodorgan, I may begin with this famous free lake. Hitherto this spring, owing to exceptional adverse climatic influences, sport has been much below par, and there is evidently no falling off in the number of its trout. After the total disappearance of ice and snow, and should the floods cease, and the equinoctial gales exhaust themselves, the prospect of good baskets would be more certain than ever. Next comes Maelog Lake, Tycores, a larger lake than Coron, and equally free, and at its best from Easter to Whitsuntide, and contains the most gamey and best eating trout in Wales, and has the further advantage of a change on the adjoining Crygyl river. A few miles of real good fishing, mostly white trout, which disappear at the end of April. With favourable weather, one may go much further and fare worse. Traffill Lake, near Valley (ticket from Mr. Pierce, the Hotel), contains Loch Leven trout and no end of perch; and in the same vicinity flows the Alaw, the most prolific river in the island, but the trout are small. Two miles above Llangefni is Lake Frogwy, small, but for its size holding more trout than any lake I have come across. A licence is required, covering the Cefni river, which flows from it, and also the Brint, a good stream flowing through Dwyran, parallel to the Menai Straits. The Cefni, for two miles above and below Llangefni, is too much fished to afford good sport, and the remaining portion is subject to the tide, and must be well curbed by a south wind to afford real good sport. The best flies that can be used for the coming fortnight are March Brown, Alder, Red Palmer, Coch-y-bonddu, and Wickham's Fancy. May wind and water be favourable over these long expected holidays is the fervent wish of—Yours faithfully, W. H.

March 28, 1899.

MR. E. M. TOD'S LATEST ROD.

MY DEAR MARSTON,—I send you, for your inspection, my latest "Forrest" Rod (Forrest and Sons, of Kelso and of London fame)—one butt, two mid joints, and three tops. I ordered it from the parent establishment (Kelso) of my old rod maker. I possess no other rods for salmon or trout fishing. Upon receiving my order the kind old head of the firm did for me what he would do for no other two-legged creature—made me a rod with his own skilled hands.

Of course, he has long since ceased to work at rod making, but he supervises every first-class rod from start to finish, and invariably puts the final touches with his own hands to every such rod, including the varnish.

The rod is of whole wood, and makes up into what are equivalent to two rods. No. 1 rod—"The Tod Rod"—is made thus, as usual: Butt and mid joints of hickory, and tops lancewood. No. 2 rod is a fine Tweed rod, all greenheart save the hickory butt, which is common to both rods.

The rods are different in character; each possesses its own charm. Length, 10ft. 10in.

I have arranged that the rod remain for a time on view at the establishment of the son, Mr. John Forrest, of 24, Thomas-street, Oxford-street, London, W., so that anyone can see it, and I am sure that it will bear inspection.

As "good wine needs no bush," so a good rod needs no "bosh" written about it. After forty years of faithful adherence to the firm, I can truthfully say that Messrs. Forrest's rods are not only fine weapons, but stand the test of time and hard wear in a wonderful manner.—Yours truly, EWAN M. TOD.

WHEN AND HOW TO USE GENTLES.

SIR,—Mr. Fishburn is to be complimented on having "found out a way last year how to preserve from hatching until required the ova of the bluebottle fly." It is desirable under some circumstances that a thing should be kept a due season that it may the better fulfil the purpose for which it is intended, but in the matter of gentles the most approved form of preservation is not to be compared with the fresh article. To those, therefore, who buy their gentles in the winter season, Mr. Fishburn (who I see advertises his gentles in the *Fishing Gazette*) is to be heartily recommended. I trust that he makes a point of giving a good large gentle to his customers under all circumstances, and sends them a reasonable quantity for their money.

Of course, Mr. Fishburn recognises the market value of his discovery, and unless he chooses to disclose his method, or someone else arrives at the same result and makes it known, we amateurs will have to keep to our own methods, which have the merit of being simple, uncouth, and sufficient. Were we in the trade it would of course be our aim to arrive at more perfect results—no doubt we should undertake more elaborate methods the better to ensure an adequate return for our trouble.

As to the matter of artificial breeding, which Mr. Fishburn distinguishes from his discovery, I do not see that it is more than a question of temperature, and certainly no amateur would go to the extent of keeping up the temperature of a room, or equivalent, during the cold weather, merely to have a supply of freshly-bred gentles, which he could obtain of Mr. Fishburn at less cost.

In conclusion, I must once more claim that excellent results can be obtained by my method—the usual method in principle adopted by the trade, I believe—and I have even now distinct recollections of the comparison I once was able to make between my own preserved gentles and some obtained through the trade. A certain dealer, who at the time advertised prominently in the *Fishing*

Gazette, succeeded in extracting an order from me, as, owing to an unexpected number of opportunities in the autumn and winter to go a fishing, I was running my preserved stock rather low. I opened the box of gentles, and proceeded to follow certain directions therein contained for reviving them after their journey. It didn't answer, and I pitched the lot into my swim, preferring to economise my remaining gentles, which were beyond comparison above those I received through the post, rather than use the rubbish that had been sent me.—Yours respectfully, FOSSDYKE.

FISHING IN MAY.

DEAR SIR,—Will you allow me to express my thanks through your columns to the three gentlemen who wrote such interesting replies to my enquiry. One or other of the places I certainly mean to visit, and I will avail myself of the offers so kindly made of further information. I should like also to thank you, sir, for your own private note, and the anonymous correspondent who wrote to me from Ireland recommending the Ballinahinch Fishery.—Yours faithfully, J. G. G.

ARE FINNOCK YOUNG SEA TROUT?

DEAR SIR,—A case which is causing a good deal of attention among Aberdeen anglers was tried in Aberdeen Sheriff Court on Thursday, 23rd inst.

The bone of contention was, "Are finnock the young of sea trout?"

One of my local customers who has fished Dee and Don for the past thirty years sends me the following explanation from his own observation to the above question.

"My opinion is that the yellow fin is the young of the sea trout, and goes down to the sea in the months of May, June, and July. They remain in the sea until the months of September and October, and then start to ascend the rivers as finnock. They remain in the rivers till the spring of the following year, and return to the sea again as kelt finnock.

"The finnock that are killed in the months of March, April, and May are, in my opinion, no other than mended kelts. These mended kelts return once more to the sea, and come up again as sea trout in their third year.—J. W. L."

Any other information is requested through your columns.—Yours faithfully, W. BROWN.

[Finnock, or phinnock, is a local name for the young sea trout, but it does not follow that all fish so called are actually young sea trout.—Ed.]

NEW ARRANGEMENTS FOR THE UGIE.

DEAR SIR,—I was interested in the description in *Fishing Gazette* of March 4 by your frequent correspondent, "G. M.," of the new arrangements for fishing on the Ugie, and as I hope to visit the neighbourhood in May next, I should feel much obliged if he would answer the following questions:

1. Is the Ugie good for brown trout as well as sea trout and finnock?

2. Will it be too late, from May 15 to June 7, for sea trout and finnock fly fishing?

3. The name and address of the new association secretary, and that of the hotel at Longside?—Yours truly, LUX.

[Our correspondent, "G. M.," sends the following further particulars: 1. The Ugie affords excellent brown (yellow, as we call it in the north) trout angling all over the whole river. Average about 1lb., but lots run up to 1lb.; and Mr. Andrew Murray, Aberdeen, killed one last spring, 4lb., to the fly. They rise freely. 2. It is not too late to look for finnock in May, but the smolt migration comes on about then, and angling on the tidal waters is suspended by regulation. After May 24, however, angling commences again. There is no suspension above the tidal waters at all. 3. Mr. Andrew Murray, Advocate, 214, Union-street, Aberdeen, acts as managing director, and will give all information. The Proprietor, the Hotel, Longside, will be quite sufficient. Railway facilities from Peterhead are abundant. Good hotels there.]

SKATING AND ROACH FISHING ON GOOD FRIDAY.

DEAR SIR,—I have just read with interest Mr. Jardine's "Reminiscence," in your issue of 25th ult., of skating and roach fishing on a Good Friday, fifty-six or fifty-seven years ago, but I think he refers to the Good Friday of 1845, fifty-four years ago.

My recollection is clear as to all the unusual or great frosts occurring during the last sixty years, and I recollect no skating in or near London on a Good Friday before or since the year 1845. I was skating on that Good Friday from nine till six (on most perfect ice) on the Longwater, Kensington Gardens; and I have referred to my records of winters and great frosts, and amongst them to a letter appearing in the *Times* of Feb. 4, 1879, from Mr. Thomas Plant, of Birmingham (a well-known authority on such matters), in which he wrote as follows:

"The next great frost was in 1844-45. This was a protracted winter, throughout the whole of December, a remarkably cold February, and so severe was the frost in March, 1845, that on Good Friday (March 21) the ice in the canal was of such thickness that boats which had been bound by ice for many weeks were still locked as tight as before."

Obviously I did not, like Mr. Jardine, fish for roach on that day, but I was then a roach fisher (as I am still, notwithstanding the fascination of fly fishing, which I took up late in life), having been taught the mode of fishing for them with the long pole and tight hair line some two years previously by a well-known professor, a very genial old man of the name of Adams, whose occupation was that of a

furniture dealer in London. He was a very expert roach fisherman and troller with the dead gorge bait, and used to spend a deal of his spare time angling in the old Pike and Anchor fishery at Ponder's End. The Pike and Anchor was then one of the most comfortable fishing inns on the Lea, and was kept by a very worthy host (one Tom Kied, and some few that are left of the Lea fisherman of those days would well recollect him).

Thanks to the old man's lessons, I caught in these long gone days good bags of fish in the Pike and Anchor fishery, and in the old Horse and Groom fishery at Lea Bridge, then one of the prettiest and pleasantest fisheries on the Lea. In the parlour of that inn was a very well-preserved salmon of about 20lb. weight. The inscription on the case recorded the fact of its capture in that fishery in, I think, the year 1827. This was the last salmon, I believe, taken on the Lea of which there is, or was, any record. One of the successful anglers who then occasionally fished the Pike and Anchor Fishery was a young Chancery barrister, Thomas Southgate, who subsequently became a very successful Queen's Counsel, made a large fortune, and retired to Marlow.

These were happy times for fishermen—plenty of fish and few fishermen, with pleasant country close into London; alas! now all used up by the builders, and forming great local centres of business and population.

It is marvellous how the number of anglers has of late years increased. Where one man fished in the forties, 300 at least do now; and the pastime is followed by all sorts and conditions of men, from Royalty down to skilled artisans and labourers, and amongst the latter are some of the most expert and clever of anglers for roach and other coarse fish.—Yours truly, H. L. W. GODWIN.

WATERPROOF FISHING HAT.

DEAR SIR,—I should be much obliged if some reader of the *Fishing Gazette* would tell me where I could obtain a waterproof hat which would not allow rain to run down the neck, and which would neither stifle the wearer nor give him a headache? I have tried a "Son'-wester," but—never again!—Yours truly, D. H.

[The most comfortable waterproof but not airproof fishing hats we know are those made by Messrs. Burberry, of the Haymarket and Basingstoke. The best shape for protection from sun and rain is the Helmet. It has a peak running all round. It is made of gabardine lined with Jaeger's cloth, and can be made as light or as heavy as may be required. Gabardine throws off the rain in an extraordinary way.—Ed.]

RECORD OF TROUT CAUGHT IN THE JED AND TEVIOT.

DEAR SIR,—As a reader of your valuable journal I enclose a list of trout caught by me in the Jed and Teviot in the year 1889. If you think it would be of any interest to your many readers, I would feel greatly obliged by seeing its insertion in your columns.—Yours, &c., THOS. RENILSON.

KESWICK ANGLING.

The trout fishing season is now in full swing, and the prospects, according to present reports, are of a favourable nature. The lake is in good condition, and many anglers have been attracted. A fresh is much needed in the river. The catches reported are as follows: Mr. Joseph Lowther, twenty-three trout; Mr. Hill, a good basket of trout; Mr. H. Beadle, six trout; Mr. Wilkinson, seventeen trout; Mr. Denwood, sixteen trout, and several pike, one weighing 9 1/2 lb.; Mr. Telford, four trout; Mr. Jameson, ten trout; Mr. Henderson, 2lb. trout; and Mr. J. Rigg, 3lb. small trout. GIL.

FOREIGN BOOKS AND PERIODICALS.—Messrs. Sampson Low, Marston and Co., St. Dunstan's House, Fetter-lane, London, supply the Trade with Foreign Books and Periodicals. Fast train consignments from their Continental agents twice a week. Catalogue gratis.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland	10s. 6d.
Months ditto	5s. 4d.
Three Months ditto	2s. 8d.

ARTIFICIALLY CONSTRUCTED SALMON SPAWNING BEDS.

THE demand for salmon has become no doubt greater than the supply, consequently the price which is now asked is beyond the means of the greater number of the population. This deficiency has been produced by many circumstances. Among them are—First, the effect occasioned by the extensive draining which has been carried out on agricultural holdings, and necessarily has made the rise and fall of our rivers, particularly the rise, much less than it was in former years, thus preventing the salmon from ascending to those places most adapted for the production of their species. Secondly, pollutions caused by the never failing walk of commerce, that is, by the erection and working of factories which have utterly ruined many prolific rivers. Thirdly, by the "deaf ear" continued to be lent by the Government to the numerous appeals made to it to bring the laws affecting our fisheries into such form that they may be applicable to the subject with which they have now, under the altered circumstances of the case, to deal. Fourthly, by the discontinuance of the preparation of artificially constructed salmon spawning "beds." The first mentioned matter which has

depreciated the value of our rivers has been by the science, which has been called into use for making it even possible to make farming a profitable industry, owing to the fall in the price of corn. The second, namely, "pollutions," which are carried off by paper mills, wool factories, and the like. This matter is now under the reconsideration of the House of Commons by a Bill specially framed to meet the matter. But as a leading section in that institution carrying great weight is utterly opposed to any further move being made in the matter, it is to be feared that unless it is handled with the greatest skill and care, the "knocking out" of those points, by which it is endeavoured to make it more forcible than the Act of 1876, it will, even if passed, be of little service in the matter of staying or controlling the defilement already existing. The next subject mentioned in these notes is evidenced by the admission of the department of the Board of Trade, who deal with our fisheries, that the laws appertaining to them as they at present stand cannot be accommodated to the matter as it is at the moment placed, the whole circumstances being so entirely altered since their enactment. Lastly, we come to the matter in hand, that of artificially constructed spawning beds.

It may not be known to the public in general that before any Parliamentary laws were brought into force with reference to salmon, the riparian owners and their tenants year after year made "beds" ready for the salmon to occupy as soon as they entered the rivers, not alone that they might more easily deposit their spawn, but that they might be more readily captured, first for the market, then for their own table. These "beds" not only save the fish considerable labour, which must necessarily more or less depreciate the quality of the spawn, but by the position chosen for the situation the whole function is carried out with greater security from the dangers with which both the ova and fry are beset than when left to the haphazard chance of finding their own resting place. But when the Act of 1861 became law all this was stopped, or nearly so, and ever since that date our stock has been slowly yet nevertheless surely, decreasing. Under these circumstances it may be as well, for the information of those interested in the subject, to describe shortly how these "beds" were, or rather are, on some rivers constructed, and also the position in which they are best placed. On the other hand, however, it will be as well before going further, to say that unless those who would undertake this method of increasing their stock of salmon are in a monetary position to employ a sufficient staff of water bailiffs to continually keep watch and ward over them (that is the "beds"), they had better be left unmade, because, as it has been proved that salmon will occupy any such places at once, and if not guarded they will simply become the easy prey of that "oldest inhabitant" of our rivers and shootings, namely, the poacher.

The manner of their construction is as follows: A point of the river is found where the water by the curving of the further bank is thrown in rapid flow to that on the other side, which should rise perpendicularly from the water. This at normal height should not be less than from 1ft. to 18in. deep, having a gravelly bottom. The situation for fixing the "bed" is at the lower end of a pool just immediately above a stickle, from the top of which a bar running nearly parallel to the bank is made with stones measuring some 2ft. in diameter, placed close together and firmly fixed in the bottom of the river. These gradually open out as they proceed upstream at an angle of something less than 45 degrees for some 20yds. to 25yds., the space at the foot, or lower end, that is next the stickle, being about 7ft., expanding to some 12ft. at the higher extremity to which the stones extend. The ground now all lying between the river bank and this artificial break-water is hacked up to the depth of some 18in. with pickaxes, all the large stones being left during the operation on the top. Then this loose soil is all shaken over with four-pronged forks, and every stone that will not pass between the prongs is thrown out. After this has been thoroughly gone over, the "bed" is levelled with a large-toothed iron rake, and all gravel which may not look inviting, that is, any with sharp edges, being picked off.

Simple as this may appear at first sight, yet it

requires a great deal of judgment to hit upon the proper situations estimated to be the best for the purpose. The proper strength of the stream of water is one particular matter which will entice fish to occupy them. If too slow or too rapid they will have none of it. But when they are as they should be salmon have often been known to leave "beds" of their own finding and continue the process of spawning on those artificially made.

To show how easily salmon are induced to take up their quarters on any place where the bottom has been freshly disturbed, it may be said that some years ago it was the practice of inhabitants of a riverside, which river was much discoloured with china clay water, to yearly wash the deposits of that compound from the bottom, and soon they would have fish on these clear spots, which they immediately secured. The clay pollution is one of the matters which greatly damages some rivers. Though it does not destroy the matured fish, it necessarily covers all spawn that may be deposited. This has, of course, nothing to do with the subject of these notes, but as it has been entirely overlooked in the draft of the new Act now before Parliament, I take this opportunity of mentioning the fact.

There is one matter that has been found most useful on those rivers where spawning "beds" have been constructed, and that is that all brush-wood, or waterstane as it is properly called, lining the banks in their immediate vicinity should be cleared away, thus preventing any hiding for the poachers. The plan of construction described has been carried out on the river Camel, in Cornwall, within the last few years, under the superintendence of an experienced conservator; and it may be said, from evidence which is to hand, that in a year or two the increased stock of that river will fully repay the outlay by its Conservancy in this undertaking. It must be remembered that there is also another side of the question besides the supply for the public and of salmon netting as a commercial industry. By the improvement of a river the riparian owners, whose position through the agricultural depression has been so much altered of late years, will benefit by the stock of salmon being increased.

PHEASANT TAIL.

ANGLING VERACITY FROM A SCIENTIFIC STANDPOINT.*

GENTLEMEN,—With a laudable desire to unite information with amusement, our association intends to provide a series of scientific lectures on various subjects interesting to its members, and I feel largely honoured in occupying the premier position with a disquisition on angling veracity from a scientific standpoint.

Do not suppose, however, that I would compete with that ingenious author who wrote the celebrated chapter on "Snakes in Iceland," or with the late Sir Stafford Northcote's famous lecture on "Nothing." My ingenuity is not up to anything of the sort; I would only bring before your notice some of the more recent deductions of Science (with a big S) on this subject. A most wonderful thing is modern science—some of its recent achievements are truly remarkable—and I hope by the use of those graphic statistical methods, with which most of you are no doubt acquainted in the pages of certain magazines, to retain your interest whilst I explain the conditions regulating veracity, or the want of it, amongst our fraternity.

You all, no doubt, know the dictum of that seeker after truth who parodied the Psalmist by declaring that "a' men are leears, but a' fishers are domned leears," a sweeping indictment which you may at times have wished either to deny or explain away. But, gentlemen, I am here to-night to show by the aid of modern science that far from being a blemish, that embellishment of the truth so habitually practised by us anglers is really the outcome of our extreme goodness. Since that eminent scientist, Max Adler, proved that the excessive wickedness of babies was due to the amount of original sin in each infantile criminal, showing that, the amount of that dreadful heirloom being the same in the smallest babe and

* A lecture delivered at a smoking concert of the Scottish Trout Anglers' Association by T. Spence.

the biggest adult, the pressure on the square inch of the child must be infinitely greater than on the adult, the scientific mind has naturally been greatly exercised to follow out this luminous idea to its legitimate conclusions.

Of those investigators whose labours have shed such light on this branch of science, and to whose researches I shall refer during this lecture, perhaps the most celebrated are Professor Dumkopf, of Keimplatz; Professors Damphul and Blutiger Narr, of Eselburg; and Herr Dunderpate, of Alt-Ranchenstadt; though we have, even in our own good town, scientists whose methods and results may compare with theirs. Nor must I forget those eminent scientists, the late Baron Munchausen, Dr. A. S. Smythe, F.Z.S., Mr. L. De Rougemont, Mr. Hook E. Walker, and the celebrated explorer Sinbad, commonly called "the Sailor," whose adventures and tales for the marines are classics. Nor, last, but not least, can I omit that celebrated Russian, Knoall Jawishedoff, whose recent researches into the life history of the shark, whereby he proved, to the eminent satisfaction of himself and friends, that from the conformation of its mouth and stomach, and from the absence of the tubercle bacillus in its intestine, that much maligned creature could not eat human beings, *must* subsist entirely on submarine butterflies, and that the second-hand watches, old boots, and tobacco pipes said to have been found in its digestive tract either only existed in the imagination of mere untrained observers, such as fishermen, newspaper reporters, and sailor men, or, if really present, must have been accidentally swallowed whilst the shark was grubbing out its natural prey from the sub-marine ooze it inhabits (an idea strongly corroborated by the fact that sub-marine butterflies have not as yet been found anywhere outside of marine ooze, and not there either), attracted such favourable attention when he read his paper on the subject before the Kaiserliche und Koenigliche Verein of Alt Rauchenstadt on the first of April last. I fear my admiration for this gentleman's wondrous methods of research has led me into an unpardonable digression, for they cannot by the wildest effort of imagination be supposed to have any connection with veracity, angling or otherwise. Firstly, the learned Dumkopf, using that ingenious instrument the pseudometer, whose invention is claimed both by Herr Dunderpate and Professor Muddle, proved that the pressure of original sin on the square inch of an average individual of the male sex in good condition is almost equal to that of the atmosphere; whereas in the adult female it exceeds that amount in the proportion of three milligrammes (0.003gr.) on the square decimetre, which the learned but impolite scientist suggests may be the cause of the acknowledged inferiority of the fair sex. I am sure that you all, as gentlemen and anglers, will join in repudiating his rude inferences, as has already been done by that eminent lady investigator, the Fraülein Doctorin Neugebaüde, also of Alt Ranchenstadt.

It is to Professor Damphul, of Eselburg, that we are indebted for the next step in this difficult research. Using Professor B. Narr's modification of the pseudometer (the mythometer), he discovered that the pressure of original sin per decimetre (pardon my using the metric system; no self-respecting scientific gent would nowadays condescend to make himself intelligible by using the common everyday weights and measures of commerce) in the average adult Teutonic angler was somewhat less than that of the atmosphere. This remarkable result was confirmed in France by I. Diot, of Maison des Fous; in America by the Rev. A. W. Fulass; and in this country by the celebrated Napeer Loonie, of Morningside. Then Knoall Jawishedoff, of the University of Krakurjawsoff, showed that differences of disposition in various characters were due to pressure of original sin on diverse organs. It would be out of place here to detail his results, but he proved, *inter alia*, that in the common or garden liar this pressure was largely directed on the tongue, a certain quantity, however, being diverted elsewhere. In the angling variety, however, he discovered that owing to the excess (I use his own words) of goodness in every other direction, the entire pressure of our awful heirloom was exercised on what Solomon long before him characterised as an unruly member. He also found that other moral qualities had considerable influence in

determining the lines along which this pressure acts.

By the aid of Professor Damphul's psychothometer, he discovered that amongst all persons, whose avocations led to their dealing largely with water, such as temperance lecturers, master mariners, and fishermen of all sorts, the imagination was largely developed, and the renowned Dr. Boobie, of Kenna-whaur, showed by the parallelogram of forces that the deviation from truth, caused by these two forces combined, amounted to 130° of latitude (moral, of course).

You will understand this better by referring to this diagram, copied without permission from his monograph on "Immoral Forces." The short line V V pointing downwards, represents the downright truth. The line O S is not a fishing rod, but represents the force and direction of original sin. The line I E represents the force of imagination, and the line L I E is the appropriate resultant of these various forces.

I have personally worked this out, and find that by it the combined forces of original sin and imagination suffice to raise a 1oz. trout to 3lb. 14oz. fisherman's weight, equal to 3lb. 4oz. avoirdupois. I show you two fish to demonstrate this: A. is the real, B. the imaginary fish, both in scale; you can't deny that they are in scale, they are covered with 'em. I now wish in accordance with the new method of diagrammatic statistics, to present to you in a visible and tangible demonstration, the amount of truth, and—imagination to be found in different sorts of angling stories. These cubes and boxes, which you will at once see have been made to scale, show the respective amounts of truth and fal-imagination I mean, in typical varieties of angling stories. This solid cube A* represents the solid truth, and gives the real size of the biggest fish you caught during your holiday last year at Back-o-Beyont; B hollow, merely for convenience of carriage, of course, its size, as told to your friends. As you will see, the disproportion here is slight, only about 1 to 10, which it would be harsh to characterise as a falsehood. Perhaps we might term it a small labefaction from truth (no reference to the member for Northampton is intended).

Block C and box D give the real size and the reported dimensions of the big fellow you lost at Altnagealagach some years ago. For this marked disproportion, however, the experiment which I am about to show you will prove that the physical properties of water are largely to blame. You see this small fish; well, I put it into this globe of pure water. What happens? It at once becomes greatly magnified. Now you all know that our earth is a globe, and its curve being so much bigger than that of my poor little globe, its magnifying power must, of course, be increased in proportion. Professor Durstig, of Ertrunken, has also shown that if the globe be filled with alcohol its magnifying powers are greatly increased, but as no angler ever by any chance sees a fish through such a medium we may dismiss this as a mere curiosity of observation.

As to my third type, I regret that I am not in a position to illustrate it physically, for reasons which you will appreciate when you have heard the story it refers to. My dear friend, Mr. Hook E. Walker, told it me concerning a remarkable capture he effected by means of scientific angling during a holiday jaunt in Hyperborea. *Once on a time*, in a small river of that favoured realm, there lived a great trout, which had been frequently hooked, but always broke away. On him my friend and his companion, Dr. A. S. Smythe, F.Z.S., &c., exercised all their noted skill and finesse with no result, save adding to that fish's collection of artificial flies and minnows. Our anglers were in despair, till to the luminous intellect of Mr. Hook E. Walker, or the equally brilliant mind of Dr. A. S. Smythe, F.Z.S., it occurred that by employing electricity, to use the classic expression of the Chicken concerning Mr. Dombey, it "was within the resources of science to double him up." At considerable trouble and expense two gigantic electro-magnets were procured and placed in position, the current was turned on, and our scientific anglers awaited events with the confidence born of knowledge. But to their surprise,

instead of turning up dead as they expected, that egregious fish calmly swam up to the nearest electrode and apparently smelt it. Disgusted at their non-success, our anglers removed the electrodes, when, to their surprise, the fish came with them. It was firmly held by the attraction of the numerous hooks fastened in its jaws. Desirous of not straining my friend's a—veracity too much, I did not ask that fish's weight, but he insisted on giving it. He said it weighed just 37lb. 12oz, five split shot, and a bit of leather shoe lace.

Now you will appreciate the reason why I cannot bring the larger cube into so small a building as this. Perhaps, however, when the Usher Hall is built I may be able to exhibit it publicly. The smaller cube I have with me, but unluckily the only microscope powerful enough to show it has not yet been made. This suggests the old maxim that "de non apparentibus et non existentibus eadem est ratio," which, being translated into vulgar tongue, means things not visible and not existing are much of a muchness.

In conclusion, I hope none of you imagine that I would speak disrespectfully of original sin; still less I hope will any here feel offended by my assuming, even in joke, the untruthfulness of anglers; for I have noted as a curious fact that those who do protest most strongly against this charge are usually —. But there, I have "havered" long enough in all conscience.

CRUISES ON THE COAST OF NORWAY.

(Continued from page 225.)

On a subsequent occasion, and from the same headquarters on the coast of Nordland, we made another expedition in order to inspect two outlying streams, to which, report had it, sea trout had access. The distance to be traversed by water being considerable, and there being, it appeared, no inhabitants in the glen down which one, at any rate, of the said streams flowed, we took a small tent in the boat with us, and a week's provisions to guard against possibilities. Our course lay for many miles through a labyrinthian series of islands; but at last we entered a long and narrow fjord with huge walls of rock, many hundreds of feet high, rising almost perpendicularly from the water's edge on either side. Though grand, the prospect was a gloomy one, and glad we were of the occasional diversion afforded by the capture on the spoon, which trailed out astern, of a happening coalfish, pollack, or rock cod. In the great precipices there seemed to be no break as far as the eye could reach. Suddenly, however, on rounding a point, we came upon a tiny bay till then invisible, into which a considerable stream of fresh water descended in the shape of a fall direct into the fjord. The fall, however, being broken in character, and of no great height, was evidently negotiable by fish, and on landing, amid seaweed-covered and very slippery rocks, we observed sundry grise and sea trout making frantic and not altogether unsuccessful efforts to ascend. Above the fall there were the remains of a wooden dam and a tiny saw mill, both of which, however, had long been in disuse; above these a stretch of some 200yds. of rough water, perfectly useless for angling; and then, to our disgust, the river ended in (or, rather, emerged from) a lake! But Ole, who again accompanied us, inspired hope by saying that the lake was only a small one, that there were good pools in the stream that flowed into it, and that the man who used to live there, and who, with his family, had emigrated to America, used to net a good many barrels of fish in them during autumn. Apparently he had been a pal of Ole's, and had communicated this information to him as a kind of "tip" at parting. After a severe struggle up the loch side, amid rocks and birchin thickets, we came upon the remains of the deserted homestead, picturesquely situated close to the point where the stream entered. The only living thing visible was a hare which quickly made itself scarce, and the place looked forsaken and lonely to the last degree.

Although neither roof nor walls were exactly weather-proof, we were glad to take up our abode for the night within the old building, to which Ole and Johan brought the provisions, &c., from the boat, and a great fire having been lit on the

* The cubes referred to consist of: A, a cake of soap; B, a small cigar box; C, a die (for gambling); D, a large cigar box.

long cold hearth, we made ourselves very much at home and extremely comfortable. A tale of a somewhat unpleasant kind attached to the place; but whether it were owing to fatigue, or the benign influence of hot whisky and water, we neither saw nor heard anything of the unquiet spirit of the deceased Norskman, which, Ole said, used to make itself unpleasant. Perhaps it, too, had migrated to the States!

The weather being brilliantly fine, and the days hopelessly bright for successful angling, we had a tub—and a precious cold one it was—in the loch at an abnormal hour, and after a jorum of most excellent coffee, prepared by Johan, we started off to fish just as the sun began to tint with rosy light the tops of the near hills. There was not much time wasted in mere pedestrian exercise, for, within five minutes, a pretty rocky pool exactly such as one sees so many of on the Sutherlandshire Shin and similar streams, which extended from the foot of some rapids to the loch, was reached. While the rod was being put together, several sea trout showed themselves in the lower part; but as the place looked as if it might hold something bigger than trout, we put up a moderate sized salmon fly on a single gut cast. Fortunately, before commencing business, we gave the gear a good soaking, for at the second cast a salmon rolled up in the rapid water, near the top, and was fast. On feeling the steel he shook his head violently, executed an elaborate somersault close to the rocks on the opposite side, and at once shot off down to the lake—the very best thing he could have done. In his haste to get there, however, he missed the way, and instead of following the channel hit off a sandbank, over which—it being barely covered—he splashed his way in most nerve-trying fashion, but finally reaching deep water again with the fly still in his mouth. At one time he got out a rather dangerous lot of line, but was ultimately induced to come alongside a rock, on which sat the watchful Johan, gaff in hand, and transferred by that youth with a shout of delight into the midst of a juniper bush. He had been two or three weeks in fresh water, but was as fat as a pig, and weighed just under 12lb. Another try in the same spot failed to obtain a response, so, adding a dropper to the cast in the shape of a tiny “Stevenson,” we fished on down the pool. The sea trout were certainly there, and although we lost a number owing apparently to their over eagerness, seven good fish and several smaller ones were landed; a second salmon, too, disturbed no doubt at the antics of the trout, made a very sulky offer just above the sandbank. After pausing for a brief pipe, we followed our attendant up the little river, and shortly came upon that individual extended on his stomach gazing intently down into the water. As a rule, Norwegians do not apparently credit fish with the possession of eyesight, or, at any rate, with fear of man, for they have a most aggravating habit, unless stopped in time, of walking straight up to a pool about to be fished, and showing themselves conspicuously to every inhabitant thereof. Johan, however, was a pleasing exception to this rule, having been taught better ways by his father (who was no fool). He stalked every likely bit of water with the greatest care. On this occasion he had noticed a large black tail show itself in an eddy in mid-stream (not unlike the “Arrow Pool” on the Kirkaig), and was watching for its reappearance with considerable interest. It was no easy job to get the fly to hang over the spot (the fish lying, it must be remembered, with head pointing down the stream proper), a strong rapid, flowing, of course, the reverse way, intervening; but at last we succeeded. Up he came, and almost before the prostrate Johan could regain his legs, was off and away down the rapids in full cry apparently for the loch. Ere reaching that sanctuary, however, he gave a chance, and in a very short time after he had been first spotted was reposing alongside his predecessor and the sea trout.

It would be tedious to inflict further details upon the reader of the sport we had on this little river. Altogether there were eight nice pools, and although with the odds and ends of places where sea trout were to be caught, these yielded some pretty fishing, there were not many “rising” salmon left at the end of our three days’ stay. During that time we got eleven fish (the largest an 18-pounder), six grilse, and a heavy bag of sea

trout, so that for a chance expedition it did not pan out so badly. Bidding farewell to the half-ruined little shanty, within whose walls we had had such a pleasant time, we conveyed our paraphernalia back to the boat one morning, got out the inevitable spoon bait, and made our way to the upper end of the fjord, where the second stream was supposed to enter. This did not turn out a success. It had a solitary house at the mouth, whose sole occupants were an extremely dirty old lady (the wife of the proprietor, who was at sea fishing) and her daughter, a female of unprepossessing aspect. The burn itself was dead low, a few rocky holes, connected one with the other by a thread of crystal clear water, being the only places where there was a chance. In these, on the evening of our arrival, we picked up a few sea trout and a salmon of 7lb., but the next day, being of opinion that the house contained too many inhabitants and the water too few, we returned to headquarters.

RUGDE.

MAY FLY FISHING IN THE WESTMEATH LAKES.

THE proverbial oldest inhabitant cannot give one any idea as to the period when the fascinating sport of May Fly fishing, or, as it is commonly called, “dapping with the green drake” was first practised upon these far-famed and charming sheets of water; and for all the information which can be gleaned upon the subject it may have been enjoyed in the long ago by the owners of our historic cranoges or lake dwellings, and the possessors of the antique old crafts which I have occasionally discovered on the bottom filled with sand when engaged eel spearing, and which I have also more than once seen lifted from their centuries of rest on the lake bed—quaint-looking, lengthy, narrow vessels, principally hollowed out of the trunks of trees, and whenever apparently enlarged or improved it was indeed a sight worth seeing to observe the curious old nails, with immense flat, saucer-like heads, evidently intended to be much more for ornament than use, in the construction of these primitive canoes.

Dapping on the Westmeath lakes at the present day is looked upon as something in the nature of a fishing carnival. The county town of Mullingar, which is equidistant exactly two statute miles from Loughs Owel and Ennel, and situated four from Derravaragh, usually looks its very gayest in the May Fly season. The hotels are invariably filled to their utmost capacity, the jarvey-men do a lively trade, and it is a very interesting sight to see the procession of Irish jaunting cars and other vehicles wending their way morning after morning to the lake shore. Along the public road the car loads of anglers—ladies and gentlemen—for the ladies can now wield a sixteen-foot trout rod with considerable skill—are met by relays of barefoot gossoons, who for a consideration are prepared to supply small boxes of the *ephemeride*, thus enabling the expectant angler to commence operations without delay, a fresh supply being easily procurable at luncheon time. On a suitable day, with westerly or south-westerly breezes, the trout are rising here, there, and everywhere, and hopes of success run high. A well-tapered fourteen to sixteen-foot rod is quickly put together, the top joints being firmly spliced and secured by well-waxed tying material, which gives a more graceful bend than ferrules all through. A good reel or winch, with from fifty to sixty yards of silk line, to which is whipped about fifteen additional yards of soft white silk, called a blow line; then three and a half feet of strong, fine drawn gut is attached to the blow line, with a small-sized Limerick or other approved hook, and with the addition of your landing net, luncheon basket, pipe, fly box, &c., your rig-out is complete. The boat is turned broadside to the breeze, and, having deftly and neatly impaled a brace of the greenest winged occupants of the fly box, you simply raise your hand, let out line, and your “dap” goes dancing merrily over the waves. After lunch you collect some of the newly risen flies, and if on Belvidere, if sport be slack you can inspect the configuration of one or more of the numerous islands which dot the lake, and either rest under the sylvan shade of Great Island, or visit that on which the ancient monarch, King Malachy, is supposed to be buried, and where, by sundry excavations made in the

rathlike mound in former times, one would be led to conjecture that strenuous efforts had been made to recover the famous “collar of gold” which the simple peasantry believed had been interred with him; or if you turn your steps towards Lough Owel you could spend an hour in moralising on the ivy-clad ecclesiastical ruins of Church Island, near where the famous Turgesius met his tragic fate, and over the ashes of a departed generation.

We are now on the eve of the dapping season of 1899, and expectation runs high as to the likelihood of good sport. The last two or three years proved very disappointing, the opening time being most unfortunately ushered in by keen easterly breezes, which literally spoiled the prospects of good angling. All the Westmeath lakes—Derravaragh, Ennel, and Owel—have been strictly preserved during the past twelve years, and trout are most abundant. The lakes are free to all legitimate anglers, boats in plenty, and can be hired at reasonable cost. Boatmen are extremely civil and accommodating, and know their work. They are full of anecdote, and always ready to while away the time with thrilling encounters with escaped ten, fifteen, and even twenty-pounders, which usually “made four even halves of the rod,” and brought away the tackle.

I will wind up by adding that it may be safely taken for granted, in the event of being favoured with suitable angling weather, the “contemplative man” would have some difficulty in finding a more enjoyable holiday than a season’s, or even a fortnight’s, dapping on the Westmeath lakes.

T. J. W.

TROUT FISHING ANNUAL CLOSE TIME (SCOTLAND).

THIS session a Bill, entitled “An Act to provide an annual Close Time for Trout Fishing in Scotland,” awaits the consideration of Parliament. The Bill was introduced by Lord Balfour into the House of Lords on Tuesday, March 7, when it was read a first time, and ordered to be printed; it now awaits second reading on Tuesday, April 18.

The object of the Bill is to provide an annual close time for trout in Scotland, between the 15th day of October in any year, and the 28th day of February in the year following, both inclusive, during which time it shall not be lawful for any person to—

- (a) Fish for or take common trout (*Salmo fario*) in any river, water, or loch in Scotland, by net, rod, line, or otherwise;
- (b) Have possession of such trout;
- (c) Expose such trout for sale;

The penalty for every such offence being the payment of a sum not exceeding £5. Of course, this clause does not apply to the owners or lessees of stews and artificial hatcheries, or their servants, and there is a proviso to the clause making exception in favour of such persons.

This Act is to be read along with the Trout (Scotland) Act, 1845, which was an Act to prevent fishing for trout or other fresh-water fish, by nets, in the rivers and waters in Scotland; and the Trout (Scotland) Act, 1860, which was an Act to extend the Act of the eighth and ninth years of Victoria, Chapter Twenty-six, for preventing fishing for trout or other fresh-water fish, by nets, in the rivers and waters in Scotland; and these Acts are to be hereby amended so far as is consistent with it, and this Act and those Acts may be cited together as the Trout (Scotland) Acts, 1845 to 1899, and this Act may be cited separately as the Trout (Scotland) Act, 1899.

The necessity for the Trout (Scotland) Act, 1860, arose, as the preamble of that Act states, from the fact that there were various other ways by which trout and other fresh-water fish might be destroyed, which up to that time had not been declared illegal; such as double rod fishing, or cross-line fishing, or set lines, or otter fishing, or burning the water, or by striking the fish with any instrument, or by pointing, or by putting into the water lime or any other substance destructive to fish, with intent to destroy them, and it was with a view to render all such diabolical devices of the poacher illegal that the Act was passed. Up to the present time the only legislation dealing with the question of a close time

for trout in Scotland is contained in clauses 64 of the Salmon Fishery Act (1861) Amendment Act, 28 & 29 Vict. c. 121, which states that in any river situate in a fishery district subject to a board of conservators appointed under the Act, no person shall fish for, catch, or attempt to catch, or kill any trout between the 2nd day of November and the 1st day of February following, both inclusive.

A. H.

JOHN BRUNTON, M.A., M.D.

In Memoriam.

WITH startling swiftness, yet amidst surrounding that in all probability involved less physical suffering than falls to the lot of most men, Dr. John Brunton has been called to his everlasting rest in the sixty-third year of his age.

To hundreds of readers of the *Fishing Gazette* he was known as an all-round angler. So he was,

commendable thrift, he contrived, out of the none too copious earnings incidental to gerund-grinding, to save sufficient money to enable him, concurrently with his literary work, to study medicine and pay the fees demanded by his alma mater.

Thus it was that the young Master of Arts became, in 1860, a Doctor of Medicine, and for a period of nearly forty years he has been continuously in practice, his conscientious professional work having been diversified only by occasional angling excursions of short duration.

For many years he was professionally associated with two of our great railway companies, and it can safely be said that from King's Cross to Peterborough, or from St. Pancras to Bakewell, there is hardly a porter, guard, or stationmaster who did not know and respect the kindly doctor. Many of them, indeed, had good cause to regard him with a feeling of gratitude; more still, perhaps, looked upon him with affection as well as gratitude; all will cherish his memory as that

the "genial doctor," as he began to be called of late years—and although, like some of his countrymen who have made a name in history, at times he "joked w/ defficulty," his kindly nature and instinctive sense of propriety always caused his wit to be tempered to the susceptibility of the object of his merriment.

Most rivers within easy access of London have engaged the attention of Dr. Brunton, and it may be said that, piscatorially, he was vanquished them all; but, instead of lamenting (after the manner of Alexander the Great) that there was nothing more to conquer, he quietly moved his forces to the south coast in order to attack the English Channel; and there is no doubt that, as a salt-water angler, he would soon have run neck and neck with his old friend Mr. T. R. Sachs, the revered president of the Piscatorial Society.

But it was unquestionably by the waters of the Upper Lea that the Doctor felt most at home, and he was fond of relating anecdotes bearing upon his visits of exploration nearly a quarter of a century ago. One sweltering day, in August, 1874, the Doctor and a brother angler had wandered they knew not whither. The mountain dew gave out, a holy thirst came upon the pair but it was deemed injudicious to slake it with the water of Isaac Walton's idyllic stream. Moreover, it was beer that their souls longed for, and beer they felt they must have, but not a human habitation was in sight, nor a human being of whom to make inquiry. Shading his eyes, the doctor scanned the horizon long and earnestly, but the result was unsatisfactory. Presently he mounted a slight eminence, and, like Archimedes of old, shouted "Eureka!" at the top of his voice. Rushing down in a state of considerable excitement, he continued, "I have spied a weathercock peeping over the top of yonder clump of trees in the far distance, let us make for it at once and get our beer." The connection between a weathercock and a barrel of ale was not immediately apparent, but the Doctor worked out the problem deductively, thus: A weathercock pre-supposes a steeple, a steeple implies a church, and a church is a sure sign of a public-house being at hand, inasmuch as

Wherever God erects a house of prayer
The devil's sure to build a chapel near.

Half an hour's walk brought them to a hamlet nestled behind a small plantation, and sure enough there was the church and the tavern, as had been foretold. Mugs were quickly filled, and still more quickly emptied, the Doctor insisting upon standing treat, being in high good humour at this instance of the successful application, as he termed it, of scientific principles to the ordinary affairs of life.

Versatility was, indeed, the good old doctor's predominant characteristic. As before remarked, he was an all-round man, yet possessing an individuality which at once attracted attention, and graced by a charm of manner which was best appreciated by those who felt it to be an outward manifestation of the spirit of goodwill towards his fellow creatures, which was the root of his popularity.

Such men are none too plentiful, and their departure from their fields of labour or spheres of influence demands more than a passing notice.

THE SEASON'S OUTLOOK.

WITH the advent of April the second and better half of the spring salmon angling season commences. There is often a change of rods and leesses, and the brown trout angler comes boldly on the scene. April is really the most prolific sporting month in the calendar, and when anything like fair conditions of wind, weather, and water are present the angler's bag is then the heaviest. Salmon have usually got into the higher reaches, and rise more readily to the smaller lures now in vogue. The temperature of the water has run up from freezing point to a more acceptable degree of heat, and the Arctic rigours of the earlier months no longer prevail to numb the limbs and pinch the features of the votary in search of sport. The trout are on the rise, and feeding greedily on the increasing myriads of flies, and bountiful Nature begins once more to smile on the barren past.

The season's outlook at this time has often been brighter. It would be very gratifying indeed to

but he was much more than this—he was an all-round man, essaying few things in which he did not excel.

As a young man he came to London, bringing with him from his native Caledonia but little beyond an accurate knowledge of the science of medicine, an extensive acquaintance with classical literature, a facile pen, a warm heart, and the instinct of a gentleman. But these sufficed, as well they might, not only to carry him along the road to eminence in the profession of his choice, but to enable him to retain as friends many of those whom he came across, whether in the exercise of his calling as a physician or in the ordinary course of life.

It was the intention of John Brunton, upon taking his degree of Master of Arts of the University of Glasgow, which he did in 1856 (having barely attained his majority), to follow in his father's steps by adopting a scholastic, or, at any rate, a literary career, and for a short time he did so; but, with characteristic energy and most

of a sympathetic friend who was ever ready to advise in matters affecting their well being as well as their health, for he was the recipient of many confidences.

Endowed with a rare faculty for observation, which had been systematically cultivated in the course of his professional training, the subject of this short memoir possessed also a power of rapid induction; and although, as has been truthfully remarked, "the man who never made a mistake never made anything," it may with confidence be asserted that the doctor's conclusions were in most cases correct, whether as regards the diagnosis of disease or the best methods of catching fish. Proceeding, as he habitually did, mainly by logical methods, he was yet by no means destitute of imagination, and both the medical profession and the less important confraternity of anglers have benefited by the exercise of his gift of mechanical invention.

A keen sense of humour added much to the attractiveness of the good doctor's personality—

report otherwise, but facts must be faced, and however disagreeable the topic may be of always reiterating blanks and failure and adverse conditions, there is nothing for it but to revert to the plaint once more, and ring the changes with another doleful tale.

Anglers have not been so hard hit as netsmen; for the former have had occasionally fair sport during the past two months, but the latter have met with no successes at all. There is nothing to actually find fault with but the abnormal spell of really "beastly weather." Every variety but the right one has prevailed for days and weeks on end. If for a single round of the clock the wind, weather, and water fell into line the netting results improved, but the combination has always been so short lived that the improvement was nothing more than a flash in the pan. The advent of April, however, brings a fresh run of fish on the coast. Those that went down with the early floods in December and January to the sea are now again in condition, and will be making for the inland streams all through April and well on to the middle of May; and with the pleasant and favouring turn in the weather which has ushered in the lambing month, a much brighter aspect is on the face of matters now than was the case a week ago.

Succeeding the snowstorm, which has been so unpropitious to prince and peasant alike, the weather is now of the most favourable character for bringing salmon inshore, and encouraging them to take to the rivers. On Wednesday last the Aberdeen Harbour Commissioners had seventy fish—a catch almost as good as any they have had this season as yet; and although returns all over are not quite up to that high water mark, yet most of the lessees on the east coast have experienced an improvement on the previous few weeks' returns. There was, and is, yet plenty of room for improvement. Not for thirty years has there been such a dearth of salmon; but then the weather has not been so bad at this advanced period of the season since the year 1859, when the "lion's tail of March" was continued into the better half of April, and, according to local accounts, the corn "braided" under the snow. Yet there never were harvested such crops, and although we have no account of the fishings, yet we can easily imagine that such conditions so highly favourable to the farmer were not altogether inimical to the angler.

The returns from Billingsgate for the month of March show that there has been a drop from 1073 to 642 on last year's number of boxes of Scotch salmon, and it must be borne in mind that last year was a very poor season indeed; 2000 boxes might be nearer the average return for March, so that all over only about a third of the salmon have been got this season compared with a fairly good one, and, accordingly, the first half of the present salmon season must be marked down as an egregious failure. Such cannot be said, however, of the prices that are obtained for what fish have been got. The average for March has been fully 3s. per pound, and the top price 3s. 6d., which was reached the other day, is, we hope, the first and only time salmon will again touch it, this year at least.

When fish are not on the coast they cannot by any stretch of imagination be in the rivers. In fact, although the anglers on the middle waters have not fared quite so badly as those on the lower beats for lack of fresh fish, and have had occasionally bright flashes of sport when a favouring breeze was sandwiched in between the generally bad conditions that have prevailed since the middle of February, they will now be out of it for a time until the pools again get stocked with fresh run fish from the lower waters. On the upper waters, again, the prospects have been very considerably enhanced by the recent floods, and a late spring and good summer season is now well assured.

Finnock or whittling angling should now be at its best, but the late storm and succeeding floods have prevented more than a mere commencement being made. There is now a good show of finnock on the tidal waters of the North and South Esk, the Tyhan, the Ugie especially, and the Findhorn. These are undoubtedly the best spots to seek this most exciting of sports, where good baskets are a certainty with every glimpse of sunshine and every favouring breeze all through April and well into May. These fish run from 1lb. to 1lb., and

are got with the ordinary trout flies, with perhaps a small tube or Devon by way of a change. These tidal waters are now being eagerly sought after, and are usually let on easy terms at so much per day, week, or month, ranging from 1s., which is the charge on the Cruden Burn, to 5s., but the normal charge seldom exceeds 2s. 6d. per day, or thereabout. Of course many of these reaches are attached to hotels, and may be fished free by guests staying in the house. The best finnock and sea trout waters are at Tongue and Durness, in the far north of Sutherland, and in a week or two the fish will be pouring into the kyles all round these localities in teeming myriads; and where in an hour or so of a tide, when fished at the proper moment, baskets, we are assured on the most reliable authority, are made which are simply incredible. It is a pity such a paradise is so far removed from civilisation. Yet those who once go there and get bitten with the sea trout craze never rest till they can return again.

The brown trout season in Scotland promises well as far as present appearances go. The winter was an open one till lately, and the temperature all that could be desired till within the past few weeks, when matters were simply knocked on the head, as far as progress was concerned. The brown trout get into condition with the rising temperature and the resulting consequence, a daily increasing dainty diet. When well treated *fario* does not hide it. He will not remain lean in a land of plenty, but generously responds when generously treated. Hitherto there has been but a scanty appearance of March Browns, and not till Saturday last could it be said that they were really on the water in anything like quantity at all.

On Saturday there was a good show up of the sober-coated gentlemen, and since then the appearance of the March Brown has been quite magnificent. Trout are rising freely, and although not in anything like condition or the condition they will exhibit in the course of a week or so, yet they are wonderfully plump and fairly well coloured. On the far inland reaches and tributary streams, where the temperature is lower and food not so abundant, they are not so well favoured, nor much angled for till the middle of May and June, when they then rise freely to the fly, while the earlier trout again are not then so free with their offers as they are at present.

The late stormy weather has made the brown trout season fully a fortnight later than usual, and angling will not be general on the early trout waters of the Don, Deveron, Findhorn, and Beaulieu till the middle of the month. The practice even in an exceptionally mild season is to refrain from angling before the advent of April, and the Duke of Richmond and Gordon has fixed April 1 in his estate regulations and on his free waters as the commencement of the brown trout season, which is taken as a criterion for the north of Scotland generally, few, if any, waters being now fished much before that date.

It is somewhat unfortunate that his Royal Highness the Duke of York should have so timed his second early spring visit to the Dee so as to be met in the very teeth, as it were, with the very worst samples of weather for angling purposes possible to conceive, and that, too, on both occasions. It was plucky of the royal angler to face the rigours of an Arctic winter almost, if not altogether, day after day whenever it was possible to get out a line, and stick to his fishery till the end of his appointed time, while others, both far and near, took to warmer quarters in the south, and with express haste returned to town. The Duke deserves better sport than he got, but unfortunately the race is not always to the swift nor the battle to the strong, and we would reiterate with emphasis the Duke's own words when leaving Ballater, not only to him, but to all others similarly situated, "Better luck next time."

The angling outlook is, on the whole, much brighter than it has been any time since the middle of February, and if the prevailing westerly winds continue, and the pleasant, genial conditions of weather generally be vouchsafed for a few weeks at least, the spring salmon season may yet, in a measure, redeem itself from being a record failure, the finnock and early sea trout season an assured success, and the yellow or brown trout, if a little late, all the more acceptable from being

the more prolific. Everything depends on the whims of the weather clerk. Meantime, he smiles benignly. G. M.

THE THAMES AS A GAME-FISH RIVER.

BLACKWOOD'S MAGAZINE for April contains a brightly written article on "The Thames as a Game-Fish River," and we quite agree with the writer that, to make the Thames a really good trout river, fish of at least two years old should be put in at the rate of 100,000 a year for a few years. But we should never advocate this unless the limit in size of which they may be taken by anglers is very considerably reduced, as suggested by Mr. Wm. Senior.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Cannon-street Hotel on Wednesday, April 5. Mr. H. W. Lane was the chair. Mr. Moore gave some interesting experiences concerning the sea fishing in the north of France during his recent trip at Easter. Mr. Crisfield reported fishing at Hasling, taking thirteen small dabs and one flounder. Mr. Wood reported fishing off Hyde Pier, and taking one and a half score of small codfish one day, and three score the next, and a few dabs, biting with ragworm obtained from Arnall, of Gosport. Mr. Cantou reported that but little sport was to be obtained at St. Leonard's, either from boat or pier. The chairman drew attention to the fact that Mr. Greener, one of our members, with his wife, were in the *Strida* disaster, but were both saved. Mr. Clarke reported that Mr. Sexton, fishing off Deal Pier for pollack, had no success. Some interesting models of large pulley wheels were shown by Messrs. Bates and Canton. Mr. Clarke reported that he had seen Hanger's house at Deal, and thought it would be useful for summer use by members wishing to take their families to the seaside, and would be a great convenience during the winter fishing season. The hon. sec. announced that Mr. J. C. Willocks would read his paper on Wednesday, April 19, on "Sea Fishing at Shoreham," and that members were reminded that the annual dinner would be held on Wednesday next, April 12. Mr. Justice Bucknill in the chair, when it was hoped that all members would endeavour to attend and support our esteemed member. A new programme of lectures is being arranged for the summer season. The usual vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

FISHING TACKLE TRADES' DINNER.

LAST Thursday evening, at the Holborn Restaurant, was held the first annual dinner in connection with the fishing tackle trade, and the proceedings were of a most enjoyable and successful character. In the chair was Mr. A. Carter, with Mr. A. Meyer as his *vice-vice*, and among the company were Messrs. S. Alcock, J. Jeffreys, R. Heaton, sen., R. Heaton, jun., J. Gillett, J. Richardson, J. R. Richardson (Kingston), F. J. Ogden Smith (Twickenham), W. Martin, M. Enright, E. Perry, W. Perry, W. Clay, P. London, George Smith, F. J. Ogden Smith, W. Ogden Smith, H. Ogden Smith, H. H. Read, A. Ormonde, W. A. Hunter, W. Preddie, J. Souly, G. Hoyle, Otho B. Travers, Chas. Edwards, T. Ford, J. Revett, E. Kent, Fred Holden, Brandon Phillips, Frank Goodwin, Lawrence Barclay, J. Allen, and G. Rens.

After the usual loyal toast had been honoured, the CHAIRMAN, in a brief speech, gave the toast of the evening, "Success to the Fishing Tackle Trade," remarking that the manufacture of fishing tackle had now become a very flourishing British industry, and so far they had defied all competition from Continental houses, and were not troubled with the "made in Germany" nuisance. (Hear, hear, and applause.) America had made considerable headway in the manufacture of tackle, and introduced many novelties, but when their goods were compared with those turned out by the best fishing houses in this country the reputation of the latter was well maintained. (Applause.) He hoped the fishing tackle manufacturers over here would uphold that reputation for many years to come. (Hear, hear.) Unfortunately, as regarded the sale of their goods, the chairman continued, they were dependent in a great measure on the clerk of the weather, but he must say he had not been very lucky in that lately. The vagaries of the weather were well known. They had been kept very dry, for instance, which was neither good for fishing or fishermen. (Laughter.) With references to the dinner, now it had been inaugurated, he trusted that each year would see it grow in importance. (Applause.) In conclusion, he asked them to drink success to the fishing tackle trade, coupled with the name of Mr. S. Alcock.

The toast was most cordially received, and, in reply, Mr. S. ALCOCK expressed the pleasure it gave him to be there that evening and to respond to the toast proposed by Mr. Carter. When Mr. Alcock received an intimation of that meeting he at once thought it was a step in the right direction. (Hear, hear.) It was, he thought, the first gathering of its kind in connection with the trade, although the latter had progressed very rapidly and more so than any other trade in the country, and he hoped it would be continued annually, as he felt sure it would tend

to bring those engaged in the manufacture and sale of fishing tackle closer together, and cause a better understanding to prevail all round. (Hear, hear.) Mr. Allcock proceeded to refer to the many well-known fishing tackle dealers who had been established in London, and said that of those engaged in the trade when he first came to the metropolis over fifty years ago not one was now living. Fifty years ago the fishing tackle trade was in its infancy; to-day they saw it one of the staple trades of the country, and no trade had made greater progress. (Applause.) There had been great changes in that time. America had taught them how to prepare lines, but to-day they in this country could turn out lines of far superior quality. Split-cane rods were also introduced from across the herring pond, but to-day in England they made more and better quality rods than the Americans. In reels the improvements, finish, and workmanship had been very marvellous. As showing how the trade had developed, he might mention that his firm now employed 650 hands. Other firms were also growing up. The progress of the fishing tackle trade was largely due to the change in the habits of the people and to the angling clubs which had sprung up. Whereas fifty years ago there was scarcely an angling club to be found, to-day those clubs were very numerous. (Hear, hear.) Fishing was also good for the health of the people, and it was not only one of the healthiest, but the most innocent, sports we had. He (Mr. Allcock) would strongly recommend parents, if they wanted their sons—and their daughters, too—to grow up in health, to present them with a fishing rod. The literature on the subject of their sport had also encouraged the fishing tackle trade. (Hear, hear.) Boys read the angling papers now, and it induced them to go fishing. As regarded the angling Press, they were well represented by the *Field*, *Fishing Gazette*, and *Angler*. Mr. Allcock quoted as authors such well known writers as the late Francis Francis, and Mr. Halford, Mr. W. Senior, "John Bickerdyke," Mr. R. B. Mareton, Mr. Martin (the "Trent Otter"), and Mr. D. Foster, the author of the "Scientific Angler." Mr. Foster, he said, first taught them how to braze hooks with the blow pipe, and was also the first to introduce the drawing of gut through plates. He should think there were 100,000 strands of gut drawn each week now. In conclusion, Mr. Allcock said they did not live to be always making money—(hear, hear)—there was something in sociability, and he trusted that the pleasant gathering would be repeated, as it brought them together, and was beneficial to the trade. (Applause.)

The VICE-CHAIRMAN, in proposing "The Visitors," on behalf of the trade warmly welcomed them to the festive board. They were delighted to see them. Next year he hoped ladies would be invited. (Applause.) He asked his friends to drink a bumper to the visitors.

Mr. J. SCULLY acknowledged the toast, and suggested that the tackle trade should form a protection association of their own. They would find it very useful in more ways than one.

The next toast, that of "The Chairman and Vice-chairman," was submitted by Mr. R. HEATON, who, in referring to Mr. Carter, said he had been the means, in selling fishing tackle, of making thousands of Londoners happy. He was very delighted to meet him that night, also Mr. Meyer, who, he said, was a most genial and straightforward representative of the fishing tackle trade. In the course of his remarks Mr. Heaton also made some amusing allusions to his early experiences both in business and angling.

Messrs. CARTER and MEYER responded, and the latter concluded by proposing the health of Mr. Frank Clay, the hon. secretary to the dinner committee, and said he could not speak too highly of Mr. Clay's services. (Applause.) He had worked hard to secure them success, and, on behalf of the company, heartily thanked him. He also thanked the committee—Messrs. D. Slater, M. Enright, and H. H. Read—and regretted that Mr. Slater could not be with them, owing to illness.

Mr. F. CLAY said it was true he had had some work to do in arranging that dinner, but that work had been made easy from several causes. He had had a splendid committee, and Mr. Enright had worked heart and soul for the musical programme. As a result they had had a musical treat. (Applause.) From the trade he had received nothing but consideration and courtesy, and said the greatest thanks were due to Messrs. M. Carswell and Co., W. Bartlett and Sons, W. Currie and Co., H. Dodge and Son, and others for the generous support they had given to the function. He felt very honoured at being the hon. secretary of the first annual Fishing Tackle Trades' Dinner, and hoped at the next gathering they would have the ladies with them. (Applause.)

Other toasts were the "Artistes" and "The Press." Messrs. Holden and Enright responding for the former, and Messrs. G. H. Howard and A. R. Matthews for the latter toast, which was given by Mr. J. R. Richardson.

During the evening several members of the trade present suggested the formation of a protection society, and were in favour of a meeting being called on the subject. Mr. J. Richardson (Euston-road) spoke on the matter, and said he would propose that there be formed a Fishing Tackle Trades' Association. Mr. O. Smith (Hyde Park Corner), after also offering some remarks on the subject, said he should be pleased to second Mr. Joseph Richardson. Mr. O. Smith pointed out that the society would in several ways benefit the trade.

There was an excellent programme of music associated with the proceedings, thanks to the efforts of Messrs. M. Enright and F. Clay (the musical directors), the *artistes* including Messrs. Brandon Phillips, J. Allen, Mick Enright, W. James Clay, Lawrence Barclay, George Renn, Fred Holden, Charles Conyers, and Mr. G. Hedges, who proved an able accompanist. The pleasant proceedings eventually concluded with "God Save the Queen" and "Auld Lang Syne."

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—When the Easter holidays happen to fall in the early part of April, as it does this year, it practically starts two important periods in the Thames. First of all, anglers will recognise that of the opening of the trout fishing season; and the second, that of bringing out the pleasure boat traffic and the objectionable steam launches, which have driven some well-known anglers from the river. When I lived at Richmond the great attraction was that of the rowing boats, and it was a sight to witness the life there was then on the river and at the locks, the keepers being well employed in directing and controlling the boats that wanted to pass through. The opening of another trout season recalls to my mind many happy reminiscences of the past, and just now carries me back to the year 1870, when perhaps more large fish were taken than in other seasons since, and included the champion trout of 14lb. 9oz. taken by the late Mr. James Forbes, of Chertsey. There were also taken, one of 12lb.; two of 11lb. each; two of 10lb.; one of 9½lb.; one of 9¼lb.; two of 9lb.; and three of 8½lb.; and all were captured by members of the Thames Angling Preservation Society. The most fortunate anglers besides Mr. Forbes were Mr. Robert King, who secured the first fish of the season; Mr. F. M. Hyam, with George Rosewell as his fisherman, who creeled nine trout, weighing 6½lb. 14oz.; Mr. Edward Jenkyn, and Mr. T. R. Dyer. According to the official list fifty-five trout were taken in 1870, the gross weight being 306½lb. and the average weight 5½lb. 9½oz. It also appears none of the trout were taken below Hampton Court. The greatest number of trout taken in the season in my experience by any one fisherman was that of George Rosewell, in 1835, with Mr. George Palmer as his client, who creeled twenty-nine trout, weighing 127lb. 6oz.; and the same angler, two years afterwards, made a total of twenty-two trout, weighing 93lb. 10oz. After sending my general remarks last week I received a communication from the Thames Conservancy informing me the conservators had received representations from the Thames Angling Preservation Society as to the desirability of further restricting the use of the cast net in the river, and suggesting only those holders of deputations who are professional fishermen should have the power to use the net in future. And concurring in this view, they proposed that from and after April 1 only such holders of deputations as are fishermen registered under the Thames fishery bye-laws shall be allowed to use the cast net, and, relying on a ready acquiescence in the above, they will feel obliged if those who are not so registered will not, after the date named, use a cast net in the river. I am not desirous of expressing any opinion upon this, and only to say I shall willingly bow to the decision of the Thames Conservators, who have always been ready to do anything for the benefit and in the interests of the Thames fishery. There is no proof needed as to the river being well supplied with fish; but the action of those old and faithful workers in the interests of Thames preservation, I mean Messrs. T. and A. Stroud, as referred to in the Sunbury paragraph, is to be commended and admired, and is an additional testimony to the stock of good fish in the river. In my long experience as secretary of the T.A.P.S., I have frequently had to thank them for assistance so freely and willingly rendered in matters connected with the Thames fishery, and I am sure my successor will feel equally grateful to them for the work they have now done. Up to this morning (Wednesday) the only success that has been made in trout fishing has been at Staines, where Mr. T. W. Gomm, with that well-known fisherman Otter Hone, has captured three trout. One of my correspondents, writing on Monday, says: "Up to last evening I can hear nothing as regards the trout at Shepperton, Chertsey, Bell, or Boveney Weirs, except at Staines, all of which I visited yesterday. I heard of a very large trout having been landed at Marlow, a fish of 11lb. 2oz., but it requires confirmation."—B.

—(Datchet).—The trout fishing is not very promising at present. I never saw so little of them up to date, and I have been on the river more than usual. I was out with Mr. G. C. Tryon on April 1; caught a very pretty fish just over 2lb. He was returned. Had another run. On the 2nd I was out with a gentleman. Only saw one fish rise; missed him. On the 3rd, not a move to be seen anywhere; saw the first swallow.—G. LUMSDEN.

—(Eton).—The weather was most unfavourable for the opening of the trout season, and until the wind changes to a warmer quarter the fish will not rise. A number of anglers have been out in this district, but I have only heard of one fish, of 2½lb., being taken by one of Lumsden's patrons.—CECIL HOWLETT.

—(Hampton Court).—William Milbourne, writing on Tuesday, says: "There has been several good fish showing themselves the last few days, and scarcely anyone has been out to try for them except a few private boats, the anglers fishing by themselves. The water at the present time is in good order."

—(Kingston).—Head river keeper W. Douglas writes: "I have not heard of any trout being taken, and they are not feeding freely on account of the cold winds. The perch have not begun spawning yet."—B.

—(Staines).—Charles Hone reports that Mr. T. W. Gomm was out with him on the first day of the season, and caught two trout, one weighing 4½lb., and the other 2½lb.; and again on Monday, when he landed another of 4lb., the latter having been sent as a present to myself, and is a very handsome fish. I have received more trout from anglers since my retirement than during the forty years I was in office, and I am grateful to them for what I

have so far received. Charles Hone on Tuesday night landed a beautiful trout of 5½lb., making his fourth fish this season.—B.

—(Sunbury).—Messrs. T. and A. Stroud write: "Having seen the dace going up the ditches to spawn, we took one cast net up to the Watersplash ditch and caught about six bushels of the finest dace we have seen for a long time. We took our van and some large tubs, and brought them all back alive, and turned them into the river opposite our ferry."—B.

—(Weybridge).—Herbert Curr reports: "Just a line to say nothing has been done in our district with the trout. I was out on the first day, and again on Monday, and never saw a fish; and another day, with Mr. Ivan Caryll, with the same result."—B.

Ancholme District.—Trout fishing has now commenced, and all the local brooke were well occupied during the Easter holidays. Monday was an ideal spring day, and baskets of six and nine fish were about the average takes. The fish are in good condition. We had the first catch of the season on Sunday morning for breakfast.—THOMAS FORD (Caistor).

Dareath, &c. (Farningham).—Weather and water in very good order, and fish feeding a little. The dry fly was only moderately successful, a brace of fish a day being about the usual score. With a continuance of the present weather report is likely to improve, and if more heavy rain falls prospects will be still better, though the river may be out of order for a few hours. No serious floods are likely. March Brown is probably still the best fly, and is likely to be more effective at present wet than dry.—J. P. T.

Dart (Totnes and District).—The river has run somewhat low again, this being against the salmon fishing. Mr. Eddbrook, staying at Furzeleigh Mill, Ashburton, has killed a few, the weights of those landed by him recently being 5lb., 9lb., and 14lb. respectively, the bait chiefly used being the prawn. A number of salmon are in the river near Staverton, and several rods are constantly trying the spots where the fish are known to be located. Good flies are the Silver Doctor and Jock Scott. Trout are in better condition in the lower reaches than on the moor, and although sport during the Easter was not brilliant, takes were fair, running up to a couple of dozen. Last week creels of a few brace were made by Messrs. H. T. Distin, H. Full, M. Revell, and others; whilst Mr. E. Ackrell basketed a dozen, which included a trull of nearly 1½lb.—DEVONIAN.

Darwent (Malton, Yorks.).—The water has been very thick lately—snow water—but it is now fining down, and should be in good fishing order by the end of this week if the weather keeps fine.—H.

Devonshire Streams.—The Easter fishing did not afford such good sport as was anticipated, the streams being for the most part very low. Still, some fair takes of trout have been made, the Carey and other streams in the Ashwater district showing better results than many rivers. Two rods creeled nearly five dozen from the Tamar with the March Brown, Light Red Palmer, and Half Stone, whilst takes of ten and a half and nineteen and a half brace fell to the lot of two other anglers last week. Baskets on the southern border streams have averaged about six or nine brace, the Maxwell and Blue and Silver also proving good killing flies. Trout are plentiful in the Otter, but rain is needed. Some nice trout have been taken from the Avon, but sport on the Teign has been very bad, especially in the lower portions.—DEVONIAN.

Dove and Tributaries.—Sport has not been very good thus far. Trout are still not in first rate condition. A 5lb. trout was taken from a mill dam on the Ashbourne Association water on Friday last.—D. AND W. H. FOSTER (Ashbourne).

Eden (Carlisle).—There are more salmon showing in the pools now than there have been before this season. They seem to have slipped past the nets during the late heavy waters. Sport, however, has been anything but good, probably owing to the unsettled state of the river. An odd fish here and there is all that one hears of. Mr. Fraser Sandeman has had two, 20lb. and 16lb.; Mr. C. Liddell, of Warwick Hall, one; Mr. Slater, one, 16lb.; and Lord Brackley, one, 17lb., in the Crown Hotel water. Trout are now rising freely, and some good baskets have been made, chiefly with the Dark Bloa. There is still a great scarcity of fish in the Solway, but a few sea trout are being got.—SILVER GREY.

Esk (Whithy).—Since the advent of the holidays this river has been running in magnificent angling condition, and, consequent upon this, numerous enthusiasts have been out daily, and in almost every case numerous catches are recorded. On the higher reaches and up the small streams trout are to be seen in large numbers, whilst in the tideway and on the lower portion of the river there is also large quantities. The catches to hand up to writing are: Mr. L. Jefferson, five and a half brace; Mr. E. Lerg, four brace; Mr. J. Moor, nine brace; Mr. R. Linton, fifteen brace; Mr. John Godden, four brace; Mr. Saddler, five brace; Mr. J. C. Walker, eight brace; Miss D. Walker, seven brace; Mr. T. Mead, three brace. The worm was mainly effectual in landing the above trout, though in a few isolated cases March Brown has been instrumental.—J. J.

Exe and Canal (Exeter).—The weather has been every way enjoyable from a holiday point of view, but by no means conducive to sport. With a low water and bright sunshine, trout have proved difficult of approach, and although all the river sections were well patronised this Easter, the aggregate weight of trout taken was far below the spring average. War is being waged among the pike in the upper reaches of the Exe, several big fish having fallen victims to the net during past few days. The conservators have determined to as far as possible rid the rivers of these trout devourers, a decision which will be cordially endorsed by all trout anglers.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The Easter holiday turned out better than expected. We had a good downfall on the last days of March, and Bank Holiday was almost ideal. Several of our noted anglers sought their sport at a distance, and I fancy they had even better luck than anticipated. Early flies will now be hatching out fast.—LIMPET.

Idle District (North Notts.).—Most of our best trout anglers, and those who can afford it, betook themselves to Derbyshire and other places for their Easter holidays. A little exciting piscatorial incident happened at the mouth of the Idle the other day. A young whale was noticed disporting itself on the shallows, and managed to get itself into a tight place. It was attacked by the natives, who, after a time, managed to haul it ashore. The captors were led by Mr. W. T. Gent, of the chemical works, Stockwith. The fish measured over 14ft. After being photographed, the visitor has been pickled for exhibition. It is not often that whales get so high in the Trent. One weighing over two tons was captured a few years back at Owston Ferry. A shark, however, was once caught at Gainsboro'.—L.

Lake Vyrnwy (North Wales).—The weather for the past week has been very cold and boisterous, and the surface of the lake has been rough, and the water muddy. Still, very fair sport has been had, and anglers seem to be satisfied. The best basket of the week was made by Dr. Fenton and Mr. Foster, who creelred thirty-one fish on the 3rd, weighing 18lb. 14oz. On March 30, Dr. Fenton killed six (3lb. 8oz.); Mr. O'Hanlon, three (2lb. 2oz.); Mr. Oulton, four (3lb. 3oz.); and Mr. Gibson, eight (4lb. 12oz.). On March 31, Mr. Gibson took seven (4lb. 8oz.); Dr. Fenton, four (3lb. 10z.); and Mr. O'Hanlon, two (1lb. 8oz.). On April 1, Mr. O'Hanlon killed eight (4lb. 11lb.); Mr. Gibson, five (2lb. 9oz.); Dr. Fenton and Mr. Foster, five (3lb. 5oz.); and Mr. Oulton, two (1lb. 6oz.). On April 3, Mr. O'Hanlon killed eleven (5lb. 5oz.); Dr. Fenton and Mr. Foster, thirty-one (18lb. 14oz.); Mr. Beazley, three (1lb. 13oz.); and Mr. Gibson, three (1lb. 14oz.). On the 4th, Dr. Fenton and Mr. Foster killed eleven (6lb. 12oz.); Mr. Malpass, one fish (13oz.). To-day (April 5) the wind has moderated a good deal, and the baskets are sure to be heavier.—LONG DRIFT.

Lark (Lackford and Icklingham).—Only a few small trout have been taken up to the time of writing. The weather on the opening day was very mild. Messrs. Skinner Brothers, trout, 14oz., and a few pike. A quantity of small pike still continue to be killed, especially with trout baits. Mr. R. Major and Mr. G. A. Harvey, fishing on April 3, took five pike. I was out on April 1, and killed eight small pike and missed a good trout. Mr. A. Kemp and son, out on Monday, killed three pike on trout tackle, best fish 6lb. I have seen a few good trout, but they are not on the feed. We want another good rain to colour the water, which is very clear at present.—A. E. KEMP.

Lea.—Another coarse fishing season has been brought to a close on this river, Friday in last week being the final day for retaining roach, chub, &c. Sport appears to have been very quiet at the finish, and the season generally has been a most indifferent one. Not that fish are scarce in the river—far from it—but the extraordinary weather and want of water doubtless in a great measure accounted for the extremely poor sport so often met with. The river has this past season, however, yielded two large pike, as already recorded in the *Fishing Gazette*, one scaling 20lb. and the other 19lb. 8oz. These are not half bad pike for the Lea. A report reached me some time ago that a number of golden orfe had been taken at Waltham, but, from inquiries I made, I was unable to substantiate the same. One of the fish was said to have scaled 3lb. I hope anglers will have a better time of it among the roach next season. Anglers are now beginning to turn their thoughts to the trout, the season for which opens on May 1 next.—IZAIAK WALTON.

Lugg and Arrow (Leominster).—These celebrated trout and grayling streams are continuing to run in good order for fishing, being clear and at a nice level. The weather has been in every way suitable for angling during the holidays, and there have been more anglers out, and the fish have been more on the rise, there having been a good number of live flies out, and some very nice lots of fine trout have been landed. The flies used are the March Brown, Blue Dun, Cowdung, February Red, Red Spinner, and Palmer. Minnow fishing has been quiet as yet. The Pinsley is running clear, and in good order for fishing.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are in good order and a nice level. Yet still the weather continues variable; consequently sport during the holidays has been very indifferent. This (Wednesday) evening rain has just commenced, with every indication of continuing—glass falling—if so it will improve the chances of success in the near future. Very few flies to be seen. The March Brown has shown up, but in no great quantity. February Red, Blue Dun, and Red Palmer have accounted for the majority of trout taken. These, with March Brown, Brown Spinner, and Cowdung, should be best. A few Stone Fly out; not yet taking.—R. T. WILLIAMS.

Nene (Peterborough).—A few weeks since it was announced that a movement was on foot to procure fishing rights in some portions of the river Nene, and also in Lincolnshire waters, for the large number of Sheffielders who pay a visit to the district during the fishing season; but now the idea does not seem to be very favourably entertained in Lincolnshire, for the Deeping Fen trustees have declined to put their waters in competition. There was no organised opposition to the numerously signed petition, but it is stated that if the request had been granted a counter-petition would have been got up.—E. A. S.

North Staffordshire Rivers.—Rain fell all day on Good Friday, and coloured the stream, but by Monday they had sufficiently cleared to allow fly fishing. On the Blythe several rods obtained sport, including Messrs. Alfred Johnson, H. G. Cowleshaw, P. Hitchings, and self. The Tean Brook was also visited and successfully fished, though fish are coming very shy considering it is spring-time. Best flies: April Dun, Francis, Cockwing, and Coachman.—F. W. DALE.

Otter (Budleigh Salterton, Devon).—The fishing continues to be very poor as compared with past seasons, but it has slightly improved since last report. Yesterday (April 4) there were slight showers and a fresh up-stream wind, and some trout were taken. One rod on the Bicton water took seven pretty fish. To-day (April 5) there was a good rise of fly (chiefly Olive Duns) about 1 p.m., and the fish stirred for them. The river is very clear and low, and a good freshet would be welcome. At sea some capital pollack fishing has been done; one gentleman, using a rod, killed nine fish the other day weighing 35lb.—HERON.

Plowden Waters and Onny.—The opening day of the Plowden Fishing Club took place on Saturday last. Five rods were on the water. The sport was poor. Mr. Salt had thirteen; another gentleman, ten; Mr. Green, five; Mr. T. Howells, four; Dr. George, six. The killing flies were the March Brown and the Orl in the order named. The day was unfavourable, a north-east wind blowing. Water low and clear. Rain is wanted. Nothing much has been done on the hotel water at Craven Arms, this part of the water being, as a rule, three weeks later than the Longmynd portion. Two brace were caught during the week. Good sport is anticipated here the last week in April, and the whole of May and June.—TRUTH.

Plymouth.—Some of our rivers are in fair condition, more particularly the Dart, and some nice baskets have been taken by those who have been out. I heard of a nice basket taken on Bank Holiday on the Avon. They all averaged a fair size, and one over 14lb. There were several rods on the Tavy and Walkham, but they did not do much—from half a dozen to one and a half dozen each. The Fowey is in very good condition, but the keeper says that the lower reaches are swarming with salmon fry, which have driven the trout to the higher waters on the moor. This is the first I have heard of salmon fry driving trout. I can well imagine peal or salmon doing this.—WILLIAM HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—Owing to the very fine weather experienced here during the Easter holidays the snow on the Welsh hills melted, and was very much in evidence in all these rivers during the time the visitors here were anxious to catch fish. The most successful angler was a lady, Mrs. Macnab, of Liverpool, who captured a pike of 7½lb. weight. Many smaller pike were also captured, and a few trout in splendid condition, both in the Tanat, Cain, and Vyrnwy, but no good sport can be had until the snow water is cleared off.—VYRNWY.

Sussex Rivers and Chichester Canal.—Rivers are in good order, and the weather during the holidays, although fine, was a shade cold for roaching. From the Ouse, on Friday and Saturday, a few fish were secured, Messrs. Ash and Doughty taking roach up to 1½lb. Other anglers also had a few fish. Mr. Durrant, while spinning, caught a sea trout of 2lb. 10z., and a fine chub of 4lb. 6oz. was taken with lob worm. The cold winds on the 2nd and 3rd put roach quite off feed. Numbers of good trout are to be seen in the river, some few fish computed at 3lb. From the Ouse tributaries several brace, averaging 6oz., have been taken with worm or minnow, the narrow and wooded streams scarcely allowing the use of fly. Six brace were recently taken by stirring up the water in the top pool and fishing with worm in the clouded water below. A few small trout have been caught from tributaries of the Adur from private land, but nothing exceeding 8oz. The streams in the vicinity of Chichester hold a few trout, and running a maiden lob through the culverts under the roadways has secured fish up to 3lb. A few smelt are in the harbours. A few have been taken at the Apuldrum sluice, Chichester Harbour, with rag worm; but warmer weather is needed to bring them up in quantities.—GEORGE F. SALTER.

Taw (North Devon).—The rain at Easter, although not very much, brought fishermen out, with the result that a few nice fish were taken. On Saturday (the opening of the salmon fishing) the scarcity of water prevented salmon from running up, and only one kelt was hooked. I am told that a novice, fishing in the Taw, was deprived of his tackle by the bailiff, who found some fingerlings in his creel. The gentleman thought they were trout. Flies are the killing baits. On my way to the country, on Saturday, I saw an angler land a 1lb. fish over a high bank, and broke his rod. Others were catching sizeable fish, about ½lb. to 1lb. All our rivers are not yet open, the owner being abroad. No one to give permit until he takes possession of his newly inherited property.—RUSTY GAME.

Teme (Ludlow).—The Teme in this part is still running clear and a nice height, and in good order for fishing. The weather has been beautiful and fine during the holidays, and a good number of anglers have availed themselves of the chance of wetting a line. There has been a good few flies on the water, and the fish have been rising better at them. The best killing flies are the Blue Dun, March Brown, Cowdung, February Red, Palmers, and Red Spinner. Bottom fishing has been tried with the worm, and several large fish have been landed. Rain has threatened, and a good shower or two would do much to refresh the river and improve sport. On Good Friday there were a good number of anglers out, and several very nice dishes of trout were taken with the fly. In the public water on Saturday some nice trout were landed by Mr. R. Smith with fly. Fishing on Monday, an angler landed

eight good trout with the March Brown and Blue Dun. With the worm, on Monday afternoon, three trout (½lb. each) were landed.—S. LUDLOW.

Teme (Tenbury).—This part has been favoured with most beautiful weather for the holidays, and the river could not have been in better order for angling, being clear and a nice height, and there has been a fair number of anglers out. The fish have been moving better, and more live flies have been on, and improved the prospects of sport a great deal. There has been a little rain, but more would do good, and would refresh the river. The flies used are the February Red, Blue Dun, March Brown, Palmers, and Cowdung Fly, and some very nice sized fish have been landed, and there is every prospect of some good dishes of fish being landed as the season advances. The Rca, Kyre, and Ledwyche are all clear.—WORCESTER.

Wey and Tributaries (Liphook).—Water a little coloured on Monday; will be in fair order for some time with moderate weather. Plenty of small fish showing, chiefly in refusing the fly. Rising short continued nearly all the while I was fishing; and it was quite the exception to hook a fish for the first two hours. Then a change came, and for ten minutes every fish that rose was landed. In this interval I had four, and during the rest of day only five. My companion hooked a 1lb. fish, but none of mine reached half that size, the conditions being more like Devon than Hants. The Silver Sedge and March Brown were best; and most of the fish took (or didn't take) under water. Fishing here can be had at small cost by applying to Mr. H. Warren, Liphook, Hants.—J. P. T.

Witham, &c. (Mid-Lincolnshire).—The change that has come over the weather within the last fortnight has been very welcome to the fish gone for spawning purposes into the smaller drains. Time was when the poacher ran riot amongst them. Thanks to the vigilance of those interested in angling this has come to an end, or nearly so. There is not much netting now in the visitors absence. Bank Holiday was very favourable for those who went out for a turn at trout fishing. Rain on Friday put colour in the water, and the warmth of Sunday and Monday stimulated aquatic life. Some visitors were abroad in the Wolds district, whilst the upper Witham had a few patrons.—LUCE.

Wye and Derwent (Derbyshire).—Up to the end of last week the above rivers were too high and discoloured for fly fishing, therefore only a few anglers were out. There has been a fair number of Easter holiday fishermen, but they have met with poor success, especially fly fishermen. On that portion of the Derwent where bottom fishing is allowed several nice trout have been landed. Members of the Chatsworth fishery have, I believe, the privilege of using ground bait, which is an advantage in the early part of the season. Several members of the Matlock and Cromford Angling Association have been out, but I only heard of one gentleman from Nottingham taking one trout over 2lb. from the Lover's Walk side of the river, Matlock Bath. These rivers are in order, and as we are having genial weather the prospect for angling is fairly good, when the following flies will be found useful: Cooper's Fancy, Cockwinged Dun, Olive Dun, Grannom or Green Tail, and Claret Bumble, to be used as a wet fly.—DOTTEREL.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—All our rivers were in splendid fettle, and a week ago prospects for Easter looked bright, but Good Friday unfortunately was as wretched as it well could be, and but few of the numerous anglers that had arrived at the different angling inns ventured out until the day was well advanced, and the pluvial downpour had somewhat abated. Their takes, as might be expected, were moderate, and the few trout caught were basketed by the aid of the "up-stream worm," as fishing with a well scoured brandling or dew worm well up stream, with fine tackle, is called in Yorkshire. The weather on Saturday improved, and on Easter Monday it was favourable enough for angling except a rather boisterous wind, but there was an almost total absence of fly to be seen on the water. Beyond an odd Needle Brown and a few spiders I found no winged insect life, and my trout were all caught with the worm, fished as above described. This is the experience of all the anglers I came across up the Yore, several of whom turned their attention to ridding the trout waters of pike, and with fair success, one angler getting half a dozen fish, and he said he could have killed as many more, for they were "dead on the feed," but as he was then some distance from his hotel he did not care to take any more. Mr. Middlemost, of Huddersfield, had good sport amongst the trout in West Burton Beck on Saturday. He tried the Yore on Monday and Tuesday, but with moderate success, being unable to keep his flies on the water. Winds, I might say, have been the *bête noire* of the angler both yesterday and to-day, and angling almost out of the question, consequently fishing in the Cover has not been good. This is also the case lower down, at Masham and Tanfield. Talking of Tanfield, I hear T. Sturdy, jun., of Masham, has been appointed bailiff to the Tanfield Club. From what I know of him, I think the club have secured a good man. He is well bred for the job, his father being one of the best fishermen in the district. My Swaledale correspondent writes in a similar strain to the above notes, viz., plenty of anglers, any amount of high winds and light baskets; and, to sum up, the reports received from the Wharfe, Nidd, &c., up to closing of this letter, describe the Easter angling so far as disappointing, owing to the boisterous weather and a lack of flies on the water. As soon as conditions are more favourable the Little Brown (Dark Woodcock and Orange), Spanish Needle, March Brown, Snipe and Purple, Snipe and Yellow, Spring Black, and Waterhen Bloat, will all kill in any of our Yorkshire trout streams.—J. E.

MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAPH.—All the Yorkshire rivers have two or three feet of fresh water in from the gales and rain storms of yesterday. There is a great improvement in the weather, and every prospect for sport with the worm, minnow, and flies. The very best cast to use is Winter Brown, Dark Snipe and Purple, Waterhen Bloa, and Spanish Needle. The Hawes and High Abbotside Angling Association turned into their waters 2000 yearling brown trout yesterday. The fish were very fine, not one being lost on the journey in spite of the rough weather. Some good sport has been had in this water, the takes averaging from four to ten brace. Two gentlemen from Keighley had heavy baskets yesterday, caught with worm and natural minnow. Prospects for next week good.—J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Border Esk and Liddle.—Both rivers are running high, consequent upon the thaw and the heavy rains of last week. It is hoped the flood will have cleared away almost all, if not the whole, of the spawned salmon to the salt water, thereby encouraging the run of spring fish from the Solway. The number of spring fish is unprecedentedly small; but as the nets near the mouth of the Esk have been doing almost nothing, it is apparent that there are few fish forward yet to enter the rivers and furnish sport for rod fishers. Both in the lower and mid reaches scarcely anything is being done, but an improvement is now looked for. In the Langholm water some fairly sized yellow trout have been got by a few persevering anglers. Mr. Mason, of Rockliffe, has had little sport since last week; indeed, nothing worth recording has been done either in the Longtown or the Metal Bridge water. The depth of rain that fell at Langholm during March amounted to 5.16in., as compared with 2.52in. during the corresponding month of last year. This is 1.08in. above the average for the previous twelve years. Rain or snow fell on fifteen days, greatest fall on the 28th—1.65in. There will be more wet weather in the near future, consequently it may safely be prognosticated that the sport will revive in the course of a week or ten days.—GILNCKIE.

Carron (Easter Ross, Ardgay, N.B.).—About the middle of last month the weather was so stormy that all anglers from the south left the district, as prior to that from the opening only two salmon were landed. These were beauties of 26lb. and 18lb. Last week a change came, and rain fell incessantly for some days, followed by other days of bright sunshine. On Tuesday this week the storm broke out afresh, with abnormal severity for this time of year. The only sport to record is as follows: On Saturday, Mr. George Ross, Braeangwell, fishing for Mr. F. Gervers, of Amat, landed a nice salmon on the Braeangwell water. On Monday this week he caught two salmon; and Mr. R. T. Coupland, of Grunards, one on Grunards water. On Tuesday, Mr. George Ross landed two. Mr. Coupland and Mr. Gervers hail from South Kensington. The six fish caught during these three days ranged from 7lb. to 10lb.—B.

Culag Hotel Waters (Lochinver, N.B.).—A 9lb. salmon was taken off Lower Inver on April 4, caught by "MacNab."—JOHN MACKENZIE.

Deveron (Banffshire).—This river has been in very bad condition both for angling and net fishing for some time back. In fact the water was so big last week by the rainfall and the melting of snow on the hills that it was very difficult for the net fishermen to handle the nets. The water was so discoloured by the debris that the sea for a long distance out was of a different hue. The spate brought down a number of kelts. In the beginning of this week, when the water was falling, there was a slight improvement in the net fishings, and the number of salmon caught up to the middle of the week was larger than that for several weeks past. On the coast the fishing at the various stations also showed an improvement. On Monday a large box weighing over 2cwt. was consigned to the market, and on Tuesday another of smaller size. The salmon are of fair size, averaging 9lb., and of good quality. It will be some time before the water is in proper condition for anglers. The section of water belonging to Huntly Lodge opened on Saturday last. A fair number of salmon are continuing to be got in the nets on the coast of Gardentown near this.—H. W.

Loch Katrine (Stronachlachar Hotel).—Out from Stronachlachar Hotel, Loch Katrine, on April 3, Messrs. Cunningham and Fergus McLellan, fishing on Loch Chon, caught twenty-four splendid trout, weighing 14lb.—DONALD FERGUSON.

Lochleven (Kinross).—First blood was drawn this season on Lochleven on Monday, when eight members of the Uddington Waltonian Club competed. The weather was very mild, with a favourable breeze, but the water was in very bad order and dirty from flooding, and fish were not taking. There were six baskets, which contained eleven trout (7lb. 6oz.). The first prize was carried off by Mr. J. Cranston, who had four trout, all caught with fly; their weight was 1lb. 10oz. Second, Mr. J. Shaw, two trout, 1lb. 7oz. Third, Mr. R. Craig, one trout, 1lb. 4oz. Fourth, Mr. G. A. Shanks, one trout, 14oz. Heaviest trout, Mr. R. Craig, 1lb. 4oz.—ROBERT LAING.

Loch Tay (Kenmore, Perthshire, N.B.).—On the Reserve water, March 25, Macdiarmid, keeper, killed salmon, 18lb. March 28, on the Hotel water, Mrs. Knight killed salmon, 19lb. April 3, on the Hotel water, Mr. James Lord killed two salmon, 21lb. and 20lb.; Mr. Knight, one of 16lb. April 4th, on the Hotel water, Mr. James Lord killed salmon, 17lb.—W. KNIGHT.

Loch Tay (Killin, N.B.).—On March 25, Mr. A. Cameron had two salmon, 24lb. and 17lb. On March 29, Capt. Cuthbert had one, 17lb. On April 1, Capt. Cuth-

bert had one, 14lb. On April 3, Mr. Whem had one, 20lb. On April 4, Capt. Cuthbert had one, 19lb. Stormy weather has been much against fishing.—H. J. MAISEY.

Lyon (Fortingall Hotel, Perthshire).—Gentlemen fishing from the hotel: Mr. Stewart landed a beautiful salmon, on March 28, of 16lb.; Mr. Joanindis, of Liverpool, landed a beautiful salmon on the 30th of 23lb.; and Mr. Stewart, one of 16lb. Also Mr. Stewart, on April 1, landed one of 17lb. River in ply.—PAUL MACPHAIL.

Naver (Bettyhill, via Thurso, N.B.).—For a time since last reported both Naver and Borgie rivers were frozen over, while shooting lodges occupied by anglers were snowed up, and roads were blocked. Under such conditions sport could not be expected. Last week, however, ushered in a change for the better, although the weather is still very unsettled. The Naver overflowed its banks; in fact, it was not in such high flood since 1891. The sport has been as follows: On March 29, Mr. Marston, Skelpick Lodge, one salmon on beat No. 6. On 30th, Gen. Home, Syre Lodge, had one on same beat; Mr. Marston, one on No. 1; and Mr. Earle Drax, one on No. 2. On 31st, Mr. Marston, one salmon on No. 2; Col. Fryer, Dalvina Lodge, one on No. 4; Col. Willson, Syre Lodge, one on No. 6. Gen. Home lost a salmon on No. 1 when almost ready for the gaff. On April 1, Col. Willson, Syre Lodge, caught a salmon on No. 1. Hills deeply coated with snow, and river still in flood.—B.

North-East of Scotland.—Weather conditions have been much more favourable, and every day since Friday last the improvement has increased. Sport has been fairly rife on the upper pools, and a few fresh fish are being met with on the lower waters. Fish are coming on the coast more freely, and the prospects for April are, on the whole, wonderfully bright. On the Invercauld Dee private water, Mr. L. H. Crake, after being stormed off for some weeks, has again made a fresh start by landing an 8lb. fish. The Duke of York brought his spring season to a close on the Balmoral reaches on Monday evening, and returned to town, accompanied by his querry, Sir Chas. Cust, Bart., on Tuesday. The Duke's heaviest fish was 16½lb. He had also two of 9lb., and one of 7lb., and another of 8lb. On the Aboyne Hotel waters, on Tuesday, Mr. Scott had one of 16lb.; Mr. Cobbold, one of 16lb.; and Mr. Crawshaw, a small fish of 5lb. On the Ballater reaches, Mr. Bristowe and Mr. Miller are getting fair sport since the river began to fall. On the Kincardine water, Major Davidson's keeper had one of 8lb. and one of 7lb. On the Ballagie section, Mr. Eustace Drummond creeled a fine fish of 16½lb.; and the Hon. E. T. Brooks had one of 6lb. on the Lodge water; while Dr. Hood creeled one of 6lb. On the Ballagie section, Mr. Edward Drummond caught one of 8lb.; and Mr. Walter Davidson one of 8½lb. on Lower Dess. Most of these were got on Friday after the river began to subside. The Duke of York left on Wednesday morning instead of Tuesday, as at first arranged. He had very good sport on Monday and Tuesday, winding up his spring salmon season with two beauties, of 7lb. and 10lb., on Tuesday. He had also two the previous day. Sir Charles Cust has had no clean fish. On the Glentana waters, on Saturday, Col. Brinckman had three fine fish, scaling 20lb., 10lb., and 8lb., and two on Tuesday of similar weights; while Mr. H. Barclay had two on Monday, of 6lb. and 7lb. Both are staying at Profert's Dinnet. The season on the Deveron opened on Saturday, when several anglers from Edinburgh had baskets of trout ranging up to 10lb. On the Ythan the smolt suspension is now in force in the tidal waters, but the Ellon and upper waters are free. On the Ugie good finnock fishing was enjoyed on Monday, and several up to 1lb. were got by Mr. Ingram and others.—G. M.

South of Scotland.—The rivers in this district have again been disturbed with many floods since last week's report. To-day (Wednesday) more rain is falling, and the rivers were in flood this morning. On Easter Monday the waters were in good order for fly, and some fair sport was had by visitors and local anglers among trout. The spring salmon fishing, however, has been much of a failure, and the catches disappointingly small on all the rivers in the South of Scotland. For some reason or other spring fish have not been running in the Solway nets, and at some of the principal fisheries the catches have been greatly smaller as compared with the corresponding date last year. A few have been taken this week in the stake nets. Sea trout are just beginning to show now, as they generally do with the commencement of April, but only two or three per tide are being caught. With a spell of more genial weather they would be sure to come on. Sea trout like mild weather for migrating, and the warmer the weather the more trout.

THE ANNAN.—In this river not much has been done, as the waters have been generally out of condition for fly in all the middle and lower reaches. In the Black Pool the other day, Mr. McEwan, of Marple, near Manchester, hooked a fine salmon. After playing his fish for nearly an hour, the lad in lifting the fish out of the water broke the cast, and the salmon fell into the pool, and lay belly upmost for several minutes before recovering, when it swam slowly away. Mr. McEwan had no gaff, and the fish was in deep water at the side of a very steep bank. The same angler hooked and lost a salmon on Monday with minnow. He also hooked and lost a good pike on the same lure. Several anglers had some fair sport among yellow trout in the tributary streams during the Easter holidays, and a number were out in the higher waters below Moffat, where some sport was had. The yellow trout are not quite in the pink of condition yet, and would be all the better for another fortnight to fatten on the March Brown Fly. This week the March Brown has been on the water in considerable numbers, and trout have been rising freely at that fly. **THE NITH.**—Sport has been rather poor on this river. The main stream is not yet giving much sport at all, and yellow trout are not

in the shallow waters yet, the best catches being at the sides of deep pools. Some anglers have had fair sport on the tributaries, the Cairn and Cluden affording the best catches, and the fly being preferred to worm bait. **THE GALLOWAY RIVERS.**—The reports from the waters of this district show little sport over the Easter holidays, owing to the waters being in spate. **AYRSHIRE.**—Anglers are now preparing their tackle, to begin fishing the lochs. Not many have been out, so far, but a few small catches have been made of yellow trout. As soon as the weather settles some pretty fair baskets are expected on Loch Doon, of Dalmellington, where the angling is free to all who like to fish this loch. Loch Finlas is also good. In May some fine baskets are taken on both of the above lochs with fly. Boats can be hired from the Eglinton Hotel, as also the Black Bull, both hotels being in Dalmellington. Anglers, however, can fish from the shore if they prefer to do so. **THE CUMBERLAND DERWENT AND COCKER.**—Both weather and waters has been against sport, and a good deal of melted snow has been in the rivers. Some nice baskets of trout, however, have been caught since last week. Mr. D. Pollock, of Cockermouth, had a very nice basket of yellow trout on the Cocker, his best fish weighing 1½lb. Mr. Thos. Ritson landed seventeen in the same river with fly, on Saturday afternoon, at Southwaite Rake Pool.

Tweed, Teviot, and other Border Rivers.—The weather in the Border district since my last notes appeared, a fortnight ago, has been most variable. Fly fishers ten days ago had not the best of the time, the bait fishers having had a good innings. However, everything comes to an end, and as the flood subsided and the waters cleared, we, the fly anglers, have had no reason to complain so far as regards takes are concerned, but the fish are really not yet in anything like fit condition, notwithstanding the openness of the past winter season. To-day (Wednesday) we have yet another flood of 2ft. in the Tweed, the main river, caused by rain and wind in the west, but, strange to say, the Teviot has not as yet (4 p.m.) been touched with any increase of flood water. As to salmon angling—well, there has been little. The only take sent to me was one salmon, killed on the Tweed by Capt. French, on the Tillmouth Park water, and the fish turned the scale at 13½lb. There have, besides, been a good many kelts landed during the past ten days in the Tweed, but on the Teviot not a fish of any kind has either been killed or landed. Of those who have been most fortunate amongst the trout we mention Mr. Thomas Pringle, Westwood Cottage, Kelso, who on one occasion had a dozen and a half of nice fish, one of which weighed fully 1½lb., while he lost a much heavier trout just while netting it. The lure for this take was minnow. During the recedence of the floods in the rivers a week ago bait fishers were "on the job," and a right good time they had of it. Most of the baskets were said to have been killed with worm or some other bait. Mr. Wm. Mercer, Kelso, had 6lb., and on the following day, on the Eden, he had 10lb. Some of these trout, however, were got at the mouth of the Eden, on the Tweed. Mr. Archibald Steel, jun., Kelso, on Tweed, 7lb.; Mr. Richard Newton, Kelso, 5lb., on Teviot; Mr. David Maxwell, 4lb. and 6lb.; Mr. James Anderson, 5lb., on Teviot; and Mr. A. Cockburn, ten trout, with minnow, on Monday, weighing 4lb., on the Tweed and Teviot. Strange to say that on the tributary streams, such as the Kale, Bowmont, Colledge, Ale, and Rule, trout are very scarce, and scarcely any baskets can at present be made. This looks crooked a bit, as on these streams in the spring nice dishes of trout used formerly to be got. During the present week, on the Tweed and Teviot, fly fishers, taking advantage of the weather and state of the water, have had a fair good innings. On Monday, on the Tweed, Mr. J. Turner, London, had 7lb. (Bamff Mill cast); and on other two occasions he had 4lb. and 6lb. Mr. David Maxwell and friend, on Tweed and Teviot, have had baskets of 6lb., 7lb., and 8lb. Mr. Duncan Hill, Queen's Head Hotel, Kelso, on Teviot, fishing from the bank, had 7½lb. of fine trout. On Monday, Mr. Robert Robertson, on the same stream, had 5lb. On the Tweed, Mr. James McCutcheon, Alnwick, had a fine dish of 10lb., including one clean run sea trout of 2lb. Mr. A. McCutcheon, jun., Alnwick, on two or three occasions had baskets of from 5lb., 7lb., up to 10lb., on Tweed and Teviot. On Monday, on the Tweed, Mr. James Wilson had 10lb. On the same water, on Saturday and Monday, Mr. William Shiell, Kelso, had two baskets, weighing in the aggregate 21lb. Mr. William Hardy, commission agent, Kelso, had 12lb., on Tweed, on Monday. During the past ten days Mr. James Hogg, gardener, has killed on the Tweed, Teviot, and Eden baskets of trout weighing from 4lb. up to 7lb. and 10lb.; Mr. E. G. Bond, on the Tweed, has had dishes of 4lb., 5lb., 7lb., and 8lb.; and Mr. Charles Farquharson, on the Tweed, has had takes ranging from 4lb. up to 10lb. and 12lb. of trout. Trout competitions are now just again starting for the season. The Kelso Angling Association have fixed their spring one for Monday next, and the Good Friday competition of the Canties Club (Berwickshire) came off on that day under unfavourable circumstances, the river being full of snow water. A good number turned out, however, and fair sport was had.—MAXWHEEL.

IRISH REPORTS.

Ballinderry (Coagh, co. Tyrone).—This stream was in fair order this week. Up to date trouting has just been middling, as the weather was very cold, which kept the trout from rising. During the Easter holidays a good many anglers were out with medium success. Trouting has fallen off 50 per cent. in the past five years; causes, pike and pollution.—J. A. B.

Bann.—This river is very low for so early in the season, and trout are beginning to rise to the early Blue Dun on the shallows at Kilrea. On 1st inst. John Dramond, boatman, took the first two trout of the season on the fly, 1½lb. and 2½lb. each. The kelts will all soon

have gone to the sea and spring fish taken their places. On 3rd inst. two newly run salmon were taken in the Culls, Colea'ne. It is expected there will be good sport on all the reaches during the coming summer, which is certain to be a cold one.—DANIEL O'FEE. [How does Mr. Daniel O'Fee know it is "certain" to be a cold summer?—ED.]

Blackwater (co. Cork).—Weather and water have been all that could be desired for past week, and some good fish have been killed on different portions of the river. On the Ballydniff Fishery, on 3rd inst., Mr. S. Haynes had a fine fish, 20lb. Fish are reported to be numerous on the upper Blackwater above Mallow.—W. HAYNES AND SON.

Blackwater (Monaghan).—The river here is too high for anything but bait fishing, and as the trout are glutted with bottom feeding by a succession of freshets they will hardly look at anything. Last week, when the river was down a bit, lots of pike up to 6lb. and 7lb. were killed.—J. A. B.

Boyne (Navan Section).—The rain last week raised the river a few inches, but as this was bog water from the Blackwater watershed it did harm, and although the river is now well stocked with fish they have been very sulky for some days. Since my last report I can only hear of twelve fish, average about 14lb., being taken on Upper Blackcastle; one of 24lb. on Lower Blackcastle; four or five, including one of 28lb., on Ardmulchan. The water is still too low for sport.—CLARET FLY.

Cork Rivers.—Sport has not been up to anticipation on any of the Cork rivers open for angling, though matters continue to show some improvement. The numbers of salmon taken by anglers on the principal rivers have been rather few and far between since last report; but trout fishers, on the other hand, had generally fair sport.—T. J. D.

Corrib (Galway).—Despite the adverse climatic conditions of the past two weeks, angling has improved considerably on this river, famed for its salmon fishing. Since the last freshet the stock of salmon has largely increased, so that the river is well tenanted at present. Amongst those recently out were Gen. Dashwood, Lieut. Dundas, R.N., Capt. Keshbrooke, Mr. W. Townsend, and the brother professionals, the Lydons. Shrimping accounts for the majority of the fish killed up to date. Trout on the tributaries was pretty good.—J. A. B.

Cummeragh and Inny.—Salmon are now pretty numerous in the deep pools on the Cummeragh, but no salmon anglers have been out on this water. Brown trout are giving good sport on this river and on the Inny.—T. J. D.

Erne (Ballyshannon and Belleek).—Mr. Wise, Mr. Cleary, and Mr. Moohan took several fine trout, weighing from 1½lb. to 3½lb., on the 28th, 29th, and 30th ult.—M. ROGAN AND SONS.

Kerry Rivers.—Sport has shown some improvement all round, though it is still far from being good on any of the Kerry rivers. Spring salmon are now arriving in good numbers on all the rivers flowing into the sea between Dingle and Kenmare.—T. J. D.

Lee (co. Cork).—The weather has been very favourable for salmon fishing for the past week, and numbers of fish are showing in all parts of the river. On Lee Mount, Mr. W. T. Crawshaw, one, 6lb. On Fargus, Capt. Douglas Pennant, five, averaging 9lb. On Ballineadig, Mr. B. C. R. Lanner, one, 12lb. On Innislinga, Capt. Gubbins, R.A., one, 18½lb. On Cronody, Capt. de Montmorency, Hants. Regiment, 14½lb. On Ashton, O. L. Evans, 14lb.—W. HAYNES AND SON.

Lough Currane Waterville, co. Kerry.—Salmon angling is now improving, though it is still far from being good. Four salmon were had last week, viz., two by Surgeon-Col. Barry, Bayview Hotel; two by Edmund Dennehy; and one by Johnny Brennan. The fish averaged 10½lb. At time of writing spring salmon are coming up in far better numbers, as is plainly evidenced by the takes had last week at the weir on the river. Last week fine sport was got on the channels between the rocky islands and the shore at brown trout.—T. J. D.

Lough Melvin.—The following salmon were taken on this lake during the past week: Mr. A. J. Troup landed three salmon on the 1st inst. of 11½lb., 9½lb., and 8lb., Mr. J. R. Fisher took one salmon of 9½lb. on same day, Mr. Bryce-Smith landed one salmon weighing 10lb. on 1st inst.; also Mr. F. Broadbent and Mr. E. Hayman took two salmon on the 1st inst., one of 9lb. and one of 10lb. Trout was fairly good on some days since last report, and a number of baskets of gillaroo and brown trout weighing from 8½lb. to 13lb. each were taken by anglers out from Ballyshannon, Bandon, &c.—M. ROGAN AND SONS.

Lough Melvin (Lower Reaches, Kinlough End).—Good sport was had amongst the trout by fly anglers during the greater part of the past week. Catches too numerous for separate mention. Amongst the most successful rodsters Mr. O. Dowd and party (England), Mr. Wood (Lisburn), and Mr. Johnston had baskets on many days to average from one and a half to three dozen daily. Several nice trout were had trolling, from 1lb. to 4lb. Salmon anglers had also fair success. Weather conditions are still favourable.—P. GALLAGHER.

Lough Neagh.—This week the weather was rather boisterous, but on the whole favourable to the fishermen. For years I have not seen so many fine lake trout taken, huge fellows up to 12lb., which would give great sport on a line. Trout fishing on the tributaries shows an improvement. Pollan fishing is also pretty good, the takes being pretty large on the Tyrone shores. On the "flats" or sand shoals in the Lough the trout will rise to the fly, but very few try this sport. Cross-lining, though illegal, is much indulged in off the Armagh shores.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport continues good on all the above waters. The best baskets

were had after 3 p.m. each day, and the following were the best baskets had last week on the different waters: On Drenane, one of three dozen brown trout, 13lb.; on Cummeravan, one of thirty, 9lb.; on Coomcateam, one of twenty-nine, 8½lb.; and on Coomavohor, one of four dozen, 10½lb.—THOS. J. DENNEHY.

Mourne (Newtonstewart, co. Tyrone).—The season opened on Saturday, the 1st inst., with the river in excellent order and very favourable, despite the cold weather. Messrs. McIlwaine and Kennedy, on the opening day, killed 7lb. and 8lb. of brown trout respectively. Amongst the anglers stopping in the Abercorn Arms are Capt. Costobadie, Capt. Ansley, Mr. Costobadie, Mr. Welsh, and Mr. Warren, all of whom have had fair sport.—J. A. B.

Moy Hotel Private Waters (Ballina).—During the last week the river has been in flood, just fishable now; some clean fish showing on the pools. Mr. W. C. Wilson, on Monday, rose one fish and hooked two others. Mr. J. Schrop had some nice trout on the lake last week. Mr. J. Timlin hooked a fish on April 2. Prospects of fishing fair on the river.—JOHN DEVER.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—Weather very much against angling; river high and much discoloured for the past week. Several kelts have been landed on the Shallows by Dr. Smart, and new fish 13lb. Parts of the Lough have been discoloured also; few anglers are getting few trout on occasional days.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—As I thought so it has turned out. Up to the present, owing, no doubt, to the very cold weather we have been experiencing for some weeks, the spring salmon have not ascended in any considerable numbers from the Atlantic, so that rod fishers have not fared well at all. But quite a favourable change has taken place in the weather, as the frosts and north winds have disappeared, and genial sunshiny days succeed each other day after day. The largest spring salmon taken last week weighed 27lb., Bill Malone being the fortunate captor. Head Constable Coulan, R.I.C., Killaloe Station, killed above the bridge a very handsome golden river trout weighing 5lb. Tom and Jack Gimes, fishing my water, basketed several fine trout during the week. Mr. Anthony Parker, Ballyvalley House, fishing Major Mott's water on Monday, bagged in two hours twenty-one lovely river trout. Yesterday my fishermen, the Brothers Grimes, landed on my water a freshly run salmon of 22lb. Same day one of the local fishermen killed a very beautiful springer of 33lb. Both at Limerick and Castleconnell several heavy fish have been captured, and now we are beginning to get a share of the spoil at Killaloe. Major Traherne told me just now that he saw a good few salmon rise on his water yesterday (Tuesday). For some days past an enormous salmon has been seen performing *pas seals* on the Major's water, but up to to-day (Wednesday) he has declined to look at any of the dainty flies that have been offered to him. I do hope that he may fall to the Major's rod. Since my last report the following angling visitors have arrived here: Major John P. Traherne, from London; and Mr. R. H. Wilson, Mrs., and Miss Wilson, from London. Several other English visitors are expected this week.—S. J. HURLEY.

Shannon (Castleconnell).—On Doonass, Mr. G. C. Williams killed one salmon, 22½lb., on April 3. On Hermitage, Mrs. W. C. Jones killed one salmon, 14lb., on March 31. On Woodlands, Mr. A. Talbot killed one salmon, 38lb., on March 30. On the same water, Mr. W. Milburn killed one salmon, 27lb., on March 31. On the Castle Fishery, Mr. E. J. Brook killed one salmon, 31½lb., on March 31. On the same water, Mr. E. T. Ingham killed one salmon, 33½lb., on April 1.—J. ENRIGHT AND SON.

SEA FISHING.

Deal (The Pier).—Though numbers of visiting anglers fished upon the pier during the Easter vacation, scarcely a sizeable fish was taken, the only exception being a codling of 1lb. 4oz. taken by Mr. Morrell. Mr. Burgess and Mr. C. Filmer tried boat fishing, and in three hours and three-quarters took nineteen small flat-fish. Mr. Fleming and his boatman (Larkins) tempted sport on three successive days, but caught nothing worth recording. Mr. Filmer held sole possession of the pier to-day (Wednesday), but his day's catch only amounted to four very small dabs.—J. RICHARDSON.

Deal.—A great many angling gentlemen and others visited the town during the holidays, and owing to prospects being so poor for fishing a very few put out, and those that did go out returned with poor baskets.—EDWD. HANGER (Agent B.S.A.S.).

Margate.—April 5.—A few fish are now coming in after the gales we have had. One angler caught on Saturday, twelve; on Sunday, seventeen; on Monday, twenty-six, codling and pouting. Another, out on Monday, caught twenty-three codling and some pouting.—T. JEPHCOAT.

Plymouth.—We are now having a spell of fine weather, and through the holidays several have been out fishing. Mackerel are taking the spinner; a friend of mine, sailing around from the eastward to Plymouth, took seventy-four, and they were in very good condition. These fish seem to be coming on earlier this year than they did last, and from all appearances we shall have a good season with them. This will be welcomed by the boats that get their living by them, as last season was an entire frost, many of the boats scarcely paying for the expense of fitting out. School bass from 1lb. to 2lb. are being taken up the Cattewater with rod and line; and some nice pollack have found their way in the Sound again. It is curious how these fish go away to the deep water directly we get much rain, which sends fresh water into the bay. They evidently do not like their natural element in a diluted form. The list of

edible fish for this month includes trout, peal, salmon, scad, mackerel, conger eel, atherine (smelt), thornback, pouting, hake, brill, turbot, dab, and all shell fish.—W. HEARDER (B.S.A.S.).

Southend and Leigh.—April 6.—During the holidays a large number of anglers tried their luck, but with indifferent success, as fish were scarce and small; and, speaking generally, sea fishing is off for the present. A few small codling were taken, unusually late in the season for them to be noted, the remainder of the catches being mostly plaice. Flounders are now out of condition, having just spawned. The fishmongers in the town have been selling grey mullet in large quantities, many of them of considerable size. These, I learn, were taken in the Burnham river; but they are by no means common on this coast.—CHARLES HUSSEY (B.S.A.S.).

TELEGRAM (April 7).—Barometer fallen; south-wester blowing hard. Boat fishing impossible.—HUSSEY.

Angling Fixtures.

April 9. Collingwood: Outing to Southend.

April 10. Central Association: Delegate meeting. Dibdin: Visit.

April 11. Hoxton Brothers: Bohemian concert. Seymour Brothers: Annual smoking concert. Wimbeldon Piscatorial: Annual dinner.

April 12. British Sea Anglers: Annual dinner. St. John's: Annual supper. Seymour Brothers: Smoking concert.

April 13. Hatcham Brothers: Annual snapper and concert. Prince Albert: A.B.S. concert.

April 17.—Anglers' Association: Delegate meeting.

" 18.—Bermondsey Brothers: Lantern lecture by Mr. W. J. Wade (secretary of the Central Association).

" 18.—North London: Visit.
" 19.—Anchor (Kingston): Annual dinner.
" 20.—Anchor and Hope: Annual dinner.
" 25.—Gresham: Annual dinner.
" 25.—Original Alexandra: Distribution.
" 25.—Royal George: Visit.
" 25.—Waggoners: Visit.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The monthly finance committee will meet on Monday evening next, April 10, at 7.30; renting and preservation at 8.30; and the general at nine o'clock.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of 6s. 6d. Peckham Brothers, 17s. 10d. Brunswick Brothers Angling Societies' donation boxes. The committee will meet on Friday next, April 14, at 8.30.—R. GHURNEY.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate.—We had a big meeting of members on April 5, when a lot of business was transacted. Our ninth annual dinner and distribution of prizes will take place on May 10. All members must have paid up all arrears on the 3rd, or rule 26 will be strictly enforced. Will donors of prizes kindly let me have same, so that I can arrange the lists, &c.—BEN ABRAHAM.

Alma Angling Society. Coach and Horses, Port-mouth-place, Lincoln's Inn Fields.—On April 16 a meeting will take place to arrange the annual snapper and other important business, when I hope to see a muster of members present.—J. CHAMBERS.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—Our quarterly meeting was held this evening, when the following gentlemen were elected on the committee for ensuing season: Messrs. H. Mallett, sen., J. Grant, J. Jones, W. Fowler, R. Chadd, W. Eggby, G. Clarke, and C. Cannar. Mr. C. Cannar was elected chairman for next quarter; Mr. Darling was elected an honorary member; Messrs. Mallett, sen., and Eggby volunteered as auditors; and Messrs. Cannar and Hamilton as stewards for annual dinner on April 20. Gentlemen requiring tickets for annual dinner can have same on application to—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—At the half-yearly meeting, on April 4, the following officers were elected: Messrs. R. Dring, chairman; A. Ansty, vice; W. Hersant, treasurer; G. Martin, weigher-in; A. Jenkins, secretary; G. Smeed, check secretary. Committee: Messrs. G. Hemens, S. Aplin, A. Dejonge, F. Ireland, G. Mead, J. Stevens, G. Austin, F. Aplin, G. Miller. Delegates: Messrs. Hemens, Ansty, Mead, and F. Ireland. The balance-sheet for the last half year was presented and passed as highly satisfactory, the same showing a substantial amount in hand, and the society to be in a flourishing condition. A special meeting is fixed for April 18, for the revision of rules, if necessary, and other important business.—A. JENKINS.

Battersea Piscatorials, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Will members kindly turn up in force next week to clear the books, as it is quarterly night, also to elect officers? Donors of prizes will oblige by sending in their prizes as soon as possible, so that secretary can get out prize list. We had much pleasure in nominating Mr. Hart a member of the above.—T. TRINGHAM.

Bermondsey Brothers' Angling Society, Woolpack, Bermondsey-street, S.E.—On April 18 Mr. W. J. Wade will give a lantern lecture at this society, entitled "A Fishing Trip on the S.E.R.," followed by a smoking concert, in aid of the Anglers' Benevolent Society. Mr. A. E. Clarke (host of the Peckham Brothers) has kindly consented to occupy the chair. The company of brother anglers and friends on this occasion will be esteemed a favour.—ALF. CONN.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—A large number of our members were out on March 26, but were unsuccessful, Mr. J. Young only weighing in, thus securing Mr. J. Taylor's prize. On April 5 Mr. F. W. Ims was elected a working member. April 12 will be quarterly night, when all members are requested to attend.—T. PATERNOSTER.

Bostonian Angling Society, Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town.—On March 22 Messrs. Ward and Jones, members of the society, gave an entertainment, entitled "Facts and Fancies," illustrated by the lantern, which was in every way a success. The room was crowded, and a very hearty vote of thanks was passed to the entertainers; £4 10s. was collected in the room towards the Anglers' Benevolent Society. On March 29 our A.B.S. box was opened, and found to contain £1 5s., making a total of £5 15s., which has been forwarded on. Shall be pleased if members will attend next meeting night, April 12.—J. H.

Central Association of London Angling Clubs.—The usual monthly delegate meeting will be held at the Bedford Head Hotel, Maiden-lane, Covent Garden, W.C., on Monday evening next, 10th inst., at 8.30.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—At a special general meeting last Tuesday, our annual election of officers for the ensuing season took place, and I am pleased to say that each member who acted last year was again returned. We are now going very strong, and arrangements are being completed for our annual supper and concert. Shall be glad if prize donors will kindly forward prizes, so as to complete the list.—S. VIOLET.

Clerkenwell and District United Visiting List.—The next return visit on the above will be to the Dikken A.S., held at the St. Martin's Tavern, Pratt-street, Camden Town, on Monday next, April 10. A good entertainment and a welcome for any brother angler who will give them a look-in. The quarterly delegate meeting will be on Thursday next, April 13, to take into consideration the proposed concert for the benefit of the prize fund, also to fix time and place for the next competition; to meet at the Middlesex Arms, Clerkenwell Green, at 9.15 p.m.—F. CASTELL.

Cobden Angling Society, Kensal-road, W.—On April 4 we had a very successful meeting, when all officers for the next year were elected. A Preservation Fund was started, and we have £1 7s. already in hand, which will be divided amongst the Upper Thames associations at the end of the next season, as the West-end waters never get any re-stocking done to them from the Anglers' Associations' Re-stocking Fund. I am sorry to say that Mr. A. Tucker, one of our oldest members, and one of the oldest members of the Anglers' Benevolent Society, has passed away after a long illness. Will Ben state who Baxter beat for the championship, or when he won it?—T. TWYMAN.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—Since my last report we had a nice show of fish from the Lea by Mr. Boyd. Our leading prize winners of the past season are Messrs. Downs, W. Beames, Ball, Jarrett, Ford, F. Beames, Turner, and others. Our sea outing takes place at Southend on April 9. Leave Fenchurch-street station at nine o'clock; return by the seven o'clock train from Southend. Our new bye-rule comes in force in this outing, in which dabs cannot be weighed in under six inches. Will club secretaries please note, to avoid clashing, that our third annual supper and prize distribution takes place on Tuesday, May 2?—W. H. STAFFORD.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Wednesday's meeting very quiet. General meeting called for Wednesday next to settle prizes and date of annual dinner. Our A.B.S. return visit takes place on Monday next, April 10.—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N.—Several tried, but no specimen trout yet. Dinner postponed, otherwise all satisfactory.—GREG.

Elgin Angling Society, Blenheim Arms, Blenheim, Crescent, Notting-hill, W.—Our fish list for the past season was duly audited by Messrs. Huggett and Carroll, and found correct, with the following result: Mr. Barnfather, gross weight; Mr. Beazley, two specimens, pike and roach. Messrs. Cushing, Wilson, Ryell, and King are among those who take private prizes. There are a number of prizes not taken; they will go on to the next outing.—G. KING.

Grange Angling Society, The Earl of Derby, Grange-road, S.E.—On Tuesday evening Messrs. W. J. Wade and P. Lee kindly gave a lantern lecture on fishing in Norfolk, Suffolk, &c., several of the views having been lent by the Great Eastern Railway Company. At the close of the lecture a collection was made on behalf of the Thames Angling Preservation Society, which, with the sum in the collecting box, amounted to £1 3s. 9d. A very

hearty vote of thanks was accorded to Messrs. Wade and Lee for the able manner in which they had entertained the company; also to Mr. J. C. Chalkley for presiding.—W. K.

Hatcham Brothers' Angling Society, Queen Victoria, Pomeroy-street, New Cross.—The annual supper and concert of the above society will take place on Thursday, April 13, at 8.30.—W. TARRY.

Highbury Angling Society, Globe Hotel, Upper Tollington-road, N.—Several trout have been taken from the club water already, largest 2lb. 2oz. by Mr. G. West. Members are reminded of the special meeting next Wednesday, when some important business will be brought forward.—E. W.

Holloway Angling Society, Holloway Station Hotel, 295, Holloway-road, N.—A well-attended meeting was held on April 5, at which some important business was disposed of. Arrangements were made for our annual dinner, to take place on May 9, when the prizes won during the past season will be distributed.—A. CLAYTON.

Hoxton Brothers' Angling Society, Spread Eagle, Kingsland-road, Shoreditch.—On Tuesday evening next, April 11, a grand Bohemian concert in aid of the A.B.S. funds will take place at the above. Mr. G. B. Shipton, of the Sturt Arms, New North-road, has kindly consented to take the chair, faced by Mr. E. Brockett (secretary Original Alexandra) in the vice. The best available talent has promised to attend, so an enjoyable evening can be assured to those who would favour us with their company. Ladies cordially invited.—JOHNNY.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—We met on Tuesday last, Mr. Heckford in the chair, when it was decided to call a special general meeting for Tuesday next (11th) for the auditor's report and to settle about our annual outing. I hope all members will endeavour to attend on that night at nine o'clock, as the time is short.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—There is some special interesting business to be placed before the meeting on Wednesday evening next, 12th inst., so shall esteem it a favour if the members will muster well on this occasion.—H. B.

Liverpool Angling Association, Bee Hotel, Queen-square.—The members, for the first time for many years, have not had a club outing this Easter, as the crush and inconvenience of getting home in the past, with their impedimenta of rods, baskets, and fish, has been very great, and competitions on Bank Holidays have been abandoned in consequence. Then, too, on accessible waters rods have been so abundant that an angler could never know whether the water had been gone through that morning or not. Reports of what has been done during the holidays vary a great deal, and one can hardly tell whether sport has been better on the whole this year than in 1898. Some decent trout have been had from Penny-Cae and Ruabon, but matters have been somewhat tame. A few have been had from the Dee, Corwen way, and from the Vyrnwy, Cain, and Tanat, Llanymynech. Of course, Easter is very early this year. Since sending my report this (Wednesday) morning, I learn that Mr. Jeffreys has done well with the trout at Llanymynech; also that Mr. Rotherham caught five pike (largest 6½lb.) within an hour, near the aqueduct, and lost three others; and Mrs. Macnab (wife of our chairman, Capt. Macnab, R.N.) landed a nice pike of 7½lb. on a small trout rod—a fine feat for the lady to accomplish. Taken altogether the sport in the Vyrnwy and Tanat was very satisfactory.—RD. WOOLFALL.

North London Angling Society, Tap House, Holloway-road.—The next return visit on the No. 2 Eastern District takes place at the above on Tuesday, April 18, when I hope to see a good muster of the clubs on the list. P.C. will be sent round in due course. Another gentleman was proposed for membership by Mr. T. Harris, who will be elected next meeting.—H. STRETCH.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—On Tuesday next, April 11, there will be no meeting at the clubhouse. We meet on that evening at the Hoxton Brothers' Bohemian concert in aid of the Anglers' Benevolent Fund. April 18 will be our annual general meeting, and as business of great importance will be brought forward, I trust that every member will be in attendance. April 25 will be our distribution night. Members and friends who have promised prizes please note the date.—E. BROCKETT.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—On the 4th inst. the annual general meeting was held, when the balance-sheet was read, and found to be very satisfactory, showing the society to be in a sound financial condition. Officers were then elected for the year. C. Shepherd, treasurer; C. Brett, clerk of the scales; and Geo. Keene, secretary. Officers for the first quarter were: A. Peverall, elected (unanimously) chairman; W. Payne, sub-secretary; and Geo. Keene and C. Brett, delegates. Several other matters were discussed, which will now become rules for the season 1899 and 1900. One new working member was made.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—Last meeting night we were fairly attended, and got through a deal of business. It has been decided to take our visit on the Central Association on April 20, when we hope to receive a bumper, not having missed one visit on the list. Members please note that a general meeting is arranged for April 12, and I hope to see a crowded attendance on that occasion, so as to arrange about our annual supper.—G. GIBBONS.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington.—Our visit on the South London List was a very poor one, only twelve clubs responding to the

call; no officers were in attendance. Many thanks to Mr. Wade, who turned up in time to call the roll and open the Anglers' Benevolent box, which contained the sum of 30s. 6d., which was duly handed over. Wednesday, April 12, all members must show up, and be clear on that night. Mr. J. Leighton has been elected as the club's new secretary for the coming season.—H. ALLAN.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—Last Tuesday, being quarterly night, it was decided to hold our annual smoking concert on April 12, when Bro. E. Burden will be in the chair, and Bro. Arrigoni the vice-chair; pianist, Mr. Bert Wood, when I should like to see all brothers and friends. Our annual supper and distribution of prizes is arranged to take place on May 9. Particulars next report.—W. ALDIS.

Stockwell Angling Society, Old Queen's Head, Stockwell-road, S.W.—Thursday next being quarterly night members are requested to be present, as important business will be transacted. The first payment under the new rules will be due.—THOS. LUCAS.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On March 28, at our annual general meeting, the following officers were elected for the next year: Mr. Harwood, chairman; Mr. Holt, vice-chairman; Mr. Lock, secretary; Mr. Sherman, assistant-secretary; Messrs. Harwood and Stevens, delegates; Messrs. Parker and Holt, auditors. Members are requested to attend on our next meeting night, which is a special meeting, to receive report from committee meeting, April 5, with regard to rules and other recommendations.—G. E. LOCK.

Waggoners' Angling Society, White Lion, Albert Embankment.—We had a good meeting on the 4th, Mr. H. Walton in the chair. Some very important business was got through. I must again remind members to settle up at their earliest convenience. We take a visit on the S.L.U.V.L. on April 25, when I hope we shall have a good muster.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—On March 29 a committee was formed to negotiate all business concerning the annual dinner. I regret to report that a letter was received from Mr. A. Alder on the 29th ult., resigning his position as treasurer, which was accepted. At our meeting on the 5th inst., this being quarterly night, the new officers for the coming year were elected, viz, chairman, Mr. Dungate; secretary *pro tem.*, Mr. Glass; treasurer, Mr. Price; assistant secretary, Mr. Carter.—W. H. BATCH.

Walthamstow Brothers' Angling Society, Essex Arms, Forest-road, Walthamstow.—The A.B.S. box of this society was opened on April 5 by the visiting officer, Mr. T. R. C. La Monde, and contained the sum of £6 14s.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—A general meeting is called for Wednesday next, April 12, to arrange about the annual dinner. I hope every member will try and be present. I shall also be pleased to receive the prizes from those donors who have not yet sent in.—W. WRAY.

White Hart Angling Society, The White Hart, Tottenham Hale, N.—Our annual supper and distribution of prizes will take place on Wednesday, May 10, at 8 p.m. sharp; also donors of prizes will oblige by forwarding them on to me at their earliest convenience before that date.—W. E. BEAUMONT.

Doffings by the Way.

THE monthly meeting of the Central Association of London Anglers will be held on Monday evening next, April 10, at the Bedford Head, Maiden-lane, Covent-garden, at 8.30.

THE annual dinner of the Society of Caxtonian Anglers will take place at the clubhouse on Thursday, the 13th inst., at 7 o'clock punctually. Tickets for the dinner will be 5s., as usual, application for which should be made as soon as possible. The presentation of prizes will take place after the dinner. If prize winners would kindly purchase prizes to the amount won, and send them to the clubhouse, not later than Wednesday evening, April 12, a cheque for the amount will be handed to them.

THE CRYSTAL PALACE COMPANY have decided to institute experiments in fish culture, the ultimate object being the founding of an English School of Pisciculture. A capital start has been made, and Mr. Edgar S. Shrubsole, the curator, has succeeded in hatching some 50,000 trout eggs. The alevis are a fine healthy-looking lot. The large aquariums are being overhauled and thoroughly cleaned and repaired, preparatory to stocking them with various species of *Salmonidae*. The extensive lakes, reservoirs, fountain basins, &c., in the grounds, will also be utilised in connection with the scheme.

MR. JOHN BICKERDYKE's new romance of the sea, "The Passing of Prince Rozan," the publication of which has been delayed in consequence of the American edition, will be issued by Mr. Thomas Burleigh, on the 15th of this month.

FETTER-LANE INDEPENDENT CHAPEL is to be pulled down. It is a case of the Pulpit giving way to the Press, the *Christian Commonwealth* remarks, for the demolition will make way for improvements in connection with a printing firm. The history of this old dissenting place of

worship is full of exciting interest. In 1666, the meeting-house then in existence was taken forcible possession of by the Episcopal party at the time of the great fire of London. In 1710, the populace broke into and destroyed the building, and in 1732 the present building was erected. The first public proclamation of the accession of George I. was made from the pulpit of Fetter-lane Chapel, by the Rev. Thomas Bradbury, one of the foremost ministers of the day.

It was not often that poor old Dr. Brunton came off second best in a chaffing match, but on one occasion my friend Norman, the hon. librarian of the Gresham, scored off him in a manner which is worth relating. One evening, at a meeting of the Gresham, the doctor, with one of those quiet smiles which heralded the advent of a good thing, announced to a small but select circle of his fellow Greshamites that after their last meeting his friend — (who also belonged to the Gresham) had accompanied him home, and had stayed discussing salmon flies and whiskey until three o'clock in the morning. "When I went to bed," continued the doctor, "my wife said, 'John, you've had a visitor.' 'Yes, my dear, it was Mr. —,' 'Oh, was it, and could you get a word in edgeways?' " This was Norman's opportunity. "What were you doing, did you say, doctor—discussing salmon flies and whiskey." "Yes," replied the doctor. "Ah," observed Norman, "if that was the case, you can tell Mrs. Brunton that she may make an affidavit that — would not have an earthly chance of getting a word in."

In the matter of entertainment, Eastertide visitors to Southend were well catered for. René Bull's lecture on the Soudan War, illustrated by the optical lantern, on Thursday; on Good Friday, "The Messiah," on Sunday, two high-class sacred concerts in the Pier Pavilion. Mr. Marlow's contribution to the gaiety of the town, and a thoroughly good contribution, too, was "The Skirt Dancer," at the Empire Theatre. The piece is one of those laughter provoking musical comedies which, while they drive dull care away, that is if you have any, at the same time delight the ear with sweet music—in this case, music written by Mr. Trotère, the composer of "In Old Madrid," and many other charming melodies. The dancing was exceptionally good, and once more Mr. Marlow has another success to his credit. Next week the play will be "The Three Musketeers."

"FROM early morn to dewy eve," Mr. Stevens' town band was delighting visitors on the front. It is strongly leavened by old guardsmen—Grenadiers, Scots, and Coldstreamers, and, with the new addition of strings, is one of the best seaside bands to be found. Mr. Stevens and his merry men thoroughly deserve all the success they have achieved, but, like many others, I found myself asking the question, "Why does not the corporation subsidise such a splendid attraction to the town as this band undoubtedly is?" It is left to the residents to support by subscription, the only other source of income being what the Brigadier, or whatever the gold lace covered gentleman's rank may be, can collect in his box. To put such a band on the same footing as an itinerant nigger troupe is unworthy of the town, and unfair to the residents who subscribe to the band's funds. Many do not who ought to, by the bye.

THEN, again, an agitation is afoot to abolish the imposition of a twopenny entrance fee to the pier after six o'clock. During the day, when trippers throng the town, the admission is only a penny, but as soon as the trippers leave, and the residents returning from town want "a breather" on their own property (the pier belongs to the town), the price is raised to twopenny. Why is this? If the corporation think a "penny wise and twopenny foolish" policy is likely to succeed, I venture to differ, and wish all success to the efforts of Mr. Burford Delannoy, of the *Southend Echo*, is making to have such a wrong righted. Stick to it "Burfie!" You will be sure to receive the cordial co-operation of your fellow townsmen, and you may rely on the sympathy of anglers in the struggle.

THE terrible wreck of the *Stella*, with its accompanying loss of precious human lives, is one of those tragedies for which we are becoming accustomed to look at holiday times. This is not the place, nor am I the man, to discuss who is to blame for the awful calamity; but above all the gloom it has caused, one thing shines out bright and clear—the splendid heroism of captain, officers, crew, and, it must be added, passengers. To read of the captain's coolness; of the mate saying good-bye to his wife, to go to certain death in fulfilment of his duty; of stewards handing round life-belts "as calmly as if they were sandwiches"; of gentlemen taking off their life-belts, their only chance of safety, to hand to ladies; and, above all, of the patient bravery with which these delicately-nurtured ladies bore the horrors of that dreadful night, or met their deaths, makes us feel proud of our race. What an object-lesson to those pessimistic croakers who say that old England and her children are deteriorating, that the age of chivalry is past, and such like rubbish. Surely they are worthy successors to the brave men who went down in the *Birkenhead* with drums beating, colours flying, and cheers for their Queen on their lips, or of the heroes and heroines of the Indian Mutiny, and the thousand and one other heart-stirring incidents of our national history. We may, and we all do, mourn their deaths, but at the same time glory in the way in which they have shown the world how Englishmen and Englishwomen can meet danger and death. To speak in terms of commendation of such conduct seems almost an impertinence, but the bereaved relatives may know that the whole nation shares their loss, and weeps with them.

THE Editor, see "Correspondence" (not alone in his impressions), has never heard of a man "taking his float." Why, I remember a very good singer at an angling concert sing, "I'm a float, I'm a float." There you are. He was a float, therefore had no occasion to swallow another.

"THE killing of that otter the other day on the Thames, and close to London," says the *Evening News*, "was a monstrous act and a monstrous error. The otter lives on other food besides fish, and the destruction of an animal now so rarely seen on the Lower Thames is little short of a scandal. That famous old sportsman, the Rev. 'Jack' Russell, of Devonshire, has left it on record that he once travelled 3000 miles to have the pleasure of seeing an otter."

LOVERS of salmon have to thank the recent frosts and heavy snowstorms for its present high price, which has risen from 2s. to 4s. 6d. a pound. Large supplies are usually being received at this time from the Tweed, the Spey, and most of the Scotch rivers, but the salmon have recently been prevented by the weather from entering them, and hence the supply is cut off. A fishmonger in a large way of business in Jermyn-street has informed a *Daily Mail* representative that fishmongers were obliged to fall back on the Irish salmon, though it was hoped the mild weather would soon restore the balance. A Bow-street trader also complained of the short supply, and combated the idea that the high price had anything to do with the extra demand for fish in Holy Week. "As soon as the snow melts and the rivers are in 'spate' fish will," he said, "leave the sea and enter the rivers, and then is the time that the net and rod fishers obtain their sport. I am confident," he added, "that the price of salmon will fall very shortly." [Sooner the better!]

OUR F. G. ALBUM OF ANGLERS.

No. 38 (New Series).

MR. PEREGRINE BALL,

St. Helen's, Fellow of the Institute of Architects, is one of those grand old anglers of whom Lancashire is proud of having them resident in the county. Born near Spilsby, Lincolnshire, he, like many others, has been "ever an angler," and to-day the fever is strong upon him. Always a busy and hardworking man, he, nevertheless, has found time to serve his Queen and country, having first joined in defence, not defiance, in 1862, when he was recruited for the 7th Lincolnshire, then followed service in the 21st North York, 15th Durham, 40th Lancashire, and 47th Lancashire, in which he still serves, but must shortly retire at age limit. But it is as an angler that he is most respected, for never was his time, influence, or purse spared if asked for. As a chairman, the St. Helen's men will always remember him as punctual, with a good grasp of the business, concise in summing up, and decisive when required in a ruling, in fact, a Bayard *sans peur sans reproche*. To-day the finances of the local association speak of his abilities. An adverse balance has been converted into a substantial balance in hand, despite a liberal stocking programme and no stint in other departments. Only a few days ago, on his birthday by the bye, his club suitably acknowledged his many good qualities, and it is the desire of his numerous friends that he may long be spared to do good for the sport we all love.

WITH the commencement of the yachting season a new publication is announced, to be known as "The Skipper." The sub-title, "A Weekly Log of Nautical Matters," sufficiently indicates the scope of the periodical, which will deal with the sport of yachting, and naval matters generally. The paper will be fully illustrated, and sold at the price of 6d. Mr. Julius Gabe, who for some years has been before the public as a yachting journalist, will occupy the editorial chair, and the business management will be in the hands of Capt. Lucius A. Kingston (late 33rd Duke of Wellington's Regiment).

THE great holiday programme has met with immense success at the Royal Aquarium during this week, and is to be continued in its entirety during next week. There are

no less than ninety-one distinct "turns" in the entertainments, which run without cessation throughout the day and night, from 10 a.m. until 11.45 p.m. It is a wonderful show for variety, quantity, and quality. Have you seen the petrified man from Patagonia?

A NEW and cheaper edition of Mr. Frederick M. Halford's well-known book, "Dry Fly Fishing in Theory and Practice," will be issued early in April, by Messrs. Vinton and Co., Ltd. The entire work has been thoroughly revised by the author, all modern improvements in rods and tackle have been treated, and the whole has been brought up to date in every detail. The plate illustrations include a number showing the various styles of "Casting," an illustrative plan "Where to Cast," and some beautiful steel engraved plates, coloured by hand, of the Life History of the May Fly from egg to perfect insect, and of the nymphæ of the smaller Ephemeridæ, Caddis and Shrimp. The edition is described as "In Memoriam George Selwyn Marryat," the original work having been dedicated to that gentleman.

FISHING on the Tamar (Devon), a gentleman caught a trout, about 1½ lb. in weight, which, whilst being taken off the hook, disgorged another fish, quite 4 in. long.

MR. F. KOBELT, of the Blackfriars A.S., has lost both father and mother within the week. I am sure that Dick (a younger son), in New Zealand—and a good all-round sportsman—will be grieved when he hears of the sad bereavement.

THE Gresham water at Cbesham is in capital order. On the opening day fourteen trout were taken. All under 12 in. are returned. Mr. Eldred, on April 5, had very decent sport, capturing three, but retaining only one of 13 in. March Brown was the fly. The "Outing" dinner on Saturday, to Cbesham, will be a pleasant affair.

"BEN" writes to say that he has had a bit of sea fishing at Newhaven, and complains of the scarcity of lug worms. If Ben is a member of the B.S.A.S. he should have called on our agent, H. A. Coates, Sheffield Arms Hotel. However, he captured a few "flat uns," and a nice pollack. Messrs. Burkitt, Neal, and others had a few fish, but as Ben says: "They was off very much."

MR. A. G. SMITH, secretary of the South Bermondsey Club Piscatorialists, has, after five years' faithful service, resigned. He will be greatly missed; for wherever and whenever there was work to be done in the cause of charity, or for our sport, he was sure to be found. He is succeeded by Mr. J. H. Davis (another good man), to whom all communications should be addressed at 63, Credon-road, Rotherbithe New-road, S.E.

THE first annual dinner of tackle manufacturers, held on Thursday night last at the Holborn Restaurant, was a great success, and reflected great credit on Mr. Frank Clay, and others who assisted him in the work connected with such a function. A full account appears on page 241. The "trade" was well represented. By the bye, I think I was present at the dinner which was given to the Tackle Manufacturers about four years ago at the Victoria Mansions Restaurant. That must have been one before the first. On that occasion Mr. R. B. Marston presided. An effort will be made to invite ladies to the next dinner. Why not?

THIS is a tip for those who object to have their names put on the toast list to "reply" or to "propose." If you are hard up for words, say you were told to "stand up; speak up; and shut up!"

THE eighth annual fisheries exhibition at the Royal Aquarium came to a close on Thursday (April 5). I called Mr. Ritchie's attention to a board at Carter's stall, on which was inscribed "Carter's steel rods." Mr. Wilkinson was deputed to warn all other exhibitors of this firm's kleptomantic penchant. Mr. Malcom (of King Malcom), the well-known waterproofers, do not swear by steel, but their leather coats, light, soft, and waterproof, are worth a visit to Leicester-square. Mr. J. J. Hardy, in describing his new reel, said "you press the trigger, the line runs free; your lead goes down to the bottom of the sea. See? oui." Mr. David Slater (who unfortunately is very indispensed) is making me a special "Duke of York" reel, and has invited me to come down to Newark and help myself to some of the big roach and trout, which he will pilot me to. I am going to Newark soon as pos. Some splendid gut was on view at the Aquarium by many of the exhibitors—some of it so fine that you could "read between the lines."

"D'ye no ken," said the minister on his way to the kirk on Sunday, to the naughty little boy, "It's most awfu' wrang to fush on the Sawbath?" "It disna matter, I've no caught a fush," was the reply.

"THE harvest of the sea" consists of many things, and lots of others besides, but one of the most curious finds I have heard of was the packet of old wills and other papers dredged from the sea bottom by the trawler *Bournemouth*, of Milford Haven. You never know your luck, so if any of my trawling friends should by any chance find in their nets papers to prove that I am the long lost heir to vast estates, or a dukedom, I shall be much obliged if they will send them on with as little delay as possible to

DRAUGHT.

SCOTTISH TROUT ANGLERS' ASSOCIATION.

A LARGE and representative gathering of anglers in Edinburgh and district met recently in the West End Café, Princes-street, Edinburgh, under the auspices of the Scottish Trout Anglers' Association. Dr. Spence, one of the presidents of the association, occupied the chair. The first business under consideration was the formation of Edinburgh into a district association. The chairman having called upon the secretary to make a statement thereanent, Mr. Andrew Smith said, that as they knew from the rules of the S.T.A.A. one of the principles embodied was the division of the association into districts, each affiliated to the central association. In this manner each district was able better to look after its own interests. At Glasgow, Elgin, Cupar, Kelsae, and other places, district associations had been and were now being formed. They had not in Edinburgh, it was true, any streams to look after. (Laughter.) If any gentleman was willing to take up the cause of purifying the Almond, it would, of course, be exceedingly gratifying, and he had no doubt such a project would receive the hearty support of the association. (Laughter.) There were, however, a thousand and one matters connected with angling which required attention, and that attention could only be bestowed by a district association. He moved that such an association should be formed. Mr. Peter Boa, of the Midlothian Angling Club, seconded, and the motion was carried unanimously. Mr. Archibald Menzies was elected president of the district, and the following gentlemen were appointed as a committee: Messrs. D. Fisher (Cockburn A.C.), A. Brown, Murray Marr (Saturday A.C.), Donald Stewart (Breadalbane A.C.), Peter Boa (Midlothian A.C.), Robt. Walker (Northern Merchants' A.C.), G. H. Douglas (Amateur A.C.), Dean Smith and Dr. Spence (Amateur A.C.). Powers were given to add to the number if necessary, and the appointment of secretary was left to the committee. The next business before the meeting was the consideration of the advisability of forming a social club for anglers in Edinburgh and the district, somewhat on the lines of the Flyfishers' Club, London. A sub-committee was appointed some time ago to inquire into the matter, and the chairman called upon Mr. Duncan Fraser to open the conference on the subject. Mr. Fraser said it was a matter of deep regret to him that Professor Stanfield was not able to be there that night. He had had the matter in hand from the first. The Scottish Trout Anglers' Association had got a name, and now was seeking for a habitation. It had been found that although there were several angling clubs in Edinburgh, there was no central club which could form a common resort for anglers. From many points of view a central club would be a great boon to Edinburgh anglers. It would enable fishers to meet together, to have social intercourse one with another, to discuss points of interest to themselves, and to exchange information. (A voice: "Swop lies," and laughter.) Different opinions were held as to the housing of the club. Some thought a humble room would be sufficient to start with, others that they might have a suite of rooms with a caretaker, and these were of opinion that they would get a sufficient membership to cover all expenses. These points might be left for future discussion. The thing he wanted to impress upon them was this, that, however it was to be done, it was in the highest degree desirable to have a central club. There might be reading and recreation rooms in connection with this club; also a museum to which the 4-pounders anglers were wont to catch—(laughter)—could be relegated, to be duly admired by the generations to come. In Edinburgh they had no such museum even in connection with their individual associations. In London, and in many other towns in England, such clubs existed, and it had been found they did much to foster the spirit of camaraderie amongst anglers. When the fishing clubs had their competitions they could weigh-in at the club instead of having to go to some place in a back street. Sometimes, of course, it was a good thing that the weighing-in took place in a back street—often there was not much to weigh. (Laughter.) The literary department of such a club would not be the least of its benefits to anglers. He did not know why they had not had an institution of this kind long ago. A man had to come from Perth (Mr. A. Smith) to waken them up in Edinburgh. (Cheers.) Mr. Peter Boa then gave in the report on the financial aspects of the scheme. He thought the club would be a great success, provided they started on a small scale. It was a mistake to start on a large scale and then have to come down. The desirability of the club was not what had given the committee most concern, but the question of ways and means. They did not in the least know the support the proposal was likely to receive. They could have little idea, therefore, of the scale on which they might begin operations. It seemed to him that in the first instance they might begin with two or three rooms. Probably a moderate sized house, that they could get for £30 or £40 a year, would suit, and the remainder of the house could be occupied by someone who, for the privilege of occupancy, would be quite willing to take care of the rooms that were reserved for the use of the club. That was one view of the matter. Of course, there were other views held by members of the committee, some thinking that they might start on a larger, others on a smaller scale. Professor Stanfield, who had drawn up the report, had indicated 200 members as a likely number, but, naturally, that was only an approximate estimate. As to having a museum in the proposed club, he thought it a very good idea. A library for reference, &c., would be extremely useful. He had often noticed in moving about among anglers how ignorant many of them were of the literature of their craft. Of course in all matters of this

kind there was always some anxiety in regard to ways and means. He thought he had indicated the main points that would require consideration in the formation of a club. At present the committee were not in a position to state the actual expenses, but it had been calculated that a membership of seventy-five would carry on a club of the sort mentioned, and leave a sum of £10 or £15 after providing for rent, fires, &c. The proposal to form a club was then put to the meeting by the chairman, and carried *nem. con.* Some discussion arose on the question of subscription. One gentleman present was of opinion that fixing it at a guinea practically meant the exclusion of working men anglers from the club. With this the majority present seemed heartily to concur. Mr. Boa saying they would rather have 150 at half a guinea than seventy-five at a guinea. Another member spoke of 5s. as a still more attractive subscription from a working man's point of view. Ultimately it was agreed to leave the amount of subscription over until it was seen what proportions the membership of the club was likely to assume, and slips were sent round for signatures. A large number of the latter were obtained. A smoking concert was afterwards given, to the great enjoyment of those present. The programme was nicely varied with instrumental and vocal selections; but possibly its chief feature was an address on "The Veracity of Anglers"—from a scientific point of view, see page 237—by the chairman, whose deductions set the risible faculties of his hearers on edge. There is, it may be said, every prospect of the club's taking root and becoming a great social boon to the anglers of Edinburgh; and the subscription is, we understand, not at all likely to prove an exorbitant one, in view of the number of gentlemen who have intimated their desire to join.

AN EVENING WITH SUSSEX ANGLERS.

VISITORS with a previous experience of the proverbially merry feasts of the Sussex Piscatorial Society might have felt, at the ninth annual dinner on Wednesday, that there was a certain chastened element in the mirth of these doughty anglers. Bright and comfortable as was the room at Booth's Restaurant, Brighton, it was pervaded for a time by a perceptible air of gravity. Members ate their dinner with a certain look of consciousness, as though they were oppressed by the sense of the approach of something important. The fact was that something very serious had happened; the honorary secretary, Mr. W. F. Booth, had sent in his resignation. Jovial fellows as these anglers all are, they have found Mr. Booth the life and soul of their festive gatherings, while, as a worker, he has been simply invaluable. As secretary to the society since its beginning, and labouring incessantly as he has done, he has practically been the main factor in keeping it together, and bringing it up to its present success. So it was not altogether surprising to find the toast list devoid of the *jeu d'esprit* that have characterised it, and to feel the consciousness of a check on the hilarity that has at other times reigned supreme. Besides, the members had a secret, and naturally they were not altogether at ease until that secret was out. At the same time, even with all these portents in the air, the Piscatorial Society could not manage to be as solemn as other people. The philosopher of the angle, who will sit uncomplainingly for hours holding on to his rod, came to their rescue, and everybody succeeded in passing a very jolly evening.

What the secret was did not come out at once. Those who were not "in the know" had to wait for it like they have to wait for a bite. Mr. Booth led off by announcing numerous apologies for absence, several members, unfortunately, being too ill to attend. Then Alderman Hawkes proposed the toast of "The Sussex Piscatorial Society." His worship observed that the society was one of the best in the country. Members glanced at him with a pained expression. The mayor saw his mistake. "Oh," he went on urbanely, "of course I should say it is the best society in the country." "Hear, hear," assented the meeting. His worship expressed his conviction that the society was a very good thing for Brighton, and did good work by supplying the Aquarium with fish.

Next the mayor was moved to a confession, and the confession, as he went on, grew more and more startling. "I am no fisherman," he admitted contritely, "except," and then his tone brightened, "I have caught a few roach." (Hear, hear.) The next sentences made the gathering shout. "I don't suppose you call it sport, but I have assisted in netting, and—I have also assisted in wiring fish!" "Shame," cried the meeting cheerily; while the secretary ejaculated, "Oh, I say!" in a tone of comic horror. With his next words the alderman saved himself. "But I can assure you I have not done it since I have come to Sussex." "You wouldn't do that here," he pursued, "you are real fishermen; you angle with a worm at one end and a—a—well, something else at the other." This was too much, and the gathering roared.

A little later the "secret" came out. Mr. W. Wilson Tickle rose and said that he would disclose it, though he complimented members on the discreet way that they had kept it. The society, he said, could not pass over the occasion without some small presentation to Mr. Booth. (Applause.) Small as it was, it represented the "fishing affection" they had for him. (Applause.) It consisted of a "Hardy" split cane steel-centred salmon rod, a "Hardy" trout rod with accessories, and an illuminated address, with a diamond bracelet for Mrs. Booth. They could not but see that Mrs. Booth had sacrificed herself in giving up her husband to attend so many meetings of the society. In appreciative terms Mr. Tickle eulogised the services Mr. Booth had rendered to the society, of which

he was one of the founders. He praised Mr. Booth's untiring energy and attention, and spoke of the fishing waters, by river, lake, and pond, that had been obtained for the society by his instrumentality, by his peculiar tact and courtesy in approaching owners, and getting from them valuable concessions. Mr. Booth had been responsible for the stocking of many waters with fish, and, by example and precept, had instilled into the club those traditions for sportsmanship and gentlemanliness that gave it such a high reputation. (Applause.) His management of finances had also been admirable. The only consolation the club had in losing him as honorary secretary was they retained him on the committee. (Hear, hear.)

Mr. Booth's health was then drunk with the heartiest of cheers, and the singing of "For he's a jolly good fellow."

An ingenious gentleman seized the reel attached to the presentation rods, and wound it vigorously. The familiar rasping was accepted by the meeting as a just and proper accompaniment to anglers' "musical honours." The rods were handed round, and anglers fingered them lovingly; they were such perfect things of their kind. Some irrepressible spirits joined them, and angled for things at the far end of the room. Much as they admired the bracelet, they liked the rods better.

The address was signed by sixty members.

A huge burst of applause greeted Mr. Booth when he rose to respond. His speech was an admirable one, quiet and modest, duly recognising the compliment paid to him and to his wife, and unaffectedly acknowledging that he had worked very hard indeed for the Society. He knew that a man at the wheel was necessary, but, at the same time, there must be good officers and a good crew. The society had had excellent officers and an excellent crew. (Applause.) Carrying on the naval metaphor, Mr. Booth said that at one time there was a little attempt at mutiny, but that had clapped the mutineers in irons, put them under hatches, and on reaching shore got rid of them. Now, with a fair wind and an even keel, the good ship seemed well forward on a prosperous voyage. He did not think he had made many enemies, but he had kept old friends and he had made many new ones.

Regarding the society itself, Mr. Booth said that its position was financially quite sound. At Horsted Keynes they had a remarkably fine piece of water for trout fishing, while, he must also tell them, all the waters fished by the society that contained coarse fish were fully stocked. Very few societies could say that.

The various sentiments produced by these ceremonies having subsided, the evening pursued its normal course. Mr. F. J. Bevis submitted "The Committee and Officers," confessing himself unable to do justice to Mr. Booth, and making special mention of Mr. Tickle, Mr. Goodwin, Mr. Gilling, Mr. Maskell, and the honorary auditors, Mr. J. S. Lee and Mr. J. Hobbs.

In response, Mr. E. W. Mellor told a story that sounded suspiciously like a traditional "angling yarn." He informed the meeting that, to acquire the eloquence necessary for his speech, he had emulated Demosthenes, putting pebbles in his mouth and declaiming on the seashore, trying to outvoice the roaring waves. "But the result, he added plaintively, "was not commensurate with the trouble." His hearers tried to look as though they believed him.

"The Visitors" produced an interchange of compliments between Mr. A. V. Treacher and Capt. Bridgen.

The health of "The Riparian Owners" was honoured at the initiative of Mr. H. Reason, who did full justice to these very necessary and obliging gentlemen. Mr. Reason mentioned that there were no less than seven gentlemen in Sussex who were generous enough to let the society fish in their waters. Incidentally, he referred to the diplomacy displayed by Mr. Booth in getting the society these favours—favours all had availed themselves of as became genuine sportsmen.

Mr. Booth interposed that Sir Raymond Burrell was so generous that he had just provided a new punt, practically solely for the convenience of members of the society. (Applause.)

In response to the toast of "The Chairman," happily proposed by Mr. J. S. Lee, Alderman Hawkes let the meeting into a few secrets as to how it feels to be a mayor. It was very pleasant to get in touch with all classes of society, and especially to find himself in such agreeable company as he did now. The position, of course, was one of great honour. But it was one of very hard work and trying responsibility. The calls upon the mayor got more and more onerous every year. Coming back to his fishing experiences, the mayor observed that he had employed himself in netting the fish in a pond at Knepp Castle. "I don't suppose you call that fishing," he remarked. "No, no," came back the laughing answer. But the mayor got even with them. "It was better than fishing," he averred.

The evening was not allowed to pass without a compliment to the gentlemen who had worked in getting up the testimonial to Mr. Booth. They were: Messrs. C. W. Mellor, P. E. Tickle, W. F. Goodwin, and W. C. F. Gilling, the last acting as hon. secretary and treasurer.

It was not in the speeches that the meeting was made lively. There was plenty of music, and good music, too; what with Mr. Norman Richards at the piano, Mr. P. E. Tickle and Mr. Jenner at the banjo, and with songs by Mr. Longhurst, Mr. Treacher, and Mr. Booth. The jovial rendering by Mr. Booth of "The Accent On" was the hit of the evening. In this way everybody managed to enjoy themselves. The landing of the "biggest fish on record" could hardly have given them greater contentment.—*Brighton Herald*.

Notes from the North.

THE DUKE OF YORK finished his spring salmon angling season on the Dee on Monday evening, and returned to town on Tuesday. The weather has been again the bane of the royal angler's visit to the north, and, had as it was last year, it has been doubly so on the present occasion.

The Duke had two fine fish on Tuesday last of 7lb. and 9lb. from the Fir-park pot on the Abergeldie water, both to the fly. In fact, the Duke prefers the fly to all other lures. On Wednesday last he had one of 16lb., which may be considered a prize on the Dee as far as early springers are concerned, the average weight of which seldom exceeds 7lb. Details of his last two days on the water are not yet to hand.

What is a finnock? is the question in angling circles in the north just now. It is being eagerly discussed in the local prints, the main drift of the observations in general bearing out the generally accepted opinion that finnock or whiting are the grilse stage of the sea trout proper.

On Friday last, in the thick of a snow shower, six anglers on the Eilon Castle water made baskets ranging from fifteen to thirty-seven each, mostly finnock and sea trout, with a few brown trout thrown in. The whole of the sport was got in the space of three hours, and from four pools. The river was in flood.

The anglers at the Invercauld Arms, Ballater, when snowed off the water last week, took to the curling pond, and assisted the local knights of the broom to keep the "roaring game" agoing. It is a unique experience at the tail end of March.

The historic estate of Dunaine, which is situated in one of Perthshire's favoured angling spots, was sold last week for £70,000. The new proprietor is Mr. Bernard, brewer, Leith.

Mr. L. H. Craik, who is fishing the Invercauld private water, Braemar, after being stormed and flooded off the river for fully three weeks, is now getting some brisk sport again. Some bright angling records have been made on this far inland reach in the past, mostly during April.

Sheriff Robertson, Aberdeen, spoke the bare truth on Monday, when he said that trout poaching was the most objectionable form of poaching which went on in the Don, and the most difficult to get at. He sentenced one poacher to a fine of £2, with £1 17s. 6d. of expenses, for netting four trout, and regretted he was not able to mulct his companions in like sums, as there was a slight break in the evidence connecting them with the fish.

A most exhaustive report has been published by the sanitary inspector, Banffshire, as to the damage distillery effluent has wrought on the angling interests of the county. The Fiddich, the Livet, Ruthie, Bogindue, Lyne of Carron, and Forgie are dealt with. These were once prime angling streams, now they are choked with fungus, and in such a foul state it is quite impossible for fish to live in them.

On the Cairnton Dee water during one of the opening days Mr. Wm. Milne, tackle maker, Trinity-street, Aberdeen, hooked and ran fourteen fish to his own rod. There were seven clean and seven kelts. The heaviest clean fish turned the scale at 17lb. Twelve of the fourteen were got on the "Kelsall," a lure well known as a favourite killer on the Tay. Mr. Milne's modesty prevented him giving us the details of his hitherto unreported take sooner.

A few fish were got last week, but the water was too big for much being done. However, Mr. Eustace Drummond had a fine 16½-pounder on Ballogie, and the Hon. E. T. Brooks one of the same weight on the Lodge water. Sport is now much brisker.

Sport has been poor all over the Highland streams, first with the storm, then with the floods. On the Helmsdale, Miss Radcliffe had two fish of 9lb. each one day in the thick of a snowstorm. On two other occasions, lately, she had two, of 8lb. and 9lb. respectively.

Trout anglers on the early reaches of the Don, Deveron, Ythan, and Ugie have been in great glee during past week. Genial weather, fine breeze, fish in splendid rising form, flies abundant, and creels heavy. Heavenly conditions for once.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

We have at last formed a small fly fishing club in Birmingham, and it will remain to be seen what success the club will attain. It has been started by a small number of members, twenty names only being down on the books. The club, I believe, do not want a large number of members until they can get sufficient waters to accommodate them. The subscription is fixed at one guinea per annum. The water that they have taken may be made into a good trout stream providing it is properly stocked, but they will find that this will be rather expensive, and I question if the subscription will meet the expenses of the club. There are at present a few trout in the portion of the water taken, and these have made their way from the higher portion of the Blythe, which is rented by the Birmingham Piscatorial Society; and I question very much, if the club stock their water, if the fish will remain in the part they rent. I am informed by gentlemen who have fished the water that they do not think they will, but still it will be worth a trial to re-stock it. The Vine Unity rented this water last year, and the members had some decent fish from it, but owing to the action of the party who owns the water the club decided to break their contract with him. This club was about to take over the water again, and so far came to terms with the owner that a legal agreement was made out and forwarded to him for his approval, but it was immediately returned with a letter stating that he had let the water to another club. This has been very disappointing to the latter club, and they will, no doubt, place the matter before the association at an early date, as it is a rule not to allow one club to take the water out of the hands of another club by offering to pay a larger rent. The Vine Unity were the first to agree to take the water, and sent three deputations over to Hamstall Ridware to make the necessary arrangements for taking the water and a portion of the Trent. The new club, I am sure, do not know anything of these circumstances or they would have made some inquiries into the matter, and I hope that no friction will occur through them taking the water, and that the new club will turn out a thorough success. The Hearts of Oak Society held what they term their re-stocking contest on Monday last at Acton. The contest is carried out on the following lines: The members are allowed a roving commission to fish the canal which they rent; each one has a bait can, which are collected by the referee during the contest, and all live fish, with the exception of the ruffe and the gudgeon, are placed to the credit of the member taking them. At the close of the contest the fish are counted up, when the member taking the largest number receives the first prize, and so on until the prizes are exhausted. By this means a number of prizes left over from past contests are got rid of. Upon the present occasion a good number of fish were taken, and safely transferred to the river Penk, which is rented by the club, and which runs adjacent to the canal. The chief takers of fish are in the order named: Mr. Clem Wainwright, E. Jackson, A. Turner, T. Bates, H. Greaves, A. Jackson, &c. The prizes won by the members of the Birmingham and District Angling Association at the Trades Exhibition at Bingley Hall will be distributed on Friday evening next, April 14, in the lecture-room, Bingley Hall, at 8.30, by Mr. T. Coles. The show of fish is a great attraction, and as a large number of special trains are running into Birmingham during the run of the show, which extends to May 20, those interested in fish should not fail to visit the exhibition. A large number of our members have been out trout fishing, but very little sport so far has been had. The rivers Severn and Teme have been visited, and some small fish have been taken, but as they have been out of condition they have been returned to the water. One of our members, a week ago, was spinning with a minnow for trout on the Severn, above Hampton Lodge, when he hooked and landed a salmon which weighed 18lb.

FROM DERBYSHIRE.

Characteristic April weather has prevailed in Derbyshire during the week, but owing to frequent strong breezes it has not been very favourable for fly angling. Showers have fallen at intervals on most days, and the waters have in places been at times somewhat discoloured. The rain has, however, freshened and cleansed the streams, and they are now (Wednesday) in excellent angling condition. So far, not much has been done with the fly, but trollers and bottom fishers have in many places done tolerably well. Fishing upstream with baits of worms has proved very successful, and some decent lots of trout have been captured by that method. As a rule the fish are not at present in first-rate condition; but, considering the early stage of the season, there is not much to complain of. The Lochlevens are in better

condition than the brown trout, as is frequently the case in the early part of the spring. On the Upper Derwent there has not been much successful fly fishing, the catches having been few and small, and the weather has kept many anglers from the streams. There are now three Bills before Parliament affecting the Derwent, respectively promoted by the Corporations of Derby, Sheffield, and Leicester, to utilise the upper waters between Ashopton and the source of the river as a water supply for those towns. One of them may be successful, but it is to be hoped that the Dukes of Devonshire and Norfolk, the principal riparian owners, will see that angling and other rights are properly protected. Several anglers have been out on the favourite Hathersage lengths, but very few good baskets have been made, and similar remarks apply to the Calver waters. There has been a fairly good number of anglers on the Chatsworth and Baslow lengths, where fish are plentiful; but the sport generally has been but of a moderate description, and few large creels have been made on any part of these waters. The Darleydale and Matlock reaches, as also those of Holmesford, Watstanwell, and Ambergate, have had a fair share of bottom anglers, with a few fly men, some of whom have taken nice lots of fish. Artificial fly fishers have on some parts of the Wye done tolerably well, but nothing worthy of special mention. On the Dove there has been a fair number of fly anglers, some of whom have met with respectable success; but, on the whole, sport has not, even on that stream, been quite up to the mark. Trout are numerous on most parts of the river, and in the neighbourhood of Milldale and Load Mill the waters receive careful attention. Lord Hindlip, who owns a good stretch of the Dove there, has erected substantial lodges for his keepers, to whom the care of the river is committed, and fresh stock is added as often as occasion requires. The fishing thereabouts is excellent, and the stream generally is benefited by the attention bestowed on these parts of it. What is wanted now is more settled weather and less wind, and until it arrives fly fishing will be pursued under somewhat unfavourable conditions, and consequently with but moderate success. The following flies will be found useful on all the Derbyshire streams: Furnace, Red Fly, Claret Bumble, Cock-wing Dun, and Blue Dnn.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

From a trout angler's point of view the Easter holidays have practically been devoid of sport. The great desideratum—rain—has not fallen in sufficient volume to improve the condition of the streams, which in some places are so low that the water has almost ceased to flow. The fish, consequently, have generally accumulated in the deeper holes, and those who have operated here have generally been successful in landing a brace or two. To some extent the high winds which have prevailed during the week have militated against sport. Flies are generally showing on the water, and the fish have shown some activity in the evenings, when the best sport has been obtained.

FROM HULL AND DISTRICT.

The weather still continues mild, with occasional showers, in this district, and the river Hull and its tributary hecks and streams are all more or less in first class condition for either fly or minnow fishing; but no trout of any size worth recording have as yet been taken, although several large fish have been on the rise in various parts of the river. A few small ones were taken during the Easter holidays, going from about ½lb. to ¾lb. each, even as low down the river as Wavne and Dunswell; but even in this district the water is very clear for this season of the year, which has been greatly against the success of our match fishers. Nevertheless, the tides during the present week are making, which will no doubt have the desired effect of slightly discolouring the waters, and bringing them into better condition for successful operations with the worm. The flounders and eels are fairly on the run again in the lower waters, and odd large trout have been on the rise near to Gibraltar and Burton Hall, showing that the salmon trout are making up the river from the Humber. Salmon are reported to be making up the river Humber for the Trent and Ouse, and their enemy, the "porpoise," has put in an appearance rather earlier than usual. The Easter holiday matches have been more or less a miserable failure so far as pleasure and sport was concerned, especially those arranged for Good Friday on the river Hull, for in this district it rained almost incessantly all throughout the day, making matters very unpleasant for the competitors, and in many instances they abandoned the match to seek pleasure and comfort elsewhere; and some of the clubs did not stake out, but adjourned their match *sine die*; and in others, who made an attempt and weathered it, not a single fish was caught; and in the Ramblers' Angling Association match, which took place on Minto Flatts, only one competitor (Mr. Alfred Rooms) secured a fish. But at Hull Bridge the members of the Derringham Angling

Club fared a little better, for they just managed to dispose of the prizes, rendering an adjournment unnecessary, the fortunate competitors being Messrs. John Thackray, John Thorpe, J. Deyes, J. Carter, George Cheeseman, T. H. Wardell, and Geo. Chew, in the order given. But those clubs that fished their matches on the Holderness drains, so far as sport was concerned, certainly fared much better, for these drains, having a direct communication with the brackish waters of the river Humber, are more prolific amongst flounders and eels than the river, although at times it abounds with them in the lower portion, especially in May and June. The Royal Albion Angling Society fished their first match of the season on the river at Weel Ferry on the 9th inst.; and on Saturday next the Hoon's Angling and Recreation Society open their season at the same place; and on the 16th the Osborne A.S. will fish their first match in Lincolnshire at Tetney lock, on the river Ludd.

FROM THE LAKE DISTRICT.

Although the weather on Good Friday and subsequent days was not of a type to please the ordinary holiday maker, anglers had least cause of any class to complain. Mild, dull days, with an almost continual drizzle of rain, following a heavier downfall last week, had the effect of increasing the volume of water, and bringing fish on the feed. There was a fairly good turn out of fishermen, and sport was satisfactory in most quarters, the worm proving most effective on rivers. Present indications point to a successful season, providing the elements prove propitious. Trout are plentiful, and are in better condition than a fortnight ago. The Rev. J. McConnell and Mr. Crump have had baskets of trout from the Winster that seem to indicate an improvement in this river. Good takes are reported from the Lne, the Kent, and its tributaries, Mr. A. Sanl having thirty trout from the Sprint on Monday, but at the time of writing reliable details were difficult to obtain. On the opening day on Windermere (Saturday), Mr. John Watson, Kendal, had a dozen trout. Wednesday was stormy, with a heavy rainfall, and there are indications of a greater rise in rivers, and consequent "worm waters."

FROM LANCASHIRE.

The Warrington Anglers' Association announce a further acquisition of desirable fishing waters for their members and friends. The water in question is another length of the river Bollin, at Heatley. Some few good baskets are reported from the Ribble, but the weather has not been at all favourable; during Easter, especially on Monday, it was exceedingly wet. The tickets for the Worley Canal Fishery are now ready for issue. Several alterations have been made in the rules and regulations, especially as regards the challenge shield competition, the conditions of which should now fall in with the oft expressed wish of many supporters. The East End Angling Association, Liverpool, at their last meeting, considered the value of the prizes to be offered in the coming season. They also had two papers on topics connected with fishing, from the pens of Messrs. W. Jones and S. F. Chantler. Several members of the Nelson Angling Society have been busy catching fish and transferring them to their own waters.

FROM MANCHESTER.

The Wellington Angling Society, Moston, have gone into stocking with a spirit that speaks well for the future of their recently acquired waters. Mr. Will Chambers has secured them 2000 roach, which the members report as being very fine indeed, and should do well in their new home. This club is said to be a lot of "stay at homes"—well, at any rate, they believe in looking well after home. Good luck to your home. Mr. C. H. Robinson, the hero of the Wyresdale competition, and Mr. Smith have been away for Easter. Friday was flood water, Saturday was somewhat better, but Monday afforded the best sport; in all the total of sizeable trout taken was thirty-four brace; this is considered by these gentlemen as moderate, but by many would be a red-letter record. Several of our men have paid their usual Easter visit to Llanymynech, but report sport as only poor, small jack were a trifle troublesome, a few trout were taken in poor condition, and several grayling in good condition, but, of course, were returned to the water for another day. The record of our townsman, Mr. Selkie, for pike taken from Hornea Mere from October to February was 1883lb. weight. At some future date we hope for more details. Bala has been visited by one local, who, on March 31 and April 1 and 3, killed two and a half brace, two and a half brace, and five and a half brace of good trout in a few hours' fishing each day about noon. One city angler passing the Dane on his bicycle interviewed one or two fishing, and ascertained they had found each a few decent trout. Next time he intends to vary his recreation by taking his rod, and trying for a few trout himself. Mr. C. Walmesley and friends, out in Cheshire, have found a few good dishes of trout, and Mr. S. McCrerrick, near Chorley, also got a brace of very fine fish, each one a good meal. Some good reports are to hand from club waters, those from the Buckland and Moss Side Angling Societies are particularly pleasing. Others no less pleasing are the Levenshulme, Kingfisher, and other societies preserving waters.

FROM NOTTINGHAM.

The recent holidays attracted salmon anglers to Shardlow and King's Mills, but no fish were landed. The fact is, the Trent, at both places, was running in too big a volume. Trout fishers were out on Easter Monday and Tuesday on various parts of the Dover Beck, and sundry brace of fish were creel'd by the aid of bottom bait. News from the lower Trent is of a startling character. It reads as follows: "Considerable sensation has been aroused in Stockwith and the adjoining Trentside villages by the capture of a young whale in the Trent at the mouth of the Idle. A young man named Farr saw the strange animal disporting itself in a rather tight spot at the entrance

to the Idle, and after several endeavours succeeded in hooking it (with what?). With the assistance of a number of other persons, the budding leviathan was hauled ashore, and on being measured it was found to exceed 14ft. in length. The species of the whale is not announced. It is on record that a large shark was, many years ago, captured at Gainsborough, but, so far as is known, this is the first time that a whale has got so far out of its course as Stockwith. It is, however, asserted that a few years back a whale, weighing over two tons, was caught near Owston Ferry, which is four miles lower down the river than Stockwith." The Kendal otter hounds met on the Greet on Thursday, and next week I hope to be in a position to record their doings. Sir Henry Bromley, of Stoke Hall, had very kindly sent me an invitation to attend the ousting of otters known to inhabit the noted trout tributary of the Trent.

FROM SHEFFIELD.

The Easter holidays have again demonstrated to the fullest extent the glorious uncertainty of the English weather. Good Friday was a most wretched day, and those anglers who had looked forward to commencing sport on that day had to postpone their outing. Since then the weather has been on the whole very favourable for fishing, and as the trout season may now be considered to be in full swing, most of the waters have been well patronised. The river Amber, which is within easy reach of Sheffield, has fished fairly well, the free portions of the river providing some decent sized trout; whilst the members of the Sheffield Trout Anglers' Society, who rent a stretch of water near Amber Mill, have done very well, the water being in fine condition, and the trout taking the worms to the utmost satisfaction of the fishermen. Between Millhouses and Beauchief the river Sheaf has provided very unsatisfactory sport, the fact being that building operations are extending too rapidly in that district to give fish much of a chance. The river Loxley has been well looked after, with the result that several nice takes of capital trout have been made. The Damflask reservoir, belonging to the Sheffield Corporation, always contains some big fish, but the number of tickets issued this year will be strictly limited, and will not be available before May 1. The rivers Wye and Derwent may now be said to have fully recovered from the intensely cold weather of a fortnight ago, and are now in capital order for fishing. In the private waters at Matlock Bridge and Matlock Bath anglers have had a good time, accounting for many brace of finely-conditioned fish. The higher reaches of both the Wye and the Derwent have been providing the best sport, and the conditions for fishing are improving every day.

FROM SHROPSHIRE.

Agreeable weather characterised the brief Eastertide holiday season, and the Severn and tributaries were visited by a fairly large number of anglers. Sport, however, seems to have been anything but good, and little worthy of record appears to have been done. Most of our Shropshire streams are yet cold in temperature, and very few rising fish are to be observed. Spinning will yield the best results until warmer weather comes, but if sport with the fly is sought in spite of unpropitious conditions the March Brown, Red Spinner, and one or other of the Duns will be found most likely to kill. A rather large March Brown, fished wet, is perhaps the most popular of all flies with Severn anglers, and if the dark patterns fail, a yellow-bodied one may often be substituted with advantage.

FROM WORCESTER AND DISTRICT.

The weather was all an angler could wish this Easter-tide, which induced many to seek the waterside; but sport among the trout was slow, and very few fish were brought home. Some of our clubs do not commence trout fishing until Good Friday. The Izaak Walton Club fished their water, and took some quantity of fish, but they were under the 9in. standard, and were most of them returned to the water again. The Greenbacks Club fished their water, and had very good sport, but most of the trout were returned to the water, being under the limit, with one exception, and that was a grand fish over 2lb., which was caught by Mr. Leach, the treasurer of the club. There were some very fine roach taken in the same water, six of the fish weighed over 5lb. The Worcester City Club fished their water on Monday, but sport was very slow indeed; and other members fished the Teme in various localities, and although the weather was so fine, neither minnow, worm, maggot, or fly was of much use. Some whipped the water for hours, and tried all the likely flies, but sport was almost nil. The worm proved the best killing bait. The Pershore Avon Angling Club had an important meeting, and the taking of immature fish was discussed at some length and condemned. Mr. Jno. Taylor proposed a rule dealing with the matter as follows: "That no fish shall be taken from the river Avon, or any other stream, under 2oz on days of contest or any other occasion (unless for baits). Any member infringing this rule shall be brought before the committee and fined." Provisions are made to decide the size of fish on days of competition, and otherwise to remove any excuse for taking fish under size. Several members strongly supported the proposition, and it was put to the meeting and unanimously carried, and the president (G. Workman, Esq.) expressed

A JERRY-BUILT HOUSE, in quite an aristocratic part of London, the other day literally fell down about its occupier's ears. Outwardly there was nothing wrong almost to the very last, and when the catastrophe occurred it spread consternation throughout the neighbourhood. Many people suffering from ill-health keep up a brave appearance, and no one knows the truth until it is too late. They go about deceiving themselves as well as others. Why, oh why are they so foolish? Their blood is impure, their nerves are shattered, disease is eating away their life. Well-advised indeed are they if, even at the eleventh hour, they turn to Holloway's Pills and Ointment—remedies which give new life and vigour to all who avail themselves of them.

the great pleasure he felt at the action of the club, as the extensive depletion of fish in the Avon had become a very serious matter, and he hoped the great angling associations would also earnestly consider the matter, and use every effort to restore the river Avon to what it formerly was—one of the best coarse fish rivers in the world. The taking of small fish was most unsportsmanlike, and should be stopped. We trust every man deserving the name of angler will do his best to help the club in carrying this rule into effect.

FROM YORK AND DISTRICT.

The weather on Good Friday was cold and cheerless, with a tantalising rain falling most of the day. It seemed as if the conditions which earlier in the week rendered angling disappointing were returning; but a favourable change gradually advanced, and springlike weather has prevailed during the early days of the month. The higher temperature has been favourable to fly fishing, which has been pursued with success on most waters. The best streams are well stocked, and the fish, moreover, are carefully preserved. The Wharfe, Yore, Swale, Nidd, Rye, and Derwent are in a satisfactory condition, the recent showers, whilst freshening the landscapes and enhancing the natural beauty of the country through which the rivers flow, giving a little more life to the still waters; the gusty winds, too, which have not been too strong, having a beneficial effect. Some trout in prime condition have been hooked. The York Amalgamation of Anglers held a meeting a few days ago, and aired a few of their more prominent grievances. One of these was the question of the river Ouse, and the following resolution was unanimously passed: "That the Amalgamation waters on the Ouse be closed during the close season for fresh-water fish, and that the resolution come into force at once." It may be explained that the Melbourne Club had called the attention of the amalgamation to the desirability of memorialising the Yorkshire Fishery Board to close the Ouse during the period stated, and to prohibit the use of click nets. This suggestion was generally approved, but so as to give strength to the claim on the board, the above resolution was brought forward. The amalgamation, in order to participate in the advantage derived from the consignment of young trout by the fishery board, have had to look out for a more suitable stream to receive the fish than any of the waters at their disposal, and they have succeeded in acquiring several miles of excellent trout water. Many York anglers feel sore on account of an intimation that the fishery board has cancelled the order with the Wyresdale authorities, and an explanation of the situation is awaited with interest.

ANSWERS TO CORRESPONDENTS.

CHILDON.—At Eynsford the Plough Inn, or Red Lion at Farningham.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

A YANKEE LYCHNOBITE.

DEAR SIR,—A few weeks ago "Dragnet" noted that the Lychnobites were to have a grand "smoker," and that he had dropped in at a committee meeting, and found certain members, named, "under full pressure of steam." As I am a lychnobite of long standing, and an angler as well, I am eligible to membership in that club or society, provided they do not put the moral or mental standard too high. I was an angler first and a lychnobite afterward, but that might not lead to a number of black balls if the fact that I was in prison for eight and a half months could be overlooked. I might as well state that I was in prison once, and only once, as to have it come out after I had been proposed as a member, but then I live "across the creek," and couldn't attend meetings, so let that go.

The name of the society attracted me long ago, and I pondered on it, wondering if they worked in the dark of the moon, in private ponds, or only worked o' nights in the club-room. Byron was a lychnobite, and wrote:

"Most glorious night!
Thou wert not sent for slumber!"

The fact that "Mr. Tom Pedley, Mr. Gus Cannell, Messrs. L. A. Swalby, C. Townsend, W. J. Povey, and Tom Edwards" were "under full pressure of steam," while "Mr. West and Mr. L. Chaplais were working hard in a good cause," raised the questions why only two should be working, and upon what the other gentlemen got up steam. As a lychnobite who is past six score, and who has experimented somewhat with "steam," let me warn them against Pelusian wine, which in England is heavier than the German article, and hath a somnolent spirit in it, which is a foe to lychnobites; rather let them partake, in moderation, of something more warming and cheering, not the doleful Lachryma Christi from Vesuvius, nor Liebfraumilch from the Rhine, but rather the Usquebaugh from the hills which unfolds the ruge of the brain, and makes it active and fit for (k)nightly labour.

Somehow I like these "like-no-bite" duffers, for I've fished many a day with no result, and then stuck out my chin and said: "It is not all of fishing to fish, I was not out for fish, but took a rod to knock down a few cherries as I strolled along viewing the beauties of nature." Even a lychnobite must admit that a fellow must lie once in a while, because it is easier than to wear one's heart upon his sleeve for "jays" to peck at. Of course, the anglers of England know that there is no "daw" in all Yankee-land, and that their Transatlantic cousins miscall a yokel a "jay."

Again the question: Why do they like-no-bites? If

they are night fishers as well as what fat Jack called "minions of the moon," then let me recommend to them a most beautiful word picture on night fishing by a Mr. W. Shakes Beer. I quote from memory, please excuse mistakes and a bad pen.

"How sweet the moonlight sleeps upon this bank!
Here will we sit and get our tackle out,
While heavy throated frogs do stun our ears
With communistic croakings like the anarchist.
Come, sit thee down, and let the songs of skeeters
Creep in our ears; soft stillness and the night
Become the touches of sweet harmony.
Sit, Jess, my boy: Look how the surface of the pond
Is thick inlaid with frog-spittle of bright green;
There's ague in it; don't cast there
Because perchance you'll only hook 'blind eels,'
As urchins term the pond weed, or a snag.
Give me another grub; now cast yonder
Among the lily pads, and I'll bet you seven shillings
You'll hook a gudgeon before your line gets down.
Look! Jess, my boy: How those tadpoles swim!
There's not the smallest pollywog which thou beholdest,
But in his motion like an angel sings;
Still quiring to the young eyed sticklebacks:
Such harmony is in the wide-mouthed bullhead,
But while this muddy pickerel weed
Doth grossly close it in we cannot hear it."

The author of these lines, if I have quoted him correctly, was a lychenobite, but it is rumoured that he is dead, therefore he couldn't get into the society if he tried. Perhaps I couldn't, and I won't try, there's too much "agin" me, but I'd like to be with 'em, no matter if they do work their neighbour's chicken roosts at night. A chicken is a mighty good bird. He is an F.R.S., and don't you forget it, for he is good fried, roasted, or stewed, just like an oyster, and the oyster is often a fellow in royal society.—Yours truly, FRED MATHER.

Brooklyn, N.Y.
[Col. Fred Mather was an officer in the "Army of the Potomac," 1862-65, but was a prisoner of war from June 16, 1864, to March 1, 1865, and it is to this that he refers when he says he was "in prison." He entered the army as a private, and fought through the American Civil War, coming out as a captain, and when his country declared war with Spain last year he raised a regiment, and was appointed lieutenant-colonel. He thought there was one more campaign in him if it could be got out at once, and he was longing for one more.—Ed.]

A FISHING FLOAT INSIDE A MAN.

DEAR SIR,—The enclosed is from the *Leamington Courier* of April 1. As we hear complaints of the increasing number of anglers, the publication of it broadcast might deter some from practising such a dangerous sport. We all, or most of us, know of the man who carried worms in his mouth, but he drew the line at floats. Surely this is a record.—Yours faithfully, J. HOBSON.

"A REMARKABLE EXPERIENCE.—The Warneford Hospital contains a patient at the present time who has passed through a rather remarkable experience. His name is Alcock, and he belongs to Leamington, being the son of Mr. Alcock, shoeing smith, Windsor-street. Some few weeks ago he experienced great pain in one of his thighs, and as a result became an in-patient of the Warneford Hospital. Investigation and examination established beyond doubt the presence of some foreign substance in the thigh, and an operation was in due course performed. It was then found the foreign body consisted of a porcupine float used on a fishing line, which the young man is supposed to have accidentally swallowed, about a year ago. Assuming the float was swallowed—and it is difficult to account for its being where it was found had it not been—it must have worked its way through the stomach into the thigh, here setting up the irritation which led to its removal. Since the operation the patient has been making a speedy recovery. A singular feature of the case is that he has no recollection of ever having swallowed the float."

[It is not an uncommon thing for an angler to "take his hook," but this is the first we have heard of one taking his float.—Ed.]

DO SEVERN SALMON TAKE A FLY?

SIR,—Can you inform me whether the salmon in Severn take the fly as a rule, so as to make it worth while using that only?—Yours truly, FLY MAN.

[We have heard of salmon being taken occasionally with the fly in the upper part of the Severn, but not lately. It is waste of time to go to the Severn to fly-fish for salmon or angle for salmon in any way.—Ed.]

FISHING IN WALES.

DEAR SIR,—Can you or any of your readers tell me of any place in Wales where, for a moderate expenditure, I can get a week's board-lodging and trout fishing? Are Welsh trout better worth catching than the wretched little sprats they call trout in Devonshire?—Yours faithfully, MEDICUS.

FISHING IN SWITZERLAND.

DEAR SIR,—I shall be obliged if you or any of your subscribers can tell me whether there is any trout fishing to be had at this time of year in the neighbourhood of Zurich (Switzerland), either by payment or otherwise?—Yours truly, MARINA JONES.

GENTLES BRED IN WINTER.

SIR,—"Fossdyke," in his exhaustive and interesting article on the above subject, says that his gentles were far superior to those supplied by a certain dealer who advertised in the *Fishing Gazette*; but, from

what I have heard how gentles are bred in winter on a large scale, I am afraid "Fossdyke" would be out of pocket if he supplied the public throughout the winter with gentles bred as he suggests. He says: "True, they are not to be had freshly bred (i.e., in the winter)." But I say they are to be had freshly bred, and are kept in damp golden sand, and sold at several shops in London and elsewhere."

The finest gentles I ever saw were bred from the best rump steak and a sheep's head, being larger than gentles even bred from liver; but what dealer could stand this expense? None of these gentles bred in the winter, that I have used, were so large and vigorous as those bred in the summer, and I feel sure that they never will be whilst the present artificial method is followed. Mr. C. H. Wheeley, in his book "Coarse Fish," published by Lawrence and Bullen, says, of these gentles, "In winter fishing I keep a small supply from the gentle bag in a tin box, in a warm pocket, or warm the box in the hand; the warmth makes the gentles stir, and puts them in fine condition for the hook; they soon die in cold water, when I pull them all off, and entirely renew the bait."—I am, &c., JUST SO.

FISHING IN LOCH FYNE.

DEAR SIR,—Having by D. MacBrayne's steamers and a yacht been as far north as Oban some time since, I noticed, especially with regard to fishing, the appearance of Loch Gilp, which runs north to Lochgilphead.

The Glasgow steamers *Iona* or *Columbia* run to Ardrishaig, where is good yacht anchorage. A large part of Loch Gilp becomes dry at low water; and, passing in a machine, I noticed innumerable lug worm casts, which would supply unlimited bait for plaice. There is a range of rock allongshore, S.E. by E., for about two miles, depth from three to seven fathoms, and a mile beyond are forty-eight fathoms, and, no doubt, congers in plenty, as Scotchmen dislike congers and all kinds of eels as food. Ardrishaig is a great herring station, and often plenty can be had for bait. The side fins of plaice will catch skate, and with this bait my friend caught one of 60lb., and afterwards, on a long line, another of 100lb.

Loch Fyne, just off the point, is three and three-quarter miles wide, and elevations of bottom are continual for two miles south, and from five to depth of forty-two fathoms. The chart of Loch Fyne is on the table before me.—Yours truly, J. C. WILCOCKS.

HOW THE T.A.P.S. TREATS ITS FRIENDS.

The Thames honorary river keepers have received the following letter from Mr. Gough, the secretary of the Thames Conservancy:

"Victoria Embankment, E.C.

"DEAR SIR,—The conservators have received representations from the Thames Angling Preservation Society as to the desirability of further restricting the use of the cast net in the river, and the society suggest that only those holders of deputations who are professional fishermen should have the power to use the net in future.

"The conservators concur in this view, as they feel the proposal would, if carried into effect, be of advantage in the interests of the fishery, and they propose that from and after April 1 only such holders of deputations as are fishermen registered under the Thames Fishery Bye-laws shall be allowed to use the cast net.

"The conservators trust they may rely on your ready acquiescence in the above, and they will feel obliged if you will not, after the date named, use a cast net in the river.—I am, dear sir, yours faithfully, "JAMES H. GOUGH."

The T.A.P.S. has thus robbed its appointed honorary keepers of a privilege which a deputation carries, and it is possible that the society will lose many friends through their action. It may be well to explain briefly the situation. The T.A.P.S. has for some time recommended certain anglers to the Thames Conservancy to act as honorary river keepers. This has always carried with it the right of using the cast net. Few of the honorary keepers have ever taken advantage of this, but have always had the pleasure (if it is one) of knowing that if they wished to do so they might. Now the T.A.P.S. has robbed them of this. Surely if the T.A.P.S. cannot trust the people they recommend for a deputation to use a cast net the society cannot trust them with the powers of assistant river keepers.

In conversation with a member of the T.A.P.S. committee I learned that some discussion had arisen through the holder of a deputation being suspected of using a cast net and selling bait, and, therefore, the society recommended this method of stamping it out. Surely the T.A.P.S. might have withdrawn the deputation, and thus stopped any illegal transactions. Now they have insulted all their honorary keepers, because by their action they clearly prove that they cannot trust them.

It may be generally known that I hold a deputation, and it may be thought that this is a personal matter, so I just add that on no account would I accept a deputation from the T.A.P.S. I received mine from the Conservancy direct, and although I have had the power to use a cast net for some years I never have done so, and I have no cast net if I wished to do so. But what I strongly object to is this shabby treatment by the T.A.P.S. of its own honorary keepers. I hear, too, that not only does this affect those with deputations in the lower reaches, but honorary keepers in the higher parts of the river have been requested not to use the cast net, so that the up-river anglers who hold deputations have something to be thankful to the T.A.P.S. for.

So far as Kingston is concerned, the only person I have ever seen use the cast net is Johnson, the fisherman, for bait for his customers. I do not believe any fish are caught by these nets and sent away for bait, and if the T.A.P.S. knew of one of its own keepers doing this, why did they not withdraw the deputation? If the society want to stop dace being sent to the market there is the

proper way of doing it, for the fish that are sent away are caught by rod and line, and the T.A.P.S. officials know it and have often stated it. But, there, where are the paid river keepers to look after this? There are none, and the so-called preservation work is therefore disgusting and heart-breaking to those who really have an interest in the river.

F. H. AMPHLETT.

[We cannot suppose that it was ever intended that honorary river keepers should have the right to use a cast net to take bait in the Thames, as it would be to the prejudice of the professional fishermen.—Ed.]

SCOTCH SEA FISHERY QUERY.

DEAR SIR,—I would recommend Mr. G. de Maupas to take steamer to Oban and look up Mr. Munroe, who is well up in this class of information, and does a large business, besides being a yacht agent.

If Mr. Munroe approves, I would suggest Tobermory as the stopping place, which is a trifle more than a nautical mile from Rana Gal Lighthouse, at the north entrance of the Sound of Mull, the chart of which, including the N.W. coast of that island, lies spread on the table before me. The bay of Tobermory is a grand natural harbour, one and a quarter miles in length and six cables in width, and Calla Isle, a mile long, protects it from the east; but as the coast of Argyll is only a mile off, there is much shelter unless the winds blow from N. by W., or S. by E., the direction of Mull Sound. Close to Tobermory town is good anchorage in from six to twenty fathoms, mud bottom. H. water, full and C. Tobermory Bay, Vh. 36m. Spring tides rise 13ft; neap to 9½ft. Close to all rocky cliffs, in the West Highlands, where I have fished, I have caught pollack, and the more open the place the larger the fish. Less than six miles from Tobermory is the "fishing bank," a little more than a mile from the shore, where all kinds of fish frequenting the coast may be expected.

I should advise his taking at least a dozen of the india-rubber spinning sand eels, red, white, and black, at 4s. per dozen, and also half dozen largest size at 9s. per dozen; half dozen 3ft. collars of double and three of treble salmon gut, two strong brass swivels on each an inch long, from C. and R. Brooks, 62, Southside-street, Plymouth; and a similar lot from Mr. W. Hearder, 195, Union-street. You get off these coasts pollack of 15lb. or more at times, to say nothing of coal fish (stenlocks), possibly larger. Most people are not prepared with stout enough snooding on their hooks. An acquaintance showed me his hands scored with cuts (lately healed) caused by these huge fish, for which tarpon tackle would seem not too stout, with its appurtenances, to be seen at the Army and Navy Stall, at the Fisheries Exhibition, Aquarium, Westminster, or their warehouse.

I strongly advise him to purchase this chart, price 4s.—title, "Sound and North-West Coast of Mull"—of Mr. J. D. Potter, 31, Poultry, London. Get it sent on a roller to avoid breakage. It is a most useful and lovely work of art, reaching from Lismore to Staffa, thence to Ardnamurchan, on to Loch Snart, thence to Rana Gal Light and Tobermory. There are two views of Ardnamurchan Lighthouse and one of Rana Gal. If a yacht is wanted, ask Mr. Munroe if he has the Plymouth yacht in his hands, seventeen tons, owned some time since by Mr. L. If he takes with him a peck of mussels, he may possibly get plaice or dabs in the harbour, or a large pollack on a stray line, at or after dusk.—Yours truly, J. C. WILCOCKS.

FISHING AT COLNBROOK.

SIR,—Could you kindly inform me through the columns of the *Fishing Gazette* if the river Colne, from the Great Western Railway Bridge to Colnbrook, is public or private property? And if private, could you kindly publish the address with the name of the lessee?—Yours respectfully, J. HUNT.

[The Colne is private from the G.W.R. Bridge, and leave very rarely given. The gravel pits outside Colnbrook Station are the property of G.W.R., and leave must be obtained to fish. Some good fish at times are taken here; also at Colnbrook (river Colne). Mr. Galton, of Star and Garter Hotel, will let you fish from his garden, at the end of which runs the Colne. There is a big pond at Horton, off the Bath-road, Colnbrook, for tench, bream, pike, perch, &c. Mr. Dnnham, of the Five Bells, Horton, will direct you to the spot. It is free fishing. The Anglers' Association has a stretch of the Colne at Horton open to its members. Particulars also at the Five Bells.]

REPORTED NETTING OF THE TEME AT LUDLOW.

DEAR SIR,—While reading your fishing reports of last week I was surprised to see in the reports a portion which I beg leave to draw your attention to, in which it states that there are said to have been signs of netting in some of the private waters below Ludlow. I beg to contradict such a statement, and to state that I travel the said waters twice a week at the least, and I have not seen the least signs of any netting having taken place this season. I have even taken notice of all footmarks by the side of the fords, and I can account for all of them, as I know for certain the anglers that have been on both sides of the river since the trout season opened. It brings back to my memory the case of a man who once said that he saw some trout which were caught with the net, also he knew samlet from trout, but when brought face to face with the fish he knew nothing at all about it. If your correspondent should hear anything of the kind again, he should ask his authority to let him see it, or come to me to know if it is the truth, as I should only be too pleased to give him any information on the point, and then he would be able to state facts, not hearsay. I did not intend to trouble to contradict it, but I am requested to do so on behalf of myself and others interested.

ARTHUR FELTON (Water Bailiff).

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to R. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Scale of Charges for Advertisements.

SATURDAY, APRIL 15TH, 1899.

A PLEA FOR STEAM TRAWLING.*

AMONG the men whose lives have been devoted to the study of sea fish, a head and shoulders above all stands Professor W. C. McIntosh, of St. Andrew's. Whenever a skilled referee has been required on fishing matters, he has been and will be called in. His book, "The Familiar History of our Marine Food-Fishes," published in 1897, is a most admirable work, and, indeed, may be looked upon as the standard text-book on the subject.

It is with mingled feelings that his new work on "The Resources of the Sea" must be regarded. As concerns the early life history, both in its purely scientific and practical aspects, no one has a more perfect grip of the subject than Professor McIntosh, and were it wise ever to bow merely to the authority of a name in any instance whatever, then this is the name *par excellence* to whom all should submit. But scientific arguments, especially such as lead to important practical results, require to be carried on without respect of persons, and with a view only to the ultimate ends to be reached.

In most works a great deal may be drawn from the preface and the conclusion, and this book proves no exception. The preface prepares us for a critical survey of the work done by the Scottish Fishery Board during the last ten years, especially when certain areas—St. Andrew's Bay, the Firth of Forth, the Firth of Clyde, and the Murray Firth—were closed against trawling. The conclusion arrived at is practically that the supply of fish can never be materially affected by the

efforts of man. Professor McIntosh therefore disapproves of protection, and recommends trust in Divine Providence rather than restrictive legislation. The grounds on which he suggests faith, rather than works, are the results obtained by the *Garland*, the makeshift vessel of the Scotch Fishery Board, when trawling in the closed areas. On page 233 he states that the period of ten years, when the tables quoted were compiled, "affords certain important data, especially in conjunction with previous observations, *carefully made and free from any disturbing element.*" It might have been as well if, before coming to any definite conclusions either one way or the other, that the author should have noted carefully the results of fishing not only within the closed areas, but also outside in British waters. On page 241 he states that "The returns from the various centres all over the country have for the most part steadily increased since 1884, and though it is true that large quantities are captured on the Great Fisher Bank, Iceland, and other regions at a distance from British waters proper, yet *this is due to the more remunerative nature of the work, and not to the dearth of fishes in the seas at home.*" The italics are ours, and not the author's, and the reason they are inserted is that this statement, though made with all authority, has not one shadow of proof brought forward in support of it; and further, indeed, seems to be contradicted by the unanimous testimony of the delegates from the Eastern Counties given at the Sea Fisheries Conference last year, nineteen-twentieths of whom were trawlers and fish salesmen, who at least ought to know where they get fish, and at what price it can be sold.

The author describes the scientific biologist as "a close observer of nature; he weaves no theories, and is not incautious in deduction." Would that it were so. It is surely unwise to argue about the general effect of steam trawling in the deep sea from the statistics afforded by inshore trawling in certain closed areas during the daylight hours. Another deduction which seems hardly justified by the facts appears on page 228, where the author says: "Instead, however, of placing the onus of the scarcity on any method of fishing, such as trawling, it would be more reasonable to lay the blame on general over-fishing." This is interesting if compared with page 241, where "scarcity" is denied.

It is well-known to all persons interested in our Naval Reserve that the fisher class have been greatly reduced in numbers during the last twenty years, especially line and net fishermen, while the capturing capacity of the steam trawler has been greatly increased, especially by the use of the otter trawl. These figures are borne out by those of Professor McIntosh, who, on pages 78-95, proves that in five years the number of men and boys on line and net fishing boats propelled by sails was reduced from 45,629 to 38,126 (by his own figures), with an increase of 415 men on steam trawlers and liners—in plain English, a decrease in the number of the Scotch fisher class of over sixteen per cent. between 1892 and 1897.

Are there any corresponding benefits as regards our fish-food supply? Improved methods usually give cheaper articles, but, as regards fish, the present methods are associated with enhanced prices.

As this book purports to be an impartial review of the present condition and future prospects of our sea fisheries, one is surprised to find certain little paragraphs which are apt to mislead the superficial reader. Thus, on page 234 appears the following: "The capture of small fishes by either trawlers or liners is a misfortune for the country." This would imply that the destruction of small fish by liners is to be compared with that caused by trawlers, which is not so. Again, on page 228, it is stated that trawled fish "on an average command a higher price than line-caught fishes;" but it is not stated that these figures are taken at the *port of entry*, and not on the wholesale markets. Doubtless at the port of entry, especially where railway facilities do not exist, hook-caught fish will fetch a less price than trawled fish delivered by carriers in Aberdeen or London; but, given equal facilities, the hook fish keeps better and fetches the best price on the central fish markets, a fact for which any practical fish buyer can vouch. Again, the author asks why the dabs have not been thinned out as have the plaice, and goes

on to remark that the trawl "makes no discrimination as regards species." Surely here his knowledge as to the *habitat* of the adult dab ought to aid him. "Practical men," such as he speaks of disparagingly on pages 222, 223, know that the dab loves rough ground or little patches amongst rocks, where he is comparatively safe from the trawl; and that, so far, the trawl exercises some "discrimination as regards species."

One statement on page 76 is certainly apt to mislead persons who do not follow fishing statistics: "Undoubtedly the larger and more regular supply of fishes had a tendency to diminish value." Will it be believed that, in the face of this paragraph, the price of fish has increased considerably during the last ten years, especially that of prime fish.

These are facts which may be deduced by anyone who cares to see the figures for himself in their entirety as they appear in the annual reports of the Scottish Fishery Board. One interesting fact is to be learned on p. 95: "For fifteen years the trawl fishery has been prosecuted with vigour, and it is interesting now to see what areas the ships frequent, and with what results. To commence with the more northerly, viz., Aberdeen, at which trawling has made great progress since the former date (1884), it is found that whereas the chief supplies were brought from the adjoining sea by the older paddle boats, or from the Moray Firth by the more powerful vessels, much of the supply of the present day comes from the Great Fisher Bank or from Iceland." An interesting commentary on the results of steam trawling as regards "the adjoining sea."

The purely scientific deductions which are drawn from the work to which the author has devoted his life are summed up in the statement that do what man will he cannot injure the sea fisheries. It is unprofitable to discuss these theories more fully here, but they remind us of the anecdote of a certain man, who, having been lodged in the county jail for some misdemeanour, sent for his solicitor, and laid his case before him. "But," said the man of law, "they can't put you in jail for that." To which his client replied tersely, "D—n it, they have." Professor McIntosh says that man cannot seriously injure our sea fisheries, and this view was sturdily maintained at last year's conference by Mr. Baillie Pyper and the Lord Provost of Aberdeen. The Hull and Grimsby delegates replied at that meeting, not by argument, but by unanimously agreeing that the North Sea was getting fished out. Perhaps the most remarkable commentary on Professor McIntosh's statements is the notice given by Messrs. Hewitt that it is their intention to close down the short Blue Fleet, as they no longer find trawling profitable in the North Sea. It will require a good deal of scientific argument on the other side to explain away such a hard fact.

After careful study of the whole of this work, the preparation of which has no doubt taken many months, the conclusion must be arrived at perforce that it will most certainly add nothing to the reputation of its learned author. It is to be devoutly hoped that its teaching may not tend to postpone necessary fishery legislation till it is too late to repair the damage caused by the short-sighted policy of the large capitalists during the past few years.

SIR HERBERT MAXWELL'S "LIFE OF THE DUKE OF WELLINGTON."—When Sir Herbert Maxwell's book on the Duke of Wellington is published in the autumn by Messrs. Sampson Low, Marston and Co., it will be found to be something more than a biography in the ordinary sense of the word. It will record the re-birth, so to speak, of the British Army, and the reform of army administration. Sir Arthur Wellesley found the army in a condition as disgracefully neglected as that in which Nelson found the Navy. Without tents and without food, Wellington's troops in the Peninsula were for a considerable time in as sorry a plight as that of the Crimean men a generation later. Another side of the subject is presented by the splendid discipline and the efficiency—especially in marksmanship—to which Wellington's forces attained long before their work in the Peninsula was finished. All this, we understand, will be made clear in Sir Herbert Maxwell's volumes.

* THE RESOURCES OF THE SEA. By Professor W. C. McIntosh. C. J. Clay and Sons, London, 1899.

CHEMISTRY AND ANGLING.

AN instance of the connection between chemistry and angling, both in fresh and salt water, may possibly be of use to brother anglers who have not hitherto had their attention called to the subject. All anglers who pay attention to pike fishing when angling with live bait, are accustomed to place their bait-kettles in the pond or river, if the local conditions permit it. They should submerge the lid of the bait kettle, which is commonly the case, but for what reason? The answer is, "to keep the baits cool and admit as much fresh water as possible, so that the baits may remain vigorous until required for use," as the water may have become more or less stale whilst journeying to the pond or river they have chosen to fish. Now, what is stale water? It is water deprived of its life-preserving power. And what is that power? It is oxygen gas, and driven off by heat of the sun or the increase of the temperature through the effluvia given off by the bait fish in the confined space of the kettle, which causes them to become sickly.

The water being now contaminated will not for long continue to support fish life, for the fish are practically similarly situated to the unfortunate British soldiers imprisoned by Hyder Ali in the Black Hole at Calcutta, who died from the heat and the impure state of the atmosphere of their narrow prison, whilst many were trampled to death in frantic efforts to get to the grating which did duty for a window. When the kettle is placed in the pond or river the temperature of the water falls, and a supply of oxygen now enters the holes in the lid of the kettle with the fresh water, so that the vigour of the baits is restored.

Some years since, whilst residing at West Brighton, on a visit to the Aquarium, I observed some sand eels in one of the tanks, and I noticed they were in a position quite unnatural for fish to take, as they were nearly perpendicular in the water, and gasping for breath, with their noses just clear of the surface.

The sand eels are members of the *Esocidæ* or pike family, and I certainly never saw a pike take up a position identical with a man when bathing, treading water. It did not occur to me that they were struggling to obtain fresh air like the prisoners of the Black Hole of Calcutta, but I feel now convinced that this was the case. I have no doubt they shortly after expired, and that an inadequate supply of oxygen to fish of so delicate organisation was the cause of death. I observed no more sand eels on other visits.

On another occasion I happened to be travelling between Hull and Grimsby, on which line one often meets with men connected with the North Sea Fisheries; and a man connected therewith being a fellow passenger, we got into conversation on baits for cod, and especially on lamperns and the Teddington fishery for them.

He informed me he obtained his supply from the Yorkshire rivers, and that much care is requisite to keep them alive for bait.

These fish are placed in a cask of water, the cask being fitted with a plunger, and a man and boy travel with them to work this plunger up and down. The boy has to take his turn at this work, and if he gets remiss or sleepy the man gives him "what for" to keep him up to his duty. I am fond of fishing, and at times have used Devon and Cornish lamperns for pollack, but I do not see much romance in lampern plunging.

Regarding the bearing of the insufficient supply of oxygen on the sand eels intended for live bait fishing, I may mention the following occurrence in connection with fishing off Shoreham, at a spot known as the "Billy Boy," a very favourite ground, about four miles off the harbour, for good sized pout, codling, black bream at times, and pollack, the latter rarely taken in any quantity by the local professional fishermen unless they have received special instruction in the Channel Island method of preserving and using the living sand eel for bait.

An amateur, who is a good ground fisherman, took some sand eels to try for pollack at the "Billy Boy," in consequence of my writing on this living bait in the *Field*.

Having placed the sand eels (known as *wriggles* in Sussex) in a pail, he arrived at his ground, and, anchoring, commenced to fish with the sand

eel bait, but most of them were dying or dead, through the exhaustion of the oxygen in the water in the pail, the result being an entire failure.

On my first visit, however, having subsequently to the above attempt become a resident at Shoreham, I visited the same fishing ground with friends whom I desired to make acquainted with this method of fishing, and our take amounted to twenty-six pollack, although through a very light wind we could not reach the coveted spot as soon as we desired. On another occasion we took fifty-three, and on a third, sixty pollack. On the fifty-three day, we provided an excellent local fisherman with live sand eel bait, enabling him to take eight pollack, an unusual number for any local man.

If the local fisherman had been provided with properly fitted pollack lines or rod tackle he would certainly have made a larger bag, but drift-lining is not as a rule understood in Sussex or Kent, nor streaming, as it is followed in Devon and Cornwall, and Ireland; and as that valuable bait the pilchard is rarely met with east of Portland, and the local fishermen have not yet recognised in any numbers the value of the living sand eel in the absence of the pilchard, quantities of pollack arrive on the rocky ground and depart, with very small toll being taken from their shoals.

The experience of the last six years has shown that more than 1cwt. of pollack can be taken in a day, by aid of the living sand eel, on rocky grounds off the Sussex coast; many of the most important rocky shoals, however, yet remain to be tested by the angling rod and line and Channel Island gear, both armed with the living sand eel, described as this "wonderful" bait, by Mr. F. G. Aflalo in his work, "Sea Fish," p. 118, and in my own work, the "Sea Fisherman," pp. 190, 135, 191, 63, 64, 65, 66, 228. This bait has been used by myself from 1862 to 1869 in Guernsey, and from 1870 and after at Exmouth, Teignmouth, Torquay, Salcombe, Dartmouth, at the Eddystone on one occasion, and off Fowey, and up the harbour, and at and off Shoreham, and once at Newhaven.

For several summers I often used it for bass at Shoreham Harbour, and I look on it as the most powerful bait to test the presence or absence of bass at the entrance of all bar harbours, and also up deep water harbours, by those acquainted with the habits of the bass, and also of the presence or absence of the pollack on or near the rocky shoals in the open sea, such as the Royal Sovereign off Eastbourne, Beachy Head, &c., or where any wreck is known to exist in a depth of three fathoms and upwards. Even in less water than two fathoms they may sometimes be found with a few bass, as at the wrecked barge at Orcombe Point, Exmouth, S. Devon, or the trawler wreck off the east end of Teignmouth beach, supposing any portions of these wrecks are yet remaining. I always used my *courgée*, i.e., the sand eel basket, as a floating reservoir for the sand eels, towing it at the boat's stern when not on board a steam yacht, as shown at p. 66, Fig. 20, of my "Sea Fisherman." If visiting a distant pollack ground in a steam yacht, it is not wise to tow the *courgée* after the vessel, as they get punished by the pressure of the water when going fast, but a waterproof box with a hole should be provided, and should be large enough to contain the *courgée* afloat in it. The hole being partly closed by a stick or a plug, one of the hands should be told off to draw sea water from alongside, and empty the bucket slowly, holding the bucket waist high above the tank box, thereby maintaining the supply of oxygen in the water, much of which should escape by drawing the plug, which will allow the old water to run away. By this means my friend and self arrived one morning in June off the Eddystone, near Plymouth, with the sand eels full of vitality; good sport followed, our catch reaching 1½cwt. Much heavier takes are, however, often made.

On another occasion the same steam yacht visited the "Hand Deeps," a cluster of rocks three miles to north-westward of the Eddystone, a fishing boat being also there. The fishing boat caught nothing, having no sand eels, but the yacht took eighty-four large pollack. In the evening, near the Eddystone, however, the fishing boat took a fine lot with other bait, viz., the rubber eel, as the light faded out of the sky. The fisherman was my informant.

J. C. WILCOCKS.

AN OLD FARNINGHAM FLY FISHERMAN.

LAST week I paid a visit to the river Darenth, for, being born on its banks, I was curious to see if that once beautiful stream—spoken of by Michael Drayton, in his "Polyolbion," as

The silver Darenth, in whose streams
Unnumbered fishes play,

and in which, for twenty years (1836 to 1856) I continually fished, from Dartford up to Eynsford, and occasionally in Lullingstone Park—had much altered in its character; for, in the times I have referred to, the Darenth was without doubt one of the very best trout rivers in England.

I struck the stream at the little bridge in the lane, by Sutton Place, and followed it through Sutton, Sutton-at-Hone, up to Horton Kirby, returning by way of South Darenth to Darenth, and I regret to be obliged to say that the river has greatly deteriorated. Its width is sadly diminished by growths of sedge; here and there decayed alder trees and bushes cumber the banks; the gravel scours, once natural spawning beds for trout, are obliterated by foul deposits from paper mills, &c.; and the head-water above Morbey's Mill (as it was called fifty years ago) was simply filthy. Well do I remember the trout my brother and I used to catch in Morbey's mill-head, and up along the alders to South Darenth; also in the Sutton stream. Six brace, each from half a pound upwards, were frequent captures, with an occasional two-pounder; but I am writing of departed times and of former sport. On my last week's visit to this Kentish stream trout were "conspicuous" by their rarity, roach were plentiful, and small jack were not scarce. In fact, I was assured that a few pike had been killed ranging from 5lb. to 9lb., and anglers know how such fish can spoil a trout stream.

In those "old times" the opening day for trout fly fishing was always on a Good Friday—how-
ever early or late that date might be—and a few anglers used to meet regularly at The Lion, Farningham, then kept by Wm. Wells, who was succeeded by "Tom" Pawley, a noted fox-hunter in his day. Among other anglers I used to meet there were Charles Messenger and his son, Charles Huggett, Thomas Barton, and many more skilful fly fishers, who were always ready and willing to impart a "wrinkle" to young anglers like myself, or would generously spare a few of their flies if by chance we had not the kind trout were taking. Another "past master" of the gentle art I sometimes "happened on" was the veteran tragedian, Samuel Phelps, who, with all the other anglers mentioned, has joined the greater majority. I entertained a great veneration for Samuel Phelps, for he was such a clever fly fisherman, and because when (as a youth) I was "put to business" in the City, I used to attend Sadler's Wells pretty regularly, and witness his marvellous acting, during his six years management, and revivals of the Shakesperian drama. One morning, at Farningham, I watched Mr. Phelps for half an hour trying for a fine fish that had strayed from Collyer's mill-tail, to where the large tree by the bridge throws its boughs over the water. The trout kept rising and retreating under the foliage, which here and there dipped in the stream. After changing his fly many times, he at length hooked the trout, which, in less than a couple of minutes, broke away round a submerged branch.

"Oh!" I exclaimed, "I am so sorry, Mr. Phelps, you have lost that fine fish." He turned to me and said, "Well, young man, and how would ye like to get your lunch at the end of a blessed cable?"

Away from the exercise of the art to which he so earnestly devoted himself, Mr. Phelps was simply to be regarded as a quiet country gentleman, fond of rural pursuits and the use of his fishing rod, perhaps prouder of his skill with that than of the warmest plaudits of an enthusiastic audience. During the theatrical vacation he was to be found for many successive years at his favourite haunt, the Lion Hotel, Farningham, where he stayed for weeks together to enjoy the pleasure of trout fishing in the river Darenth, which flows in front of the lawn of the old hostelry.

The farmers in the neighbourhood never suspected that a visitor who conversed with them

so freely about their crops was at the same time busy in studying the best modes of rendering the next Shakesperian play to be produced at his theatre on the banks of the New River. And it is on record that a Kentish yeoman, bringing his family to town for the purpose of seeing "The Doge of Venice" at Sadler's Wells, and, recognising a familiar voice and manner in the prominent actor, astonished the audience in the midst of the play by involuntarily exclaiming: "Blest if the 'Dodge' isn't the old Farningham fisherman!"

ALFRED JARDINE.

TRAVEL AND TROUT ON EASTER MONDAY.

It is not without reason that "travel" is put before "trout." Of course, it usually has to come before it, and also, alas! after it; but in this case there was a great abundance of travel of the most satisfying description, and the bag of trout resulting—well, to put it mildly—was not quite in proportion.

Perhaps we were lucky to have any fish at all, many Easter Monday anglers tell us so.

Certainly it was a bold thing to put ourselves at the mercy of the South-Western Railway on such a day.

However, we did; and, by a double miracle, we both caught the 6.40 a.m., having, between us, only three minutes to spare. No fault could be found with the weather, the country was looking pretty enough, and we certainly had plenty of time to admire it in the two or three hours which this line takes to do about forty miles.

On arriving we breakfasted, and started to walk by a "short cut" of my invention to our stream. My companion tells me that we wandered over the greater part of the country during that "short cut," but I think he was prejudiced, as it was not *his* short cut. We did arrive at last, and began to whip the stream by 10.30, which, after all, is not so bad.

Fish rose at once, but nearly always refused, only one troutlet being taken (and returned) before we arrived at the mill pond, the scene of many a bit of lively sport in previous years. Here at last we did get a decent fish, though just short of 1 lb. Being the first, he had the honour of being lifted out by the miller himself with the landing net, though not without some scoffing on my companion's part.

Seeing what great care we took not to let our quarry, however small, escape, the fish, after this, with one consent, agreed to come short. For hours not one came to bank, though numbers rose, and some were hooked and played. My friend had two on in as many casts while I was watching, and afterwards he hooked a 1 lb. fish (very large for this water), which went the way of the rest.

After lunch there was a temporary change, and for about ten minutes every fish I rose was duly landed, and I thus increased our bag by four; but it was soon over, and for the rest of the afternoon the old game went on—rises rather frequent, and takes very rare. One fish rose to me five times, and never touched after all; but on the whole my friend had the more provoking time of it, getting twenty times as many rises as fish. I fancy this was partly accounted for by his preference for dry fly; most of the fish that fastened doing so under water, and preferring the end fly when two or three were being used. I had on a Silver Sedge (of all things) for end fly, and this was taken in most cases, though some fish fell to the March Brown. The largest hooked took a Soldier Palmer, which is always a good fly on coloured water.

After all, it was an enjoyable day while we were at Liphook, the fresh, spring weather being most delightful to us both, and, after the fishing, perhaps the best part of the day came round, as the hospitable miller made us come in for some tea, and the lively society indoors made us reluctant to hurry out again.

As a matter of fact, we did make a few casts before the trap was ready; but it was, as we expected, of little use, only a few half-hearted rises rewarding our efforts.

The scene was a beautiful contrast to the Babylon we had so lately left. Before us spread the large mill pond, lighted up by the evening sun and slightly ruffled by the breeze.

On its surface floated a pair of swans, and every now and then a trout would rise, or even jump high into the air. Primroses and kingcups were just coming on, and the elms were putting on their spring attire, and all nature seemed in tune, and even the pair of grumbling anglers ceased to fret, and packed up the few small trout that had fallen to their lot in comparative contentment.

Soon we had taken leave of the party assembled on the lawn, and were off again for dusty, dirty London; and alas, with small hope of getting there for some three hours or more.

We took something over that on the railway journey alone, but the end came even to me before midnight, and as I had to penetrate ever so far into Kent by the South-Eastern this was something to be thankful for; though whether a Briton ought to be contented to be conveyed about 100 miles by rail in seven or eight hours is another matter.

I may add that (contrary to usual custom) this fishing, though private, is available to any gentleman willing to contribute a little towards improving the stock in the water.

Anyone wishing to try the fishing (which, it must be remembered, is essentially different from most Hampshire fishing, and is more like that of Devon) should write first to H. Warren, Esq., Liphook, Hants, for particulars, means of access, &c. It is rather a long walk (two or three miles) from Liphook station, even if you do *not* take the "short cut."

J. PAUL TAYLOR.

JAPANESE FLIES.

THOSE of our fly fishing readers who have not seen artificial flies made in Japan will be interested in the accompanying illustrations of four

of them. The head of the fly is represented by a little gold knob. Some of the hooks are barbless, and not unlike the hooks made from needles, and used by some of the Swiss natives in making artificial flies.

EARLY STAGES OF THE YOUNG MARINE FOOD-FISHES.

IN my last article I dealt with the eggs and spawning of the principal food-fishes having floating ova.

Passing on, then, from the period when the egg, having swelled to its full size, is extruded and slowly risen to a certain level, is gently rocked in the cradle of the deep, we have to note briefly the phases through which it passes. The principal change is internal, namely, the growth and development of a small tadpole-like creature within the transparent envelope. After a period varying according to the temperature of the water

and the species of the fish, the envelope ruptures, and the larval creature emerges. When first hatched, it is floated by the watery yolk of low specific gravity retained in the yolk sac; this, as the little creature develops, is gradually absorbed into its body, and is at first the only source of nourishment. The sac, however, very speedily diminishes in size from the fact that a great deal of watery yolk is required to build up the growing organism in a very short time. As the yolk is absorbed, so the young fish is deprived of its float, and unless it is able to support itself by means of its fins, sinks gradually towards the bottom. It was found in the artificial hatching of the young fish that the critical period was when they had absorbed their yolk sacs to such an extent that they were no longer buoyed up by them, while they did not seem to have acquired sufficient energy to support themselves by means of their fins. Of course it is well known that great differences exist between the round and flat fishes having floating eggs, as to their power of flotation, and as to the rate and character of development in their fins; but even if these points be taken into account, artificial hatching at this particular stage seemed to be attended by a tremendous mortality. Mr. Harald Dannevig, who has so successfully, during the last few years, conducted the affairs of the Marine Fish Hatchery at Dunbar, determined to carefully investigate the reason of the mortality amongst the young fish.

He accordingly experimented with young plaice, the ova of which he placed in a special apparatus, constructed as follows:

A large carboy-shaped vessel, 20 in. in diameter, flattened on the bottom, 18 in. deep; diameter of the neck 9 in.; placed in the sand bath to the depth of between 3 in. and 4 in. The whole apparatus was lifted 2 ft. above the floor, placed in a corner with a window on each side, 4 ft. distant, one looking north, the other east. The back portions of the jar were more dimly lighted from the other laboratory windows, and was sufficient at any part of the day to permit of the fry being closely examined. The jar was filled to a depth of 10 in., and the water used was from the harbour, renewed once or twice daily if it became too heated. Constant circulation was kept up by the water next the glass sides (especially those next the light) becoming heated and rising, being replaced by cold water from below. This was specially seen if the sun were allowed to play on the tank.

The first successful experiment is here summarised. Plaice eggs were artificially spawned and hatched eleven to thirteen days later, most of the young fish having the yolk sacs absorbed in a further period of five days. They were then all placed in the jar above described and fed twice daily with minute forms collected in the harbour with a tow net. The tow net, as no doubt most of us are aware, is a single net formed of fine material, from butter muslin down to silk bolting cloth, which strains off even the most minute forms of life found in the sea.

The young fish separated themselves into three groups:

1. Swam steadily near the surface, and paid no attention to food. They were originally highly coloured, but gradually became pale, joining No. 2 group.

2. Were pale and weakly, remaining, as a rule, quiet near or on the bottom, resting on their heads; they "occasionally made an attempt to catch small crustaceans."

3. Were richly coloured and looked healthy; they were found at all levels, slowly moving, on the look out for food. They were much fewer than the other two groups.

The difference between this last group and the two others was the avidity with which they fed on the food supplied by the tow nets, consisting of diatoms, free-swimming larvæ of shell fish, and numerous forms of water flea. A tremendous mortality occurred in the first two divisions, so that by the forty-fifth day after hatching, when the experiment appears to have been concluded, the forms which remained were all belonging to this last group.

The most interesting matter to be investigated was the reason why in artificially bred larvæ these three divisions should occur. It struck Mr. Dannevig that the first and second divisions were in the condition known to persons who have had experience in Indian famines, that is to say, these fish had reached a condition which precluded

them from feeding on ordinary food. He says: "I am not quite certain, but there is reason to think that these two classes of larvæ in reality had been starving while in the hatching apparatus, where they were perhaps retained rather long." It struck him that perhaps the young fish did not wait for complete absorption of the yolk sac before commencing to feed. This idea was further confirmed by the fact that the absorption of the yolk, which at first proceeds very quickly, gradually becomes less and less, so that the last quarter of the whole amount is absorbed very slowly, so that, as Mr. Dannevig puts the matter, "it becomes evident that more nourishment is required, and possibly of a different nature than what is simply provided by nature directly and attached to the fish in the form of yolk."

Accordingly he took some newly hatched plaice, put them direct into his rearing jar, and added tow net food as in the previous experiment; in between three to four days the fry, with only partially absorbed yolk sacs (about half the yolk remaining), commenced to feed upon the small free-swimming forms, especially one form of infusorian, and occasionally diatoms.

The previous observations made on the feeding of post-larval (those with the yolk sac completely absorbed) fry seemed to show that their principal natural food was larval and microscopic crustaceans, which they took to after a modified dietary of infusorians and diatoms had been given up.

The reason of the previous tremendous mortality in rearing is clear. Those who are acquainted with the death rate amongst infants artificially fed, or rather starved, will notice the strong parallel which exists. We find that infants, systematically starved by improper bottle feeding, and put upon the same food as their parents, are unable to retain such food; and, even should they retain it, are not nourished thereby, but die of starvation. Of course, under even the most adverse circumstances, a certain small minority struggle through to maturity; otherwise the children of the labouring and lower middle classes would never reach maturity at all. The same may be said of the few post-larval fish that have hitherto been reared; but there is little doubt that this number can be quadrupled by early and appropriate feeding.

Here, then, are to be seen the advantages of scientific research; years of practical rule of thumb work would never have taught the importance of early feeding, whereas the facts proved by research, namely, the low specific gravity of the yolk and the usual food remains found in captured forms of larval fishes gave the required cues.

Would that we had the same scientific research going on regarding our fresh-water fisheries. Are our salmon fisheries of no value that their ruin should be looked upon unmoved? Do we await the day when salmon will be as scarce on the Severn as they are on the Thames? Why should England wait, and for what?

But having seen our young fish first nourished, let us see what forms their staple food while they are approaching land.

Up till quite recently but little was known on this point. However, in a recent blue book the contents of the stomachs of various young fish are described.

Of course, the toddlers do not entirely give up their nursery milk, and therefore still continue to wage hearty havoc amongst the water fleas, but add to this dietary the *zoæa* or infant free-swimming forms of the better known crab and lobster groups. A specially favourite food of the young codfish is the larval form of one of the sea anemones which conveniently attaches itself in great numbers to the edge of the disc of a little jelly fish. The young fish seek the neighbourhood of these jelly fishes, therefore, in search of food, and this has no doubt given rise to the idea first put forward by Sars, and since stated to be erroneous, that the young codfish sought out the jelly fish and found security beneath its umbrella, darting forth at intervals in pursuit of prey. Whatever the exact mutual relationship is, there is little doubt that the jelly fish can, and frequently does, shelter the young fish, and that the fish relieves the jelly fish of its parasitic sea anemone. When the young fish gets inshore its appetite has grown with its increase in bulk, and therefore the food required must be more easily and quickly collected. Larval mussels appear

now to be favourite forms, and in the autumn and early winter months the neighbourhood of mussel beds usually abounds with very immature fish. Also in these localities adults of various food-fishes are found, such as large plaice and codling, whose object appears to the unsympathetic scientist to be more personal than parental. Sad to say, the stomachs of such specimens when captured more frequently contain the *débris* of young food-fishes than the remains of either immature or mature mussels.

The young cod also, the first autumn and winter, have a habit of frequenting the ground covered with the *Flustra* or sea mat, a species of zoophyte. Of course this browsing does no permanent damage, as the zoophyte rather prefers an injury as a stimulus to its growth.

Having given a brief sketch of the various forms upon which the young fish feed, it will be as well to particularly describe one or two of the principal, so that the reader may have some personal idea of these important though but little known organisms.

As has been said, after the earliest stage amongst the first food the larval form of a small shell fish is most frequently found in the stomach of the little transparent creature. The little fish then starts feeding on the water fleas, the less strongly armed forms of which it polishes off most unceremoniously; those with spines or bristles it is unable to swallow, and rejects.

From the twentieth to the thirtieth day the young plaice is able to cope with *Evadne* and other large forms of water flea. *Calanus finmarchicus*, commonly called "whale's food," because it is devoured in great numbers by the right whale, is now occasionally swallowed.

From the thirtieth to the thirty-sixth day the little plaice added to the dietary various larva of larger crustacea and molluscs.

From the thirty-sixth to the forty-fifth day, when the record ceases, a few larger forms are added, such as *Temora longicornis*, so well known to all boatmen as universally distributed near the surface of the water in temperate seas.

Mr. Thomas Scott's researches on the nature of the "plankton," as the floating material collected by the tow net at the surface of the sea is called, shows us that about nine-tenths of this in the neighbourhood of the Farøe Icelandic Channel consists of the before enumerated small crustaceans, the commonest forms being *Calanus*, *Pseudo calanus* (a closely allied form), *Temora*, *Acartia* (a form not described as fish food), *Podon*, *Evadne*, and others.

It is to be noted that the larvæ of the better known crustacea are rare, and this is to be expected. For we find that the young fish are hatched out and rise to the surface at a great distance from land, and these require the *Copepoda* or water fleas as an early diet; but as they get older they sink deeper and get more inshore, where, of course, they can acquire different food, such as has been mentioned in this brief article. We see that the more we learn the more we have to learn, and that every bit of knowledge is of practical value.

The greatest collection of plankton is the favourite ground of young post larval fish; the crowd of young post larval fish is the situation of the predatory surface swimmers; and they, again, are preyed upon by the larger forms: so, at length, we begin to see daylight concerning the migrations of our adult food-fishes, which our forefathers were accustomed to attribute to spawning, and indeed fifty other causes equally without foundation. CHARLES S. PATTERSON.

THE DECLINE AND FALL OF SALMON FISHING.

UNLESS something is shortly done by the Legislature, salmon fishing in the rivers of Scotland and Ireland, and, for the matter of that, in the seas as well, will, within the next twenty years, become altogether a lost sport.

People, as a rule, overlook one very important matter, namely, the improvement in angling. Rods have been improved, new spinning reels have been made, minnows and prawns have been introduced, and where there used to be one fisher of salmon there are now fifty. And this within the last five-and-twenty years.

But the fish has got to get into the river, and here comes a far more important matter. He has

got to find the mouth of the river, and creep up it, and from the moment he starts to follow the decrees of Nature his troubles commence. Stake nets, bag nets, and fly nets are laid out along the coast, into anyone of which let him once poke his nose, and remote, indeed, are the chances of his ever again revelling on the spawning beds of his ancestors.

The rents paid for good stretches of water have become almost fabulously absurd, and surely the water owners who take advantage of the salmon fisher's love of sport ought to provide him with the best attainable. He does nothing of the sort; he simply tries to give as little as possible for the money.

Surely salmon fishing can be improved? The big landed, or rather watered, proprietors are greatly to blame for the terrific slaughter they allow at the mouths of the rivers. Two instances especially strike me—the Spey and the Blackwater, both in the possession of so-called sporting dukes. The Duke of Richmond gets £6000 a year for his six nets at the mouth of the Spey, and practically catches in nets all the spring fish that would enter the river! Again, the Duke of Devonshire traps, in a wicked Irish device, nearly every fish that would attempt to ascend the loveliest river in Ireland.

Is there anything to be done? Before suggesting a remedy, let me point out, as has been pointed out by Mr. Grimble, that there are five splendid rivers flowing into the North Sea where hardly ever a spring fish is caught by rod, but at the mouths of which hundreds and thousands of fish are yearly murdered in nets.

The rivers are the Erne, the Deveron, the Findhorn, the Don, and the North Esk, and we may rightly suppose that if some public company could buy those stake and other nets off, those rivers could be let to sportsmen at a great profit to the company.

Right among those rivers I have just named flows the glorious Dee, and see the difference! Some twenty odd years ago an energetic proprietor, Lord Huntly, successfully carried out a plan for buying off the river nets, which at that time plied as far as Banchory, fifteen miles up the river as the crow flies. In those days never a fish was caught in the spring months between Banchory and Aberdeen, and very few east of Aboyne, and now Mr. Fasby's water at Cairnton, by Banchory, is probably as valuable as any stretch on the river. Surely this speaks for itself?

But although the river nets spoil all spring fishing, it is to the stake nets along the shores that legislation must be turned, if the salmon is not to follow the dodo. These nets have increased five and tenfold, and any owner with a frontage, or whatever it is called, on the sea, can put any number of stake nets out. Feeling his way for the fresh water, if the salmon misses one he fouls another, and so on.

There is a law, I believe, which prohibits nets being placed within 400 yds. of the actual river's mouth, but this little matter is easily arranged by taking the river's mouth a trifle up stream!

On one river nets come off at six o'clock on Saturday evening and come on at six o'clock on Monday morning. That is the only chance a fish that has entered a netted river gets of jogging home.—*The Phoenix*.

SOME RECENT THAMES TROUTING.

ALTHOUGH the state of the water was better at the opening of the 1899 trout season on the Thames than that we have enjoyed for many years, no reliable report of the capture of a large fish reached me during the first ten days of April.

It is true I was told a fish of over eleven pounds had been landed at Marlow, but up to the present I have had no confirmation of this; on the other hand, many small fish have afforded sport and encouragement to those who made an early commencement, and were fortunate enough to "spot" a feeding fish, or have one found for them.

The Easter holidays came at a very acceptable time for many anglers, myself amongst the number, the 1st of April being the day after Good Friday, and doubtless many a busy man was glad to lay aside the pen and wield the rod once more. It is satisfactory to note the increased number of city firms who close their establishments for the

full four days at Easter, and it is perhaps not too much to say that ere long the half-day of the Saturday will be added to the calendar of St. Lubbock; if so, it will be health to men, and death to many a "fush."

The season opened with a cold, but fair morning, and on reaching Shepperton Weir about 8 a.m., I found, to my surprise, that I was apparently the first there to wet a line. I tried the Tumbling Bay over very carefully, and was soon joined by another local enthusiast, but we could not find a fish. On the arrival of the London train, we could see many "rods" hurrying to the weir, and a mighty adjustment of tackle was soon in full progress by the river-side, and ere long, it was amusing to see twelve or more anglers at work, some endeavouring to catch bleak, some spinning, others live baiting; it can be imagined the water was well "combed" for the time being!

Seeing the game was up, I left the platform, put on my waders, and spun over all the shallows thoroughly, but without success, not seeing a single trout move. The water at the edge of the fall was alive with dace, hundreds of these fish collecting at the corners of the weirs, and amongst so much bait the chances of running a fish were somewhat poor. I stopped fishing about 3 p.m., and determined to go further afield on the Monday.

On Easter Monday I "biked" to Bell Weir, taking my rod, bag, and landing net on my back, began fishing, and was soon joined by Rowles; together we gave every foot of the weir a thorough "doing," but without a touch, not even from a chub or jack. The old man was not at all sanguine of sport, and if he cannot get a trout at Bell Weir, it is only by mighty good luck that any one else gets one there, for he almost knows how many spots a fish has on him when he has been in the weir for a day or two. After lunch, nothing discouraged, I rode on to Boveney Weir, beyond Windsor, and I do not think I ever saw so many bicyclists on the road, Windsor being quite dangerous to ride through, especially over the huge cobble stones near the Castle. The lane leading to Boveney was terribly bumpy, and the going over the grass was worse, so I was not at all sorry to get off my "machine" at the lock, and put my tackle together once more. Two anglers were fishing from a punt in the far corner, but they had done nothing beyond catching a jack.

There was a very full stream running, and the likely spots were swarming with dace, roach, and minnows, but the excellent colour of the water gave good prospect of sport, notwithstanding a bitterly cold wind. After fishing for some twenty minutes I had a bait pulled clean off; the fish, whatever he was, missing the hooks and securing the gudgeon without being so much as pricked. It is an ever recurring puzzle to anglers how a fish can pluck a small bait, practically covered with hooks, clean away; doubtless it is chance, but it is a marvellous chance indeed. One would suppose that a small gudgeon, spun on a tackle comprising a lip hook and three triangles (the last one loose), apparently arming the bait entirely, would infallibly secure each fish that came at the bait, be it trout, chub, pike, perch, barbel or any other; but this is not the case, and arm your bait how you may, with fewer or more hooks, such a mischance will occasionally happen. Even that great fish, the salmon, will nip a piece out of a well triangled prawn as neatly as possible, so I suppose we must content ourselves to take our luck as it comes, good or bad, and when the hook holds, cry "Hold enough!"

I do not certify the particular fish in question was a trout, the pull was rather too "jiggery" on the rod for my liking, but, whatever it was, the effect was the same. I tried him again, but without result, and returned to Bell Weir.

Just on reaching the weir an excitement was provided for the multitude by the capsizing of a sailing boat in a heavy squall of wind; the heavy sails kept her down on the water, and her crew could not right her; she drifted down to within a few yards of the weir head, when a sculler came from the boathouse, and arrested her further progress by a line to the bank. As it was, it was touch and go for the weir, and I fancy that the occupants of the craft, after clinging so long to the gunwale, were not sorry to get safely ashore, though the real danger of a "capsize" is to be entangled under the sail.

When the crowd left the weir I fished it over once more; then Rowles returned, and we had another chat, and I left him to deal with the "trouts" without interruption. I rode home past Chertsey Weir, and Marsh informed me that nothing had been done, and I also found the sport at the Shepperton Weirs had been nil.

The next time I could wet a line was on that genial spring day, Saturday, April 8.

"First it rained, and then it blew,
Then it friz, and then it snow,
Then there came a shower of rain,
Then it friz and snow again."

—Shakespeare (or some other poet).

My word, what a day for a Thames trout, and no humbug either! It is on these awful days, after the baits have once been in the weirs, that one has a rattling good chance. Reason why, the baits all go, and the trout get the very dickens of an appetite. You put a bait over them and the thing is done, bar accidents.

Is it not on record that "J. P. W." killed a brace of big trout and lost one some 16lb. weight (more or less) at Molesey on one of the vilest days that the clerk of the weather ever concocted?

Therefore, when getting on my waders, I was not one bit surprised to see a trout, recently caught—a nice fish about 4lb. in weight—and I went on to the weir with a full confidence of getting another.

I tried the big weir, the snow falling heavily, and the wind coming in great gusts from about N.W. Not succeeding, I waded into the shallow water, and spun the tail end of the weir as far as I could throw, then crossed the weir and tried the other side. Tug, tug, all at once, and a heavy pull. Another fisherman came running with the net after a minute or two, but I was reluctantly obliged to tell him it was only a chub; and a beauty it was, at least 4lb. in weight, thick and heavy. The brute broke off a triangle while I was extracting the hooks. It is close season for "knocks on the head" as regards coarse fish. I pitched him in again, little the worse for wear, put up a fresh tackle, and went off to the Tumbling Bay.

The wind there was so terrible that it was quite dangerous to stand on the platform, and the line belied about so that fishing was almost impossible, so I left the weir for awhile; it was not good enough. Towards evening the storm died away, and I started to fish again in earnest. When the wind dropped, the water fell considerably in the weir; it was not driven in waves and spray over the weir-fall, and the lower water fished perfectly. I spun a small bait over the likely spots most carefully. Jig, jig, the bait went, and presently, in a very favourite spot, the rodtop was jerked violently down, and a trout was leaping and tearing down the big run as only a trout can; up and down and across the heavy water he went. At his first leap I saw it was only a small fish, but he was a rare plucked one! I played him till he turned on his side, walked down the steps, washed him round in the eddy, and popped the net under him.

This fish, though small (only 3½lb.), was well hooked indeed, and he would never have got away without breaking the tackle. To my surprise, the fish was evidently an old one, a male fish with a regular "kipper" under jaw—a silvery fish thickly covered with black spots on sides, tail, and gill covers.

It was fine sport to get a fish in such bad weather, but my experience is that if the water be right no weather is too bad to kill fish in.

One of the most genial anglers who ever caught a Thames trout was the late Doctor John Brunton. Success attended his efforts at the very outset, for he secured a very fine fish, as I understood from his remarks, on his first trial, and another on his second. If I remember rightly, his first fish was some 8lb. in weight, taken by spinning between Chertsey and Shepperton. Always anxious to give us the benefits of his varied angling experiences, we shall miss him sadly at the meetings of the Piscatorial Society; it was through his kindness I first heard of the killing powers of the Wagtail artificial bait.

Writing on the present subject reminded me of his conversation about Thames trout, and I close my remarks with a most respectful tribute to the memory of a thorough angler.

CHARLES H. WHEELLEY.

BRITISH SEA ANGLERS' SOCIETY.

THE ANNUAL DINNER.

THE sixth annual dinner of the British Sea Anglers' Society was held on Wednesday evening, at the Holborn Restaurant, under the presidency of the Hon. Mr. Justice Bucknill. The vice-chair was occupied by Major A. J. Travers (prime warden of the Fishmongers' Company), and there was an excellent attendance of members and visitors. The British Sea Anglers, as a club, met at the Holborn Restaurant for the first occasion on Wednesday, but for the future this will be their headquarters. They will hold their weekly gatherings there every Wednesday, Mr. J. C. Wilcocks, the veteran sea angler, delivering the inaugural lecture, as far as the society's new home is concerned, on Wednesday evening next. The dinner was one of the most successful held by this "go-ahead" society. Among those present were:

Messrs. F. C. Baker, J. N. Blyth, J. Butler, T. B. Bates, W. Bennett, T. Edwards, E. J. Holbrow, J. W. Smith, A. W. Taylor, C. T. Coombs, H. Codner, H. Tautz, Chas. Buswell, R. T. Buffery, R. Bradford, H. Weber Brown, G. Read Clarke, C. J. Crisfield, C. H. Cook ("John Bickerdyke"), W. C. Canton, G. H. Howard (*Fishing Gazette*), A. R. Matthews (*The Angler*), W. Craig, J. H. Dunkin, Julius Davis, H. Edwards, G. Fletcher, John Friers, J. J. A. Grumley, W. T. Green, Preston R. C. Gardner, Major G. Gordon, Messrs. W. Gowland, G. C. Horsman, J. N. Hearn, A. Hodson, Croft Handley, Chas. Handley, W. Ive, Michael Jacob, A. Krenkel, John Lees, H. W. Lane, E. T. Lacey, Arthur Mignot, H. T. Moore, C. O. Minchin, E. M. Mallett, S. T. Mimpriss, W. Marshall, E. McFee, W. Meyers, G. Nutter, H. Norton, L. A. Ormiston, G. F. Penney, S. J. Prior, W. S. Penney, W. H. Puckle, A. W. Parker, G. Reynolds, J. Robinson, J. Risien, Woollard, Beard, W. Marsden Smith, J. W. Simon, M. Smith, H. Simmons, E. Bessie, G. White, I. Jonas, F. Penney, H. C. Simmons, M. Schmidt, L. Saunt, J. G. Tolhurst, S. Tucker, J. A. Travers, R. J. Tomlin, J. Wrench Towse (secretary to the Fishmongers' Company), G. Vaughan, B. Warsop, F. W. Wohlgenuth, G. Wheeler, F. Ward, A. W. Watts, J. W. Zaehrsdorf, E. Bennett, Chas. Bramley, King Lovett, and E. Hanger.

The usual loyal toasts having been heartily honoured,

The HON. SECRETARY read telegrams and letters of regret at absence from, among others, Mr. C. A. Payton, British Consul at Calais (and a well-known writer on angling under the *nom de plume* of "Sarcelle" in the *Field*); Mr. R. B. Marston, Editor of the *Fishing Gazette*; Mr. R. Biddulph Martin, M.P., the society's honorary treasurer; and Mr. A. E. Litchfield, the latter, it was announced, away on his honeymoon. He wired: "Two British Sea Anglers wish success to the dinner." A telegram which was received with hearty cheers.

The CHAIRMAN next proposed "Success to the British Sea Anglers' Society." He said that that toast, after the toast of the "Queen," was the toast of the evening, because it was the toast of their noble selves—of a society on which the sun never would set, and of a society which, to paraphrase the words of the song they had just heard, "Will last to all Eternity," as it went on increasing in numbers, health, and strength. (Applause.) Perhaps some of them would say, "That is all very well; where do you get it from?" Well, from the programme; on its front page they would find a picture of the rising sun, then several anglers in a boat—they looked as if they were both trying to foul each other's lines—(laughter)—and there they could also see the fisherman for'ard. Later on they saw they had hooked two mermaids—(laughter)—and while one angler was trying to kiss a mermaid, the other mermaid was waiting for her chance to arrive. There was also depicted Father Neptune, who, all smiles, seemed to say, "I've done all that before." (Laughter.) So they would see that that picture indicated what a happy thing it was to be sea anglers when they could go fishing and catch fish. (Laughter.) But they were not fishing that night, and it was just possible that in that fact might lie the danger, because he was quite sure that all there that evening were determined to enjoy themselves—he himself was already well on the road in that direction—yet they were not sea anglers merely by name, hoping to come there for the purpose of convivial entertainment only, but were there to also talk about what had been done in the sea fishing world, and of the know-

ledge which had been acquired from brother anglers at the weekly meetings. Their primary object was to be upon the sea, and their secondary object was to be there this evening. To be upon the sea, he might say, however, was not at all times a pleasant thing, especially when they were ill. (Laughter.) He (the Chairman) upon one occasion went over from Folkestone to Deal to see Mr. Clarke catch fish, but he did not get a single specimen. (Laughter.) Nevertheless, determination and perseverance overcame most obstacles, and he believed Mr. Clarke had caught fish since then. At all events, he said so, and if that was the case it must be so. (Laughter.) The society was growing to such an extent that not only had it branches in England, Scotland, and Wales, but through the exertions of a gentleman in the room, Ireland had been brought within the fold. (Cheers.) He believed that Irishmen were both Tories and good sportsmen if they approached them properly; and, with regard to their sea coast, its richness for sea fishing, he believed, had not yet been found out. The West Coast of Ireland teemed with fish. (Hear, hear.) When they found that the anglers had caught all the fish which were to be taken off Deal, and when they went on increasing in their numbers—and that would soon happen—they would have to seek some other fishing ground. Well, let them make up a little party and go to the West Coast of Ireland, where they would, he thought, get fish. He would commend that as an idea to the hon. secretary. He (the Chairman) proceeded to refer to an angling experience of his own at Exmouth, where his father and he nearly filled the boat with mackerel. On the way to shore his father remarked: "Tom, we'll have an auction on the beach"—(laughter)—and this they did, he (the Chairman) having to unload the boat. His father in the meantime had perambulated the district, and, having gathered a crowd round, at once proceeded to constitute himself, in a most illegal manner, an auctioneer—(laughter)—selling the fish for the benefit of the local cottage hospital. (Cheers.) He could remember his sore hands as a result of handling the mackerel, but everything was very enjoyable. That to him showed that when they had hard work and good sport they never failed to look back to such pleasurable incidents as that to which he had referred. (Cheers.) He believed that if they wished to enjoy themselves as sea anglers they could not do better than stick to that association, and ask their friends to come in and join it as well. (Cheers.) So long as they had a secretary like their present secretary, and so long as they made enthusiasm their motto, he did not see what they had to fear. (Cheers.) Why, they even had a Bishop of Litchfield among them—(laughter)—and he had that evening sent them a message from some other place than Litchfield. (Laughter.) He (the "Bishop") was on his honeymoon, and, though he was called the Bishop of Litchfield, he may be said to have lived at Deal. (More laughter.) Under the circumstances, however, he had not forgotten the association, since he had found his wife amongst the members. (Laughter.) In conclusion, the Chairman remarked that at that moment nothing was nearer to his heart than the interests of that society, many members of which were present, and he wished it long life, prosperity, health, wealth, and an increasing membership. Might it go on as it had begun, and might it go on to all eternity. (Loud cheers.)

"The Visitors" was submitted by Mr. R. PRESTON-GARDNER, who expressed the pleasure, on behalf of the society, it gave them to welcome the guests at their banquet. The society was a rising one, and he hoped that many of the visitors with them that evening would be members next year. (Cheers.) In his opinion there was no better sport than that of sea fishing. A man who participated in it returned from his outing not only better in health but in better temperament. They had weekly meetings, where there were many things to learn, where good fellowship prevailed, and where there was the making of friendships. (Cheers.)

Mr. E. M. KILVERT suitably acknowledged the toast.

The toast of "The Press" was ably proposed by Mr. C. O. MINCHIN, and was acknowledged by Mr. C. H. Cook (editor of the *Bazaar Sportsman's Supplement*) and Mr. G. H. Howard (*Fishing Gazette*).

Mr. C. H. COOK, referring to the British Sea Anglers' Society, remarked that he had always done his best for it. (Cheers.) He had never lost an opportunity of advocating its claims, and advising sea anglers all over the kingdom to join it. It had done a good work. The professional fishermen, in his opinion, did not know as much as they did with regard to the capture of sea fish. In some cases they (the professionals) were now following their methods—they were using smaller hooks and were also fishing with gut. He (Mr. Cook) had, indeed, used the rod in certain districts without any remarks being passed on that style of sea fishing. That, he thought, indicated progress. (Hear, hear.) He hoped the society would never lose sight of its aims and objects. (Hear, hear.) In conclusion, he congratulated them upon its remarkable success. (Cheers.)

Mr. G. H. HOWARD also acknowledged the toast, and expressed the regret Mr. Marston felt at being unable to be with them. He, however, had sent him (Mr. Howard) to represent him, and he wished the society continued success. It was doing a good work, and the members were all excellent sportsmen.

The Chairman presented the prizes won by members last season, and took occasion to heartily congratulate the various winners, who were loudly cheered. The successful anglers and their prizes were as follows: The Deal Corporation Challenge Cup and the society's gold medal for the heaviest fish were taken by Mr. William Ives, with a cod weighing 13lb. 4oz.; and the silver medal by Mr. J. H. Dunkin, with a pollack weighing 12lb. In Class 2 the silver medal was taken by Mr. A. Krenkel, with four cod weighing 21lb. 8oz.; while in Class 3 the silver medal was taken by Mr. F. C. Baker, whose best twelve whiting weighed 10lb. 5oz.; and the bronze medal fell to Mr. T. Yates, whose best twelve weighed 10lb. The bronze medal in Class 4 was taken by Mr. J. C. Mason, with two plaice weighing 1lb. 12oz. In the Pier Competition, Class 5, Mr. T. Sexton again carried off the silver medal with a catch of nineteen pollack, weighing 21lb.

MR. G. READ CLARKE (whose rising was the signal for a chorus of cheers) proposed, in eulogistic terms, "The Health of the Chairman." He was sure they would all feel very gratified that his lordship had been elevated to the Bench. (Cheers.) He had conferred a great honour on them by presiding that night. Speaking personally—he had known the Hon. Mr. Justice Bucknill for many years, and had been engaged with him professionally—he would say this, that never had he met a man more hand in hand with anyone. (Cheers.) As a social friend he was—if he might be permitted to use the term—a good pal; he was a good companion to everyone. (Cheers.) In reference to the day their chairman came over to Deal to see him (Mr. Clarke) fish, the water was so thick—(A voice: "Excuse")—that there was no chance of pollack fishing. (Laughter.) He (Mr. Clarke) tried with the well-known parchment bait, but it was all in vain. (Laughter.) In conclusion, he asked them to drink long life, health, and happiness to the Chairman, might he long be an ornament to the Bench, and might he long do his duty to his Queen and country, as he had always done in the past. (Cheers.)

The toast was enthusiastically honoured, the company singing "For he's a jolly good fellow;" and in reply,

The CHAIRMAN suitably responded, thanking Mr. Clarke and the company for the kind way in which they had received him that evening. He also referred to the sports he followed, and related an amusing incident while sea fishing at the entrance to Weymouth Harbour, and, regretting that he was obliged to leave the meeting to catch a train, requested Major Graham Gordon to take his place in the chair.

The VICE-CHAIRMAN next gave the toast of "The Honorary Committee and Officers," remarking that the British Sea Anglers' Society was an extremely well managed one, and while it was in the hands of such an excellent committee and hon. secretary it would long continue to be. (Cheers.)

The toast was acknowledged by the HON. SECRETARY (Dr. Patterson), who remarked that during the past fifteen months they had held a weekly meeting, and he only wished that at those gatherings they might have such an attendance of gentlemen as he saw around him that evening.

(Hear, hear.) They had over 900 members, and he wished one-tenth of them would attend one quarter of the meetings he had referred to. As regarded the work of the society, he had been backed up by a capital committee—(cheers)—in proof of which they had had twenty-nine committee meetings during the past year. Theirs was the largest angling society in the country. (Cheers.) He had an announcement to make to them that evening—they had moved into a new home, to a more central position, viz., to the Holborn Restaurant. Their first meeting would be on Wednesday evening, when Mr. J. C. Wilcocks, the veteran sea angling author, would read them a paper. (Cheers.)

Major GRAHAM GORDON next asked the company to drink to the health of the vice-chairman, and dealt with several matters of interest to sea anglers, one being the three-mile limit. He also mentioned that their vice-chairman that evening was the Prime Warden of the Fishmongers' Company, and also an ordinary member of the society. He thought the combination of their chairman and Major Travers was a very happy one, and one which did honour to the society, and upon which the executive ought to be congratulated. (Cheers.)

Replying, Major TRAVERS said that the British Sea Anglers' Society and the Fishmongers' Company ought to work together. (Hear, hear.) He was sure the society would always find them lend welcome assistance when they could do so at the Hall. (Cheers.) They had there a society—a kindred society, he might say—which was friendly to the B.S.A.S., namely, the National Sea Fisheries Protection Society. It was part of the Fishmongers' Company's duty to help the fisheries, both in fresh and salt water—(cheers)—and the Court took very great interest in all fishing matters, and he looked forward to that interest increasing every year. There was, he thought, very much which members of the B.S.A.S. might do in assisting in the development of our fisheries. (Hear, hear.) They could also help the scientific researches of experts as regards the habits, &c., of sea fish. With reference to the three-mile limit, it was his opinion that if it was extended there would be even greater difficulty in maintaining the linesmen's rights than there was at present in their own waters. (Hear, hear.) Therefore he would urge the members, in their individual capacity, to oppose it, and jealously to guard their rights within that three-mile limit. (Cheers.)

There was an excellent musical programme during the evening, the *artistes* including Messrs. C. Bramley (who was the life and soul of the evening), E. T. Lacey, E. Bennett (another good boy), and Lovett King (at the piano).

GRESHAM ANGLERS' OPENING DINNER.

THE opening dinner of the Gresham Anglers took place at Chesham on Saturday last, April 8. Several members, including Dr. Patterson, Messrs. M. Davis, Chastaney, and F. E. Eldred, went down to Chesham by the 10.27 from Baker-street, and within a few minutes of their arrival were greeted with one sample of the weather in the shape of a blizzard. However, not to be daunted, Messrs. Patterson, Chastaney, and Eldred put their rods together and started fishing, with, for some time, no result, the surface of the water more resembling a miniature sea than a trout stream. It (the weather) hailed, and rained, and snowed, and blew, in fact, drove us to take shelter under the friendly lee of a shed. Then succeeded a short period of bright sunshine, and the rods were again at work, and both Dr. Patterson and Mr. Eldred were successful in luring the trout from their chilly element.

Again shelter had to be sought, as a storm, fiercer and colder than the preceding one, broke over the valley, darkening the sky, and making us think that we were back again in January, with an extra special blizzard in full blast. And so the day proceeded—intervals of winter and spring alternating. By this time more Greshamites arrived, and proceeded to try their luck, but the weather was too much, or too many, in the way of samples of snow, hail, rain, &c., to allow of any really successful fishing being done. However, Dr. Patterson and Messrs. Eldred and Chastaney all took fish—Dr. Patterson, three, all over the limit, only retaining one; Eldred, four; and Chastaney, one; all returned to give sport at some future occasion.

Then came one of the events of the day, viz., the turning in of some hundreds of two-year-old trout (*farlo*), which was successfully accomplished under the superintendence of Mr. J. B. Close, assisted by Messrs. Woodruff, Goodwin, and Formay, the latter kindly making all provision for the carriage of the cans from the station to the water. It was a sight to see the trout rising immediately upon their release. They apparently did not mind the inclement weather; in fact, seemed to be enjoying them-

selves immensely. Another storm, another period of enforced inactivity, and rods, &c., were put up.

And now came the event of the day, viz., dinner, well deserved by those who had given up their afternoon to placing the fish in their new home, and ardently deserved by all, as the keen air had given all sharp set appetites. The hostess of the Black Horse had prepared a capital repast, and by common consent Mr. Mark Davis was voted the place of honour. Ample justice was done to the many good things provided, and all showed that if the weather had spoilt the fishing, it had, if anything, improved the appetite.

The members present were Messrs. Davis, Close, Dr. Patterson, Marshall, Bridgman, Connellan, Eldred, Chastaney, Hicks, Reeves, Goodwin, West, Formay, Woodruff, and Ford (son of Ford, of Caistor fame), who was invited to see the fish turned out.

Altogether the day proved an enjoyable one, in spite of the adverse conditions of the weather. F. E.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—The weather has shown no improvement of any importance since the commencement of the trout season, to the great disappointment of those anglers whose expectations from the mild change were somewhat sanguine of securing some good fish. Mr. T. W. Gomm, one of the practical members of the committee of the T.A.P.S., is heartily to be congratulated on being the only successful angler in this portion of the Thames during the first seven days of the season, and in three days, with his skilful attendant, Charles Hone, landing four trout. One of these, weighing 4lb., was sent for my acceptance, and, on cleaning it, I was surprised to find it full of well-developed spawn and a dead minnow. I have just heard from Major Arthur Terry that on Saturday last he landed his first trout this season—one of 3lb. 10oz.—in the backwater at Weybridge, and adds that, having fished from the weirs at Shepperton, he had seen the sign of a trout, but they were swarming with large dace and roach, which gives further evidence of the river being well stocked with fish for the general body of anglers. Last Saturday was remarkable for some heavy falls of snow, and, in the opinion of some, the trout will not feed at such a time, but this was somewhat negated on that day, as both Major Terry and Mr. C. H. Wheeley creeled a trout each, the latter securing one of about 3½lb. In the opinion of one of my most accomplished correspondents, "the worse the weather, the better the chance," is his theory, "provided the water is in good condition, as no weather stops him from trying for a fish." I have received a letter from one of the honorary river keepers, who considers it a good thing not allowing them the use of a cast net, as some wanted to hold a deputation simply to be able to use it, and suggests the advisability of restricting the professional fishermen from using it after dark. The continuation of cold winds and frosty nights has kept the big fish down, and, with the exception of another small fish having been taken at Hampton Court, the reports this morning (Wednesday) are a complete blank. The official report as to the movements of the perch is they have not begun to spawn.—B.

(Eton).—The heart of the trout angler is becoming weary with waiting for a change in the wind to a warmer quarter. I was out this morning about six, but there was a sharp frost, and needless to say not a fish was to be seen on the move. Very few anglers have been out this week, and I have not heard of a fish being taken in this district.—CECIL HOWLETT.

(Hampton Court).—William Milbourne says: "Mr. Woods, of Molesey, on Monday evening took a nice little trout, weighing 3½lb., at the back weir. The water is in good order, but we want warmer weather."—B.

(Shepperton).—Major Arthur Terry caught a small trout of 3lb. 10oz. in the backwater at Weybridge; and Mr. C. H. Wheeley, on the same day (Saturday), landed one of 3½lb. out of the Tumbling Bay, and in addition a very large chub, which he returned. It is remarkable that the only three fish reported this week are of the same size.—B.

(Teddington).—Some of the trout fishers have been at work, but the only results have been the hooking of chub, barbel, and jack, which were all safely returned.—B.

Coln (Gloucestershire).—The season opened on April 1, and some good sport has been had both on hotel and private waters. Mr. Carbonell, on the Fairfield Park water, creeled his six brace; and Mr. Wykeham Martin, on the Bibury Court waters, four and a half brace. Amongst others who have been out on the Gloucestershire streams, are Messrs. John Morgan, C. Chard, K. Iles, Yeates, Hadley, Rogers, Russell, Livingstone, Jackson, Jenkins, &c. Best flies are March Brown, Pale Winged Olive Dnn, Whirling Blue, Brown Sberry Spinner, Blue Dun, Coch-y-bondhu, and Red Soldier Palmer on 10th days. Weather changeable. Snow on Monday. Trout in good condition, and rivers in fair order.—PAN.

Dart (Totnes and District).—The north-west wind and stormy weather has interfered with sport this week. Last week Mr. E. Distin had a basket of two dozen, and other takes of a few brace have been made by Totnes rods. Minnow fishing will be continued at Totnes weir until the end of this month, by order of the angling association. Mr. Edbrooke, of Furszeleigh Mills, killed another salmon a day or so since, in the association water at Bulkamore Quarry pool, with the prawn. The fish scaled 18lb. During the holidays Messrs. F. and J. Windeatt and Evans had some sport with trout at Holne Chase.—DEVONIAN.

Devonshire Streams.—The rains have put the streams in better condition, and the salmon rivers are now in trim. During the holidays a number of trout were killed in the upper Lyd district, where the prospects of a season's good sport are distinctly favourable, fish being numerous. The best takes have been from the Tavy, Clave district. Trout on the southern rivers has not provided anything approaching large creels, in spite of the increased volume. Most anglers have "drawn blanks" as regards salmon fishing, although Mr. Edbrooke has killed several fine fish this year in the Dart, near Buckfastleigh.—DEVONIAN.

East and West Cleddau (Pembrokeshire).—The rivers are in good order for fishing, and numerous good baskets of trout are being taken. The weather has been very cold for some days past, but the wind has now gone round to the west.—H.

Exe (Whitby).—The remunerative takes of last week have during the present week been superseded by indifferent results, and in only isolated cases are catches recorded. For this the prevalence of cold easterly winds is mainly responsible. Not a few local, as well as visiting, enthusiasts have been out, and only in the higher reaches have catches been effected at all, and these appear to be so scanty in number as to preclude the possibility of a record being obtained. At the time of writing the water is somewhat heavy, and prospects of sport for the ensuing week only moderate. Swarms of smelt are reported as being in the tideway.—J. JACKSON.

Exe and Canal (Exeter).—General conditions still dead against angling. Although a little rain has fallen, the river has received no benefit, and the cold winds day after day have effectually kept the trout down. Up to now this season takes very high rank in the record of bad years, the early spring fishing being an absolute failure.—RED PALMER.

Fen District (South Lincs. and Cambs.).—The streams of the district are stated to be very low for the time of the year. Cold is also against the hatching out of flies. As a consequence, little has yet been done. An odd brace are picked up now and again, but they are mostly taken with bottom baits or spinning. As soon as weather becomes favourable Sand Flies, February Reds, March Browns, and Bumbles might prove useful.—LIMPET.

Idle District (North Notts).—From the Idle district there is not much to be reported in the way of sport. The Ryton is noted in some parts for its fine dace. These are believed to have already spawned. Trout fishing, both on this stream and the Idle, has had little success, though, as the streams contain good fish, better things are expected. Salmon are said to be ascending the Trent, and these are followed as usual by a school of porpoises. As yet we have heard of no captures in the lengths between Gainsborough and Newark.—L.

Lark (Lackford and Icklingham).—Trout fishing in this river has improved somewhat. Mr. J. Hedges, out on April 6, killed two trout, 3lb. 6oz. and 15oz., also a pike, 3½lb. Mr. H. Mayhew, on the 10th, one trout, 1½lb., one pike, and a nice eel. The weather during the past week has been anything but pleasant by the riverside. The water is in very fair order to-day (Tuesday).—A. E. KEMP.

Lake Vyrnwy (North Wales).—The cold weather reported last week has held out, and, if anything, for the first few days of this week it has been worse than in the middle of winter. The wind occasionally has veered to the north, and this kept the fish down. Whenever the elements were favourable for a short spell the fish rose freely, the best basket of the week being Dr. Fenton's twenty-one fish, weighing 12lb. 8oz. On April 5, Dr. Fenton and Mr. Foster killed nine, 5lb. 10oz.; Mr. Malpass, three, 1lb. 10oz.; and Mr. Isaac, three, 1lb. 6oz. On the 6th the first two killed nineteen, 12lb. 10oz.; Mr. Isaac, six, 4lb. 10oz.; Mr. Malpass, four, 2lb. 11oz.; and Mr. Tarrell, two, 1lb. 10z. On the 7th the weather was too rough for any fishing to be attempted. On the 8th, Dr. Fenton creeled six, 2lb. 4oz.; Mr. Malpass, eight, 5lb. 2oz.; and Mr. Isaac, two, 1lb. 9oz. On the 10th, Dr. Fenton killed seven, 4lb. 11oz.; Mr. Isaac, six, 3lb. 8oz.; and Mr. Malpass, three, 1lb. 9oz. On the 11th, Dr. Fenton killed twenty-one, 12lb. 8oz.; and Mr. Malpass, twelve, 7lb. 12oz.—LONGDRIFT.

Lea.—Many anglers are now anxiously awaiting the opening of the Lea trout fishing season, which begins on the 1st prox. Enthusiasts have already paid the upper reaches a visit, on the look out for feeding fish. Several trout have, I hear, been seen on the move during the past week between St. Margaret's Lock and Rye House Bridge; and it is well known that trout have their haunt at Hertford, Ware, Hoddesdon, Broxbourne, &c. On the same day as trout fishing begins, eel fishing also opens in the Lea; and, as eels are very destructive to spawn, it is hoped a good many, when the season arrives, will be brought to bank.—ISAAC WALTON.

Lugg and Arrow (Leominster).—These trout streams are running in good condition, being clear and a nice level, and suitable for fly, bottom, or minnow fishing. The weather has been most changeable this week, and falls of rain, sleet, and hail, with strong winds, have swept over the district, and made it uncomfortable for anglers; but there has been a good few who have braved the weather, and have tried Stone Fly, Blue Dun, Cowdung, Red Palmer, March Brown, and Iron Blue, and have been rewarded with some very nice lots of trout, and, if the weather will only take up, there will be good sport had in this district. The Pinsley is running clear and in order.—GWYNNE.

Otter (Budleigh Salterton, Devon).—We have had a cold spell of weather for the last week with violent wind, chiefly from the north, which has been greatly against fly fishing. Last Saturday, however, although a most bitter day, accompanied by hail and rain storms, trout moved a little, one rod taking, near Tipton St.

John's, five brace of decent fish. These all took the sunk fly in the otherwise quiet water, lashed, as it was, into waves by the strong wind.—HERON.

Plowden Waters and Oany.—The weather here since last report has been cold, with rain and stormy hail showers. Little fishing has been done. At the suggestion of one of the members, Mr. Plowden has had a large number of fresh water shrimp turned into the club water, which it is hoped will improve the condition of the trout.—TRUTH.

Plj mouth.—We have had some nice showers locally, but on the moor, I hear, they have had plenty of rain, and the rivers are in better condition than when I last wrote. I have heard of some good baskets from the Tamar; a gentleman fishing last Saturday had five dozen trout, and on Monday, over three dozen; all fish under 4lb. were put back in the river. How about our Devonshire sprats after that? We have the fish here, and only want the fishermen to catch them. Several fish have been grased during the week over 1½lb. The Tavy and Walkham are in fairly good condition, but the weather is too unsettled for moor work.—WILLIAM HEARDER.

Severn (Caerswa to Llandinaw), Carne brook (Caerswa).—Monday to Saturday last nothing much done by anyone, weather cold, and latter part very rough. Heavy flood Thursday and Friday. Fly fishing only allowed now on the Severn over the Plus Dinam Estate. Minnow fishing has played "Old Harry" with the sport. Given "fairish" weather this week, some good baskets ought to be made.—J. E.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—The wild and stormy weather recently experienced here has driven away most of the angling visitors, but at present the state of affairs is all that can be desired for angling, and in a few days both the Vyrnwy and Tanat will again be in good condition for the fly, if the present fine weather continues. The Severn is still flooded, and on Tuesday afternoon rose so very rapidly that the local postman between Llanymynech and Llandrinio, on his return journey to Llanymynech had to wade through 2ft. of water for a long distance. Little sport has been had here of late, but Mr. Durnville Lees, Woodhill, Oswestry, whilst angling on the Tanat, in the preserved waters of that river at Llanedwyn, captured several very fine trout and grayling, all in excellent condition. Permission to angle in this part of the Tanat can only be obtained from the Dowager Lady Williams Wynio, Llanedwyn Hall.—VYRNWY.

Sussex Rivers and Chichester Canal.—Rivers and streams are now in good order. From the Ouse a few roach have been taken during the week, and from the tributaries several trout. From one stream in the Fletching district seven brace of trout were taken in one day with worm and minnow, but double the quantity of perch were hooked and at once destroyed, as perch and trout are too agonistic in a stream. A few good trout have been taken from the tributaries of the Adur, and close to Shoreham a nice fish of 3lb. was taken from a culvert with worm. At Chichester Canal roach are spawning, and myriads of fish may be seen from the basin to the locks—several carp up to 14lb. in the basin and under the bridges. The harbour fishermen have had good sport with smelt. Mr. Fowler, fishing from a boat off Apuldram Sluice, recently captured twenty-two dozen; Mr. Moore, thirteen dozen. Those who would like a day's harbour fishing among smelt, bass, eels, or flat fish, should write to Mr. George Stoveld, Birdham Lock, who will provide bait and boat, and pilot his patrons to successful sport.—GEORGE F. SALTER.

Taff (Llandowror, Carmarthenshire).—The river is in very good order for fishing, and good baskets of trout have been caught during the past week, but not many salmon or sewin.—H.

Teifi (Lampeter, Cardiganshire).—Good sport is being had with trout, which are plentiful. The river is in first-rate order.—H.

Teme (Ludlow).—In this district the Teme continues to run clear and a nice level, and in capital condition for fishing. The weather during the past week has been most changeable, and what promised to be a successful spring for fishing has turned out just the opposite, and we are now having early March weather, with cold, strong winds and showers of rain, and hail and snowstorms. Fortunately, the storms have been of short duration, and have been followed by sunshine, and the trout have been rising well at the fly, and there has been a good few live flies on. There has been a good few anglers out, who have fished during hail storms and snow, and they have been successful in landing some nice trout. The best killing flies are the Blue Dun, February Red, Cowdung, Stone Fly, Iron Blue, and Red Palmers. Bottom fishing has been more successful of late, and some good trout have been taken. In the water below Ludlow some nice trout have been caught with fly. Near New Bridge some fair sized fish were landed on Monday. On Tuesday morning, in the Castle Pound, an angler, with the worm, landed a fine trout, 1½lb. weight. Trout have been on sale at the fishmongers at 1s. 4d. per lb. The Ony, Corve, Clun, and Ledwyche are all clear and in fishing order, and sport has been better in them this week.—S. LUDLOW.

Teme (Tenbury).—The Teme is continuing to run in good order in this part, and is at a nice height, and suitable for angling, but the weather has been anything but suitable for fishing, there having been rain and hail storms, followed by sunshine, which has made it uncomfortable for anglers. For all that, there has been a good number of flies on the water between the storms, and the fish have been well on the feed. A few anglers have been out and have used fly, and several very nice lots of fish have been taken. The flies used are the Blue Dun, Iron Blue, Cowdung, Red Palmer, March Brown, and Stone Fly. With warmer weather sport will improve.—WORCESTER.

Witham, &c. (Mid-Lincolnshire).—Trout fishing is very quiet in the Wold and upper waters. Weather is too changeable. Since the opening of the Great Central line to London, and the breaking of the working agreement between it and the Great Northern, doubts have been expressed as to changes in the running of excursion trains from Lancashire and Yorkshire. For some time there has been difficulty in getting off at intermediate stations beyond Lincoln with through tickets to Boston. We now hear this is settled, and people may leave the train at Bardney, Scuthrey, Stixwold, Kirkstead, &c., with a week-end cheap ticket over the whole distance.—**LUCI.**

Wye and Derwent (Derbyshire).—A few anglers were out Friday and Saturday last week, but had very poor sport. On Sunday a heavy downpour of rain, which brought a flood on the Derwent. No angling since. It will be Saturday before the Derwent will be fishable. Both rivers are too high for fly fishing, and will be until next week, when the following flies will be useful: February Red, Yellow Dun of April, Cooper's fancy, Blue Dun, Grannom, to be used as wet flies while the water is high.—**DOTTEREL.**

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—In spite of the fearfully cold east and north-westerly wind, accompanied by storms of snow and hail, a good few anglers have been out on the banks of all our streams; but the hard night frosts keep insect life down, and vegetation is making very slow progress. The higher hills are frequently covered with snow, and scarcely a fly, beyond a few Midges in the middle of the day, is to be seen on the wing; consequently there is little inducement to fish fly, and, as a rule, up to now but meagre dishes have been made with it. Some customers, however, who have visited the Eden tell me sport on that river has been very fair indeed; and, strange to say, the fish there have taken the Orange Partridge and Bracken Clock well, along with the Snipe and Purple and Waterhen Bloa, the last two flies, with the March Brown, Sparish Needle, Woodcock and Orange, and Woodcock and Yellow, are unquestionably the best for any of the Yorkshire rivers; but as yet very few natural flies have made their appearance, and more fish have been caught with the natural minnow, fished on Ariel or Chapman tackle, than by any other method of angling, and in clearing waters following freshets some good baskets of trout have been made with it, in both the upper Yore and Swale particularly. Some of the members of the Black Ox Angling Club have had fair sport in the Codbeck, Wiske, and Bedale Beck; but up to the time of despatching this report nothing particular has come to hand from the Wharfe, Nidd, or other streams. Snow fell early this morning, followed by a lot of rain. The aneroid is very low, and we look like having a lot of wet again. This surely is the advent of warmer weather—that is all we require for good sport next week.—**J. E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.**

SCOTCH REPORTS.

Carron (Easter Ross, Ardgay, N.B.).—On 3rd inst., Mr. R. T. Coupland, of Gruinards, landed a 7lb. salmon on Havenrock Pool; and Mr. George Ross, Braelangwell, fishing for Mr. F. T. Gervers, of Amat, caught two, weighing 10lb. and 8lb. On 4th, Mr. Coupland grassed a 10-pounder on Gledfield Pool; and Mr. Geo. Ross, two, of 8½lb. and 7lb., on the Braelangwell water. On 5th, Mr. Coupland landed two, of 7lb. and 8½lb., on Gardener's Pool, besides one of 7½lb. on Bank Pool. On 8th, the same angler had one of 7½lb. on Poll Moral, and an 8-pounder on Rock Pool. On Monday, this week, Mr. Coupland was successful; and on Tuesday, Mr. Marquis, Balnagown Arms Hotel, landed a salmon of 11lb. A great number of anglers have now arrived, but the weather is very stormy. Heavy snow down to sea level.—**B.**

Deveron (Banffshire).—There is little or no improvement in the weather, which greatly affects the net and rod fishing in the river Deveron and adjacent coast. During Monday night and on Tuesday of this week a northerly gale prevailed, accompanied with a high sea and frequent showers of hail and snow. The river is running heavy and in bad condition. Notwithstanding, fair baskets of trout have been got on Corviehaugh and on several other sections. On the Bridge of Marnock water, Mr. H. B. Leatham had a salmon of 13½lb. The net fishermen on the river have had slightly improved takes of salmon and trout. The salmon weigh generally from 6lb. to 9lb., the heaviest fish got as yet scaling 30lb. On the coast the high sea running on Tuesday did not allow the cobles to get out of the harbour to the nets, and at some of the stations the nets received slight damage. In the end of last week a box of about 2cwt. was sent to the market, and on Monday of this week another of 2cwt. The flooded state of the river is bringing down kelts to the sea. Little is being done at the coast fishings at Gardentown; only a small box of ½cwt. was consigned to the markets on Tuesday.—**H. W.**

Lochleven (Kinross).—On Monday a rise in temperature brought large numbers of fish to the surface, but the absence of wind prevented good sport from being got by Mr. Schollet, Edinburgh, and Dr. Johnston, Corstorphine, who creeled four trout (3lb.). These were all captured on the March Brown fly off the old manse. On Saturday, two Edinburgh anglers also killed four trout with fly. The weather is now dry, but very cold, and the water has become decidedly clearer and in better order for the prosecution of angling. On Saturday 300,000 trout fry from the Lochleven hatchery were deposited in the principal streams which feed the loch.—**ROBERT LAING.**

Loch Tay (Killin, N.B.).—On April 6, Mr. Richards had two nice salmon, 21lb. and 17lb. On April 7, Mr. C. Wheen had one, 16lb.; Mr. S. Berger, one, 21lb. On April 8, Mr. S. Berger, one, 19lb.; Mr. C. Wheen, one,

20lb. On April 10, Master H. Berger, one, 23lb.; Mrs. Berger, one, 17lb. On April 11, Mr. C. Wheen, one, 24lb.; Mr. J. R. Sloan, one, 18lb.; Master H. Berger, one, 24lb.; Mr. Berger, one, 16lb.—**H. J. MAISEY.**

Naver (Bettyhill, via Thurso, N.B.).—Since last report the following sport has been got: On 3rd, Gen. Home, Syre Lodge, landed five salmon on beat No. 3, they averaged 9lb.; Mr. Marston, Skelpick Lodge, got one on No. 5; and Mr. Campbell, Dalvina Lodge, one on No. 1. On 4th, Gen. Home landed two, of 13½lb. and 8½lb., on beat No. 4; Mr. Marston, one on No. 5; and Mr. Campbell, one on No. 2. On 5th, Mr. Campbell creeled a salmon on No. 3. On 6th, Mr. Marston, Skelpick Lodge, caught two salmon on No. 2; and Col. Fryer, Dalvina Lodge, a 10-pounder on No. 3. On 7th, Gen. Home landed two salmon on No. 1. On 8th, Mr. Marston fished No. 3, and landed three fine salmon, one of them a beauty of 17½lb.; Col. Fryer had one on No. 1; and Mr. Campbell one on No. 2. Weather very stormy. Gen. Home and Col. Wilson have left Strathnaver for the south. Despite unfavourable conditions, the former landed twenty-three salmon during the month of March.—**B.**

North-East of Scotland.—The weather has been very changeable and cold, and water somewhat unsteady. Fresh snow showers are of daily occurrence, and altogether the conditions are not inviting for the advanced period of the year. On the Invercauld Braemar waters, Mr. F. J. Bisset had two fish, of 6½lb. and 8lb., and one of 7lb.; while Mr. Somerset creeled one of 6lb., and Mr. H. L. Craik, one of 8lb. On the Balmoral waters, the Duke of York finished his season on Tuesday week last with one of 10lb., on the Birrkall section. On the Ballater waters, Mr. Bristowe and party have had fair sport considering the adverse conditions. On the Glentana waters, Mr. Barclay (Profett's) had one of 7lb.; and Col. Brinckman, one of 16lb. On Saturday, Col. Brinckman had three, of 20lb., 10lb., and 8lb.; and Mr. Barclay, two, of 8lb. and 7lb. On the Huntly Arms water, during the week, Mr. Nelson had one of 6½lb.; Capt. Scott, three, of 8½lb., 6lb., and 9lb.; Mr. Bush, two, of 15lb. and 6½lb.; Mr. Crawshaw, three, of 13lb., 7lb., and 8lb.; Mr. Millburn, one of 6½lb.; and Mr. Clive, one of 6½lb. On the mid-reaches at Kincaidine O'Neil and Bancroby fairly good sport has been got, and the prospects are daily brightening. On the Dess water, Mr. Walter Davidson had one of 12lb., three, of 7lb., 8lb., and 9lb., and one of 8lb.; while the Hon. Walter Brooks had one of 6lb. on the Borrowstone; Lord Garrioch, two, of 6½lb. and 7½lb., and one of 12lb. On the Lodge water, Dr. Hood landed one of 7½lb.; and Mr. Whitley, one of 7lb. On Carlogie, Willie Dunn had two, of 7lb. and 9lb. On the Upper Blackhall water, Mr. Davies creeled seven fish for the week, ranging from 6lb. to 9lb. Sir John Gladstone, on Woodend and Commonty sections, had eleven fish during past ten days, all ranging from 6lb. to 12lb. On the Blackhall water, Capt. Mitchell had one of 7lb., one of 6½lb., one of 5lb., one of 5½lb., and two of 6lb.; while Mr. A. F. Hildyard creeled a fine fish of 16lb., and one of 7½lb.; Mr. R. B. Wilson, one of 6lb.; and Mr. E. Spencer Stanhope, two, of 6½lb. and 5lb. On Monday, Capt. Mitchell added two of 7lb. to his bag, while Mr. R. B. Wilson had a fine fish of 28lb.—the top weight for the season as yet on the Dee. On the Ythan, Capt. Mitchell had a fish of 8lb. on the Turnershall water. On the Ugie, Mr. George Mackay, jun., and Master William Mackay had some finnock of good weights. On the Deveron several salmon up to 13lb. have been got, and very good baskets of finnock.—**G. M.**

Shin (Inveran, N.B.).—The weather is still so unseasonable that good sport cannot be looked for. Between snowstorms and thunderstorms angling affairs are at a low ebb. On 1st inst., Mr. A. Farrer, Sutherland Arms Hotel, landed a salmon of 10lb. On the 5th the same angler had two, of 10lb. and 11lb.; and Mrs. Jackson, one of 8lb. On the Sch, Mr. A. Farrer caught a 10-pounder. On Wednesday snow fell heavily all day.—**B.**

South of Scotland.—Last week-end more rain fell over the south of Scotland, and the rivers were in flood on Friday morning. There was no option left to anglers but to fish with bait. Several preferred to spin the Devon minnow on the off-chance of getting the pull of a salmon, while others pinned their faith on the worm as a lure for trout. Spring salmon are very scarce in the Border rivers this season; only two have been caught in the Annan with rod and line, while none have been reported from the Nith, as also the Kirkcudbrightshire Dee, the Gatehouse Fleet, the Dalbeattie Urr of Galloway, and the Ayrshire rivers. In the nets of the Firth none have been running until within the past week, when a few odd ones were caught. At the time of writing the Cumberland fells have received another winter coating of snow, which is sure to retard trout fishing. This (Wednesday) morning there was a sharp snap of frost, and although we have much sunshine daily, the temperature is cold after the sun goes down. The most of the salmon kelts have been swept down to the sea with Friday's flood, but no doubt a number have been left behind, and will follow the salmon fry down to the sea. The annual migration of the smolts has begun now, and trout fishers will have no end of trouble taking off and returning these little fellows to the water. The fry gobble everything in the shape of a fly as soon as the cast is made. The best lure for yellow trout will be the real minnow, but the weather and water must be warmer before anglers can be successful. **THE ANNAN.**—This river was in flood on Friday. Fishing with the worm in the flood, Mr. Thomson, Carlyle-place, had several trout, one of which was a good yellow trout of about 1lb. Those anglers who were out in the higher waters had the best sport among brown trout, and several nice catches were made in the Wamphray district, as also below Moffat. One angler hooked a salmon with the minnow and lost it. **THE NITH AND TRIBUTARIES.**—Not much angling has been obtained on this river. Unsettled weather prevailed last week, and the river was

in flood. In the Thornhill portion a few rods have been more or less successful with fly. **THE DEE OF GALLOWAY, &c.**—No sport has fallen to the rods since last notes, and at the time of writing the weather is too cold for trout rising freely. Similar notes come from the other rivers of Galloway, including the Fleet at Gatehouse, the Cree, and the Urr of Dalbeattie. **AYRSHIRE LOCHS AND RIVERS.**—The waters in this part are in fairly good order for fly. On the lochs not many rods have been out, but a few nice baskets have been had on Loch Doon by fishing round the loch from the shore. The month of May is a capital time for Doon and Finlas of Dalmellington; and a good many Glasgow anglers frequent the former loch. On the rivers not much has been done. **THE SOLWAY DERWENT, &c.**—There has been very little doing in the Derwent at Cockermouth and in the Cocker, the weather being too cold for much sport. Not much sport is reported this week from the Ehen, Calder, Irt, and neighbouring waters. Mr. J. Gainford, sen., and Mr. J. Gainford, jun., killed eighteen yellow trout with worm bait on the Calder, all good fish; and on Friday the same anglers caught a dozen or so with fly on the same river.—**HEATHERBELL.**

Spey.—Since the opening little has been done by anglers, owing to the unsuitability of either the weather or water, and often both. At present the hills are covered to their base with snow, and the atmosphere as cold as in mid-winter. On Tuesday, on the Wester Elchies water, Mr. Cumming, The Downes, killed three salmon, scaling respectively 5½lb., 9lb., 14½lb.; on Wednesday, Col. Smith Grant, Anchorachan, one of 7lb.; and on Thursday, Mr. Duncan, fisherman, one of 11lb. From the Aberlour House water, on Tuesday, Mr. McDiarmid, gamekeeper, landed one of 7lb.—**J. M.**

Tay.—The river continues in good ply, but the weather is cold and unseasonable. On the Logierait Hotel water, on Monday, Mr. R. Butler caught a fish of 17lb. and a trout of 4lb. On Stobhall water, yesterday, Col. Phillips killed a fine fish of 33lb. On the free water here anglers are getting from four to eight daily, most of them being of good size.—**P. D. M.**

Tweed, Teviot, and other Border Rivers.—The weather in the Border district for fully a week past has been very cold, and the natural fly is yet scarce on the rivers. One or two bull trout have been got during the week with fly, these fish weighing from 3lb. to 4½lb. respectively. Many grayling have been killed during the week. This season of the year is, I believe, the close time for these fish in England, but in Scotland there is no close time for any fresh-water fish but the salmon. More the pity! Of those who have been most fortunate amongst the trout were: Mr. William Mercer, on the Eden, 13lb.; Mr. James Hogg, 6lb.; Mr. T. Watson, 4½lb.; and Mr. Jas. Thompson, 3½lb. On the Tweed, Mr. Chas. Farquarson has had baskets of from 3lb. up to 10lb.; Mr. R. Thompson, on Tweed and Teviot, takes of from 4lb. to 6½lb.; on the same stream, Mr. T. Mercer, teacher, Newport, had 5½lb. On the Teviot, Mr. Duncan Hill, on Monday, had 4½lb.; and on Tuesday, 5½lb. He also had a nice dish of eight brace, which were not weighed. Mr. Adam, Denholm and Mr. George Lees, last week, on the Tweed and Teviot, had 3lb. and 2½lb. respectively in two hours' fishing each. In the tributary streams little or nothing is being done owing to the coldness of the weather. Salmon angling is very quiet indeed. The only takes that have come to my knowledge during the week was one salmon killed by Lord Dunslass, on the Birgham of his father's (the Earl of Home), and one by Capt. French, which weighed 7lb., and this fish was killed on the Till. The crusade against the pike still continues, and occasionally one of these trout and salmon smolt destroyers are brought to bank. On the Teviot, during the past ten days, Mr. Jas. Affleck had two of 5lb. each, killed with parr tail bait; while Mr. R. E. Hogarth has also had a couple of 4lb. each, on the same stream, with spoon bait; and Mr. Frank Stephani, Kelso, on the Tweed, one of 6½lb., with spoon bait. The annual spring competition of the Edinburgh Spread Eagle Angling Club took place on the Tweed on Saturday. The Tweed net salmon fishings are still exceedingly bad; worse than they have been since the opening of the season in February.—**MAXWHEEL.**

IRISH REPORTS.

Bandon River (co. Cork).—Salmon anglers have not been doing over well for past week. Mr. Joseph Pike had a nice fish of 12lb. on the Carrigmore water. Trout anglers have been more fortunate, some very nice baskets have been made between Ballineen and Dunmanway; also on the tidal water at Innishannon.

Belfast.—A very poor week on the Dams owing to the uncertain weather; Mr. Caldwell, Mr. Hunter, Mr. Loughran, and some others, had a few trout on Woodburn. To-day (Wednesday) the weather is bright, but very cold.—**J. A. B.**

Boyne (Navan Section).—Stormy weather and low water the latter part of last week prevailed, but the high winds brought up a sprinkling of good fish. On Sunday rain fell heavily, but not sufficiently prolonged to do more than raise the river to its normal height for this season of the year, and on Monday it was too discoloured for sport. On Upper Blackcastle water, Mr. Francis Ley and party have had fair sport. On the 6th they had three, 22lb., 20lb., and 11lb. On the 7th, two, 24lb. and 12lb. On the 8th, two, of 25lb. and 15lb. On the 10th, one, 17½lb. On the 11th, five, of 28lb., 25lb., 24½lb., 11lb., and 10lb. I cannot hear of more than two or three fish being taken on the lower reaches. At time of writing this there is every prospect of more rain.—**CLARET FLY.**

Bundrows River (co. Donegal).—This river has been in high flood, and continues so at present, but the weather at time of writing seems fine and settled, and looks like remaining so for some time, and now that there

is a fine head of fish in this river, as soon as it gets into fishing ply, which will be in a couple of days, some good sport amongst the salmon will be had on it.—M. ROGAN AND SONS.

Carrigart (co. Donegal).—This week the climatic conditions were adverse to angling. The best trout up to date was a very nice 4lb. fish killed on Glen Lough by Mr. H. O'Brien.—J. A. B.

Corrib (Galway).—The fickle April weather was against sport in the past week, not only from the cold, sleety showers lowering the temperature, but from their disturbing influences on this most easily disturbed water. Since last notes about a dozen fish were killed by Major-General Dashwood, Mr. W. Townsend, Mr. Conyngham, and the Lydons.—J. A. B.

Erne (Ballyshannon and Belleek).—At time of writing the Erne is rather high for successful trouting, still, Capt. Leo Moore, Mr. Maxwell Moore and others had some good sport amongst the trout on it since last report. The river will be in splendid trouting order in a few days from now should this fine weather continue.—M. ROGAN AND SONS.

Lee (co. Cork).—The weather has been very snitable for salmon fishing since last report, and the river in very good order. The occasional showers have brought down small floods, which have drawn numbers of fish up from the tidal waters. Prospects for the coming week are good. The following were successful on Mashonoglass: Mr. M. F. Barry, 7½lb., 8lb., 14lb.; and others 60th Rifles, four, averaging 10lb. On Oak Grove, F. M. Leader, 10lb., 20lb.; G. M. Jevons, 10lb.; and H. E. Stanley, 10lb. On Lee Mount, Mr. W. T. Crawshaw, 6lb., 8lb., 8½lb.; Mrs. Crawshaw, 10½lb.; and Mr. H. M. Lewis, 7lb. On Ballineadig, Mr. S. Haynes, 10½lb., 8lb. On Cronody, Capt. Gubbins, R.A., 9lb.; Capt. Bowker, 9lb. At Castle Lynch, Mr. J. O'Brien, 9lb. Trout anglers have been doing well. The Upper Lee and Sullane river at Macroom are well stocked with salmon and trout, and is well worth a visit. The fishing is nearly all free by stopping at Dennehy's Hotel, where anglers are specially catered for at most reasonable charges.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—The weather has been on the whole very unfavourable since last report, and only two salmon have been had, viz., one of 8lb. by Mr. Thornton, and one of 10½lb. by Mr. Darley, Q.C. The brown trout fishing, on a few favourable days, was good, and sport has been pretty brisk during the last few days at "Pinks," at several points. Salmon continue to arrive in better numbers from the sea, and, given fair weather, sport should show much improvement during the remainder of April. Things are going on nicely at the hatchery here, but it is reported that a number of the fish put into the lake at Tarmons have died. Weather at time of writing improving, and fly fishing prospects better.

Lough Melvin.—The weather during the past week was so stormy that the best parts of the salmon waters at the Garrison end of the lake could not be approached, and in consequence little sport was had. Mr. F. Hughes took one salmon of 9lb. on April 6; Mr. K. W. landed another of 8½lb. on 7th; Mr. P. Munday took a trout (*Salmo ferax*) of 6lb. on 8th; and Mr. Gerald landed one salmon of 10lb. on 10th. Trout fishing on some days since last report was fair, but the continued storm was much against it, as well as against the salmon fishing. Mr. F. Broadbent, Mr. E. Hayman, the Rev. Wm. Verner, and Mr. Neely were amongst the most successful trout anglers. A number of anglers from England and elsewhere are to arrive at Scott's Hotel, Garrison, towards the end of this week.—M. ROGAN AND SONS.

Mountain Lakes (Waterville, co. Kerry).—Sport continues good on all the above waters, the best baskets being had on Saturday and Sunday. The following were the best baskets recorded on the different waters: On Drenane, one of twenty-nine; on Cummeravanig, one of three dozen; on Coomeateen, one of forty; on Coomavoher, one of forty; and on Filealougha, one of twenty-seven brown trout. July, August, and September are the best months for angling on those waters, and the beaver trout are had by worm fishing, which is very slow work on those waters. The trout usually had with fly average only about one-third of a lb. in weight, few reaching 1lb. Though comparatively small, they give good sport, being hard fighters.—T. J. D.

Moy Hotel Private Waters (Ballina).—Water coming in order after a flood. Nothing done on the river during the week, as there were no anglers fishing, on account of dirty water. Some clean fish taken in the weir. Cold, north-easterly winds against fishing. Weather just settling down. Some nice baskets of trout taken at Rungry Lodge during the week.—JOHN DEVERES.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—River high and out of order here for the past week, and weather very unsettled. A splendid run of clean salmon just now in the river. If the weather would only become fine anglers would be sure of good sport. The lough is also in a high state, and trout not taking well.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—For six consecutive days a storm has swept over the Shannon and Lough Derg, so that angling of all kinds was out of the question. On Thursday, however, during a short lull in the storm, Major Traherne's fishermen, Patsy Ryan and W. Fogarty, went out on the Major's preserves, and within an hour they landed two spring salmon of 19lb. and 11lb. respectively.—S. J. HURLEY.

Shannon (Castleconnell).—The weather has been very changeable during the week—calms, storms, rain, and sunshine alternating. On the Doonass Fishery, Mr. G. C. Williams killed one salmon, 24½lb., on the 4th; and one salmon, 18lb., on 6th. On Prospect, Mr. D. Vickers killed one salmon, 26lb., on 5th. On the Castle Fishery, Mr. E. T. Ingham killed one salmon, 21lb., on 11th.—J. ENRIGHT AND SON.

Strule (Omagh, co. Tyrone).—The weather up to time of writing (Wednesday) has been cold and bright, with frequent showers of rain and sleet—very detrimental to sport. The best trout killed yet was one of 3½lb., killed on a bait, by Mr. J. Donohy, on the Camowen tributary.—J. A. B.

SEA FISHING.

Deal (The Pier).—Local fishing still remains extremely poor, the constantly changing winds not giving the water a chance to properly settle. Mr. Gray fished from the pier on 9th inst., and took half a score of small dabs and pouting. On Monday, Mr. Welch and Mr. G. Wood tried for three or four hours, the resultant catch being two pouting and three tiny dabs. Mr. Filner held undisputed possession of the pier on Tuesday but did not experience the sensation of a single bite. Nothing daunted, he essayed sport to-day (Wednesday), and hooked and landed four dabs, two of them of decent size.—J. RICHARDSON (B.S.A.S.).

Plymouth.—The weather has been rather unsettled during the week, but still some of the boats have made short trips, and done fairly well. The mackerel drift boats have had a hard time; they were caught at sea in the gale, and a lot of them lost their nets, having to cut them adrift and run for shelter. It is calculated that in Devon and Cornwall the damage and loss to boats and gear during the last ten days will amount to nearly £25,000, and as some of the men are stupid enough not to insure, their loss must be terrible, as it is in reality losing their entire means of earning their livelihood. The amateurs are busy fitting out their boats.—WILLIAM HEARDER.

Southend and Leigh.—Notwithstanding the variegated weather, fishing has distinctly improved, and shows prospects of being even better in the immediate future. I am pleased to hear that the members of the Collingwood A.S., who were here on April 9, took some nice fish. Good flounders and dabs can be found in the neighbourhood of the Crowstone, and many have been taken from the Leigh Creek. A good spot is about 500yds. from the Leigh Creek buoy, the buoy bearing directly S.E. The electric tramway on the pier is closed for repairs, so that it is necessary to walk to the extension. Barometer, 29.5 in., falling; wind, S., fresh; sea moderate; weather clear.—CHARLES HUSSEY (B.S.A.S.).

Angling Fixtures.

- April 17.
Anglers' Association: Delegate meeting.
Dibdin: Visit.
- April 18.
Bermudsey Brothers: Lantern lecture by Mr. W. J. Wade (secretary of the Central Association).

" 25.—Waggoners: Visit.
" 26.—Amicable Waltonians: Distribution.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—The annual delegate meeting will take place on Monday evening next, April 17, at 8.30.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £6 14s. Walthamstow Brothers, £5 15s. Bostonian, and £1 15s. 3d. Hoxton Brothers Angling Societies, from their donation boxes.—R. GHURNEY.

Anglers' Association (No. 2 District) Visiting List.—My next return district visit takes place on April 18, at the North London A.S., Tap House, Holloway-road, near Highbury Station. Buses and trams pass door. I hope to see you all. Secretary Stretch does his best to provide a host of talented artists, and also his esteemed son, Bill Stretch.—BEN ABRAHAMS.

Allason United Brothers' Angling Society, Duke of Sussex, Uxbridge-street, Notting Hill Gate.—Our ninth annual dinner will take place on May 10.—BEN.

Alma Angling Society. Coach and Horses, Portsmouth-place, Lincoln's Inn Fields.—The meeting called for April 16 is postponed until April 23, when I hope to see every member.—J. CHAMBERS.

Amicable Waltonian Angling Society, The Fox and French Horn, Clerkenwell Green.—The annual distribution of prizes will take place on April 26. Will prize donors please note date. Our annual concert in aid of the Anglers' Benevolent Fund will take place on May 8, when I hope to have the support of brother anglers. Will members please show up at Bermudsey Brothers on Tuesday next.—G. MERRY.

Anchor and Hope Angling Society, Duke of Kent, Old Kent-road, S.E.—The usual weekly meeting

of this society was held on April 12, Mr. C. Cannar in the chair. Members are requested to send in as soon as possible how many tickets they will use for annual dinner, and forward prizes from last season.—F. W. MARTIN.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—(Owing to the dinner and distribution coming early in May, I should deem it a favour if donors would forward promised prizes at their earliest convenience. All members are desired to attend special meeting on April 18. This is most important.—A. JENKINS.

Battersea Piscatorialists, Winstanley Arms, Winstanley-road, Clapham Junction, S.W.—Will members take note that next week is general meeting night, when there is some very important business to be transacted. Donors of prizes will greatly oblige by sending in their prizes by next week.—T. TRINGHAM.

Bermudsey Brothers' Angling Society, Woolpack, Bermudsey-street, S.E.—On April 18 Mr. W. J. Wade, secretary of the Central Association of London Anglers, will favour this society with a lantern lecture, "Rambles in Kent," followed by a smoking concert, in aid of the Anglers' Benevolent Society. The chair will be taken at 8.30 by the genial host of the Peckham Brothers', Mr. A. E. Clarke. The company of brother anglers and friends on this occasion will be esteemed a favour that the B.B.'s will not forget to repay on any future occasion.—ALF CONN.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—I wish to remind members and friends we intend having supper and distribution of prizes at above on Tuesday, May 9. Should like all members to attend next Wednesday to clear and settle important business.—WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—On April 12 Mr. J. Bell and Mr. C. Daniels were elected working members. Wednesday next, April 19, will be limit right, when all subscriptions must be paid without fail. Members are requested to note a special general meeting is called for April 26, for the revision of rules and other important business.—T. PATERNOSTER.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—A special meeting will be held at the above club on Tuesday next, when officers, &c., will be elected for the coming season. Will members kindly turn up in full force on this occasion?—F. RANDALL.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—On April 11 there was a very good attendance of members, and it was arranged to take our return visit, No. 1 Eastern District, on April 24, when all anglers and friends are invited. Will those members who fished for timepiece on March 26 please hand in their names? No trout to record yet. Expect the members are waiting for their annual dinner; date to be fixed next Tuesday.—P. E. LOFT.

Camden Angling Society, The Locomotive, Jamer-street, High-street, Camden Town, N.W.—We have a smoking concert, on behalf of the widow and children of the late T. Nicholls, on Monday, April 17. I hope to see a good muster of brother anglers; ladies invited.—E. BONALL.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—A special meeting will take place on Wednesday, April 19, for revision of rules and other important business. I shall esteem it a favour if donors of prizes will kindly forward on same as soon as possible, as the end of our financial year is on April 26.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—On Tuesday we made final arrangements to hold our annual dinner and concert (which promise this year to be a big success) on Wednesday, May 10. It has also been decided to hold a committee meeting next Tuesday evening, at 9.30 sharp, before the ordinary meeting. Will members please note?—S. VIOLET.

Clerkenwell and District United Visiting List.—The visit to the Dibden A.S. will be on Monday next, April 17, instead of the 10th.—F. CASTELL.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On Tuesday, April 25, all members are requested to attend on urgent business, to elect officers, &c.—T. FAULKNER.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On April 11 our annual general meeting was held. All the officers were re-elected with the exception of the committee, which was deferred until next week. The auditors, Messrs. T. Swain and R. Mack, gave their report and presented the balance-sheet, which was accepted, and a vote of thanks passed to them. The annual distribution of prizes will take place on May 16. It was also decided that the dinner should take place in the country. Members are requested to attend on Tuesday next to select a place. Members who are in arrears are requested to clear the books.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—On Wednesday last a general meeting to settle prizes and date of annual supper. The following were the lucky ones for season prizes: H. Brock, five; A. Edwards, three; W. Elton, three; D. Ansell, three; J. Edwards, two; R. Bennett, one; M. Brothiers, medal. Date of supper Monday, May 8, at clubhouse. Our C.D.V.L. visit was postponed at the last minute, on account of the death of host's father, till Monday next, 17th. Will those clubs that turned up please accept my apology and come in force next Monday, when we hope to eradicate their disappointment of Monday last.—JOHNNY EDWARDS.

Forest Piscatorial Society, Rose and Crown, Hoar-street, Walthamstow.—On Thursday evening, April 6,

the prizes were distributed as follows: Mr. Davies, club prize for largest roach (1lb. 5oz.), club prize for dace (12½oz.), and special prize for largest number of dace over 8oz.; J. W. Marshall, club prize for largest jack during season, and special prize for largest jack; Mr. T. J. H. Marshall, special prize for largest perch. No prizes are granted to members for gross weight—only specimen fish.—HENRY TISLEY.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—The annual supper is fixed to take place on May 9 next, at 8 p.m. Will members kindly clear the books next Tuesday, as I wish to get out the balance-sheet? Mr. King started the new season on Tuesday with a trout.—J. E. LAWFORD.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—Members are requested to attend on Monday next, the annual meeting, when all arrears must be paid up. The election of officers for the ensuing year will take place, &c.—J. A. FITCH.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green, E.—Next Wednesday being general meeting night, I hope all members will attend for special business. Our supper takes place on May 29; distribution of prizes the Monday following.—C. SMITH.

Highbury Angling Society, Globe Hotel, Upper TOLLINGTON-ROAD, N.—Mr. J. B. Close took the chair on Wednesday last at a well-attended general meeting, and a heavy evening's work was got through in good style. Mr. F. Berry's pike, 17lb. 5½oz., took the silver cup for best fish of season, Mr. Wymer being second with a dace 14½oz. Mr. W. D. Hall and Mr. Wymer tied, with 74 points each, in the challenge cup competition; but on a ballot being taken, the latter's were declared to be the best fish, thus entitling him to hold the cup for the year. Our standard for jack, barbel, chub, carp, and tench was raised 2in., now reading 24in., 18in., 14in., 14in., and 12in. respectively. Officers were elected for the forthcoming season, and May 17 fixed for annual dinner.—E. W.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On Tuesday last the auditors give in their report, when everything was pronounced satisfactory, with a good balance in hand. We have a brake outing as last year, to the same place—Pardon, in Essex—on May 14. The prize distribution night will follow on shortly after, so will members and friends who have promised prizes kindly forward them to the secretary?—J. H. HERBERT.

Jubilee Angling Society Prince Arthur, Golborne-road, North Kensington.—Will members kindly favour us with their attendance next meeting night, as we have some very important business?—G. BENICE.

Junior Piscatorial Society, Rosemary Branch, Lewisham High-road, S.E.—Several members were out at Easter, the most fortunate being Mr. Sutherland, who took a nice salmon of 22½lb., and two other good fish. Messrs. J. W. Freeman, Baker, and Bailey had some very fair trout. Our annual general meeting took place at the clubhouse on Thursday last, and a very satisfying balance sheet was placed before the members, showing the society to be in a flourishing condition. A hearty vote of thanks was accorded to our retiring secretary, Mr. J. R. Freeman (who is shortly leaving London), for the able manner in which he has attended to his duties.—C. R. W.

Lincoln Angling Society, Metropolitan, Winchester-street, Pentonville, N.—Our seventeenth annual dinner and distribution of prizes will take place on Wednesday, May 17. Prize donors will greatly oblige by sending on prizes by now and above date.—W. WATLING.

Liverpool Angling Association, Bee Hotel, Queen-square.—The Eastertide angling has been mostly very successful, and I have heard good reports from various waters. But I think our Mr. Whittington's take of thirty trout (heaviest 1lb. 5oz.), from the Pen-y-Cae reservoir, wants beating. The *Pontinalis* trout have done very well, indeed, being bold risers, handsome, and full of fight. It is a great pity success is so uncertain in this water, as the trout only seem to rise in fits and starts, and it is disheartening to go two or three times and find them off. But there is no water within many miles of Liverpool where the same quantity and quality of trout can be found for a subscription of only £1 per annum. Then, on Mondays and Saturdays you can have an excursion fare to Ruabon and back for 2s. 6d. And it is prettily situated, and the mountain air pure and bracing.—RD. WOOLFALL.

Lychnobite Angling Society, Ben Jonson, Shoe-lane, E.C.—At our meeting on Tuesday last, report re concert was read by hon. sec. Committee earnestly trust that ticket-holders will send in returns as early as possible. Lieut.-Colonel Fred Mather, the eminent American ichthyologist, was elected a member. Mr. Charles Hussey, the popular angling *littérateur*, Mr. Arthur Matthews, and Mr. Harry Malins will be proposed next week. Many thanks to Mr. G. H. Howard for excellent G.E.R. books. Members delighted, and could do with more!—SID RANSOM.

North London Angling Society, Tap House, Holloway-road.—The next return visit on the No. 2 Eastern takes place at the above on Tuesday, April 18, when I hope to see a good muster of the clubs on the list. On the 5th inst. Mr. Black and Mr. Hayes were elected auditors, to go through the accounts for the last six months.—H. STRETCH.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Sumner-road, Peckham, S.E.—Since the holidays business has been very slack, nothing doing. A special meeting will be held on Friday, 14th inst.; important business. On the 18th our worthy host, Mr. Clarke, will take the chair at the Bermondsey Brothers' concert. I hope to see him well supported by members and friends.—GEO. ETHERINGTON.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—Members are

reminded that Monday next is our quarterly night, when important business will be brought forward, including the fixture of the date for the annual distribution of prizes; also to arrange our supper for that evening. The members have granted the use and support of our room on Monday, April 24, for the benefit concert on behalf of Mr. A. Fowler, of Golden Barbel, who, through fire, has been burnt out.—W. B.

Queen's Piscatorials, Queen's Arms, 1A, Chapel-street, Edgware-road, N.W.—I beg to remind members that contributions for the past season are now overdue, also private prizes. Should feel obliged to those gentlemen who kindly promised prizes if they would send them in at their earliest convenience. The annual dinner and distribution of prizes takes place on Tuesday, May 9 next.—GEO. KEENE.

Royal George Angling Society, Queen's Arms, Bateman-street.—At our last meeting it was decided to take our annual supper and distribution of prizes on May 24, and Messrs. E. and G. Bardot will act as stewards on that occasion. We take our visit on the Central Association list on April 20, and hope to receive a bumper on that occasion.—J. GIBBONS.

St. Alban's Angling Society, Rising Sun, Prince's-road, Kennington.—Our annual dinner will take place on May 11. All members must give in their names by Wednesday, May 3. Several new members have been proposed, and, will all members please note, prizes to be paid in by May 3.—H. ALLEN.

Seymour Brothers' Angling Society, King and Queen, 1, Foley-street, Fitzroy-square, W.—A special meeting of the above members is called for Tuesday next, to consider very important business. Will all members please attend. Our annual supper and distribution of prizes will take place on Tuesday, May 9.—W. ALDIS.

South Bermondsey Club Piscatorial Institute, Rotherhithe New-road.—The above society will hold their fifth annual dinner and distribution of prizes on Monday, May 8, in the hall at the above institute, when we hope to have a good muster and a jolly time of it.—J. H. DAVIES.

South London United Anglers' Visiting List.—The next visit on the above list will take place on Tuesday, April 25, at the Waggoners' A.S., White Lion, Albert Embankment, S.E.—ALF. PAINTER.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—At our special meeting on April 11 the annual supper night was fixed for May 4, and the recommendations from the committee to commence business at nine o'clock and close at 10.30, also the power to arrange the outings for the ensuing season, were accepted.—C. E. LOCK.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Will members please be in their places on Wednesday, April 19, as we have very important business before the club. Our dinner will be held on May 3; any member not receiving dinner tickets please communicate with the secretary.—TIDLER.

Walworth Waltonians Angling Society, St. Paul's Tavern, Westmoreland-road, Walworth, S.E.—I shall be glad to see every member next Wednesday evening as early as possible, to arrange the annual dinner.—W. WRAY.

West Ham Brothers' Angling Society, Coach and Horses, The Grove, Stratford.—Our monthly meeting takes place on Wednesday next, April 19; hoping to have a good attendance to arrange for the annual supper.—R. LOWTHER.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We are anxious that all our members will be at the clubhouse on Tuesday, April 18, to hear balance-sheet read and revise rules, as we want to get through all business in connection with the past year and start afresh; also we want to see all our members, to arrange for annual supper. By specially attending to this you will greatly oblige.—N. LINDEN.

Doings by the Way.

The monthly delegate meeting of the Anglers' Association will be held at the Foresters' Hall on Monday evening next, April 17, at 8.30.

"SCRIBNER'S MAGAZINE" for April is an extremely interesting number. Mr. Sydney Colvin continues to give us some of the charming letters of Robert Louis Stevenson, with dainty illustrations quite in harmony with the graceful text. The "Rough Riders" is also continued, and we have some stirring records of what the American Cavalry did at Santiago. "A Winter Journey to the Klondyke" is another article which will be read with great interest. Indeed, the whole number is crammed with good things, and, needless to say, the illustrations are up to the usual standard of excellence.

ANGLERS will be sorry to hear of the death of Mr. H. C. Cusping (late of the Piscatorial Society). He was well known and beloved at Twickenham; also in Norfolk, on the Yare.

MR. ERNEST SHAND has been giving some "Queer Experiences" when fishing for trout, in the columns of that most interesting paper, *The Umpire* (Manchester). The following is an extract:

"The spring, the spring, the beautiful spring.' So sings the poet; but I have come to the conclusion that he is too soon with his jubilant song; he should wait until the summer arrives and spring has passed, then he could make what remarks he chose—he could refer back, as it were. Anyway, spring always seems to get up and prove the

poet to be out of his reckoning, and this year it has won, hands down. Spring particularly appeals to the trout angler, as the trout then are supposed to be unsuspecting and hungry. They are supposed to take an artificial fly with an eagerness that they do not evince later on in the season, when they have a better judgment of real and artificial insect life. It was with a kind of suppressed joy that I waited the end of the pantomime season, and prevailed upon my worthy manager to give me two days' holiday from the present rehearsals. For weeks previous I was wallowing deep in the 'Angler's Diary,' trying to decide upon a suitable spot for those two days. I settled on half-a-dozen places, and learnt the trains to and from Manchester off by heart. My hair was going grey through studying Bradshaw, when a happy idea struck me. It was to write to a literary friend who lives among trout streams, and to ask him to put me on to some decent fishing for those two days. He suggested a visit to the Wharfe. I jumped at it—the suggestion, not the Wharfe,—and decided to take his advice. There were no trains from Manchester on Sunday to the town I made my headquarters, but I found that, by going half-way round the United Kingdom, I could reach my destination about midnight. The weather was then truly springlike, but directly I decided where to go to, it changed. When I bought my ticket, it grew bitterly cold. When the train started, it got worse. But even then I determined to go through with it; and then, when the weather became thoroughly aware of my fixed resolve, it snowed! And it snowed all the way! When I got up the next morning to prepare for my fishing expedition it was freezing hard, and snowing in a desultory manner, as much as to say, 'I'm here when you start fishing.' Nothing daunted, I put on my waders and sallied forth. There was only one of me, but I sallied. My literary friend had persuaded an expert fisherman to pilot me on my way. When I met him he was carrying something bushy in his hand. I asked him was it fur or feathers, but he informed me it was his beard that had frozen during his journey, and had accidentally broken off in an encounter with a lamp-post which he hadn't expected to meet. He said the weather was unpropitious. I said it was something else, but there's no need for me to repeat it. However, we wended our way to the river, dodging snowflakes, after calling at a house to look inside a bottle. Having prepared our tackle and got ready for the fray, we loaded our pipes, and again looked upwards at the sky through a bottle, then 'waded in.' There are golf links along that portion of the river, and a lunatic asylum at no great distance. A few individuals who were playing golf came to the riverside in open-mouthed astonishment at seeing Arctic explorers after fish; but, recollecting the asylum, they resumed their game. I met a man lower down the river, and who, when I asked him if he had got any fish, replied, 'Nine.' My spirits rose. 'Nine!' I exclaimed, in astonishment. 'Nine,' he reiterated, and shook his head. After a little conversation I discovered that he was a German, and spelt his reply 'nein.' I moved on." [Good job anglers are all benign.]

A YANKEE who recently invented a fishing rod which automatically registers the exact weight and number of the fish caught on it cannot understand why nobody will buy it.

THE prospectus of the eighteenth annual Sportsman's Exhibition, to be held at Olympia, Newcastle-on-Tyne, on May 3 to May 13 next, is to hand. Every imaginable sport, of course including fishing, will be represented, and a long and most influential list of patrons angers well for the success of the show. The business manager is Mr. J. W. Grieves, of Lower Edmonton, London, N.

A CYNICAL American once remarked that England had no climate, "it was all weather," and certainly the weather of last week-end justified the *mot*. At noon on Thursday, when the fishing reports came to hand, "All in the garden looked lovely," as Miss Marie Lloyd sings; then without warning, rhyme, or apparent reason, down plunged the barometer. The mercury fell from 30.0in. to 29.15in. in twenty-four hours, with a strong S.W. gale, which did much damage, especially to the fishing fleets. Our Southend correspondent warned readers of the *F. G.* by telegram of the change; but before the week-end holiday up jumped the glass again, the wind veered to N.N.W., and sea fishing prospects brightened considerably. Perhaps "Observer" and others who are inclined to blame the *F. G.* for not accurately forecasting on Thursday the weather likely to prevail from Saturday to Monday, will kindly bear this little meteorological vagary in mind before saying hard things of our correspondent's reports in future.

I PROMISED not to give the name away if I told the tale, but it is too good to be lost. A certain well-known member of the B.S.A.S. was returning from a fishing excursion, and while walking along the parade to his hotel was much amused to see a couple of visitors trying to make head or tail of the society's burgee, which he was wearing on his cap. "B. A. S. S.," said the lady, "I wonder what that means?" "Oh! I know," said her husband, "he must be Bass's agent in the town. Let us ask him to send us a small cask of bitter. The beer we get from the King's Arms is certainly not up to the mark." The moral of this little tale is "never let your eyes deceive your earsight," as Artemus Ward bath it.

The Government Marine Biologist at Cape Town has "struck ile," and no mistake. The correspondent of the *Daily Mail* in those parts wires that the G. M. B. has discovered a new fishing ground off Lagulhas Bank of

Established

1819.

A CHARMING OLEOGRAPH

PRINTED IN SIXTEEN COLOURS, ENTITLED—

"AN EVENING'S FISHING."

The picture represents a brace or two of Trout just caught, after the Original Painting by the late T. G. TARGETT, in possession of the Editor of the FISHING GAZETTE.

LONDON: SAMPSON LOW, MARSTON & COMPANY, LIMITED
ST. DUNSTON'S HOUSE, FETTER LANE, FLEET STREET E.C.

"6000 square miles extent. The telegram adds, "It is fairly creeping with soles," which sounds touching. Unfortunately the waters which surround this little island are too thoroughly fished for an unexpected discovery of this kind to be made within reach of the London markets. Our brethren at the Cape are to be envied.

"FORTY thousand pounds for a trout." M'yes, it sounds all right, does it not, and likely? But that was the astounding line on the contents bill of the *Daily Telegraph* of Monday last. It appears that an American financier, Governor Roswell Flower, went on an angling excursion, during which he caught ten trout, and while he was away his rivals engineered one of those nice little moves at which Wall Streeters are such adepts, and depreciated his holding of stock to the extent of two million dollars (£400,000), so that we are asked to believe that each of the trout cost him the modest sum above mentioned. I shall have to dissemble when I go a-fishing, or else perhaps some one will be playing the same trick on me.

A WELL-KNOWN Dissenting minister was travelling by railway, and took upon himself to rebuke a fellow traveller for the sulphurous nature of his language. "Look here, guv'nor," replied the offender, "you just mind your own business, if you interfere with me I shall give you a punch on the nose." Then came the soft answer which turneth away wrath, "My friend, take my advice, never give away what you want badly yourself."

ONE of the policemen at the Royal Aquarium is a wag. An angling chum of mine enquired of him during the recent Fisheries Exhibition where the specimen fish were. "Oh! they're up the stairs, but I should not trouble to see them, they're all dead."

A PARTICULARLY knowing sample of the country blade recently came on a visit to "the great metropolis," and was determined not to be taken in by the "Lunnon folk." "How much is that hat?" said he to a shopman. "Eight shillings, sir," was the reply. "Tell yer what, I'll give yer sixteen bob, not a penny more." "I said eight shillings, not eighteen." "Very well," he answered smartly, "then I'll give yer six." No deal.

THE other morning, about 4 a.m., when I popped into the meeting of the Lychnobite Angling Society, I found the members in high glee. They had been reading Col. Mather's letter in last week's *Fishing Gazette*, and so highly did they appreciate his kind remarks, that to return the compliment he was proposed, seconded, and by the unanimous vote of the members present elected an honorary member of the club. In the course of my experience I have been brought into contact with the secretaries of a number of angling clubs, but I do not know one who works harder, or is more entirely devoted to the interests of our sport and its followers than Mr. Sid Ransom, the hon. secretary of the Lychnobites. I saw him in the corner scribbling, and, peeping over his shoulder, managed to copy the following verses in commemoration of the event of the evening.

Oh! Mather, would that I could breathe
The word that hostile swords might sheathe.
Thank God, no cause can keep apart
Our countries, for they're one in heart.
We shake your hand across the sea,
Your land, like ours, is for the free.
Though miles apart, in heart and mind,
Colonel, you're ours, we're kith and kind.
Greetings fly swift across the foam,
Betwixt us twain, from home to home.
Never forget, come peace or fight,
Henceforth you are a Lychnobite.

THAT was an impromptu. "Sid" seems to have the rhyme slinging complaint very badly (I wonder what he takes for it); but he never put his pen to better use than in writing these lines to welcome Colonel Mather as a member of "our" angling society. I do not know if I am telling secrets, but it is whispered that when the colonel comes to a meeting of the club, he is going to have such a reception as will astonish him. When a man reaches the venerable age of "six score," and that is what Colonel Mather tells us his years number, he naturally wants as much health as he can acquire, and in order to make him as robust as possible the menu of drinks with which to wish him all he wishes himself is already being arranged. Up to now it comprises Liebfraumilch, dog's nose, Usquebaugh, Beaune, four ale, "Kiss him for his Mather," rum punch, special Scotch (Dunripple), B. and S., Sloe gin, John Collins, Imperial stout, sherry cobbler, Day and Martin, Apollinaris, Bitter and Burton, Chartreuse, gingerbeer and Guinness, furniture polish, and a lot of other things. These are only suggestions, as the boys do not yet know what particular poison their new member is fondest of "hitting in;" but, Colonel, if there is any mortal thing you prefer that can be obtained in this little village—and there are few things that can't—please let us know before you cross that little damp spot they call the Atlantic Ocean, and you can bet your bottom dollar it will be "thar." Only come and see us soon, the sooner the quicker.

THE mail that carries this number of the *Fishing Gazette* will take to the Colonel his card of membership, book of rules, and all the papers necessary to make him a full blown Lychnobite. The hours of meeting are a trifle inconvenient to most people—that cannot be helped—but it should be noted that it is no good turning up at the John

Benson, I mean Ben Jouson, before two o'clock a.m., as the hostelry is not open till that time, the licensing magistrates and the police having the absurd idea that even printers need not moisten their clay between 12.30 a.m. and two o'clock.

THE ink with which the above remarks were written was not dry when the news came to hand of the trouble in Samoa. For the first time in history English and American sailors fought, and, unfortunately, some of them died, shoulder to shoulder. Lieut. Freeman, of the British Navy, Lansdale and Monaghan, of the United States Navy, and their men have died as brave boys would wish to die, on duty, and if I am not mistaken Easter Sunday of 1899 is going to be historic. "The blood of the martyrs is the seed of the Church," says an old proverb, and the blood of Lansdale, Freeman, and Monaghan is going to be the seed of an Anglo-American alliance, such a bond as the world has never seen. Their deaths will do more for the alliance than reams of diplomatic dispatches. "Ain't anybody got to be whopped for this 'ere?" once asked Mr. Samuel Weller. Well in this case somebody is, and no mistake. Stuart, and Kautz, and Sturdee, (with the might of England and America behind them, are awkward handfuls, and that they will exact reparation to the uttermost farthing is as certain as that two and two make four. This is no time for nice international distinctions, and I have purposely put Admiral Kautz's name between those of Stuart and Sturdee, two as smart sailors as ever wore the Queen's uniform, because, when the time comes to "cut the cackle" and clear for action, we Britishers know that side by side with our ships Kautz and the *Philadelphia* will be there, and we're quite content. The States have recently shown the world how their sailors can fight. Every month almost our blue jackets are "whopping" somebody; but with the two together there is no nation—alliance of nations—that can afford to be too cheeky; they would find, in the words of the song, they would have "something to play with." Just a few!

OUR F. G. ALBUM OF ANGLERS.

No. 39 (New Series).

MR. GEORGE STEGMANN.

is a well-known electrical engineer, of New Wandsworth, and not long ago he had a very curious experience. A gentleman called on him, and asked him to make a very extraordinary apparatus, which much puzzled the engineer. "It looks like an electrical fishing rod," said Mr. Stegmann to himself, and an electrical fishing rod it was doubtless intended to be. Like the good sportsman that he is, Mr. Stegmann did not exactly decline the job, but he followed the Irishman's tactics, and gave his customer "an evasive answer." Anyhow, if the unsportsmanlike weapon was made at all, it was not at Mr. Stegmann's establishment. He would fit up the welkin with electric bells, and light the Alps with electric lights at a few hours' notice—but he draws the line at fishing rods which the most abandoned Jack would pronounce "shocking!" Though a very busy scientific man, a good angler is Mr. Geo. Stegmann. He has fished many of the continental rivers, and whipped a good many English streams with no small measure of success. In recent years his fisherman's fancy has turned to "the briny," and no sea fisherman would wish for a more genial companion in either rough or smooth water.

WILD horses will not drag from me the name of the angling club whose dinner he had attended the night before, but Jones (that's a fictitious name) had been drinking several healths, and in his charitable endeavours to make the recipients of his compliments as robust as possible he had seriously, although temporarily, deranged his own system. When his friend Brown (another fictitious name) came to see him in the morning poor Jones was feeling bad. "How are you, old chap?" said Brown. "Oh, very seedy," was the reply. "Had any breakfast?" "Yes, but I could only manage a 'boozer's breakfast' this morning." "A boozer's breakfast, what's that?" "A brandy and soda, a dog, and a chop." "What was the dog for?" queried Brown.

"Oh," replied the invalid, meekly, "the dog is to eat the chop!" Brown is wiser now.

"A CORRESPONDENT on board the Orient line steamship *Austral* sends to us," says Reynolds, "the following singular story: 'Whilst we were making our passage home from Sydney, N.S.W., to London, on August 20, about four a.m., in the Red Sea, a large shark, from 20ft. to 25ft. in length, which must have been sleeping on the surface, was fanned to have come in contact with the ship's bows. The vessel must have hit the shark nearly in the middle of the back. The vessel, which was travelling at a great speed, carried the shark in the front of its bows for nearly two hours. When the captain found that the monster did not fall away, he had to stop the ship to allow it to fall into the depths of the Red Sea. Such an incident I do not think likely to occur again for many years. It caused great interest amongst the passengers and crew.'"

I AM afraid something must have happened to "Truthful Tommy," as this is what he writes me this week: "Satan Dragnet Sahib. Baghair dand-ke mallah kyunkar no, o khe-sakte hain?" Don't know, dear boy, I never learnt German, but I will inquire. But when he goes on: "Tum appa kaghaz kyun kharab karte ho?" I am glad to be able to reply, I don't, we were out of print with last week's issue on Saturday. What do you think of that? Next, please, but once more, this is not an India-rubber paper.

ONE of my friends, who is a skilled meteorologist, has let me into the secret of forecasting summer weather, and, in the hope that it may be useful to anglers, I give it here. "The proper forecast for the summer," he writes, "is fine, with local showers." This is his explanation: "If it is fine where you happen to be, it's all right; if it rains, it is one of the predicted local showers; so that you are right all the time. See?"

IN answer to "Button Off," who writes from Colney Hatch: No; you are quite wrong. A char-woman is not usually considered by naturalists to belong to the family of *Salmonidae*. They are often found partially immersed in washing tubs, and should therefore be more properly classed with the amphibia.

ON Wednesday I attended the British Sea Anglers' dinner at their new headquarters, the Holborn Restaurant. It was one of the most successful, if not the most successful, angling function at which I have been present. The hon. secretary was in good form, and is to be congratulated on the marked success achieved. The chairman, the Hon. Mr. Justice Bucknill, was, as he always is, the right man in the right place, and was ably supported by the Prime Warden of the Fishmongers' Company. Both these gentlemen are ordinary members of the society, and when such men can be numbered on its roll, the society is bound to flourish in the future as it has in the past.

"JOHN BICKERDYKE" (Mr. C. H. Cook) will preside at the annual dinner of the Gresham A.S. on Tuesday evening, April 25. A word of praise must be given to the executive of the Gresham for the admirable manner in which the new book has been prepared. Handy for the pocket, well printed and compiled, it gives every item of information that can be required. The list of officers is set out; names and addresses of members; weights of fish allowed to be shown (and they are pretty high); a list of fixtures up to Feb. 27, 1900; rules and regulations as to fishing at Kelvedon or Chesham; and last, but not least, two splendid maps (in colours—red and blue), showing exactly how to reach and fish the society's waters. The annual subscription to this up-to-date go-ahead angling society is one guinea and a half; entrance fee, one guinea. Mr. Alex. Wright is the hon. sec.; and the headquarters, Masons' Hall Tavern, Masons' Avenue, Basinghall-street, E.C.

ALTHOUGH I was unable to be present at the "smoker" of the Hoxton Brothers A.S. on Tuesday last, I hear that it was a great success. Mr. G. B. Shipton occupied the chair, and Mr. E. Brockett the vice.

ANOTHER enjoyable evening's amusement will be on Tuesday, April 18, when Mr. W. J. Wade will deliver a lantern lecture before the members and friends of the Bermondsey Brothers A.S., Woolpack Tavern, Bermondsey-street. The title of the paper is "Rambles in Kent." After the reading there will be a smoking concert.

THE annual dinner of the Society of Caxtonian Anglers took place on Thursday evening, April 13, under the presidency of Mr. W. Cate—Mr. Chapman in the vice-chair. It was a delightful little affair—good dinner—good wines—good company—and—good-night! (Home in the president's brougham.) More next week.

The "Thames Angling News" and "Hastings and St. Leonard's Club Chronicle" are to hand, and are brimful of interesting information. Will review them in next number.

MR. COLLINSON, the hard-working secretary of the St. Ives A.S., writes that their annual dinner will take place on May 3 at the Corn Exchange. A chair has been reserved for DRAGNET.

PISCATORIAL SOCIETY.

Few trout, comparatively speaking, were taken in the opening days of the season, the sharp snap of the previous week having caused them, like Brer Fox in "Uncle Remus," to lie very low indeed. A large number of members reported to the chairman of Monday's meeting (Mr. Horace H. Brown) that they had been out on the 1st, and for some days thereafter; but the results had hardly been commensurate with the labour entailed. The Moor stream and Kennet fished badly, only two brace of sizeable trout having been creeled amongst the whole body of anglers who visited Thatcham and Newbury. Mr. H. Harden had a nice fish from the Kennet of 3lb. 8oz.; Mr. E. M. Mayer one of 2lb. 5oz.; and Mr. J. E. Evans a brace from the Moor stream. Beyond these nothing of note was done in Berkshire. The new water on the Colne, at Uxbridge, fished better than either the Kennet or Moor stream. Mr. J. J. Hardy had three fish, the largest going close upon 3lb.; Mr. M. G. E. de Conroy retained a brace out of a catch of five; and Mr. H. A. Rolt took one fish. In private waters adjoining, Mr. Horace Brown grassed four and a half brace in two hours. This was something like sport. In the Thames members have been very fortunate. Mr. T. W. Gomm has had several fish, particulars of which have already appeared in the press. Mr. J. E. Evans, in all, caught nearly a dozen, large and small. The least of top weights went 3lb. 8oz., 3lb. 4oz., and 3lb. Mr. C. H. Wheeley had, of course, been amongst them, and on Saturday landed a somewhat old fish of 3lb. 8oz. Mr. Wheeley described that day as the very worst one he had for fishing. The cold was intense, and until the evening the wind was dreadful. Mr. J. W. Zehnendorf went to Uxbridge on Saturday, but, like a wise man, took refuge in the chalet, not caring to face the gale of wind, snow, and rain which obtained. Some interesting particulars of the Uxbridge water were given by a proposed new member, Mr. Woodbridge, who hails from, and thoroughly knows the whole district round about. Mr. H. H. Brown reported that he had on two different days attended some netting operations on private portions of the Colne at and near Uxbridge, the outcome of which was that nearly 400 fine fish were transferred to the society's water. There were tench up to 2lb. 8oz., chub of 3lb., plenty of perch of 1lb., and dozens of roach over the last mentioned weight, in short, an exceptionally lovely lot of fish was secured. Mr. Robt. C. Blundell, than whom no one takes a deeper interest in the fishery, considered that the trout were very shy there, his opinion being that dry-fly men would, later on, stand a much better chance of getting good sport than those fishing downstream wet. Mr. Blundell also mentioned that he, with other members, had attended the funeral of the late Dr. Brnnton, to pay the last tribute of respect to their old friend and colleague.

M. G. E. DE C.

GRESHAM ANGLING SOCIETY.

At a well-attended meeting Mr. W. Marshall occupied the chair. It is with great regret that I have to report the death of the wife of our esteemed hon. librarian, Mr. F. W. Norman, and I am sure the sympathy of every member of the society will be extended to him in his bereavement. Mr. A. W. Parker will next week read a paper before the society, entitled "Improvements in Sea Tackle," and I hope that every member who can will attend. The annual dinner of the society will take place at the Mason's Hall Tavern on Tuesday, April 25, when Mr. C. H. Cook ("John Bickerdye") will take the chair, supported by Messrs. W. Marshall and E. H. Bramley in the vice-chairs. The tickets are now ready, price 5s. each, and I hope every member will do his best to attend, and apply at once for the tickets. The new programmes are now ready, and will be forwarded in due course to those members who have not yet received them. Mr. H. Weber Brown, of 84, Bishopsgate-street, E.C., was unanimously elected a member of the society. Mr. Taylor reported that a deputation from the society had attended the funeral of our late honorary member, Dr. Brnnton. The service was a very impressive one, and the angling world was well represented at the graveside. A consignment of trout was placed in our waters at Chesham to the extent of 200, and we hope shortly to place further fish in the water. We are indebted to one or two members for this consignment. The fish are two-year-olds, and as soon as they were placed in the water commenced rising. Not a single fish was lost or damaged. The average length was about 7½ in. The opening dinner at Chesham last Saturday passed off admirably, fifteen sitting down. The reports of fish taken are below: Messrs. Taylor and Bridger, in the Isle of Wight, trout up to 3lb. each, with March Brown. Mr. Emery, one trout, Chesham, returned, and, spinning in other waters, forty-nine pike and twelve perch in one day, all returned, bait Devon; Mr. Powles West, two and a half brace trout, Chesham; Mr. Eldred, three brace, all returned but one fish; Mr. Eldred, five brace, only one brace retained; Mr. Chastaney, trout; Mr. Connellan, dace with fly, all returned; Mr. Buckingham, one and a half brace trout, from Scotland; Mr. Gibson, dace with fly, private waters, returned; Mr. Woodruff, two brace of trout, Chesham, largest 2lb. 5oz., one brace returned; also one trout from the Kennet. One trout, after being cut open, was found to contain four frogs. Mr. Close, one trout, Chesham, 13in., and one trout, Kennet, about 1lb. Flies that were successful were March Brown, Alder, Golden Sedge, Coachman, Artful Dodger, and Pink Wickham, on the Chesham water. Members are reminded that a book is kept at the Black Horse, Chesham, for the purpose of recording their capture and all particulars relating thereto, and it is hoped that every member taking fish will so record them. Dr. Ladell, pollack and conger from the Scilly Isles and Penzance. He also presented to the

society a piece of a wreck curiously bored by some of the marine insects. The usual toasts and a vote of thanks to the chair concluded the proceedings.

ALEX. WRIGHT, Hon. Sec.

WIMBLEDON PISCATORIAL SOCIETY.

ANNUAL DINNER.

The third annual dinner of this society was held on Tuesday evening, at headquarters, the Alexandra Hotel, when Mr. Walter Dowson, S.C.C., presided over fifty members and friends who attended the festive gathering. An admirable repast was served by Host Gibbs, at the close of which the chairman gave the toast of the Queen, followed by that of the society. He alluded to the steady growth the club had made during the three years it had been in existence, as evidenced by the large increase in membership and the greatly augmented prize list. He drew attention to the large number of preserved specimens on the walls, and expressed the gratification it afforded him to see that the members had aimed at securing quality rather than quantity. The hon. secretary (Mr. S. Peskett), in replying, said that the season just passed had been more successful than any of its predecessors. At one time they had sixty members on their books, but a few defections from the ranks had brought the number down to fifty, at which the muster roll now stood. (Applause.) The prizes they were presenting that evening amounted to £17 in value, against £11 in 1898, besides several articles given in kind—a good prize list for so young a society. (Hear, hear.) Several specimens—pike, bream, roach, perch, dace, chub, and grayling—had been creeled by the members, who, since the abolition of the gross weight prizes, had turned their attention to big game in lieu of "scripers." The principal event of the year—the silver cup competition—was keenly contested, the result being a win for their popular hon. treasurer, Mr. H. A. Rolt. (Applause.) The presentation of awards followed, the winners of the fifty-seven prizes being: Messrs. H. A. Rolt, S. Peskett, R. Howden, J. Gallie, Starling, Garrett, Bishop, F. Rolt, W. F. Bowie, Lawrence, H. Golding, sen., H. Golding, jun., C. Pain, J. Furnage, J. Gillman, and F. Salkeld. The remaining toasts were: "The Hon. Members and Prize Givers," proposed by Mr. G. S. Salkeld, responded to by Mr. W. Poole; "The Hon. Secretary," proposed by Mr. H. Bright, responded to by Mr. S. Peskett; "The Visitors and Host," proposed by Mr. H. A. Rolt, responded to by Mr. F. H. Amphlett (*Thames Angling News*), Mr. W. Gibbs (Alexandra Hotel), and Mr. Moore (Mitre Hotel, Weybridge); and "The Chairman," proposed by Mr. Cawse, and replied to by Mr. W. Dowson. In the course of the evening a case of handsome pipes was presented to Mr. S. Peskett as an acknowledgment of the valuable services that gentleman had rendered the society as hon. secretary for the past two years. A capital selection of songs was given by members and friends, and harmony was indulged in until midnight, when the company dispersed.

CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.

The usual monthly meeting of delegates was held at the Bedford Head Hotel, Maiden-lane, Covent Garden, on Monday evening last, the chair being occupied by the president, Mr. C. A. Medcalf; vice-chairman, Mr. Elsmore. The minutes and formal business being disposed of, Mr. Elsmore reported some interesting details concerning the recent doings of the Thames Angling Preservation Society, stating that the protection of the fishery during the spawning season was receiving careful attention, and arrangements were nearly completed for the removal of the barren swans; also reading a letter from the Thames Conservancy intimating that new regulations had been made doing away with right of netting by assistant river keepers—in his opinion a very wise course to adopt, and anything in the form of further restrictions of netting should commend itself to every reasonable and right-thinking angler, this opinion receiving the hearty approval of all the delegates present. The colour of next season's privilege card was decided to be light blue. Mr. C. Watling reported that visits had been paid to the Phoenix A.S., also a most satisfactory one to the Peckham Brothers' A.S.; twenty-five clubs present. Next one to the Royal George A.S., Queen's Arms, Bateman-street, Soho, on Thursday, 20th inst. The secretary reported the result of the recent annual concert would be of a satisfactory nature. It was also decided to hold the Central's monster competition on the opening day, on June 18, when the Emden cup and Elsmore cup will be competed for. Several important questions concerning additional railway facilities received consideration, and the secretary instructed to interview the various companies in reference thereto. Other matters were discussed, details of which it is at present unnecessary to publish. Votes of thanks were passed to the chairman and vice-chairman. All communications to be sent to the secretary, Mr. Wade, 6, Priter-road, London, S.E.

AN IMPUDENT FRAUD has been perpetrated upon a well-known Member of Parliament. This gentleman recently entered a small chemist's establishment in Northampton and asked for a box of Holloway's Pills. A packet was given to him, for which he paid and then left the shop. Having to leave for London that evening, it was not until he was in the train, many miles away from Northampton, that he discovered he had been swindled. Instead of Holloway's Pills he found that a pernicious and worthless imitation had been foisted upon him. Of course the rubbish was thrown away, and the M.P. had to wait until he arrived in London before he could get the genuine article.

LOCHLEVEN.

THE angling season will be open here on April 3, when a Glasgow club will compete. The weather has been exceptionally severe of late, but a heavy snowfall has brought with it a milder atmosphere. The pike netters inform me that they have never seen trout in more forward condition at this time. The other day one of the directors was on the loch for an hour or two, and saw a number of rising fish. The water was then rather dirty for angling from heavy flooding caused by the bursting of Loch Glow Reservoir. During the spawning season spates were frequent, though it is not supposed the redds were injuriously affected. Lochleven hatchery has produced its full complement of trout fry to stock the loch with. A list of the angling competitions to be held here this season will be found in another column. There are in all 116 competition fixtures besides the two special competitions after the loch is closed to the public. The National competition will take place on June 7.

ANGLING COMPETITIONS ON LOCH-LEVEN FOR 1899.

THE list of fixtures for competitions on this favourite resort of the angling fraternity has now been made up for the ensuing season. About forty clubs will hold 116 competitions, which is an increase of five on last year's number. The following are the dates on which the various clubs compete:

APRIL.	JUNE (continued).
3. Uddingston Waltonians	15. St. Mungo
22. Pollokshields	15. Pollokshields
24. Stirling	16. Killin Breadalbane
26. Perth	Angling Club

EDEN FISHERY BOARD.

THE report of the Watch Committee, to be submitted to the next meeting of this board on April 8, states that there has been so far an exceptional scarcity of salmon both in the Solway and in the rivers running into the Solway. The Tweed and some other Scotch rivers have shown equally bad results. It is possible the stormy weather in the early part of the year may have driven the fish into deep water. In this case they may come on later. Owing to the state of the board's finances the staff of bailiffs has been reduced. The bailiff at Edenhall reports having buried over eighty dead kelts. This shows that a large number of spawning fish went over the Armathwaite weir in the autumn.

Notes from the North.

SPORT is somewhat brighter all over, although there is room for much improvement in this respect. The weather has been very indifferent, and those who came north for the Easter holiday week have made but meagre baskets.

Mr. Somerset and Mr. Bisset are having some sport on the Braemar Dee waters. Mr. James Temple, of Richmond, was with the Prince at Abergeldie, last week, and since then has been putting in the time on the Glentana water, at Dinnet.

The Grant Arms Hotel, Grantown, has been sold by Mr. Macdonald to a Glasgow syndicate at the long figure, for a country hotel, of £14,500.

Good sport has been got on the Ellon waters of the Ythan. Capt. Mitchell had a fine spring fish of 8lb. on the Turnhall waters, and some heavy baskets of finnock and sea trout are being made daily. These waters are open to daily ticket holders.

Information regarding any of the waters in the Perth district may be had from Mr. P. D. Malloch, Perth; regarding Aberdeen and the north, from Mr. Wm. Garden, tackle maker, Aberdeen; or through the *Fishing Gazette* Office.

The Aberdeen Harbour Commissioners have dropped £375 on their returns from their extensive salmon fishings this year up to March 31 as compared with last year, which was also a very poor one. Owing to the high prices presently a-going the drop does not represent the case at its worst. Last year the fish caught weighed 15,166lb. This year the total only amounts to 8262lb.

Sport is improving on the Deveron. Last week, at Bridge of Marnoch, Mr. Leitham had a fine fish of 13½lb.; and on same day, on an adjoining section, Mr. Chamberlain and a friend creelied baskets of 21lb. and 25lb. respectively, of nicely conditioned trout.

The Scottish National Sea Fisheries Association held its annual conference at Aberdeen last week. The association flies its banner under a high sounding title, which looks important; but its constitution, after all, is much after the model of the three tailors of Tooley-street. The association exists to put down trawlers. It may as well try to dry up the North Sea.

Two bottle-nosed whales were stranded in the Dornoch Firth last week, but with the flood tide both got away. Later on, however, one of them was seen foundering in the shallows at the head of the Firth, and was despatched by a party in a boat.

The mansion house of Williamsraig, Linlithgow, belonging to Mr. Blair, Glasgow, was totally destroyed by fire one night last week. Mr. Blair arrived home from Glasgow to find his fine house in a blaze.

The effects of the recent snowstorm are now being seen in the dead bodies of great numbers of our migratory birds. Plover seem to have suffered worst, and mixed up with them may be detected curlews, thrushes, blackbirds, and even wild duck.

A local poet on the Ythan, writes:—

"A glorious day; the sky is dark
And 'light' well up, to hit the mark;
A gentle breeze sobs from the west,
The air that suits the angler best.

"But—O good Lor', what's this I've got?
A beauty, and I'll stake a groat
It's fourteen pounds; but, holy roast!
A kelt as big's a pailing post."

At a meeting of the Tay salmon fishing proprietors, held in Perth last week, it was agreed to appeal the "Hang Net Case" to the House of Lords.

Mr. J. Arthur Thomson, M.A., F.R.S.E., of the Edinburgh Medical School, has been appointed to the Chair of Natural History in Aberdeen University, vacant by the death of Prof. Nicholson. The appointment was made by the Crown, on the recommendation of the Secretary for Scotland, out of a large list of most distinguished applicants.

Professor Thomson is well up in marine zoology, and will have a fine field in the north-east of Scotland, with the Fishery Board's Hatchery just at his door. There is also an aquarium at the bathing station, which the late professor of natural history took a great interest in, but which he latterly threw up in some friction with the Town Council.

The finnock question is the great theme with tidal anglers in the north. How will it end? every other one is asking. There is only one ending. The first one caught with finnock will be charged with taking whittling, and fined accordingly. The loop hole in the last indictment was charging the man with "sea trout" instead of "whittling."

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

The monthly meeting of the committee of the Birmingham Angling Association was held on Thursday evening last at the headquarters, Mr. T. Coles presided, and Mr. R. Holding occupied the vice-chair. The first business transacted was to receive the reports from the visiting committee, who were instructed to visit two new clubs who had applied for affiliation. Messrs. Bagley and Rabone reported that they had visited the new club formed at the Crown Inn, Upper Sutton-street, Ashton. The report went to show that the number of members on the books amounted to sixty, the club was properly constituted, and as no objection was raised by any of the clubs in the neighbourhood, the club was admitted. Mr. Hughes, in the absence of Mr. Foster, gave in a report of his visit to the Bridge Society, held at the Bridge Inn, Bridge-street, Smethwick. This club has forty-five fully paid-up members on their books, and a number of names down to join as soon as the society was accepted by the association. The report was very satisfactory, and as no objection was made by any of the clubs in the vicinity, the club was accepted. The Queen's Arms Society offered no objection to the affiliation of the new club, held at the Vine Inn, Newtown-row, so this club was also admitted. Opposition was made to the King's Head Club, in Brearley-street, becoming affiliated, so the application of this club was allowed to remain over until the next committee meeting. The balance-sheet for the quarter ending March 30 last was read by the secretary. This went to show that all liabilities had been met, and that a profit of near upon £6 had been made during the quarter. This sum was added to the general fund. The balance-sheet and report was adopted. The important matter of the association renting a portion of the river Avon at Defford was discussed at some length, when it was finally resolved that as the association could not rent the water direct from Lord Coventry the matter should be allowed to drop. The Lamp Angling Society, which has at present about 180 members, intends making their club the largest in the city. With this in view, Mr. F. Smith, the president, and Mr. B. Banks, the treasurer, intend giving a handsome prize for the member bringing the most members to the society during the next eight months. This club is one of the best managed clubs in Birmingham, and looks like being the strongest, considering they have only been in existence such a short time. The Birmingham Association have been during the last few years very particular as to the character of the members joining the new clubs that have lately been affiliated. The association is just now very particular, not only as to the members, but also the character of the neighbourhood and the houses where the clubs are held at. In this respect the clubs cannot be too particular, and several applications have been partly refused on these grounds alone, as the association can well do without clubs that are calculated to, perhaps, bring discredit on them in the future. Since the formation of the association a weeding out of some of the undesirable members has taken place, and, as a consequence, the members have been taught such lessons as to deter them from wrong doing in the future. A number of our members have put up their tackle until the close season expires; but those who go in for the "fine art" of fishing have been out with their fly rods. A number of gentlemen have visited the river Teme, which is one of the best public trout rivers we have near to our city. They found the river very much against them, still, some few fish were taken. Mr. A. Randall, of the Hearts of Oak Society, was the most successful. He took three and a half brace, the largest fish being over 2lb. None of the fish were in proper condition.

FROM DERBYSHIRE.

During the past week wild, cold, stormy weather has prevailed; rain and snow showers, which the Peaklanders call lamb storms, have fallen frequently. Fly angling has been out of the question, as it has been next to impossible to keep a line on the water. The streams for three or four days have been in flood and greatly discoloured. Few anglers have been out, and only bottom fishers and trollers have done anything. They have managed to take a few decent lots of fish in the upper reaches of the Derwent, and also on the lower waters where those methods of angling are permitted, and a few baskets have been made on certain parts of the Wye. There seems to have been better sport on the smaller streams, and last week's anglers did fairly well on some of them. The Amber yielded several fair baskets to worm fishers, and upwards of fifty brace were killed on the Nowe, in the Edale district. There has been no fly fishing during the week worth recording, for the reasons above mentioned, although numerous futile attempts have been made. The banks of the Dove and Wye, save in one or two places, have been deserted, and the best reaches of Chatsworth and Hathersage have not proved tempting. Such has been the unfortunate state of things up to Wednesday morning, when there came a welcome change. The wind had ceased to blow "great guns," the rain and snow showers passed away, the sun shone out, the waters sunk to their almost normal level, and were in splendid condition for bottom angling, with promises of good fly water in a short time. Thereupon anglers at once flocked to the rivers, and some good sport has been had. If the weather keeps up the streams will soon be in capital condition for fly angling, and as most of them contain an abundance of fish, good baskets will no doubt be made. In particular the Upper Lathkil is reported to be "brimful of fine trout," thanks to the care and attention of Mr. Symington, the lessee under Earl Cowper, whose famous hatchery on the banks of the river is in full operation. The Duke of Rutland's portion of the Lathkil is also well stocked, and in the adjoining

Bradford the trout are most plentiful. Special permission, however, is required to fish these waters, as they are strictly preserved, principally for the owners and their friends. It would be well if certain semi-public portions of the Derwent were better attended to in the way of restocking. Constant fishing, and no fresh supply to the waters, will in time most assuredly spoil them. This observation, however, only applies to a few small districts, for as a rule all the Derbyshire fishing streams are well and carefully preserved. Angling prospects are much more favourable, and fly anglers may take heart. They will find the Claret Bumble, Ash Dun, Yellow Dun, Black Gnat, Cooper's Fancy, Cock Wing, and Olive Dun useful flies.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

The trout streams have been improved somewhat by welcome falls of rain, but the remarkably cold weather experienced this week has entirely ruined the prospects of angling. Indeed, snow has fallen on several occasions, and it is not surprising, therefore, to find that there are now practically no flies on the water. Those who continue to employ the worm in the deeper holes have taken a few brace of trout, but fly fishing is quite out of the question, and until we get a spell of warm weather very little will be done.

FROM HULL AND DISTRICT.

The weather in this district during the past week being rather mild, and favourable for trout fishing, and the top stretches of the River Hull being in good trim, several of our local anglers visited their favourite swims, both above and below the lock, but with only poor results, the best fish recorded only scaling 1lb. 5½oz., which was taken at Aike Beck-end with worm. A few small trout continue to be taken in the lower portion of the river at Wawne, Cicey, and Dunswell, running from ½lb. to ¾lb. each; and the flounders and eels are furnishing fair sport in these districts. On Easter Monday the Beverley Foresters' Angling Society fished their first match of the season on Swine-moor, Mr. G. Armstrong taking the first prize with 1lb. 2½oz., Messrs. H. Stork and F. Lacey taking the next two with under a lb. of fish each. The Star Angling Society, of Stoneferry, fished their first match at Figham, resulting in Messrs. L. Linsley, C. Leake, and E. Dann taking the first three prizes. The River Hull Angling Society opened their season at Hull Bridge, but with only poor results, Mr. J. Hepworth taking the first prize with only 14½oz.; Mr. T. Stead the second with 13½oz.; Messrs. H. Wild and Joseph Powel taking the next two with 10oz. and 8½oz. respectively. At the Sissons Brothers' A.S. match, which was fished at Weelferry, Mr. J. Mason was fortunate in securing a nice trout of 1lb. 5½oz. The Driffild Hearts of Oak Angling Society, by kind permission of the commissioners, journeyed to Barnston, and fished their first match on the Barnston Drain with very fair results, Mr. F. Waites taking the first prize with 2lb. 11½oz.; Mr. A. Waites second with 2lb. 9½oz.; and Mr. J. Cooper third with 2lb. 4½oz.; but those drains that have a direct communication with the salt water are always more prolific with flounders and eels. The Alexandra Angling Association, of Hull, opened their season on the Winstead Drain at Patrington, Mr. H. Heart being first prizeman with 1lb. 3½oz.; Mr. G. Kemp second with 1lb. 2oz.; and Mr. J. Gooch third with 14½oz. The Hull Ramblers' Angling Association have arranged that the whole of the prizes—they not having been won at the Good Friday match—stand over for the next match, the place and date to be decided upon at a meeting to be held at the Cricketers' Arms on May 8. On Monday evening next the Victoria Angling Society hold a special meeting at the White Horse Hotel, to fix place and arrange matters for their first match.

FROM THE LAKE DISTRICT.

Anglers are still waiting for more propitious weather. After two or three comparatively mild days last week, when heavy rain fell and brought out rivers, we have had a return to early March-like weather, and this week snow and frost, with cold winds, have been the rule. Nearly all the mountains, and in some localities the low lying lands, have been snow capped, while ice is formed each night on water sheltered from the wind. There was a considerable arrival of visitors last week in north Westmoreland from Northumberland, Durham, Yorkshire, and more distant parts, and on some of the rivers excellent sport was enjoyed for a few days. Mr. Broadbent, a Bradford angler, secured over a hundred fish in two days; and a local piscator, Mr. J. McHaffie, topped this total by some two score during the week. Many of the fish taken, however, have been rather small. The best fish so far this season has fallen to the lot of a Keswick boatman, who one day last week secured a handsome trout of over 4lb. There has also been a fair turn out of anglers on one or two occasions on the Lune, Kent, and other rivers, but there is a general lament that April is slipping away without the chance of sport usually enjoyed. Although there is a fair amount of sunshine, the cold showers and frosty nights make angling anything but the enjoyable pastime it ought to be. Very little is being done on the lakes, where the cold is more keenly felt.

FROM LANCASHIRE.

The annual *conversazione* of the St. Helens Anglers was held on the 6th—too late for notice last week—as a reunion of past and present members and friends, covers being laid for thirty. Mr. John Wells, president, presided over the whole proceedings, which were exceptionally enjoyable. Mr. and Mrs. Watts, and Messrs. Durie, Scott, Barrett, Seddon, and Humphrey, with the assistance of the St. Helens' blind pianist as accompanist, provided a programme full of good items. The Chorley Angling Society by way of making a start fished a friendly match on Good Friday for nine prizes, which were all awarded, the first four going to Messrs. E. Lever,

Bentham, Moon, and Sewell. They have placed eighteen candidates for membership on the nomination list, and no efforts will be spared to make things hum in the coming season. A new club is being established at Atherton, the Lion Inn, with the name of the Welcome Brothers' Angling Society. It is the intention of the members to seek admission into the Northern Anglers' Association. The Tyldesley and District Anglers' Association are noted for their annual dinner on the 22nd at headquarters; the corrected address of the hon. sec. is 1, Lime-street, Tyldesley. The Lune Fishery Board is deserving of the thanks of all fishermen for the great interest they take in the waters under their control. They do the best to stop pollution and other things likely to do harm; and at the same time try to do good to the sporting side of the question. Owing to pollution, the salmon are not coming freely into the river, and, in consequence, the licences have not brought in so much as in former years, but, on the other hand, trout licences have brought an increased revenue, which enables another baillif to be engaged until September. The Ribble, despite inclement weather, has afforded fair sport to a limited number of rods. The river is almost void of flies, and very few fish are rising; the chief sport is with the minnow. The Wyre has received a large number of fish below St. Michael's; the water has been in fair condition, only a few naturals are on, but the fish are in good condition and more plentiful.

FROM MANCHESTER.

The annual meeting of the Manchester Centre of the Northern Anglers' Association was held on April 7, at the Horseshoe Hotel, Pendleton, Mr. W. F. Constable presiding. Routine business being disposed of, the report and balance both found favour with the meeting, and were passed as satisfactory. Mr. Constable was re-elected president, and Mr. W. Prescott hon. treasurer and secretary; the following are the committee, Messrs. Bate, Berry, Cash, and Howarth. During the summer the centre will promote a match. The Victoria Angling Society, Longsight, have now a complete roll call, and have decided for the future to have a limit. The following matches are arranged: June 17, at Poynton; July 22, at Northwich; Aug. 19, at Marple; Sept. 17, not fixed. To-day, the first prize won at Wyresdale is timed to reach Manchester, but the time 10.30 is far too early for any quantity of fishermen to get a peep at the fish; this is a great disappointment, and many who wanted to see some rainbow trout will have to wait a little while longer. Club news of a deeply interesting character is very scarce, our local organisations being chiefly occupied in arranging for the coming summer's programme. Our men are gradually coming round from the regrets about Easter, and are talking already about Whitsuntide—the great holiday of the year. It is astonishing how buoyant a fisherman's feelings are—down in the dumps for a time, but this never lasts long, and the next news is another trip. The Kingfishers have commenced to fish their trout waters, but it is yet too early to say to what extent they will yield sport. Last season, in common with other waters, they fell short of expectations, but better results are hoped for in 1899. Very good reports are being made of the growth of rainbow trout in the County Palatine Angling Association's private waters. They are occasionally both seen and handled, and are in the pink of condition. With a good long lease, these waters could be made second to none.

FROM NORFOLK.

A few nice trout have been taken in this district since the opening of the season on the first of the month, otherwise no sport has been had. Most of our fishing here is for coarse fish, and, although we have no legal close time, very little angling is done by local people during the time that abatement from the sport is enforced in other parts of the country.

FROM NOTTINGHAM.

The Trent, since my last report, has undergone a rise of more than 5ft., and the heavy volume of water pouring downwards should assist salmon upwards. So far, no fish have fallen to the rod. The change has, however, come at a most opportune period. At the outflow of the Greet, on Thursday, Mr. W. Gillott caught, with worm, a very handsome trout; and several brace have been taken with the same kind of bait on privileged stretches of the lower Dover Beck. Sir Henry Bromley, of Stoke Hall, had his other honnds at work on the Greet on the 6th inst. The meet—a most fashionable one, so far as company is concerned—was at Rolleston Junction, and, on reaching a meadow above Southwell Silk Mill, a trail was struck. A vixen otter was bolted from an ugly "hold" adjoining the stream, and was soon lost to sight. Working downstream, she took refuge in the hollow stump of an old willow tree, and was with difficulty dislodged. Diving upstream, she showed her head, and honnds were on her in a second. The noble master plunged in to their assistance, and had a leading hand in her capture. She was about 16lb., and was hauled into the meadow, into the midst of her pursuers, amid a scene of unwonted excitement. Presently they were whipped off, and then the head, pads, and pole (tail) were severed from the body. Following this novel process, the kennel huntsman (Jackson) cut away the skin, and the carcase was thrown into the air, only, in a few seconds, to be devoured by the twenty-one honnds, with three rough terriers, taking part in the hunt. The head was presented to Miss Starkey, of Norwood Hall; the pole to Mr. Johnson of the Silk Mill named; and the pads to other gentlemen living in the neighbourhood. Not long ago a dog otter of about 28lb. was shot on the banks of the Greet by a local cottager, who thought he had despatched a "wild cat." Anglers frequenting the river feel deeply indebted to Sir Henry Bromley, who had, in the hunt, the able assistance of his sons, for having exterminated the vixen. The stream, needless to say, is extensively stocked with trout.

FROM SHEFFIELD.

The weather during the past week has on the whole been very favourable for angling, notwithstanding that occasionally it has been as cold as November. There has been pretty well of bright sunshine, and the showers of rain that have fallen have just been about sufficient to freshen the waters. Last week being Easter week, all the rivers in this neighbourhood were extensively patronised, and so far as can be ascertained sport was generally of a satisfactory character. Artificial fly anglers on the Wye and Derwent have had a fairly good time, the higher reaches of the rivers providing plenty of sport. It is reported that grayling are so numerous in the Wye as to constitute a nuisance to fly anglers, and the pity of it is that a lot of the fish are said to be affected with the fungus disease. In the waters of the Matlock Bath and Cromford clubs worm anglers have put in several days' good fishing, and the creels had many fish weighing from 3lb. upwards. Bottom anglers have accounted for some splendid catches all along the Derwent, the water being of a splendid colour. In future bottom anglers will be allowed to fish for roach and grayling in the Cromford and Matlock Bath Club waters below Cromford Bridge, from Nov. 1 to Jan. 31. The members of the Sheffield Trout Anglers' Society have devoted considerable attention to their private waters at Wingfield, and the results have amply repaid them for the care they have taken in preserving and re-stocking them. Dock grub and minnows have proved alluring baits, some of the fish captured weighing over 1lb. each. Locally the best sport has been obtained in the Loxley stream, upstream fishing with worms accounting for several brace of tidy sized fish.

FROM SHROPSHIRE.

The opening weeks of April have been characterised by much colder weather than those of the previous month, and the prospects of the trout fisher for the present are by no means bright. Storms of rain, hail, and sleet occurred early this week, and the running waters will not be in good order for a time, even given warmer weather. Fly fishing in some of the smaller tributaries of the Severn may result in the capture of a few trout, but really good sport cannot yet be anticipated. In the Severn and Vyrnwy anglers will probably do well to use the spinning and bottom lures. They will be doing useful service in ridding the river of as many pike and chub as possible, and a big trout or so may possibly be landed also. Just at present the main river is bank full and discoloured, but spinning should be practicable by the end of the week. This year it was hoped that the unusually high waters throughout winter and spring, and the great floods which once or twice occurred, and at times very favourable to the running of salmon, would have brought a fairly large number of good fish up the river to the waters of Salop and Montgomeryshire, but these hopes have not, unfortunately, been verified.

FROM WORCESTER AND DISTRICT.

Very few anglers have been out this week. A lot of what appears to be snow water has been coming down the Severn, and made it a very nasty colour. There was quite a 3ft. rise on, and the water has been kept up by the very high spring tides, which affected the river perceptibly nearly up to Worcester Weir. At Upton-on-Severn the tide was 18in. on Tuesday. The Teme is very fine and a nice height, but a very strong wind, N. to N.W., has been blowing all the week, which has interfered with sport very much, and made fly fishing very difficult. Still, a few were found whipping the water; but rises were not frequent, and some three brace only were taken, the fish coming very short, Blue Dun, March Brown, and Cowdung the only ones that coaxed a rise. Better sport was had on some of the club waters with the worm; but anglers would do well to let the trout alone for a week or two longer, they are not in high condition yet. Salmon fishing continues very bad; some of the nets have not taken a fish for weeks. One had a slice of good luck, and caught two very fine fish the end of last week, the two weighing about 40lb. I heard; and one was caught by Griffen, of Upton-on-Severn, on Monday, which weighed near 16lb., the only one caught in that part of the Severn for three weeks. The price of fish, as a natural consequence, is very high, 4s. to 4s. 6d. per lb. A small sturgeon has been sporting about in the water at Upton-on-Severn, and has been seen by many, but as yet has escaped being captured. It came up with the late high flood without a doubt.

FROM YORK AND DISTRICT.

The cold winds have interfered to some extent with fishing lately. Conditions have improved, however, this week, for not only have the flooded streams settled down, but the stormy weather has subsided. At the time of writing a delightful southern breeze is blowing, and though the atmosphere still retains a chilliness, testifying that the year is as yet, as Thomson puts it, "unconfirmed," it is pleasant alike in country lane and at riverside. The Wharfe is in nice condition, and some fairly good catches of trout have been made. The Yore, however, has yielded the best sport with fly, the most effective casts being the March Brown, Spanish Needle, Little Early Brown, and Dark Bloa; or the Snipe Bloa, Dark Snipe and Purple, and March Brown. Local anglers have not done amiss on the Harrogate Club's waters. The North-Eastern Sea Fisheries Committee will hold their quarterly meeting at York on the 19th inst. Mr. W. H. Ashford, the fishery officer, states in his report that the fisheries within the district generally have during the whole of the winter months, when the weather has permitted, been prosecuted with good results. At many of the coast places the fishermen report as being the best winter season they have had for many years. The enforcing of a due observance of the bye-laws in connection with the different fisheries has been attended with some difficulty, and will, observes the officer, continue to be so until he is able to be aloft in the boat which is in course of construction.

ANSWERS TO CORRESPONDENTS.

J. J. MUSGRAVE.—The king carp and golden orfe have been introduced into some waters in this country from Germany, where they breed them. The king carp is bred for the market, and highly prized as a table fish in Germany. It is a variety of the common carp, and takes the same baits, and is similar in its habits. The golden orfe is like a dace in shape, but of a red colour—like a red gold fish—it grows to 1lb. or 2lb. in weight. It is a handsome fish, and is said to have done well in some lakes and ponds in this country. The late National Fish Culture Association imported and distributed some hundreds of king carp and golden orfe between 1882 and 1886.

W. M.—Shilling day tickets are issued at Barcomb Mills. Inquire at the inn. Pike fishing is not allowed in the fence months, and is, of course, highly unsportsmanlike in any water, unless it is necessary to destroy and keep down the pike, as in a trout stream, for instance.

W. HUBBARD.—Yes, you may fish at both places in the close season, but we do not agree with fishing out of season.

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

NETTING IN THE TEME.

SIR,—In reply to "Arthur Felton, Water Bailiff, Lndlow," allow me to say I do not report hearsay evidence without having the best of proof as to the truth of the statement, which statement was made to me in the presence of another person, and has since been vouched for as being a true fact—that netting had taken place, and that at the time he drew the attention of two witnesses to where the net had been taken out of the river. My informant is a gentleman well known in the district, and will probably write you confirming my report as true.—Your respectfully, S. LUDLOW.

TROUT FISHING AND BRACING AIR WANTED.

DEAR SIR,—I should feel greatly obliged if you or any of your readers would tell me where I could get trout fishing in May, combined with bracing air, mountain or moorland.

I have tried the Hawes district with benefit, but would like a change this year.—Yours truly, SURGEON.

RIVER POLLUTION FROM LEAD MINE WASHINGS.

SIR,—Can you or any of your readers kindly give any information as to the effect produced upon *Salmonidae* in particular, and fish in general, by the introduction into a river of the water used in lead mine washings?

This pollution I have heard called "lead mine poisoning," and I assume that it is so-called from it being known that in the rivers into which it finds its way it causes the death of the fish; and if this assumption is correct, does it follow that the water thus contaminated is injurious to cattle partaking of it, not to mention human beings?

If any information can kindly be afforded on this subject, it would be greatly enhanced if names of rivers could be included into which the pollution has flowed with disastrous results to the fish, and, in consequence, whether legal steps were taken by boards of conservators or others? The river on whose behalf I am asking this information, at times presents a milky appearance, and dead trout (*fario*) have been observed floating down it.—I am, &c., POORBEAH.

JOKIN' WI' DEEFFICULTY.

DEAR SIR,—In your kindly appreciative notice of Dr. Brunton's death, you say the good old doctor sometimes "joked wi' deefficully." I presume, Mr. Editor, that you are a sonthron, and are consequently not fully aware of the meaning of the phrase. To say that a Scotsman "jokes wi' deefficully" does not, or should not, mean that he lacks the sense of humour, but that he makes fun of difficulty, regards it only as an obstacle to be overcome by Caledonian perseverance, "sticking plaster" as it is called. That in its fullest and best sense the phrase might be applied to Dr. Brunton I am well aware, but Englishmen, bearing in mind the old remark about the surgical operation, seem to think that a lack of fun is a Caledonian characteristic, which it is not, as witness the article on "Angling Veracity from a Scientific Standpoint" in the same issue of your admirable paper.—Yours faithfully, SANDY MACPHERSON.

MANCHESTER ANGLING CLUB QUERY.

SIR,—Will you kindly inform me through the columns of your valuable paper whether there is a social fishing club, with reading room, &c., in Manchester, similar to that existing in London, and which it is proposed forming in Edinburgh? Your attention will greatly oblige.—213, Mostyn-street, Manchester. G. H. POMEROY.

[We advise our correspondent to consult Mr. Abel Heywood, the hon. sec. of the Manchester Anglers' Association.—Ed.]

RECORD OF TROUT CAUGHT IN THE JED.

DEAR SIR,—In your issue of April 1 a record of trout caught in the Jed and Teviot is given, signed by Mr. Thomas Renilson, representing his catch for 1899, who hopes it will "interest your many readers," &c. The catch does interest many, who think your correspondent should be ashamed as a sportsman to publicly record the

fact that he took 1366 trout, weighing 263½lb. (I am glad the ½lb. is accurately given). The record represents an average of a little over 3oz. per fish. This represents hundreds of fingerlings, from 2oz. to 2½oz., to produce such an average. This record comes from the district where there are many objectors to Sir Herbert Maxwell's Bill. No wonder trout are scarce in that region.—Yours truly,
EIGHT INCHES.

Newcastle-on-Tyne.

[We did not work out the averages, but we certainly should like to see it made illegal to take trout under 8in. in length in any part of the United Kingdom.—Ed.]

DO SEVERN SALMON TAKE A FLY?

DEAR SIR,—Replying to "Fly Man's" query, in last week's issue, I beg to inform him that in this upper part—Caersws, Llandinaw—some were taken with fly last year.—Yours truly,
J. EVANS.
Caersws.

RE NETTING IN LUDLOW WATERS.

DEAR SIR,—In your issue of the *Fishing Gazette* last week there appeared a letter from Arthur Felton, of Ludlow, the Severn Conservators' water bailiff for that district, which calls for a reply.

As he ventures to contradict your correspondent's statement about the netting in private waters below Ludlow, I desire to give corroborative evidence. There were marks on the river bank which convinced me that the river had been poached by netting; and, if need be, I can give the signatures of others, proving that their attention was called to the said marks at the time. The statement was not made as a reflection upon the water bailiff or upon the discharge of his duties, but as he states that he goes down that water twice a week on both banks, and I think we anglers, who pay our licences as regularly as the season comes round. "Why on earth does he travel that particular stretch of water so often when there is such vast area requiring his vigilance?" If instead of going down the river in the day time, when the sun is shining pleasantly, he had gone down in the night time, he would most likely have come across the poachers. He also said something about a "netted fish" and a "man who knew nothing about samlets." Are we to understand that the "man" was a Shropshire angler? If so, one would have thought that a conservators' water bailiff would have been too cute to be taken in like that! Or has he been venturing to teach his dear "old grandmother how to suck eggs." It looks like it. I enclose my card.

FISHING IN WATERWORKS RESERVOIRS.

SIR,—On behalf of the angling brotherhood we ask your kind indulgence in addressing you and the readers of the *Fishing Gazette* upon a matter which in our opinion is of vital interest to every wielder of the rod. In our particular locality there are a number of extensive reservoirs under the control of the local waterworks committee that are eminently suited for the growth of trout, and which, with systematic stocking, could be made to afford fine sport for anglers; but which, as at present managed, not only yield indifferent results, but are well nigh inaccessible to working-men anglers of the locality. At intervals—very many years apart—the authorities stock these waters with trout. Each year a limited number of fishing permits are distributed by members of the waterworks committee, who present them gratis to applicants as far as the limited number will allow. The number of local anglers exceeds the number of tickets issued, and it necessarily follows that whilst some influential individuals may secure several tickets, other unfortunates are unable to get even one. We think, sir, you will agree that this system is crude and inadequate, and that waters of this kind should be accessible by a reasonable payment, and that stocking should be done annually either by the waterworks authority or by the local angling association. The waterworks committee probably consider that they have more weighty matters than angling to deal with, and they are quite justified in holding that view. At the same time the present procedure involves the individual members of that committee in being worried by applicants for more tickets than they have at disposal, and it appears to us that arrangements might be made with the local association by which the latter could relieve the committee of this trouble by managing the fishing under rules and conditions to be approved by the committee.

Our object in writing is, firstly, to endeavour, through the agency of your columns, to obtain definite information as to what privileges and arrangements are in force in other districts possessing waterworks reservoirs, in order that we can lay before our waterworks people such an array of facts as may induce them to grant us better facilities for sport; and, secondly, by the publication of such particulars in your columns, to enable the anglers of other localities who may be in the same plight as ourselves to strengthen their position and afford them some ground of action. In any case the information, if obtained and published, will form an interesting and valuable record. We, therefore, respectfully suggest that you, Mr. Editor, might throw open your columns for the publication of details of arrangements in existence in those districts in which anglers have ready access, by payment or otherwise, to the waterworks reservoirs, and where systematic stocking is done by the angling association or the authorities. We feel quite assured of your own sympathy at the start, and earnestly hope that those of your readers who can furnish particulars will do so, and thus maintain the true Waltonian spirit of brotherly assistance.

We may add, in conclusion, that we are members of an association of some 200 strong, and that previous efforts we have made to secure improved arrangements have been unavailing, because, as we believe, we have not been able

to show to "the powers that be" that we are only seeking the advantages that have been obtained in other more favoured places. Should you, Mr. Editor, as we anticipate, be willing to give your assistance, we would suggest that for the convenience of those who can furnish particulars, and for the purpose of comparison, the information might take the form of answers to the several questions appended hereto. In conclusion, we would remind anglers generally that every year adds to their number, the available waters become more and more fished, and it is, consequently, desirable that every suitable sheet of water that at present is not properly utilised shall, if possible, be made available for furnishing the best sport it admits of.

QUESTIONS.

1. Name of locality or town?
2. Is angling permitted in the waterworks reserves?
3. Is a charge made for tickets, and, if so, how much?
- 3a. Are tickets issued to visitors as well as residents?
- 3b. Are tickets issued by the waterworks authority, the landowner, or by the angling association?
4. Are the reservoirs stocked, and how frequently, and by whom?
5. Have the local angling association any rights or privileges in the management of the fishing?

Remarks, or supplementary information.

Yours, &c.,

G. H. JONES

(Hon. Sec. Stamford Angling Society).

Ashton-under-Lyne.

THAMES TROUT—THE LATE DR. BRUNTON.

DEAR SIR,—I had the pleasure of capturing a nice little trout in Bell Weir on Saturday last, a very game fish of 2lb., which I returned to his native element. He seemed not to like his treatment for a while, and lay on the bottom wrong ways up, but a gentle dose of the handle of the landing net moved him, and I hope he will live to fight again. Weather cold, and fishing in snowstorms is not all delight. Here is another story of our dear departed friend, Dr. John Brunton. Just before starting to the north last August for some autumn salmon fishing I called on my old friend for a few parting words of advice as to flies, &c. "Here you are, my boy," he said, "take my book of flies and tackle. Do ye know how to hold a big rod?"—putting his up. "There, note, that's the way; an 18ft. rod then becomes a pleasure instead of a labour. But mind ye bring them back." Showing his usual kindness of heart.—Sincerely yours,
JAMES STARTIN.

HOW TO REAR GENTLES.

SIR,—Having supplied London shops with bait—worms and gentles—about twenty-five years, and my father before me, I should like to say a little about the gentles. If "Fossdyke" says you cannot get a large freshly bred gentle in the winter he makes a mistake. First, you must get a large fly, the ova to be fully fed up to its size, and when they are scoured will keep large; when feeding they will lose in size if not managed rightly; like men, one food stands longer by them than another, so it is with the gentle. Liver has proved the best to my experience, although under certain heat any food will do. Second, you must not disturb them more than is possible until they are scoured. The reason you get the best gentle in the fall is that nature gives the largest fly then to stand the cold, and to find any refuge; being cold, it does not smell so much. These gentles can be kept any length of time, and be as lively when in use. "Fossdyke" is right in saying that kept gentles are better than many that is used. Where do the London shops get most of their gentles in the winter—from me. The trade is so uncertain, that I, after twenty-five years' study, cannot keep a large supply ready for use. I have to have one lot under the other, some ready and some feeding, and oftentimes have to send them out green; then they waste away. My experience is that until some one that is in the fishing tackle trade takes to supplying worms and gentles, anglers will only get good bait by fits and starts. I have given my time to raising red, brandling, and marsh worms, and have at present the largest stock to be seen; they will soon run out, because the demand is ever on the increase.—Yours truly,
G. NASH.

WIRE SEA LINES, &c.

DEAR SIR,—I have been very sorry to see the wire sea line correspondence in your columns dropped so suddenly, as I was hoping some of the correspondents would have told us what gauge of wire they were using, both single, plaited, and twisted, as my experience with stranded wire running over pulleys is not quite so satisfactory as I could wish even with fine, soft copper wire stranded and lightly twisted to make it as flexible as possible; yet renewals are very frequent, although the pulleys are quite 2in. in diameter; and, if soft copper wire is so liable to breakage, I am of opinion that phosphor bronze is much too brittle for the rough usage we all put our fishing lines through. As a wearing material, i.e., rubbing surfaces, as in slides and bearings for machinery, it stands splendidly, but for tensile strain I do not like it. I much prefer Muntz metal, but do not know if that company make a wire so small as would be required for a line. I don't know what size the members of the B.S.A.S. use, but I think about 22 or 24 S.W.G. will be about right for single wire, and if stranded or plaited, and you get 36/40 strand, you will get a much thicker line than what I use in flax, and no stronger, for I can lift 33lb. dead weight, and that is several pounds more than a 36/40 strand of copper wire will lift. I find a 24 S.W.G. brass wire breaks where it is looped at 29lb. I intend making a few more experiments respecting breaking strains of wire of different gauges, but would like some Muntz metal wire if procurable. Perhaps some of your correspondents can oblige. I should have been glad if you

had given us a few more particulars re Carter's big wheel pulley for rod tops, both as to price and size of top they are made to fit. You see, my purchases are hardly likely to be sufficiently extensive to recompense Messrs. Carter for the expense of their catalogue if I wrote for one, therefore I think I ought not to do so; and I could not spare a £5 note for a visit to the Fisheries this time, as it might mean so many days off my fishing excursion to Scarborough.

How is it we get no reports from any of these N.E. stations? Nothing north of Yarmouth.—Yours respectfully,
R. A. GOODMAN.

FISHING IN WALES.

DEAR SIR,—In reply to "Medicus's" letter for Welsh fishing, I do not think he can do better than write to the Red Lion Hotel, Llangynidr (T. Evans, proprietor), Breconshire.

It is situated on the Usk, in which fish (trout and salmon) abound in size, quality, and quantity.

The accommodation is good, and the hotel close to the river. It is five miles from Talybont, and ten miles from Abergavenny. It has two miles of good fishing. Can give further particulars if required.—Yours truly,
APPLEGREEN.

DEAR SIR,—I would draw the attention of "Medicus" to page iii. of your issue last week, wherein are two places advertised; either would, I think, suit—Rock House Hotel, Llandrindod, Wells (Mid-Wales), L. and N.W. Railway; Porth Hotel, Llandysil (South Wales), G.W. Railway. River Ithon, Llandrindod; Teifi, at Llandysil. There is capital fishing at the latter place, where the fish run to a good size.—Yours truly,
J. EVANS.
Pendref, Caersws (Mont.).

PROPOSED FISHING TACKLE TRADES ASSOCIATION.

SIR,—Since the proposition for the formation of a fishing tackle trades association (reported in your last issue), several members of the trade have expressed a desire for steps to be taken to bring about its consummation. If members of the trade will communicate with me, and make any suggestion that they think is desirable, I shall be pleased to call a meeting at the earliest opportunity, for the purpose of its formation and enrolment of members.

I shall also esteem it a favour if any of your readers that have copies of trade association rules by them that are likely to be of use to us, if they will be good enough to send them to me. I will return them if so desired.—Yours truly,
J. RICHARDSON.

123, Euston-road, N.W.

A FISHING RECORD AT THE GREAT LAKE IN TASMANIA.

The following is an account of twenty-three days' trout fishing at the Great Lake, situated in the highlands of Central Tasmania, at an elevation of 3000ft. above sea level, Dec. 24 to Jan. 15. This is understood to be the record of one rod's fishing for trout. The successful angler is Mr. W. Bryant, barrister-at-law, an ardent trout fisher from Victoria; this makes his seventh trip to the Great Lake:

Dec. 24.—Two fish, 7½lb. and 9lb.; total, 16½lb.
Dec. 25.—4lb.
Dec. 26.—4lb.
Dec. 27.—12lb., 6½lb., 3lb., 3½lb., 8lb., and 7½lb.; total, 40½lb.
Dec. 28.—Weather bright and warm, with a strong westerly blowing; 9lb., 6lb., 8lb., 6lb., 7½lb., 7lb., 12lb., 6lb., 5½lb., 4lb., 7½lb., 8½lb., 3lb.; total, 90lb.
Dec. 29.—Nil. Weather bright, hot, sultry; light northerly, changing light N.W.; thundery.
Dec. 30.—8lb. and 6lb.; total, 14lb.
Dec. 31.—Nil. Weather bright, hot; northerly wind; thundery.
Jan. 1, 1899.—7lb., 9lb., 8lb., 9½lb., 4lb.; total, 37½lb.
Jan. 2.—11lb., 10½lb., 10½lb., 9½lb., 9lb., 9lb., 8lb., 7lb., 7lb.; total, 90½lb. Weather, strong northerly, with much rain.
Jan. 3.—11lb. and 6lb.; total, 17lb.
Jan. 4.—8lb., 8lb., and 6½lb.; total, 22½lb.
Jan. 5.—Nil. Weather, W. to S.W.; strong rain, sleet, and snow.
Jan. 6.—8½lb.
Jan. 7.—Nil. Weather, wild, westerly, cold; water dirty.
Jan. 8.—8½lb.
Jan. 9.—4lb., 8½lb., and 6½lb.; total, 19lb.
Jan. 10.—11lb.
Jan. 11.—9lb. and 10lb.; total, 19lb.
Jan. 12.—11½lb., 9½lb., 7½lb., 7½lb., and 12lb.; total, 48lb. Weather, southerly, changing to S.W.; heavy showers, occasional glimpses of sunshine.
Jan. 13.—12lb.
Jan. 14.—Nil. Hot and bright; dead calm.
Jan. 15.—7lb., 6lb., 10½lb., 10½lb., 10½lb., 9lb.; total, 53½lb.

This record gives a total of sixty-five fish; weight, 516lb. The bait used was eelskin and troutskin phantoms, as modelled by Capt. Owen, of Sydney.

Another angler, Mr. A. D. Hall, from Sydney, from Jan. 1 to 15, succeeded in landing nineteen fish; total weight, 174lb. The heaviest was 14½lb. and the lightest 2½lb. This is, however, by no means the record catch at the lake, as it has been exceeded by that of Mr. Thomas Carr, of Lanneston, who once, on a pouring wet day, captured over 120lb. of trout. Nor are the individual fish specially large, specimens having been previously captured up to 25lb.

NOTICE.

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department, Fishing Tackle for Notice, Books for Review, &c., should be addressed to B. B. MARSTON, Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter-lane, London.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain	10s. 6d.
and Ireland	10s. 6d.
Months ditto	5s. 4d.
Three Months ditto	2s. 8d.
To America and the Continent, annual subscription, including postage	12s. 6d.

Scale of Charges for Advertisements.

One Page	£7 7 0
Half Page	3 15 0
A Column or Quarter Page	2 2 0
Half Column or Eighth Page	1 5 0
Small advertisements 4s. per inch of single column (4 cols. to page).	

The Life of every Advertiser and Subscriber is Insured by the Proprietors for One Hundred Pounds in case of death when travelling, or by drowning when fishing.

All communications respecting Advertisements should be addressed to the ADVERTISEMENT MANAGER, St. Dunstan's House, Fetter-lane, London.

SATURDAY, APRIL 22ND, 1899.

VARIETIES OF FISH FOOD.

FISH are very capricious feeders, and at times they show a marked liking for one particular food, and discard all other dietary than the one kind they happen to be taking at the time. At other times, if the mood suits them, they are omnivorous, and will devour nearly anything in the shape of food that chances to come near them. I have made a practice for a few years back of examining the stomachs of the fish I have caught, and I find that this habit has given me a great deal of insight as to what fish will eat. I feel as if I were taking an unfair advantage of the fish in so doing, but I have found out that this is a surer way to ascertain what fish have been taking than any other. When one knows how to fish, and what the fish are feeding on at the time—I take it for granted that they are feeding—it becomes an easy matter to catch them. There are times when fish feed fairly well, and when it is difficult to tell what they are feeding on, no matter how observant one may be, but if you catch one at such a time it is quite possible to get more. The chances are that at such times they are all taking one particular fly or other item of fare, and if you open the stomach of the one you have caught, and examine what it holds, that fish may be the cause of the capture of its fellows. I sometimes carry a small magnifying glass when

fishing, as it is often difficult to distinguish thoroughly some of the delicate morsels that the fish eat; and some kinds of food very quickly become unrecognisable, owing to the processes of swallowing and digesting. The glass is a great aid to tell what flies the fish have been taking, as they are so fragile that they become broken up and crushed to such a degree that it is often very difficult to distinguish their species by the naked eye. I do not recommend fishers to take all this trouble, and I have no doubt that there are many who will look upon it as a semi-barbarous proceeding, but many will admit that it is a sure way of becoming thoroughly acquainted with the food that fish will devour. It has not been my fortune to capture very many species of fresh-water fishes, as Scotland lacks the variety of fish to be found in England and some other countries. Nevertheless, I have caught many a trout and grayling, some pike, perch, and roach, a few sea trout, and a couple of salmon. It is chiefly about the food of the trout and grayling that I intend to write. Throughout the incoming season I will act on the advice of a friend, and try to arrange a kind of table containing, as nearly complete as possible, a list of the food I get in trout and grayling, and give the dates on which the fish are taken. I have been doing this for the last few years, and have kept my fishing diaries containing some useful observations on the above subject, and it is owing to the fact that there were a few times I did not examine the fish I caught that I do not publish such now. As a summary of my diaries, I find, on looking through them, that fish I caught during the spring months contained chiefly flies, grubs or larvæ, creepers, and shrimps, with a minnow or two. At this season of the year I have got trout containing the ova of grayling or some other fish. I am almost certain that it was grayling spawn, as the river Ayr, where I have mostly fished for the last few years, contains a great many of them, and they are increasing in numbers at a great rate. This river flows through a very rich and well-wooded country, and, I think, contains nearly all the flies and insects that are to be found on any stream in the country. I have met with nearly every fly I have seen mentioned in angling books with the exception of the Green Drake or May Fly. It is owing to the amount of feeding in this river that the trout here are so difficult to take at times. I will not attempt to give the names of all the flies I have seen on this river, as that is beyond me; but the principal flies that the fish take in the spring are the February Red, a large, dark fly like a small Stone Fly, Blue Dun, March Brown, Red Spinner, Iron Blue, Oak Fly, Yellow Dun, and Needle Brown. I have noticed that some of the above flies appeared rather earlier here than in other districts. When May and June approach the trout become very fastidious in their tastes, taking only the choicest tit-bits from among a great variety which is to be had at this time. Indeed, at this season something tastier than a fly is better suited for making a haul. Most of the trout taken here in these months contained a few beetles of various sizes and kinds, but a great supply of very small ones. They also contained creepers, flies, ants, shrimps, larvæ of many kinds, and great quantities of a small cream-coloured grub or caterpillar about a third of an inch in length. Later on in June I got specimens of full fledged Stone Flies, and some green caterpillars, house flies, bluebottles, and one or two garden bees in trout. At this time of the year the trout took the creeper, caddis grub, small branding or red worms as bait, and also small artificial beetles, Black Gnats, Sedges, Yellow and Golden Duns. When June comes on I find that the trout are not inclined to take the artificial fly very readily, unless after a flood, and I think the reason of this is that all kinds of aquatic weeds thrive in the water now, and harbour millions of larvæ and small creatures that trout feed on, and which are too small to use as baits, and very difficult to imitate. I have got trout at this time of the year with nearly everything in their stomachs in the shape of flies, ants, larvæ, shrimps, minnows, large and small creepers, beetles, aquatic snails, worms, and beasties of all kinds. I once caught a large trout in a pond while fishing for perch at this time of the year, and it contained a few minnows, gerris, flies, beetles, a small frog,

and a mass of blackish feeding which I took to be the remains of tadpoles. I have found small frogs in trout two or three times, but this was the only occasion on which I ever got anything like tadpoles in them, although I have caught trout in ponds and sluggish water that contained thousands of them. On another occasion I got a trout which contained, among other things, the remains of what I took to be a small eel or lampern. I have often got trout containing flesh maggots, but once, while fishing a stream near Peebles, I cut open nearly a dozen of the largest of my trout that day, and found that the most of them were nearly gorged with nothing else than maggots. On going up the stream before leaving off, I noticed a dead sheep lying in the grass overhanging the water. It was swarming with maggots, and the stench which came from it was far from being pleasant. Once, while fishing the river Tweed, I got a yellow trout of about 2lb., and it contained the remains of a salmon fry or small trout, some minnows, loaches, flies, and a creeper or two. Most of the large trout I have caught contained small fry, minnows, or stone loaches, and I think that when trout get to a certain size they become predaceous, and feed upon their smaller neighbours, and are more inclined to feed by night, or when the water is clouded. Extra large trout will account for as many fry and minnows as a pike of equal weight. On another occasion, while fishing Glencorse Reservoir, which sends its water to Edinburgh, I noticed a trout or two pick up bees which had fallen off the willow bushes that fringe a part of the bank. The bees seemed to be working on the willow flowers, or some other plants, and by some mischance or other they had fallen into the water, where they made a considerable stir for a time, until they were snapped up by some hungry fish. I have seen trout take ants, wasp flies, and other large insects in the same manner, and in the late autumn I have got an occasional wasp in the stomachs of trout. I do not think that the trout show any great liking for wasps, as I have cut open several trout in September and only got an occasional specimen or two, although there were hundreds of dead and drowning wasps in the water at the time. Wasps are often chilled and numbed by the cold in the late autumn, and, losing the power of their wings and legs, they drop off the trees in great numbers. If trout were inclined to feed upon them at such times, they could gorge themselves with wasps without much difficulty. During and after August trout show a tendency to feed upon flies nearly as well as they do in the spring months, and I am sometimes inclined to think that they take flies more greedily when few are on the water than they do at those seasons when flies are on at all times of the day in clouds. Trout feed principally on flies during the spring months, and will, at times, take nothing else if they can get them. They seem to know, instinctively, that few other foods are so nourishing. Trout thrive and come into condition very rapidly after feeding for a week or two on flies, and if one opens the stomachs of trout at this time of the year flies will be found to be the principal contents. I have often had baskets from the river Ayr containing both grayling and trout, and I have noticed that it is very seldom that the contents of the stomachs of these two kinds of fish are the same, even if they are caught in the same pool or stream. The mouth of the grayling seems to be better adapted for sucking very small "beasties" off a smooth rock bottom than that of the trout, and I have found very small larvæ and other extremely small beings in the stomachs of grayling that trout would often pass by on account of their insignificance. I have often found the grayling to be a great nuisance while fishing with creepers in the spring months. They seem to be very fond of them, and persist in hanging on to your bait, whether they are in condition or not, and, as creepers are not easily procured at all times, an ill-conditioned grayling is not received with very good grace by some anglers. Nearly all the grayling that I opened last spring contained creepers, or remains of them, shrimps, beetles, and flies of all kinds. The shrimp seems to be a great favourite with many fish, and few will refuse them if they are inclined to feed at all. The best grayling swim I know of in the river Ayr is behind Privick Mill. On one occasion I took a mixed basket of trout and grayling weighing 30lb. Most of them were grayling, and

the majority came from this swim. I have caught grayling more than once from this same pool, and, having opened some of them, I found that they contained a quantity of seeds and grain which had come from the mill. Some time before this a friend told me that he had experienced the same, and I was hardly inclined to believe it until I saw it for myself. I knew that roach and other coarse fish feed on grain at times, but I always thought that the grayling, belonging to the noble family of *Salmonidae*, was above that sort of thing. There is no saying what fish will eat at times. It has been my fortune to capture fish on four different occasions which contained hooks. I have no doubt that some, or, more probably, all, of them would be responsible for a few fairy tales about monstrous fish breaking away and smashing the tackle of some unfortunate fisher. The largest of the four weighed about $\frac{3}{4}$ lb. Two, taken from the river Ayr, had flies firmly fixed in their mouths, and one hook was almost rusted through. Another of about $\frac{1}{2}$ lb. contained a large bait hook and a piece of gut fixed well back in the throat. This fish was an ill-favoured looking specimen, and ought to have weighed a pound or so had it been in condition. In all probability its bad health would be due to its having this unnatural appendage in its throat. I got this fish in the Tweed, below Peebles. A coarse Stewart tackle, and nearly a yard of gut attached, adorned the mouth of another which was taken from the Tyne in East Lothian or Haddingtonshire. The hooks in this case seemed to be quite new, and the gut was not even rotten, although it was badly frayed. This fish was in the best of condition, and weighed $\frac{1}{2}$ oz. It may have furnished "exciting sport" to some unlucky individual before I caught it. Every time I see a fish lost through carelessness, I feel inclined to say something very uncomplimentary to the loser, as I consider all trout that have once tasted steel become the inveterate enemies of anglers, and settle down in after life as tutors to the rising generation of fish, and instruct them in all the wily ways of the fisher and his art. Joking aside, it nevertheless seems to be the case that fish have some means or power by which they can make their congeners understand certain things as well as we can by speech or writing.

BLACKBEETLE.

SALMO MARSTONII.

[MR. A. NELSON CHENEY very kindly sends me the following extract from the Canadian magazine "Recreation." If some of our friends of the Tourilli Fish Club would send me in ice a good specimen of *Salmo marstonii* I should be extremely obliged, and will pay all expenses of carriage. For years I have been hearing about this game and lovely namesake, and should like one stuffed in my fishing den. If I don't see or catch *S. marstonii* before I die, I shall begin to think it's "all my eye."—R. B. M.]

(From "Recreation.")

NEW SPECIES OF TROUT.

Quebec, Jan. 26.—A new species of trout has been discovered in the Tourilli Fish and Game Club's waters. This trout runs up to $\frac{3}{4}$ lb. in weight, and is the most beautiful and gamey of the salmon family. A specimen has been sent to the Smithsonian Institution, and has awakened a great deal of interest among scientists. It is generally supposed to be the rare and much coveted *Salmo marstonii*.—*The Citizen*, Ottawa, Canada.

Will you give us some information, in "Recreation," as to *Salmo marstonii*, mentioned in this clipping? Where is that species principally to be found?

In the early stages of spawning, by what exterior marks can the female be distinguished from the male speckled trout? Has colour anything to do in this respect?

Your magazine is ever interesting, and I am always awaiting it with anxiety and pleasure.

E. EDWARD LEMIEUX.

Dept. of Militia, Ottawa, Can.

The Editor of *Recreation* says: "I referred this inquiry to Hon. George M. Bowers, U.S. Fish Commissioner, who replies thus:

"The fish to which your correspondent apparently refers was described in 1893, by Professor Samuel Garman, of the Museum of Comparative Zoology, Cambridge, Mass., under the name *Salmo marstonii*, in honour of Mr. R. B.

Marston, editor of the London *Fishing Gazette*. This trout belongs to the group of salmonoids known in Europe as charrs or saiblings, represented in America by a number of species and varieties, most of which inhabit Arctic regions. Later authors have consequently assigned Marston's trout to the genus *Salvelinus*, of which our brook trout (*S. fontinalis*) is the best known example. Furthermore, this fish is closely related to the blue-back trout of the Rangeley lakes (*Salvelinus oquassa*) and is by some regarded as a variety of that species. Marston's trout is known from Lac de Marbre, Ottawa County, Quebec, from which the type came, and from Decallones township, seventy miles east and forty miles north of Montreal. This fish cannot be mistaken for the speckled or brook trout of either sex, except perhaps during the parr stage. It differs markedly in colour and form, having, among other distinguishing features, a plain back, a deeply forked tail, and thirteen dorsal and twelve or thirteen anal rays, instead of the ten and nine rays, respectively, which the brook trout has."

JOHN BRUNTON, M.A., M.D.

A REMINISCENCE.

DEAR SIR,—I was glad to see the excellent portrait and read the "In Memoriam" notice of our esteemed friend. During the past six months he visited Deal several times, and joined the B.S.A.S. and the Greshamites in fishing from boats, with good success, and sometimes from the pier. On one occasion, being fortunately provided with a single-barrelled pistol, he shot one of a passing school of porpoises, which bounded out of the water, showing that the bullet had taken effect. The porpoise was afterwards picked up dead, so I was told, on the beach near the ruins of Sandown Castle. Dr. Brunton was always considered one of the most skilful trout and grayling fishers of the present day; he never used a landing net for trout, but always landed them by hand. Trophies of his skill are shown in cases which ornament the walls of the Gresham Angling Society's club-room, grayling being most conspicuous. I remember well the year he acted as delegate for the Piscatorial Society at the annual Loch Leven trout competition (the society annually providing three guineas towards individual expenses) and winning the first prize, and his showing the members twelve Scotch £1 notes as the result. He also produced a chart of the loch, drawn by himself, pointing out the place where he captured his trout, his scientific knowledge and matured judgment being well rewarded. He had a silver cup made for the £12. On one side was a suitable inscription, and on the opposite a bunch of thistles most artistically engraved. The Brunton Challenge Cup, presented to the Piscatorial Society in 1889, has been won by several gentlemen. It is for the greatest weight of grayling, and must be won three times by a member before it becomes his property. Our late friend read two papers at the Piscatorial Society, which are bound with other papers in vols. 1 and 2—"The Science and Art of Spinning," in vol. 1; "On Grayling," 1882, in vol. 2.

When here he kindly visited and cheered me up three evenings. Once an angling friend came with him. We were conversing about Scotch songs, and, having a large musical-box which played Scotch tunes, I set it going. One Scotch reel tune so excited him that he jumped up from his chair, and caught hold of me to dance a reel with him. Our friend sat enjoying a good laugh to see us old fellows tripping it in bonnie style. This showed his happy disposition. He finished the evening at the P.S. dinner on March 20 with his usual "Auld Lang Syne," and surely his genial acquaintance will ne'er be forgotten.

T. R. SACHS, P.P.S.

"ABOUT BIG PIKE."—This is the title of an article in the current number (April 15) of *Harnsworth's Magazine*, and is by Mr. R. B. Marston. It is well illustrated.

FOREIGN BOOKS AND PERIODICALS.—Messrs. Sampson Low, Marston and Co., St. Dunstan's House, Fetter-lane, London, supply the Trade with Foreign Books and Periodicals. First train consignments from their Continental agents twice a week. Catalogue gratis.

OLD ANGLING BOOKS FOR SALE.

MESSRS. PICKERING AND CHATTO, 66, Haymarket, London, have now ready a new catalogue of second-hand books, containing many rare and interesting works on angling, including two sets of the first five editions. For the first set they ask £675 (the books are all in the original bindings); for the second set, bound by Riviere, they ask £525. These editions were all published during the lifetime of Izaak Walton, between 1653 and 1676. All lovers of angling books should obtain this catalogue.

"A LESSER STAR."

HE was a cadger, a prince among cadgers.

Do not imagine for a moment that there was anything princely in his appearance; in fact, by his lack of apparel and miserable, unshaven countenance, he seemed fitter for the Union than the palace, yet there was no doubt of the noble cunning of his ways.

When a schoolboy I first made his acquaintance whilst fishing in some private waters, where, I fear, I had no more right than had he. Hearing a voice behind me, I started in fear and trembling, sizing the stream rapidly for a jump, in case it should be the owner or those in authority under him. It was the cadger, a little bow-legged man, bent of back and grimy of visage, arrayed in a most dilapidated suit of corduroy.

From beneath the shade of his flapping straw hat twinkled a wicked pair of black eyes, which would have been beautiful had they not been surrounded by blood-shot whites; and I well remember the extra sparkle in them as he cheerfully said "No, Tommy; they ain't nabbed yer this time."

From his shoulder he swung a large coarse calico bag and a bundle of sticks, whilst the other arm lowered what seemed to be a large fish-kettle; then, fitting together various lengths of the sticks, he took a line from his pocket, baited with a bloodworm, and started work in my swim.

With boyish admiration I watched him transfer gudgeon by the dozen from the stream to the large can, and between each capture he kept up a running fire of sage remarks.

"Gudgins, Tommy! Lor, I beleive yer; 'undreds on 'em! These 'ere—tho' they aint hextry big, 'll fetch a brown apiece, that is, o' course, wiv proper 'andling. Gudgins (come up, yer varmint!), as I was agoin' to say, don't grow so wery fast; these 'ere aint no less than a 'undred years ole apiece! You wern't thought of then, Tommy, no more wern't I, tho' the beak did say as 'ow 'e can't rightly 'ollect when I fust made my bow, an' 'e's an old fossil if hever there was. 'Bloodwum Bill, I am,' sez I. 'Do yer washup want heny wums? cos, if so, my bag's in the p'lice's 'ands, an' they'll arl die o' grief if their marster's sent to do 'ard.'"

"What do the prisoner mean?" arsts the beak. 'What is bloodwums?'

"Jest fancy a man not knowin' wot bloodwums are! 'E might a bin born an' bred down a coal mine! I can't read, nor no more write, but I'd be bloomin' 'shamed o' meself if I didn't know wot bloodwums was."

"'Ere, Tommy! See that there bit o' lily root? Hook it hup. So! there's a good boy. Now, d'ye know wot that there bit o' root's for? Well I knows a sight o' ole wimmin wot buys fish orf o' me, an' keeps 'em in ole glarst jars an' sich like; so periodical I calls on 'em, and sez, sez I, 'Them there fish o' yourn 'll die if they ain't given some Umpa Dorum.'"

"Wot's Umpa Dorum?" sez they.

"Ah, mum, you're a arsting questions! sez I, 'but it's hard to git now, an' a shillin' a root's mighty cheap for Umpa Dorum nowadays.'"

"This 'ere lily root is Umpa Dorum, Tommy. Blow the connection, as the man sez to the rope when they 'ung 'im. Come hup."

"Now, some people sez as 'ow you must 'ave a 'spensive rod fur fishin'. This 'ere rod o' mine ain't 'spensive; don't look it, anyhow; came near bein' mighty so, though."

"Top jints a willer switch; next 'un's a sweep's rod I picked hup outside 'is door when 'e wern't

lookin'; if 'e had bin, this yere rod 'ud 'ave corst me seven days! Bottom jint's a broom 'andle, an' the 'ole lot corst nopence farthin'.

"'Ere's a eel! Bother eels, sez I, as a general rule, but jest now I've got a ole gal wot bleives in eels. I buys 'em down town, an' takes 'em to 'er kivered wiv weeds an' slime, and she pays a hextry bob for 'em cos she knows the difference, sez she, 'tween stale an' fresh 'uns! This 'ere's the fust fresh eel she will 'ave tasted fur munths, an' we'll put up the price accordin'.

"Now, Tommy, 'ere's a bloomin' dawg a-comin', so I'll be orf! You ain't got the price of a drink on yer, 'ave yer? No. Well that's a good job, cos I never likes a 'leavin' my young friends wivout coin passing. By bye! Olive oil, as the Frenchmen say."

And Bloodworm Bill made off upstream to a fording he evidently knew; whilst I shinned up a tree until the "dawg" might return home.

When in funds Bill was also in drink, and his appearance at the local bench was fairly regular.

On being ushered before his old friend "the Beak," Bill would familiarly bid him good day, remark on the weather, and the state of the rivers, until ordered to desist.

Then such a dialogue as the following would ensue:

The "Beak": "What have you to say for yourself?"

Bill: "I'm uncommon modest, yer honour, an' was always taught ter let others speak for me."

"Then you admit being intoxicated."

"No, yer honor, I don't admit nothing; mine's a wet business."

"Why not leave it for something more honest?"

"I'm a straightforrard man enough, my lord, if only them coppers 'ud let me alone (insinuatingly). Now yer honor, let me sell you a few beautiful wums?"

"Five shillings or —"

"Take it in wums!"

"Seven days."

"Would yer ludship kindly direct them blue bottles ter give the gudgin fresh water twice a day, an —"

Here Bill is forcibly removed.

I was once present when his enemies, the police, made an inventory of the contents of his parcels. They comprised half a peck of manure and myriads of bloodworms, seven pheasant's eggs, a fowl (deceased), a noosed rabbit (also deceased), two dozen gudgeon, and a bottle of whiskey! Not a bad day's work for a cadger!

His antipathy to eels was justified. Poor fellow! he was missing for a week, and then a ploughboy found his old bag in the river. Subsequent search discovered a portion of him, the remainder still glides about the sunken tree trunks and the mud; and I never see an eel in the old stream without pondering as to whether in it are incorporated the mortal remains of Bloodworm Bill, the Cadger.

KRYPTOS.

RE-STOCKING POSSIBILITIES.

"You'll never miss the water till the well runs dry," says the good old refrain, and the moral follows, as a natural sequence, that it is then too late to look for a drink. Hitherto the idea of re-stocking our northern Scottish trout streams has never seriously been contemplated. Certainly in the south of Scotland, and about the Lochleven country, re-stocking is nothing new; but beyond an occasional experiment in private ponds and such like quarters, artificial propagation and the like has been entirely confined to *Salmo salar* and *Salmo trutta*, while *fario* has been left to multiply and replenish his haunts as best he could, and in any haphazard fashion that came the way. So prolific were the streams and burns north of the Border, and the farther north the more so, that an inexhaustible stock of fish met the angler at every turn. This was the case some twenty years ago, not to go further back; but what has happened since then?

The early spring salmon angler had not then began to spin the minnow and gudgeon over the tail ends of the salmon pools, where the brown trout love to take up their winter quarters. Since

minnow spinning for salmon began trout of a large size have been conspicuous by their absence, where formerly they were met with in fairly large numbers. Now they are not there to slay. The salmon angler was not looking for them certainly, but his minnow was, and is, just such a tempting morsel as they were eagerly on the look-out for in their lanky winter condition, and which they came at with avidity, much to the disgust of the fisherman on the bank, who, with a curse at the unwelcome interruption, and disappointment at the wretched condition of his nicely trimmed minnow, now chewed and broken, pitched the unlucky offender—a 2lb. or 3lb. *fario*—high up the bank, to fester and rot in the broiling sun. We have stood by and seen it done times without number, and later on, in the summer months, when searching the streams for the big fish that were not there, could then easily account for the deteriorating size of the fish once so common, and now rarely met with beyond 10oz. or 12oz. in weight. To the salmon angler it was nothing. In fact, there are many who hold the opinion that the less trout there are in a salmon river the better. Probably they have the very strong argument on their side that trout live on salmon ova and parr, not disdaining a goodly-sized smolt when it comes its way. This is all quite true. On one occasion we took from the gullet of a 2lb. *fario* no less than six salmon parr, all more or less decomposed, from the last freshly taken one not yet fully gorged to the skeleton of the first, probably in its stomach for over an hour. Six 4in. salmon parr per hour is a costly tribute to pay for *fario*'s presence in a salmon stream. We feel that we are giving away the case for the trout in so damaging an indictment, and that our salmon streams would be better without it. But, on the other hand, there is the balance of nature to be considered, and which no theory can be complete without considering, and which science can hardly explain. The trout live on other foods besides salmon ova and parr. They have not always a diet of ova and parr to live upon; and, no doubt, though their presence in a salmon stream may not be an unmixed blessing, nevertheless Nature has a set and definite beneficial purpose in view, although it may not be obvious at first sight. The plague of mice in the south of Scotland, and such like plagues, when they crop up are undoubtedly object-lessons of an emphatic and telling order to conserve the balance of nature, lest a worse thing comes. Again, *fario* is always with us. The salmon, grilse, and sea trout pay our pools a flying visit, and should the weather be too hot or the water too small they will hide in the deepest shadows, and scarcely deign to indicate by the slightest sign the nearness of their royal presence. The angler may whip the pools with all his might and main and practised skill from morn to dewy eve, and yet return home with an empty creel and a desponding heart. But under such conditions let him think of *fario* in the necks of the pools and in the thickest of the current, or even out upon the shallows, and with a worm, a small phantom, or a parr tail, when the gossamer gut and invisible gnat is no avail, and he will not be turned away empty. To get an hour or two's good trout angling in the height of a July or August day, with the prospect of creeling a few big fish scaling 1lb., 2lb., 3lb., and even 4lb., is worth, *per se*, a considerable tribute in salmon parr.

Re-stocking by artificial propagation should be resorted to where there is much spinning for early spring salmon practised.

The poacher we have always with us. When the waters are small and clean, when bigger game is not on hand, then he falls foul of the trout, and scoops them out wholesale. There are two classes of poachers—the amateur and professional. The amateur is not of much account. He may use an illegal lure, but as long as he sticks to rod and line his depredations do not amount to much, and the keepers and watchers are quite able to take care of their preserves as far as he is concerned. But the professional poacher is quite a different sort. He has been steadily coming to the front in the north in recent years. For some time back he has been devoting his attention to finnock and brown trout in their respective seasons, and adding them to his bag, in addition to the salmon and sea trout which seem to have been all his prey heretofore. The trout are poked from under the

banks, herded into a deepish pool where the bottom is free of boulders and where there is no escape, and then literally scooped out. No stream or burn, even where a few ½-pounders can be "copped," is safe from the poacher's ken. Neither is distance any obstacle to him in the pursuit of his nefarious calling, and he will travel fifty and sixty miles per rail to establish himself if there is any chance of making lean the country round about, sending off his ill-gotten "takes" by rail with a barefaced shamelessness and bravado as if he were a sportsman born, and despatching his parcels to his friends. Nor is he wanting in his creature comforts. When in a fresh bit of country, and the field tolerably open, he can make a goodly thing of it, and live, if not like a prince, at least like a "fighting cock" in good form. The other day a colony—two men and two women—was unearthed on the banks of a northern famous finnock and brown trout stream of this description. For three weeks or so the rendezvous had been watched night and day in order to secure a capture, but every time the two men, either proceeding singly or together, were set upon nothing of an incriminating nature was found upon them, nothing more damaging than a bit of fishing line. The "colony" had built for itself a castle in the shape of a turf hut, in which a very snug lodgement was nightly found. A search warrant was found, and a raid duly made on the stronghold, which was easily carried, for there was practically no resistance offered; but, to the chagrin of the head bailiff and his assistants, not even an inch of a net could be pounced upon. There was abundant evidences of the regal style in which the quartet lived in the shape of empty meat cans, empty fruit cans, empty bottles (dead men), and even a "greybeard" of the capacity of two or three gallons with a suspicious smell about it, although it was given out that it was for carrying water.

There was no visible means of subsistence, no hawking, no trade of any kind, no begging even, and yet they had been living on after this style since the early days of the season. To cut a long story short, the inspector to the district fishery board solved the mystery, although he was unable to trap the birds before they had flown. The two men poachers were merely "decoy ducks." The women did the poaching, and while the three watchers were busily engaged stalking the "decoys" about a mile from camp, the two women netted the pool, which was replenished with every tide with fresh run finnock, and then dispatched the spoil from the local post office per parcel post or otherwise. This game was carried on right under the noses of the bailiffs for three weeks. When the women were scented they threw up the sponge and decamped, leaving their net behind them in the tideway, and a supply of light packing cases at the local station, which still lie there unclaimed.

Thus, "far from the madding crowd," these experts find a resting place, and ply their trade. It is finnock just now; later on and further up the country the brown trout will engage their attention, and, attended by their lady friends, there will be a descent made in due season, when the fish are more marketable and command higher prices.

A federation of the leading fishmongers throughout the kingdom, and a firm determination on their part to have nothing to do with poached fish, and to expose those in the trade who do, if it does not effectually shut the door, will at least reduce the poacher's market to the smallest possible dimensions, and be most gratefully welcomed, by all who have the interests of our fisheries at heart, as a magnanimous and noble step in the right direction, and worthy of all praise.

But the incursions of the poaching fraternity will need to be made good. Of course, the stock will assuredly increase of its own accord if left alone, but there are miles and miles of excellent trout waters on almost every stream where re-stocking is not only a possibility but an absolute necessity. It would take a series of years before it can redeem its former prestige by itself, and yield a respectable basket of goodly sized fish, which the necessities of the age cannot brook, to say nothing of the constant demands for current sport, so that the subject of re-stocking is not a matter of *may*, but *must* be done. G. M.

THE OPENING OF THE SEASON ON LAKE VYRNWY.

How anxiously, after a long winter, does the angler await the 1st of March. Only a few waters are open on that date, and one of the best of these is Lake Vyrnwy. The advantages are so many, and the drawbacks so few. Plenty of trout, unrivalled scenery, fine bracing air, obliging and capable gillies, the nicest and most homelike little hotel in the three kingdoms, and, as a rule, the pleasantest and most sporting lot of visitors that one can imagine. As I have said, the drawbacks are few. Perhaps, so early in the year, some of the trout are out of condition—well, this may be so, but many of them are quite the reverse, and the explanation is not far to seek. When the lake was originally stocked, many varieties of trout were introduced. Some of these became rapidly acclimatised, and have done well ever

the hotel after ten miles of posting through the Arctic regions. The cold was awful, but we were soon chatting away merrily with Miss Davies, in front of a huge bank of red hot coals, and, of course, taking our toddy under the Doctor's orders. How delightful to gaze once more upon the dear old lake, even through a snowstorm. How pleasant to recall experiences of years before, and to yarn away before that superb fire, until the fish we had caught in the past seemed to somehow or other get a *leetle* larger, and their numbers to insensibly increase. The Doctor was more or less of a novice, and styled himself "The Entered Apprentice." To me he accorded the august title of "The Past Master." He was as keen as possible on fishing, and we had barely disposed of our luncheon before he was asking me to make him up a cast. In ten minutes more we were off, attended by the faithful Simeon, who shook his head mournfully as he broke the ice with the oar before we could get out of the boat-

spite of the bitter weather, we soon found out that the trout were inclined to feed. Presently the Doctor had a quick, splashing rise, and, not seeing it at the moment, Simeon yelled out, "*There he is!*" This so startled the Doctor that he struck for all he was worth, and had the fly been fast in the fish something must have gone. As it was, no harm was done; and the trout scuttled off with nothing worse than a severe fright. I now began to get some nice fish, one (a pretty trout of 1lb. 4oz.) giving me some real good sport. The Doctor, too, killed three fish, and was mightily pleased thereat. Not being frightened by Simeon's stentorian "*There he is!*" the fish were quietly struck, and decorously landed in most artistic style. When the shades of evening began to fall, we reeled up as well as our frozen fingers would permit, and breasted the steep hill leading to the hotel.

How welcome was the warmth and brightness, after the biting wind; how welcome also was

LAKE VYRNWY HOTEL.

GILLIES AT LAKE VYRNWY.

A ROUGH DAY ON LAKE VYRNWY.

A SMOOTH EVENING ON LAKE VYRNWY.

since, others, evidently unsuited to the water, have deteriorated, and will ultimately die out. This, at least, is my theory, and when I take one of these eels, or "telegraph posts" (as a Liverpool fisherman called them), I usually knock the fish on the head instead of returning him to the water, as these fish are certainly better out of the lake than in it. There are thousands of good trout to be had, however, and it is a significant fact that on a good day, when the fish are taking, we rarely get a bad fish in the whole day's catch. On the contrary, when there is no rise on, and the fishing is bad, we kill a few of these thin fish. I can only say that in March last year I made a bag of twenty-three trout, weighing just on 20lb., and every one of them in the pink of condition.

Perhaps an account of a few days on the lake may be interesting to those who have not been fortunate enough to visit this charming spot. We (my friend the Doctor and myself) arrived at

house creek. Previous experience had warned me to clothe myself in Esquimaux fashion, so I looked more like one of the guys than the boys carry round on the Fifth of November than a sedate and elderly sportsman of the nineteenth century. I put up three flies—one which is christened Pine's Fancy, for the tail fly; Teal and Olive for the first dropper, and a small Zulu for the second dropper. This cast I used with the greatest success during my stay; and, although I often changed my flies, trying March Brown, Red and Teal, Claret and Grouse, &c., I always returned to my first love. Here I may say that I killed more than half my fish on Pine's Fancy, and whether used as tail fly or dropper it was equally good. I left a pattern of this fly with Miss Davies, who signified her intention of getting some tied for the use of coming visitors. As we had not much time to fish, we started the shallow shore immediately in front of the hotel, and, in

the cheery voice suggesting just a suspicion of bitters before dinner. Our fish were weighed and exhibited in dishes, thirteen trout, 9lb. in weight. Not bad for such weather, and in so short a time. Soon afterwards we were joined by a third belated fisherman, who had toiled all day for five fish, but who came up smiling, and, in spite of his avowed teetotal principles, took very kindly to whiskey toddy with his dinner, notably doing this "for his health's sake."

After dinner, fly-books were unearthed, and a most learned discussion upon the merits of the various flies was eagerly carried on. Casts were made up for the morrow, and the usual fishing stories were freely indulged in, the authenticity of which could not be doubted. The latest arrival told us a weird experience he had of the enormous rise of the Black Gnat. This gentleman was so impressive in his manner, that we placed the most

implicit faith in his statements. He told us that the Black Gnat came up in such huge quantities that the lake had a margin of these dead and dying insects all round the edge of several yards; that they covered the roadway across the dam to such a depth that navvies were employed to cart them away with spades and barrows; and that the effluvia was so injurious to health that the place was avoided as a plague spot.

The Doctor merely remarked that he quite believed it, and proceeded to tell us how he had once caught two fish simultaneously on the same fly, when the bedroom candles were brought in.

Up with the lark in the morning, breakfast (and such a breakfast) disposed of, and we were off to the boathouse. Not quite so cold, but still a good stiff nor'-westerly breeze with a bit of a sting in it. Now this was a special occasion; I had come into my jubilee, and it was my birthday. Simeon was anxious to bring home the best bag, and we determined to row up to the end of the lake, and fish home. Away we went, struggling gamely against the wind, and after an hour's hard work we found ourselves in the little bay, yecept Eunant. For an hour we fished every inch of the shore without result, when all in a moment the trout "came up!"

There was a great rise, though what the fish

real music hall fashion, although the tones thereof were rather tinny.

"And so to bed" (as Pepys bath it), with no premonition of a head in the morning. Retribution, however, was lurking in the background, and a gigantic thirst was manifest about eleven o'clock the next day. Altogether I killed 180 trout in eighteen days, and this in the most wintry weather, and with no fly up at all. Surely this is good enough early in the season, and, combined with all the charming accessories of the lake; is tempting enough to lure anyone away from the strife and turmoil of the world to the peaceful and beautiful shores of Lake Vyrnwy.

QUILL GNAT.

MID TAW TROUT FISHERY.

THE proprietors of The Fox and Hounds Hotel forward us the following particulars relative to the above fishery:

"Five hours from Waterloo, direct, without change. Best months for trout—March, April, and May. No trout taken under 8in.; fly only until end of April; average weight, $\frac{1}{2}$ lb. Hotel stands close to river, and you can fish six miles up or down stream. Country around thickly

If fish are dead off the feed one bait is no better than another, but there can be no question that fish will sometimes refuse to take a bait on one occasion that they will take with avidity on another; and if the angler happens to be without this special lure, so much in request on such occasions, a blank is almost certain to be the result, and the most clever and experienced angler may be as much at a loss to explain why the fish refuse to bite as the veriest tyro. Therefore, I think, so far as some rivers are concerned, it is rather foolish to confine oneself to one particular bait for any period or style of fishing, for something in the condition of the water, atmosphere, or even in the fish one desires to catch, for anything the angler knows (they may be queer), may, for the time being, prevent them from feeding; whilst, on other occasions, it goes without saying that both barbel and perch will prefer gentles to worm; chub, greaves to pith, and minnows to either; roach, blood worms to cubes of bread; and bream, brandling to marsh worms. This is my experience. On a similar day, and at a similar period, all this may be reversed; and it is just possible that, if one only took one sort of bait on these occasions, that bait would be certain to be the wrong one, and not a fish would be taken. If an angler finds that it is impossible to catch only a few fish by using in the most careful and clever manner three or four sorts of the most successful baits, how can the novice expect to obtain sport by using only one bait in any river he may visit haphazard? The fact is, the excessive use of any particular bait trains the fish to expect that bait; and in the use of white bread paste in the Lea, for instance, fish are constantly missed by a great number of anglers, and the flavour of it is always in their mouths. I also have an idea that the ground-bait employed increases the longing for this special hook-bait; and thus it happens that roach can often be caught with white bread paste in the Lea more successfully than with any other bait.

But with respect to certain baits for roach, say, in the Trent, this is what an old observant and successful Trent angler once said: "We commence to fish for roach about the beginning of July with gentles, and although there is a great variety of baits used for the capture of this fish, this is undoubtedly the best bait for this month. All throughout August and September creed wheat and malt are the most killing baits if the water be clear. Next comes white bread paste, which may be used with more or less success all through the winter; but, taking one occasion with another, the best bait in the winter months is the beautiful bright cockspur and the tail end of a female lob for choice. The angler should always take both sorts with him, and he should throw a few larger or coarser worms, chopped up very small, for ground-bait, where there is a fair number of fish, but he must be very sparing with it, as very little food satisfies them in winter."

It would be difficult to convince a Lea angler that stewed wheat would ever be so successful as white bread paste. Whenever it has been tried it has signally failed. On the other hand, although I have taken splendid roach both in the Wiltshire Avon and the Trent with the worm, I never saw a Sheffield angler fish with it for roach either in the Witham or the drains adjacent.

I do not say that they do not use the worm for taking roach in these waters, but I have never seen them; pastes (various), creed wheat, and gentles galore, but never worms.

I have heard it stated that Lea anglers stick almost entirely to white bread paste. All I can say is, I have been out with a good many Lea anglers fishing in various rivers, such as the Rother, Thames, Lea, Wey, Medway, and Arun, and I can safely say that they do nothing of the kind. Lea anglers adapt themselves to the necessities of the hour as much as any anglers I know, or have known; work as hard, and at the right period I have seen them taking roach in the Thames, both above and below Pangbourne, and other localities, with a bunch of gentles, employing their pellet of carefully kneaded ground-bait on the shank of the hook in a scientific manner. And what anglers, may I ask, are more clever in taking big bream in the Arun on a tight line with wheat, gentles, and worms; or roach, even, in his favourite river, with the blood worm proper, in certain foul and tainted swims, in preference to

FOX AND HOUNDS HOTEL, EGGESDON, N. DEVON

were rising at I could not make out. Pine's Fancy, however, did the trick, and for an hour I had grand sport, fish after fish coming to net, but none of them very large. By lunch time I had creeled twenty-three beauties, and then the rise seemed over. After luncheon the wind fell, and, although I used smaller flies, I could not get a fish. About four o'clock, however, the breeze freshened, and I took fourteen more trout before the falling light warned me to make for home. Thirty-seven fish is a good take for any water, but I began to feel anxious as to whether my friend of last night had beaten me. I had returned ten trout to the water, and so was left with a balance of twenty-seven; but, as it proved afterwards, I easily headed the bag, and so came out first on my birthday, which was only right and proper under the circumstances.

What an evening we had! The table was decorated in my honour, and a most marvellous cake, covered with fishing mottoes, graced the board. The harpist (Ernest Roberts) harped divinely in the hall, and a peep through the dining room door revealed the fact that the maids and gillies were dancing merrily to the fascinating strains. After this a gentleman of great accomplishments gave us a weird show on the gramophone, and the familiar air of "Her golden hair was hanging down her back" was reproduced in

wooded, and any amount of bird life; very little population. Three flies will take fish throughout the season, viz., Blue Upright, Rusty Red, and Rusty Blue. Hotel water was re-stocked three years ago with 1000 yearlings from the Brunton Fishery, and are now giving splendid results. Peal run up to this part of river during wet seasons; best months August and September. Good train service; and Barnstaple, Ilfracombe, Lynton, and Lynmouth, also Bideford, Tarrington, Westward Ho, and Clovelly may be visited during the day, the New Tor Railway from Barnstaple to Lynton passing through lovely country, giving a day's outing that would be difficult to surpass. From middle of April Mr. Cheriton's otter hounds hunt two days a week, and good sport is the rule. The Taw trout are short, deep fish, and, when in condition, fight like sea trout. This season has opened well; in spite of the keen frosts and east winds good baskets have been made."

ON AND OFF.

No matter what river an angler is going to fish in, I think he who takes three or four different baits will stand a better chance of obtaining sport than he who takes only one.

any other bait, as is only natural below these overfalls?

The fact is, some Lea anglers I know are real good all-round anglers, and know quite as much of other well-known styles as they do of the Lea style, and can show as good specimen trout, pike, perch, chub, barbel, bream, tench, and carp as one need wish to see.

Lastly, if Lea anglers could catch more roach and better roach with any other bait than white bread paste (say, a cube of bread, for instance), depend upon it they would be the first to use it.

A. O. D. H.

ANCHOR FISHING SOCIETY, KINGSTON.

THE fourth annual dinner of the Anchor Fishing Society was held at the Druid's Head, Kingston, on Wednesday, Mr. G. H. Howard, president of the society, in the chair. The vice-chair was ably filled by Mr. J. R. Richardson, who has just recovered from an attack of muscular rheumatism in the leg. Amongst those present were: Messrs. H. Pincott Hill, F. Littlewood, G. E. Caton, F. H. Amphlett, F. Lockett, T. King, C. Wells, T. Perdue, P. Collins, McE. Collins, R. Howse, J. Henwood (hon. secretary), &c.

The chairman, in proposing "The Anchor Fishing Society," said, as their president he did not come amongst them as much as he ought. He had previously suggested that they should get someone who could come amongst them more often. Still, he was proud to be their president. There were forty-four members, and if they pushed twice they would get eighty-eight. There had been eight monthly competitions and two special ones. There was £10 in hand, and for a small society like that it augured well for the future. The accounts had all been passed as read, and some passed as blue. (Laughter.) He hoped the society would go on and prosper, and he would himself get one or two honorary members for them.

Mr. Henwood (hon. sec.), in response, said he would be glad to see the membership increased, as they were shorter now than at this time last year. They must work, and get up the membership again. Their loss had been caused through members leaving the town.

Letters were read from Mr. Higgins and Mr. Crumplen, regretting their absence; and Mr. Douglas, on behalf of the T.A.P.S., opened the box, which contained £1 11s. 9½d. and a button.

Mr. H. P. Hill, in proposing "The President," said that he was glad to be allowed to propose that toast. Mr. Howard was well known in the fishing world, and he was not only a friend of the young, but the bosom friend of anglers of older years. He often went to a great deal of trouble to give any information in his power to all those who cared to ask him for it. The importance of restocking and preserving their waters, more particularly the Thames, was daily growing. In fact, it had become of national importance, and he hoped before long there would be a Government grant to assist them with hatcheries, and for the better restocking and keeping up a good head of fish in the river. (Hear, hear.) In fact, those who took no interest in fishing ought to see the importance and necessity for this work, for the destruction of fry and ova by steam launches was enormous. (Hear, hear.)

Mr. G. H. Howard, in reply, said it was a pleasing duty to respond to the toast of their president. Mr. P. Hill, whom they were proud to have in the society, had made a very flattering speech, but he (Mr. Howard) assured them that when he was elected their president he suggested they should get someone who could be more often amongst them. He hoped he was a sportsman and an angler, and that in his capacity on the *Fishing Gazette* he would always assist to increase the love for the river. The Thames was a fine river, and he loved any scheme on the board for improving its stock. (Hear, hear.)

Mr. Douglas (T.A.P.S.) said he was pleased to represent his society. They were all doing all they could for the river, and they had just taken fifty swans off the river. He had 150 yds. of wire netting to stake over the perch spawn, and Mr. Knight would help. He was very glad of that assistance. He also thanked them for the money handed over to him from the box.

Mr. McE. Collins then proposed "The Prize Winners," and was sure that in no other club was there such keen competing. Anyone who could win a prize in the Anchor Society could win a prize in any society.

Mr. F. H. Amphlett responded, and said he hoped that next year their worthy vice-president (Mr. J. R. Richardson) would secure a prize. The sport during the winter was fairly good, so whether they won a prize or not they enjoyed themselves. In the summer the river was very low and clear, and sport was poor.

The following prizes were distributed during the evening: For pike, to Mr. P. H. Conroy; perch, Mr. J. Charter; roach, first, Mr. P. H. Conroy (given by Mr. J. R. Richardson); second, F. H. Amphlett; bream, Mr. A. C. Wells; barbel, first, Mr. F. H. Amphlett; second, Mr. Arthur Wells; chub, first and second, Mr. H. P. Hill; dace, Mr. Arthur Wells. Prizes were also awarded in competitions as follows: Barbel, Mr. A. Wells and Mr. W. Hedger; bream, Mr. A. Wells; gudgeon, Mr. R. Howse; roach, Messrs. A. Wells, McE. Collins, F. H. Amphlett, and Charter. In the hospital competition the prize given by Mr. Hearn (of the Druid's Head) was won by Mr. R. H. Conroy, and the prize presented by Mr. T. Lyne, of the Kingston Piscatorial Society, was won by Mr. C. Littlewood.

The following prizes were offered for the coming season: Mr. H. Pincott Hill, £1 1s.; Mr. J. R. Richardson, £1 1s.; Mr. H. P. Conroy, £1 1s.; Mr. King, £1 1s.; Mr. R.

Howse, 10s. 6d.; Mr. F. H. Amphlett, 10s. 6d.; Mr. Caton, 10s. 6d.; Mr. Hearn, £1 1s., for the best roach; Mr. G. H. Howard, £1 1s.; &c.

Mr. J. R. Richardson proposed "The Hon. Secretary and other Officers." They had a good secretary and officials, and they would all put their shoulders to the wheel to raise the membership. He appealed to the members to attend the meetings regularly, and pull together and support the officers.

Mr. Henwood and Mr. R. Howse responded. The latter said they had done their best, and he hoped that members would attend regularly.

Mr. Caton proposed "Kindred Societies and Visitors." Every society of this kind wanted friends, and he was pleased to see some members of the Kingston Piscatorial Society and others present.

Mr. Fred Lockett was sorry that he was a disturber of the spawn on the river with his launch, but he never disturbed anyone who was fishing. His launch had once been termed by Mr. Hill as the fisherman's friend. And the anglers generally got a fish when he went by. As a visitor, it had been a pleasure to see them sitting on a nice dry seat, instead of in mackintosh and sou'-westers. When a punt was towed up the bank it often made more wash than a launch.

Mr. F. H. Amphlett also responded, and said that he believed that before long a Government grant would be given towards promoting sport on the Thames, and was glad that the two angling societies in Kingston were so friendly disposed towards each other that members of each society were to be found in the other. (Hear, hear.)

The vice-chairman (Mr. J. Richardson) proposed "The Press." He said that when they referred to the Press they spoke to them as friends, for they were able to push them forward. They always did their best for them.

Mr. Christie (the *Surbiton News*) and Mr. Amphlett (Editor *Thames Angling News*) responded.

Mr. Conroy proposed "The Host and Hostess." Mr. Hearn responded, and the musical entertainment lasted until the early hours of the morning.

REPORTS FROM RIVERS, LOCHS, &c.

ENGLISH AND WELSH REPORTS.

Lower Thames.—GENERAL REMARKS.—As far as the anglers are concerned in regard to sport, the trout is the only fish in which all their hopes and expectations are centred, and the weather has been the only drawback to anything but a successful realisation. The fish taken during the first ten days have all been small. Mr. T. W. Gomm during that time has been successful in creeling both the largest and the smallest fish in this portion of the river, the former weighing 5½lb. and the latter 2lb. (which was returned), and he has succeeded in landing six trout, each day being attended by Charles Hone. I have received an interesting letter from George Rosewell, of Shepperton, who in the first place informs me he has only been out on the first day and saw five nice fish feed, but the gentleman he was with could not "rise" one. Perch have at last commenced to spawn, and several patches were found in the backwater at Welton, which head river keeper Douglas at once protected with wire netting; and on Monday the swans were taken up from Staines to Hampton Court, and the remainder, from Hampton Court to Teddington, were removed on Tuesday. The water is in good condition, but the cold winds and cold nights have completely checked the ardour of trout anglers. All the reports up to this morning (Wednesday) include only one capture, from the rod of Mr. T. W. Gorman, of 3lb. On my visit to the riverside there was only one opinion of the fishermen in regard to the trout, that there would be none taken without a thorough change in the temperature of the water.—B.

—(**Datchet**).—I do not remember seeing so little of the trout up to time of writing, very discouraging state of affairs exist. I was out yesterday. Mr. Lands had a good fish on at the weir and lost him. We fished all round the Old River, saw no sign of a fish; not likely, either. A bright cloudless day.—G. LUMSDEN.

—(**Eton**).—The water is in good order, but the wind still continues very cold, with sharp frosts each morning, as much as eleven degrees being registered on Monday morning. Several anglers have been out, but I have not heard of a fish being creeled. Mr. J. Comber, of Eton, lost a nice fish on Sunday, about 7lb., after playing him some ten minutes, unfortunately having a triangle off his flight to be disposed of.—CECIL HOWLETT.

—(**Hampton Court**).—William Milbourn writes: "There is a great quantity of barbel drawing up to the weir, and several have been taken whilst fishing for trout, up to 8lb. and 9lb. each. There is a great quantity of roach getting up to the weir, but owing to the cold weather there has been nothing done since the last report"—B.

—(**Henley**).—April 20. The first trout of the season in this district was caught on April 16, by Mr. W. Meyers, fishing with J. James, above Shiplake Lock, a nice made fish weighing 7lb. 2oz. The water is in good condition, but the cold mornings and evenings seem to keep the fish from moving.—STANLEY MEAD.

—(**Kingston**).—William Douglas in his general report states: "I have not heard of any trout being taken. Several have been seen on the move in different parts of the river."—B.

—(**Lechlade, Cricklade**).—The river in these districts is in good order for trouting. Mr. Sturgeon and Mr. Walter Weil have been fishing at St. John's Bridge, and other trout fishers have been out in the district. There will not be much done with Thames trout

until May, when, about the middle of the month, an artificial fly should take a rising fish.—RAMBLER.

—(**Shepperton**).—Mr. Ralph Smith, fishing with George Rosewell, caught an old male trout weighing 8½lb. The worthy fisherman adds, "If people do not come and try they cannot expect to catch them. I never knew it so slack before. It is worse this year than last. However, this capture may bring me a bit of luck."—B.

—(**Staines**).—Charles Hone says: "I had a very pretty fish on Monday just 3lb., but had bad luck this last week, as I could not get the hook into the right place. This makes the seventh fish to the credit of Mr. T. W. Gomm this season."—B.

Coin, Leach, &c. (Gloucestershire).—These trout streams continue to attract anglers to their banks, but the weather has been very bad for fly fishing, and sport has consequently been generally but indifferent. The rivers are in very fair order for the time of year, and the trout rise freely in the forenoon, from about 10.30 until twelve o'clock, and again about three and four o'clock. There has as yet been no evening rise to speak of, it being much too cold.—PAN.

Cornish Streams.—The weather has been too bright and cold for much sport lately, but in the sheltered parts of the Camel and Fowey some very fair baskets of trout have been got. One rod fishing the former got trout weighing very nearly 1lb., and others have taken from twenty to thirty sizeable fish in a single day. The salmon season does not begin until May.—BODMIN.

Darehth (Horton Kirby, Farnham, &c.).—The river soon cleared after the little flood on Saturday, and is now low again rather than high. The fish are beginning to show, and occasionally to rise at a tiny grey fly, which is on the water. Little sport has been had at present, and the larger fish are not yet in condition. Out of fifteen or twenty, which I noted, not more than five or six seemed fit to keep out. They lie rather low in the water, and, in fact, have not yet started their summer habits. The best fish I heard of was taken with wet fly.—J. P. T.

Dart (Totnes and District).—The recent rains have been beneficial to salmon fishing, the river now running in good volume. The condition of the fish is good, and several have been killed during the past few days in the moorland waters. Mr. Arthur Holman landed a ten-pounder near Dartmeet with the Silver Doctor, and Mr. W. W. Symington, J.P., killed a couple on successive days, one scaling 16lb., and the other 14lb. Mr. Edbrook has added another to his list at Buckfastleigh, the weight being 21lb. Useful salmon flies are Silver Doctor and Popham. Very few fish have been caught by the nets, and prices are exceptionally high. Trout are not taking well, although some nice creels have been made above Totnes Weir in the evenings by Messrs. H. T. Distin and E. Distin, the former getting a splendid pounder. A few brace have been killed by Messrs. M. Revell, H. Full, &c. Flies: Edmund's Palmer, Half Stone, Blue Upright, Yellow Body, and the natural minnow at night. A number of bull trout are in the moorland waters, and complaint has also been made of the number of herons on the moor, which led to considerable destruction of trout and salmon. The conservators have decided to ask the Duchy authorities to assist them in enforcing the limit size of trout, and preventing the killing of salmon fry by the examination of baskets. It is asserted that at present a lot of immature fish are killed on the higher waters.—DEVONIAN.

Devonshire Streams.—The streams are now running in fairly good fishing trim, and salmon have been enabled to run up. Trouting has improved somewhat, but several of the best streams are not providing anything like good average takes. The southern border rivers show the best sport, one rod on the Carey getting a nice lot of forty, with the Half Stone and Red Spinner. Unfortunately, night-liners are at work in this district. On Saturday fish rose so freely that on two occasions two fish were landed from one cast. Some nice fish were killed on the upper Tamar, whilst fish have been taking well on the upper Lyd, several Bridestowe rods doing well. Bishop's Fancy was responsible for over a dozen of one basket. An improvement is apparent on the North Devon streams, and fair baskets of trout have been made by Messrs. Rule, Doe, and others, with the Blue Upright, Red Spinner, &c. The Torridge is well patronised, and salmon have been killed by Messrs. Pearson and Routley (Hatherleigh) and Col. Macartney (Torrington). On Tuesday, Mr. E. C. Norrish, of Sandford, landed a fine fish of 22lb. in the Eggesford district. Several fine fish have been killed in the Dart. An attempt has been made to reduce the number of pike in the Exe, and some big fish were destroyed. One rod has killed twenty-five this season.—DEVONIAN.

East and West Cleddau (Fembrokeshire).—Water in first rate order for trout fishing after the recent rainfall. Weather still cold with frosts.—H.

Eden (Carlisle).—We are still waiting anxiously for a good run of fresh fish from the Solway. During the last two or three days a few have been taken by the nets at the mouth of the river; but where there is one there ought to be fifty, if the spring of 1899 is not to beat the record for scarcity. The few fish that are being taken with the rod are nearly all old laid fish, and have lost all their sea bloom. On April 10, Lord Brockley had one, 14lb., in the Crown Hotel water above Wetheral; Mr. T. Harris, one, 20lb., at Brockleworth; Mr. C. Liddell, one, 16lb., at Warwick Hall; and the Corby Castle keeper, one, 6lb. On the 12th, Mr. Roe, one, 23lb., in the Little Corby water. On the 13th and 14th, the Corby Castle keeper, one each day, 8lb. and 26lb. On the 17th, young Mr. Howard, of Greystoke, one, 16lb., in the Corby water. Trout have been taking the fly fairly well, but they are only in moderate condition.—SILVER GREY.

Fen District (South Lincs. and Cambs.).—The weather holds cold and sunless for April, but the

streams are in better ply in consequence of the rains. Fly fishing is said to be at a standstill, and sport is only obtainable by seeking fish in the holes with the bottom bait.—LIMPET.

Idle District (North Notts).—Sport is very quiet in the district of the Idle, and there has not been much done in the way of trout fishing. We hear of a few brace taken from the streams which fall into the Trent on the other side of the forest district. Trout fishers are somewhat exercised by the knowledge that there are others in the neighbourhood. Sir Henry Bromley, however, has had his hounds over there, and one or two have been captured.—L.

Lake Vyrnwy (North Wales).—Better weather has prevailed, and the fishing has been exceptionally good. The record of the lake has been hitherto held by Mr. R. L. Garnett, with a catch of forty-two trout, on the 17th May, 1897. This has now been beaten by the Rev. Gregoire, who creel'd forty-three trout on the 14th inst. Both baskets of course were made with fly. All Mr. Gregoire's fish were taken on Teal and Red, Claret and Grouse, and March Brown. On the 12th the weather was comparatively warm, and five rods brought home fifty-five fish, weighing 35lb. 12oz. Mr. Malpass made the best basket with nineteen fish (12lb. 5oz.), Mr. Murly took fifteen (9lb. 8oz.), Dr. Fenton ten (6lb. 10oz.), Mr. Henty eight (5lb. 4oz.), and Rev. Gregoire three (2lb. 10oz.). On the 13th, four rods creel'd fifty-five fish (33lb. 9oz.). Dr. Fenton's basket of twenty-two fish (14lb. 10oz.) was the best. Mr. Malpass killed fourteen (8lb. 3oz.), Mr. Henty ten (6lb. 8oz.), and Rev. Gregoire nine (4lb. 13oz.). On the 14th, six rods killed 106 fish. Rev. Gregoire's basket of forty-three fish is the best yet made on the lake. Mr. Malpass killed fifteen (9lb. 6oz.), Dr. Fenton fourteen (8lb. 9oz.), Mr. Henty thirteen (8lb. 7oz.), Mr. Chittenden thirteen (8lb. 10z.), and Mr. Murly seven (4lb. 12oz.). The 15th was a miserably cold day, and anglers devoted themselves to the river. Only three rods were on the lake, the best basket being made by Mr. Malpass, with seven fish (7lb. 10z.), the best fish weighing 13lb. On the 17th, four rods killed twenty-three fish. The best basket was made by Mr. Henty, with twelve fish (7lb. 12oz.); Mr. Chittenden killed six (3lb. 9oz.), and Mr. Murly three (1lb. 12oz.). On the 18th, five rods killed twenty fish. Mr. Murly making the best basket with seven (4lb. 5oz.); Mr. Henty next with five fish (2lb. 13oz.), and Mr. Chittenden four (2lb. 12oz.).—LONG DRIFT.

Lea.—Delightful weather prevailed by the riverside on Wednesday, and if the south-west wind continues, and we are treated to more sunny days, many trout ought to be met with on the move. The season, as already announced, opens on May 1, and some good captures are anticipated. Many fine trout have their haunts in the upper waters. The tributary Beane also opens on May 1 for trout fishing. So far I have not heard of any coarse fish spawning in the main river, but the perch should soon be depositing their ova now. The water has been nicely freshened up by the rains.—ISAAC WALTON.

Lugg and Arrow (Leominster).—Both these streams are now running in good order for fishing. They have been running stained and slightly coloured after the heavy rains at the end of last week, but the wind changed south, and the weather has been more suitable for anglers to get out. The fish have been rising better this week, and a good few flies are on, which the fish take well. A fair number of rods have been out, and some very nice lots of fish landed. The best flies are the Blue Dun, March Brown, Stone Fly, Red Spinner, Cowdung, and Palmer. The Pinsley is running clear, and a nice level.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rain at the close of last week rose these rivers a foot or more of muddy water, since run off, and they are now in good order. Still, sport there is little or none, the weather being dead against it. Strong frosts by night usually followed by bright days, with wind for the most part N.E. Flies and rising fish are both scarce, although specimens may occasionally be observed of the March Brown, Blue Dun, Brown Spinner, Iron Blue, Hardy Brown, Stone Fly, and Yellow Dun, from which the choice should be made according to the day.—R. T. WILLIAMS.

North Staffordshire Rivers.—All our streams are in a fit state for fly fishing, and numerous rods have been out during the past fortnight and had sport. The natural flies, particularly the early Duns, have been out in sufficient force to bring fish on the feed. The Blythe has yielded four to five brace to March Brown, April Dun, and Blue Dun. The Tean Brook has done best to Hares Ear Dun—the old Staffs. pattern, body blue fur, legs hares flax, and wings sterling. Olives and Blues have paid on the Dove, and Coachman has been accepted on several streams in late afternoon.—F. W. DALE.

Otter (Budleigh Salterton, Devon).—The rains set in last Thursday (13th inst.), and a capital spate followed. The river began to clear on Saturday (15th), and in the afternoon trout took the fly greedily in some parts, notably on the Bicton water, where one rod took thirteen, and another nine, really good fish. The river is now full, but in perfect order for the fly. To-day (18th) there was a good rise at midday, and thereafter for two or three hours. One rod on the public water here took two brace of nice fish with the dry fly—Blue Upright. At sea, pollack have lately taken very well. A few days ago a sea rod took twenty-four fish, aggregating in weight 90lb.—HERON.

Ouse (St. Ives, Hunts).—A nice trout, weighing 34lb., was taken in the Stanch Pit at St. Ives, on the 18th, by Mr. G. A. H. Mence, a member of our society. It is going to J. Cooper and Sons for preservation, and the gentleman has kindly intimated that it is to be presented to the angling society's club-room.—E. COLLINSON.

Flodden Waters and Onny.—Wind until to-day has been N. or N.E. Water of a clay lake appearance.

No rods have been on the water. Matters are beginning to improve. The Stone Fly is well in evidence.—TRUTH.

Flymouth.—Some nice dishes of trout have been taken from the Walkham, although they run rather small. I was on the Meavy yesterday, and saw some very fine fish in the pool below Gratton. I have also heard of some nice ones from the Tavy, two of 4lb. each, four, over 4lb., being amongst one basket. The rivers are in fair condition, but the Meavy is very clear.—W. HEARDER.

Severn, Vyrnwy, Tanat, and Cain (Llanymynech).—During the latter part of last week the weather was again very wet and stormy, so that all these streams were flooded more or less, and little sport could be obtained, but on Saturday, Mr. T. H. Johnson, Llanymynech, one of the most practical and persevering of our local anglers, whilst angling in the Vyrnwy near the mouth of the Tanat, succeeded in capturing two fine perch, which were in good condition and scaled 1lb. 4oz. and 1lb. 3oz. On Tuesday Mr. Edmundson, a Liverpool gentleman, landed several very fine trout from the Tanat below Llanbyddwel Bridge, and on Wednesday last two other Liverpool anglers had very good sport in the same river. Although there has been more than the average quantity of water in all these rivers no salmon have been seen about here lately.—VYRNWY.

Sussex Rivers and Chichester Harbour.—Rivers have been running high, owing to recent rains, and those who, in association waters, have tried for roach or chub have not met with much success. From the upper reaches of the Ouse, above Isfield, four and a half brace of trout were recently taken, and from the tributaries near Fletching six and a half brace of small fish. A brace of 1lb. trout are notified from the Rother, taken with minnow, and the tributaries of the Adur have yielded a few nice fish. Harbour fishing is now at its best among the smelt. On Saturday, Mr. Fowler, Dr. Humphrey, and Mr. Willis, fishing from a boat off the sluice at Apuldram, secured what I believe to be a record take of smelt at one tide, viz., fifty-one dozen and one; several nice fish of 7in. among them. Other takes of from six to twelve dozen were made fishing from the bank, and although the eflux from the drainage works is not rosy to the olfactory organs, the fish congregate in large numbers. Paternostering without a float, with rag worm as bait, has been the most successful method.—GEORGE F. SALTER.

Taw (North Devon).—The rain during the past week has made fishing good. Many anglers have taken some good catches of trout in the various brooks. Salmon fishing has not been very good. I heard of one of 10lb. being taken Monday, also a few kelts, which were returned. Best flies: Rusty Red, March Browns, Blue Uprights, and Half Stone.—RUSTY GAME.

Taff (Llandowr, Carmarthenshire).—The river is in first-rate order for trout fishing, plenty of water and nice colour. Were it not for sharp frosts at night fish would rise more freely.—H.

Teifi (Campeter, Cardiganshire).—The water is in grand condition for fishing, and good baskets of trout are being caught daily by local fishermen and visitors.—H.

Teme (Kidlow).—The Teme in this part underwent a sudden change at the end of last week owing to the heavy falls of rain and hail, and the rain must have been very severe in the upper parts, as on Thursday and Friday the river began to colour, and rose several inches, and at one time there was a probability fishing would be stopped, but a sudden change on Monday caused the rivers to go down, and they are now running clear and a nice level and in order for either fly or bottom fishing. The weather has been beautiful and fine, and there has been a fair number of anglers out, who have used the Blue Dun, Stone Fly, Cowdung, Red Spinner, March Brown, and Iron Blue, and some very nice lots of fish have been caught. Worm fishing has been most successful. On Monday a fine dish of five trout were landed with the worm. The largest scaled 13lb. and the smallest 10oz. On the river with the Stone Fly and Blue Dun, six good fish were taken. During the week Mr. R. Smith has landed several nice lots of fish with fly. On Sunday an old fisherman and well-known fly maker, Billy Jones, was found dead in his bed at the age of seventy-four. Deceased was an expert on flies and fishing, as was his father before him.—S. LUDLOW.

Teme (Tenbury).—The Teme in this part is now going down and clearing, and is in good order for fishing. At the end of last week the weather turned rough, and rain and hail fell, and the water came down quickly and rose a little, but a change to fine weather soon put the river right again, and the fish have been moving well at the fly, and a good few anglers have been out this week, and some fair sport has been had, and some very good-sized fish have been landed, and the prospects for the coming week are good, as there are plenty of fine trout in this part, and fishing is easily obtained from the association, and good sport will be had during the coming week.—WORCESTER.

Upper Coln (Bibury, East Gloucestershire).—Several rods have been out on the Swan waters and also on private waters in the district. Messrs. Hurst and Mills have been on the Ablington Manor waters, with some nice sport. Messrs. Peto, Lea, Yeates, Morgan, and Senior have been fishing the Swan waters, with fair sport for the time of year.—SHERRY SPINNER.

Upper Yore.—The anglers staying at the Crown, Hawes, have had a good week with the minnow and fly, taking from 4lb. to 10lb. daily. The river is in good condition at present for fly fishing. Best flies: Thompson's Fancy, Dark Snipe and Purple, Light Snipe and Yellow. A few good baskets were made by local gentlemen, one taking thirty-three trout. Blades has made a splendid basket to-day; information just received.—JAS. FAWCETT.

Usk (Abergavenny).—The recent rains have put the river in good order for trout fishermen. Water rose about

2ft. last Thursday, followed by a sharp fall. Friday it seemed fairly good salmon water, but I think rather high for the streams. I understand Mr. Poullett, has taken two salmon; Mr. W. Peake, one, 20lb. Trout ought to take well this week, should the weather continue as at present (Monday). There is a nice sun this morning, and plenty of flies ought to hatch; hitherto it has been so raw and cold. I took a few trout last week. I believe there were many medium baskets taken, but nothing worthy of mention. Master Percy Denner took a nice trout, in good condition, on Monday, weighing 1lb. 10oz.—ERNE DELAFIELD.

Usk and Tributaries (Senny Bridge).—The trout fishing has improved here lately, and the rivers are just now in perfect order for fly fishing. Some very fair baskets have been caught during the last week. Mr. C. H. Eden caught over 5lb. last Saturday. The best killing flies are March Brown, Light and Dark Blue, and Quill Gnat.—PONTSENNY.

Witham, &c. (Mid-Lincolnshire).—Very little in the way of sport comes from the North Lincolnshire district. From the Wold district there is next to nothing, whilst in the upper Witham the only item of satisfaction is that more water is found in the streams, and prospects are brighter in view of warmer weather. Snowstorms are hardly conducive to aquatic life, especially when several degrees of frost sweep over the water during the night. Only warm weather is wanted to set things going.—LUCI.

Wye and Derwent (Derbyshire).—Up to the time of writing reports from the various districts are not very cheering. Those anglers that have been out returned with very light creels, especially the fly man. As there has been a remarkable absence of natural flies on these rivers, the cause is attributed to there being a large quantity of snow water in these rivers from the Derbyshire hills. A few trout have been taken by using the minnow and swimming a worm where it is allowed. Only a very few trout rising at present.—DOTTEREL.

Wye (Builth Wells).—Both salmon and trout anglers are having fair sport. River is now in grand trim. Sport should be good this next week. Weather fine but cold. Best bait for trout: March Brown and Blue Dun; or, for evening, spinning with Kill Devon.—W. B. ROBERTS.

Yore, Swale, Wharfe, Nidd, &c. (Yorkshire).—The weather has certainly displayed some little improvement to-day to what we have experienced nearly every day since Easter, but there is still snow on the higher hills and moorlands, and until it has disappeared we cannot look for "the genial spring time," a spell of which would bring the fly well on and improve sport all round. Up to now I never saw fewer flies on the water than has been the case, and no wonder, for the night frosts have been very keen and the weather too boisterous and cold, even in the middle of the day, to allow anything in the shape of insects to live long, consequently the angler is at a loss what to offer the trout, and but poor sport has been had with the fly. The best dishes of trout have been caught with either the minnow fished on the "Chapman" or "Ariel" spinner, or the worm used with the "Practical Pennell Tackle." Some of the members of the Hawes Angling Association have had fair sport, and Mr. Willis, of Carperly, tells me that some anglers in the neighbourhood of Bainbridge have done very well. Mr. Willis confines himself to the fly, and he has found the Merlin Hawk, both with purple and green body, and the Waterhen Bloat to kill best. With these he has got a few nice trout, and I have met other anglers who have used the same flies, as well as the Snipe and Purple, and March Brown, with some success, but the keen night frosts and cold and boisterous weather have of course been sadly against the fly fisherman. Mr. C. Ilinson, of Middleham, caught sixteen in the Cover on Monday, and on the same day I had four grand trout in half an hour's angling, and that not at the best period of the day. However, an hour's walk to the river and back, in addition to the time spent in angling, serves a good purpose. From the Swale itself I have no encouraging accounts; from either Catterick, Richmond, or higher up the Dale; the few fish caught being taken with the worm, but one or two nice dishes are reported from the tributaries, the best by Mr. T. G. Duff, of Leeds, who had three good trout, weighing 3lb. 7oz., caught in the Bedale Beck. Other anglers have done well in the preserved portion of the same stream. Good dishes on the Wharfe, Nidd, Aire, Esk, Rye, Riccall, Derwent, &c., have been the exception, not the rule. A case of considerable interest to Yorkshire anglers and manufacturers was heard at Sheffield on Monday, where Messrs. Tyzack, Sons, and Turner, edge-tool manufacturers, Abheydale Works, Sheffield, were summoned by Mr. F. Stead, head water bailiff to the Yorkshire Fishery Board, for having, on February 18, permitted to flow into the river Sheaf, a tributary of the rivers Don and Ouse, containing salmon, certain scourings and refuse of a dam, to such an extent as to cause the waters to kill or poison trout. Mr. H. T. Waddy, barrister, instructed by Mr. J. E. Jones, of York, secretary to the Yorkshire Fishery Board, prosecuted; and Mr. T. E. Ellison defended. Mr. Waddy said the summons was taken out under sect. 5 of the Salmon Fishery Act 1861. It might be thought strange that the provisions of the Salmon Fishery Act should be put into operation with regard to the Sheaf, but the explanation was that the Sheaf was a tributary of the river Don, and the Don was a tributary of the Ouse. Both these rivers were salmon rivers within the meanings of the Act, and as the Sheaf contributed to them it came within the section. On Feb. 18 defendants cleared out their mill dam, and, in order to do so, they opened wide the shuttles by which the water entered and left, with the result that the whole force of the river was taken through the mill dam, cleaning out the dam, and carrying into the river tons of mud which had collected to a depth of 20ft. The

effect was to fill the pools where the trout collected with intensely offensive fluid, and this killed the fish. Evidence having been given in support of Mr. Waddy's opening statement, Mr. Ellison, for the defence, said if mill owners were prevented from sludging their dams it would make it practically impossible for them to carry on their business. The cost of removing this mud by any other means would be prohibitive. What was in the dam was an alluvial deposit brought down the river. This deposit was not in itself harmful or noxious, but because there was a very much larger quantity than under normal conditions it smothered the fish. It was a natural deposit, and came within the excusing provisions of the Act, in support of which, Mr. W. Hy. Lancashire, civil engineer, Sheffield, said the invariable custom of mill-owners on the streams converging into Sheffield was to sludge out their dams. It would be almost impossible to get rid of the mud in any other way. He calculated that, roughly speaking, there would be about 30,000 tons of the sludge in the Abbeydale Dam. The process of sludging out would be more likely to kill fish in the dam than in the river below, though fish in the river below might be choked by the mud. After consultation, Alderman Franklin said the bench had decided to convict. They did not think the defendants took the best practical means of repairing the shuttle, and they would be fined £2 including costs. Weather to-night more settled, and slightly warmer. The best flies are March Brown (male and female), Waterhen Bloa, Blue Hawk (Merlin), Purple, Snipe and Yellow, and Spanish Needle.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

By TELEGRAM.—There is a considerable rise in temperature to-day; wind is south-west; the weather far more spring-like than we have had it up to now. All our rivers are in fine trim, and prospects for next week are good. Sport in the Hawes Angling Association waters has been good. Baskets of from 4lb. to 10lb. have been caught. Best flies: Dark and Light Snipe and Thompson's Fancy, the latter kills well.—JOHN E. MILLER, Northern Anglers' Depot, 19, New Station-street, Leeds.

SCOTCH REPORTS.

Awe.—Fishing from Taynult Hotel on April 17, Mr. Macdonald had a beautiful fresh run salmon of 22lb. The river is getting into fine order and prospects good; weather very fine.—D. McDONALD.

Border Esk and Liddle.—Snow is lying on the Dumfriesshire hills, and several lambs have been frozen to death. The tops of Whita and Warbla, the two famous heights overlooking Langholm and the conflux of the Border Esk, Ewes, and Wauchope were white with snow on Sunday and Monday, consequently in such wintry weather fishing is almost out of the question, and few anglers have been out. Spring salmon are scarce, notwithstanding the fact that they have a fine access to the fresh water from the Solway, whereas last year the reverse was the case, as a great sandbank thrown up by the tide blocked the passage from the frith. This impediment has now been removed. Yet this salmon fishing has even been worse than that of last season, which was exceedingly poor. Sea trout are not expected to run till next month. Mr. Alex. Grant caught one sea trout in the Metal Bridge water, and Mr. J. Scott, Longtown, landed a couple. Yellow trout are affording what sport there is, and, although they are not in prime condition, some big ones have been caught. An angler in the Canonbie water has creeled two and a half dozen since the beginning of the season. Mr. McMellan has had some in the Langholm water weighing about 1lb. A few odd takes have been made in the Ewes, but nothing to speak of, and Tarras has as yet yielded next to nothing. Fishing in the mid reaches of the Liddle above Penton Bridge, with fly, Mr. James Jardine, Kershope-foot, caught a yellow trout weighing 2½lb. Mr. Jas. Elliot, London, had a good basket in the Liddle, and Mr. Little, Carlisle, and Mr. Whitfield, Carlisle, have both had fair catches. Mr. Hobbiuk, Newcastle, and others have had nice kills in the upper reaches. A few also have been got in the Shillinghaugh Pool of the Hermitage. All the trout have been caught with the fly, bait fishing not having begun yet.—GILNOCKIE.

Carron (Easter Ross, Ardgay, N.B.).—On the Gruinards water the following sport has been got: On April 9, Mr. Warner, London, landed a 9lb. salmon on Washerwoman's Pool, besides a 6 pounder on Ross's Pool; and R. T. Coupland, of Gruinards, one of 7lb. on March Pool. On 11th, Mr. Warner had two salmon, of 6½lb. and 5½lb., on March Pool; and Mr. Coupland a 9-pounder on Ross's Pool. On 12th, Mr. Warner caught a salmon of 10lb. on Washerwoman. On 14th, Mr. Coupland had one of 8lb. on Poll Moral; and Mr. Warner one of 7½lb. on Gledfield Pool. Mr. Marquis and party are fishing the Braelangwell water; Mr. Cosens and party the Invercharron water; and Mr. G. Buge, along with Dr. Eley, are on the Balmagown Arms Hotel water (Gledfield), but very little sport has been got on these waters since last reported. Mr. F. T. Gervers, of Amat, has arrived at Amat House, on the upper reaches of the Carron. Weather most wintry and unfavourable. On Monday this week snow lay down to sea level. On Tuesday snow disappeared, but keen frost prevailed.—B.

Cassley, Roseshall (Sutherland).—Mr. Banks has landed three salmon, weighing 24lb., 11lb., and 9lb. Capt. MacTaggart, of Glenrossal, has also been successful in landing several. Weather most adverse.—B.

Dee, Don, Ythan, &c.—The water has been in a very unsettled state all the week. Sport on whole fairly bright on the Dee, but almost nil elsewhere. On the Glentana waters, Sir Wm. Brooks' fisherman had one or two from Waterside and adjoining pools during the week, of average weights; while Mr. Barclay had one of 7lb. and one of 6½lb.; Mr. Laming, two, of 15lb. each, three, of 6lb., 7lb., and 12lb., four, of 18lb., 15lb., 12lb., and 6lb., and one of

22½lb.; and Col. Brinckman, one or two of average weights. On the Aboyne waters, Mr. Bush had two, of 7lb. and 14lb.; Mr. Clive, one of 8lb., and two, of 7lb. and 8lb.; Capt. Scott, two, of 7½lb. and 8½lb., and one of 8lb.; Mr. Millburn, one of 9½lb.; and Mr. Crawshaw, one of 22lb. and one of 6lb. River in good order, but weather of worst description. On the Kincardine O'Neil reaches, Mr. L. H. Crake creeled three, of 6lb., 6½lb., and 20lb., on Ballogie water; Mrs. Pickering, one of 6½lb. on the Lodge water; Major Davidson, three, of 7½lb., 8½lb., and 14½lb., on Dess water, and two, of 6½lb. and 25½lb.; while Mr. Walter Davidson, one of 8½lb. on the same section. On the Comonty, Mr. H. Lawrence creeled one of 6lb. and one of 6½lb.; while Lord Garrioch had one of 6½lb. on Borrowstone water; and Mr. Crake other two, of 7lb. and 7½lb., and one of 6lb., on the Ballogie water. On the Cairnton section, Mr. T. Turner Farley last week creeled, in addition to a number of smaller fish, one of 30lb., the top weight for the Dee this season. The salmon fishings on the coast are not showing much improvement, the returns up to date being only half of last year's. On the Don a few good baskets of finnock have been made. Mr. Reid has been very successful on the Ugie.—G. M.

Deveron (Banffshire).—This river is in good condition both for angling and net fishing. The weather, however, continues bitterly cold, the ground being white with frost in the mornings. Strong easterly winds also prevail. We hear of fair baskets of trout being got on the lower part of the river in the end of last week. There is still a dearth of salmon, and the net fishermen up to the middle of this week, although keeping the nets going in the river night and day, have scarcely got a salmon or trout. On the coast the heavy sea on the inshore kept the fishermen from examining the nets for several days in the end of last week and until late on Monday. In the nets nearest the river's mouth only three salmon were got. Grilse have not made their appearance as yet. Only a small box of fish has been sent from the Deveron district to the market this week. On Tuesday, a box, weighing 1cwt., was consigned from the fishings at Gardenstown to the market. These fishings are situated about seven miles east of the Deveron.—H. W.

Lairg Hotel Waters (Sutherland N.B.).—Mr. W. Hughes was out on Loch Shin last Friday, and made a basket of eight trout, 4½lb.; and on Saturday, nine trout, 4lb. Cold and stormy weather still prevails.—B.

Lochleven (Kinross).—The weather has been of such a wintry aspect during the past week that only the keenest anglers have ventured on the loch with the rod. Their efforts, however, notwithstanding the bitterly cold weather, with frequent heavy showers of snow and hail sweeping over the water, were rewarded with surprisingly good results. Fish have been rising well to the fly, though refusing the minnow, and the prospects of a good season—given anything like favourable weather—are very bright. Mr. Hardie secured twenty-one trout, 16lb.; Mr. Rait, Glasgow, twelve, 8lb.; Mr. Macleod, Edinburgh, twelve, 10lb.; Mr. W. Ormiston and Mr. R. L. Middlemas, Edinburgh, twelve, 10lb.; Capt. Cowan, fifteen, 9lb.; Mr. Hunter, Edinburgh, eight, 8lb. 4oz.; Mr. Duncan, Alloa, ten, 7lb.; Mr. S. Taylor and Son, Edinburgh, seven, 7lb.—ROBERT LAING.

Loch Tay (Kenmore, N.B.).—On the hotel water, April 6, Mr. James Lord killed salmon, 15lb.; 11th, Mr. James Lord killed salmon, 16lb.; 12th, Mr. James Lord killed two salmon, 21lb. and 19lb.; 15th, Mr. James Lord killed one salmon, 16lb. Loch in good ply; only one boat out.—W. KNIGHT.

Loch Tay (Killin, N.B.).—On April 13, Mr. W. Worthington killed three salmon, 15lb., 16lb., 16lb. 14th, Mr. J. R. Sloan, one, 19lb.; Master H. Berger, one, 17lb.; Mr. Stenhouse, two, 19lb. and 16lb. 15th, Mr. Wheen, one, 21lb. 17th, Mr. Smith, one, 21lb.; Miss Berger, one, 15lb.; Miss Sloan, one, 19lb.; Mr. Sloan, one, 17lb.; Mr. W. Worthington, one, 15lb. 18th, Mr. J. R. Sloan, one, 18lb.; Miss Sloan, a fine trout of 10lb.—H. J. MAESSEY.

Lyon (Fortingall Hotel, Perthshire).—Gentlemen fishing from the hotel. Mr. Stewart landed a beautiful salmon grilse, weight 7lb., on the 8th inst.; also Dr. Childs landed a beautiful salmon, weight 15lb., on the 12th; and Mr. Stewart, on the 13th, landed a beautiful salmon, weight 15lb.; and Professor Cash, one of 17lb.; and Dr. Kidd, on the 15th, one of 16½lb. River in ply.—PAUL MACPHAIL.

Naver (Bettyhill, via Thurso, N.B.).—The weather has been so stormy that anglers from the various lodges have not been out regularly of late. On 10th, Mr. Stibbard, Syre Lodge, caught two salmon on Beat No. 2; and Colonel, two, on No. 3. On 11th, Mr. Campbell, Dalvina Lodge, landed two salmon on No. 2. On 13th, Col. Fryer, Dalvina Lodge, had one on No. 4. On 14th, Mr. Blood, Skelpick, caught a salmon on No. 2; and Col. Curtis, one on No. 1. On 15th, Mr. Marston, Skelpick Lodge, landed one on No. 4; and Mr. Blood, two on No. 3.—B.

Oykell (via Lairg).—Despite unfavourable conditions, Mr. W. A. Soames, London, and Mr. Soames, junior, fishing from Balmagown Arms Hotel, have landed several salmon, ranging in weight from 6½lb. to 16½lb.—B.

Shin (Inveran, N.B.).—On 10th inst., Mr. Farrer, fishing Sutherland Arms Hotel, got a salmon of 19lb., and Mrs. Farrer, one of 9lb. Since then there has been no sport to speak of; in fact, more serpents than salmon appear to be killed. One day last week, John Ross, gillie (who was accompanied by Mr. Duncan, inspector of the Kyle of Sutherland Fishery Board), came across a number of these reptiles, four of which he dispatched right off, while several others made good their escape. The four killed were unusually large, ranging from 24in. to 30in. in length.—B.

South of Scotland.—The Border rivers are in nice ply this week for trout fishing with fly. Sea trout are

not making any show in the Solway rivers yet, although the netmen are getting some in the Solway nets near the mouth of the Annan and Nith. The weather this week is more favourable and much milder. With April drawing near to its close, the spring salmon fishing in the rivers of this part of the country may safely be said to be at an end, and, like many recent spring seasons, that of 1899 may be classed as a total failure. In the ANNAN several rods have been out with fly for trout. The only favourable day last week was Friday, when Mr. J. Jackson had a splendid basket of burn trout in the middle waters, with fly; Mr. Thomson had several good trout, one weighing 1lb. On Monday, Mr. McEwan had a fine basket of yellow trout. His heaviest fish weighing 1½lb. On Tuesday, the same angler had a fair catch, all with fly. In the higher reaches of Wamphray and Moffat, a number of visitors have done fairly well this week. In the NITH not much sport has been done in the lower waters. Nearer Thornhill several rods have had moderate baskets of burn trout. The Duke of Buccleuch's portion of Mid Nithsdale gave fair sport among yellow trout. In the Sanquhar waters the baskets have been small. In the Cairn and Cludon a number of anglers had pretty good baskets. The reports from the Galloway rivers are somewhat poor, but the district lochs are now affording improved baskets, and the brown trout are in better order. More rods are out on the Ayrshire lochs, but angling is not yet of much account. Several Dumfriesshire anglers paid the Upper Clyde waters a visit last week in the hope of getting some sport among the burn trout, but had poor sport. On the waters above Coulter and at Tankerton, Mr. W. Dickson caught a basket of yellow trout, weighing 3lb. 14oz.; Mr. W. Nicholl had 3lb.; Mr. Robert Gray, a similar creel; Mr. Lawson, 2lb. 12oz.; Mr. R. Gray took a trout of 12oz. THE DERWENT.—With much snow on the Cumberland hills, and melted snow in the waters, trout fishing has not been good of late. In the Cockermouth portion Mr. J. Allison had fair sport with fly, and Mr. B. Hewitt had also some nice trout with worm bait. Mr. J. Wright took a good basket of trout in the Cocker.—HEATHERBELL.

South of Scotland.—SOLWAY DISTRICT.—The weather last week was very wintry over the Solway district, and the nets in the frith had a poor return for this period of the season. Last week the great decline in the salmon fishing in the Solway and the Eden river was the subject of discussion at the Eden Fishery Board's quarterly meeting. One of the members said that for some years the salmon fishings had been going very much to the bad, but this year it seemed to have finally collapsed.—WM. WRIGHT.

Spey.—The river is now in better condition for angling, but the biting east winds are against sport being so successful as it should be. From the Knockando House water, on Thursday, a salmon of 8lb. was landed by Mr. Hankey; and one of similar weight was also killed on the Laggan section. On Friday, on the Carron House water, Mr. Grant was successful in landing a newly-run beauty of 18½lb. On the Fiddich, sport continues to be satisfactory. On the reaches below the Distillery Range baskets weighing 5lb. and 6lb. are common, while further along the Auchindoun way a good number of sea trout, &c., have also been got. This season should be a much better one than last, as the principal distilleries will be all closed during the summer months, so that the water will be clear and sport more of a pleasure than in recent years.—J. M.

Tay.—River Tay is at present in fine order, but rather poor sport is being got, the weather being cold and unseasonable. Fishing on Fisher's Hotel water, lower Dunkeld, on Thursday, Mr. D. M. Stuart landed two fish, of 24lb. and 18lb.; and Mr. Evans, one of 15lb. Mr. A. M. Prain, Longforgan, had, on Wednesday, one fish of 27lb., and on Thursday, three, of 24lb., 17lb., and 10lb. Mr. J. R. MacIntyre, Edinburgh, fishing on Birnam Hotel water, on Wednesday, caught one salmon of 21lb. On Findyate water, on Friday, Mr. Macpherson caught a salmon of 17lb. On Fisher's Hotel water (Pittochry), on Saturday, Mrs. A. M. Prain caught a splendid newly-run fish of 16lb. Col. Phillips landed one fish of 31lb. On Ballathie water, on Thursday, Col. E. R. S. Richardson caught two fish. Poor sport has been got on the Muthly and Delvine waters during the past three weeks, only one salmon being got, and that on Wednesday, by Mr. Ivers Bland, Delvine. It weighed 17lb. Capt. Baldwin, fishing on Redgorton water, on Saturday, landed one fish.—A. A.

Tummel.—Miss Henry Peters, fishing Faskully waters on Wednesday, after a most exciting run, landed a nice salmon of 18½lb. On account of the recent floods in the Tummel, the fishing has not been a success during the past two weeks. LYON.—From Fortingall Hotel, Dr. Childs killed a fish of 15lb. on Wednesday; and on Saturday Dr. Kidd landed a beautiful salmon of 16½lb.—A. A.

Tweed, Teviot, and other Border Streams.—Notwithstanding all the various causes which have militated against successful angling, some fairly good takes of trout have been got during the past week, both on Tweed and Teviot. The tributary streams, however, are doing little or nothing as yet. In the Kelso district a few salmon have been got during the past ten days, mostly on the famous Floors Castle preserves, while one or two have also been killed on the Birgham water by Lord Dunglass. Amongst those who have been killing trout the following may be mentioned: Mr. R. Newton, Kelso, 3½lb., 7lb., and 4½lb., on Tweed and Teviot. On the Teviot, Mr. W. Barff had 3½lb. Mr. Robert Robertson had 5½lb. on the Teviot on Tuesday. On the Tweed, Mr. Charles Farquharson had baskets of 3½lb., 4lb., and 6lb. last week-end; while this week in the two main streams, Tweed and Teviot, he has killed some nice dishes of trout, weighing from 8lb to 8lb. Mr. W. Mercer, on the Eden, has had 4lb. and 2½lb. of nice trout; while below Ednam Mr. James Patterson had 4lb. of trout, fly fishing. On

Tuesday, on the Teviot, Mr. A. Williamson had 3½lb. of trout, and a sea trout of 2½lb.; and Mr. Alfred Jamieson a good dozen, weighing close on 5lb. Many other baskets have also been killed, including three or four by Mr. Thomas Pringle, Westwood Cottage, Kelso, whose weights ranged from 6lb. up to 8lb. The first competition of the Selkirk Angling Club took place on the Tweed. There was a fair number of competitors, and the total number of trout killed weighed close on 50lb. aggregate.—MAX-WHEEL.

IRISH REPORTS.

Bandon River (co. Cork).—On the Carrigmore water at Ballineen, Mr. J. Pike, D.L., during the week landed four salmon, 12lb., 11lb., 8lb., 7lb.—W. HAYNES AND SON.

Belfast.—Trouting was pretty good recently on the Woodburn Dams. Amongst those out were Capt. E. R. O. Lndlow, D.A.A.G., Mr. A. McD. Caldwell, Mr. Hunter, Mr. Kirk, Mr. Williams, Mr. Langhead, &c., all of whom half a dozen fish each per day out. At the last committee meeting of the Belfast Anglers' Association twenty-five new members were elected.—J. A. B.

Boyle.—Since my last report weather here was awful, and very little fishing done. This week, however, matters have improved considerably, and some very good baskets have been made. Mr. Hertney, fishing Corbally Lake, killed thirty-two nice trout in three days, these trout averaging 1lb. Longhs Key, Gard, and Arrow are doing very well. Col. Carr's best day on Arrow this week was four trout, largest 4½lb. Mr. Fenwick, fishing Gard, had very fair sport, getting three and four trout each day. The river was never in better order for spring fishing, as it is in winter flood just now, and full of large fish. Local anglers are getting some beauties on it up to 4lb. and 5lb. each. We are looking forward to a first-class May Fly season, especially on river.—GEO. TAYLOR.

Caragh Lake (Caragh).—Lake fishing is now improving. Mr. Day, of Cork, staying at the Southern Hotel, took three dozen good brown trout on the 10th inst. If the weather settles now there will be good fishing in future.—G. C.

Coghlan's Hotel (Foxford).—Mr. Edward Maitland, fishing here, killed, in five days, 180 trout. River just coming in order; expects good sport.—ANGLER.

Cork Rivers.—Sport has exhibited an all-round improvement on the Cork rivers of salmon, and trout angling has generally given fine sport in the Bandon district, and at few other points. The weather has been all that could be desired during the last few days.—T. J. D.

Corrib (Galway).—Adverse climatic conditions and the unsettled state of the rivers militated salmon fishing since last report. Three or four fish were killed on the shrimps. There seems to be a fair stock of fish now up. The floods assure good summer peal fishing.—J. A. B.

Erne (Ballyshannon and Belleek).—This river is again in high flood, but some good-sized trout were again taken since last report by Capt. L. Moore, Mr. Maxwell Moore, Mr. Kuox, Mr. Duff, &c.—M. ROGAN AND SONS.

Imperial and Royal Hotels Private Water (Ballina).—River is now in good order, and weather at last favourable. There is a good supply of fresh run fish in the pools. Two gentlemen, staying at Gortnorrabbey Hotel, had some good baskets of trout during the week. There were also five salmon killed on the lake.—MANAGER.

Kerry Rivers.—Sport has been very good on all the Kerry rivers open for angling between Waterville and Castlemaine at brown trout, and some good baskets of "pinks" have been had on the Waterville (upper portion), Reenroe, Inny, Fartha, Behy, Cmmmeragh, and Caragh. Salmon have not given any sport except in the Killarney district, where a few good fish have been had.—T. J. D.

Lee (co. Cork).—Cold north and north-east wind, with low water, has not been an advantage to the fishing; nevertheless, good sport has been had. On Ashton water, Mr. J. Sullivan, 9lb. On Oak Grove, H. E. Stanley, 21lb., 17½lb.; G. M. Ievers, 9lb., 11lb. On Nettleville, Col. Broderick, 10lb., 10lb. On Lee Mount, Mr. H. M. Lewis, 16lb., 11lb., 8lb., 7lb. On Fargus, Mr. H. Austen, 9lb. On Cronody, Capt. Bowker, Hants Regt, 8lb. On Castle Lynch, Mr. J. P. Hawkes, 14½lb., 11lb., 11lb., 8½lb., 8lb.; and Mr. J. O'Brien, 14lb., 10lb.—W. HAYNES AND SON.

Lough Currane (Waterville, co. Kerry).—Sport has been very poor since last report, so far as salmon are concerned, but generally average sport was had at brown and pink trout. Salmon have been ascending from the sea rather slowly last week, and no peal have yet been noticed.—T. J. D.

Lough Melvin.—The weather during the past week was again against the chances of good sport, owing to heavy falls of rain at intervals (most rain fell during the nights), and very cold in the day time. Mr. A. J. Troup landed two salmon of 10lb. each on 14th and 17th insts. Mr. Philley took one salmon of 6lb. on the 15th inst., Mr. Whitehead landed one salmon of 10lb. on the 14th inst., Mr. R. Bailey landed one salmon of 9½lb. on the 15th inst., Mr. F. Hughes landed one salmon of 8½lb. on the 18th inst. Trouting has been excellent since last report.—M. ROGAN AND SONS.

Lough Neagh.—Pollen fishing continues pretty good, the takes being fair and the fish of an average quality. Demand from cross channel markets steady. The same remarks apply to trout netting. The cold weather is keeping back trouting on the tributaries.—J. A. B.

Mountain Lakes (Waterville, co. Kerry).—Sport continues good on all the above waters, especially on Loughs Coomavoher, Bricdarrig, Coomcatcum, Drenane, and Cmmmeravahig.—T. J. D.

Moy Hotel Private Waters (Ballina).—Water in good order, with southerly winds; fair run of salmon on the pools; prospects of fishing favourable. There was a

couple of fish taken on the lough last week. There was some nice trout taken at Runagry, and, on the whole, fishing fair.—JOHN DEVERS.

Moy, Loughs Conn and Cullen (Ballina, co. Mayo).—The weather has changed for the better since my last report, and the river is getting into good order. The lough is high for good sport. Have heard of some salmon being taken by trolling. Trout anglers done fairly well for past week.—PAT HEARNES.

Shannon and Lough Derg (Killaloe).—Yet another week of most disreputable weather—hail, sleet, and rain squalls, together with bitterly cold north-east blasts all the time. It was simply marvellous how any sport has been had at all, yet the following captures of salmon have been made: Mr. W. A. H. Martin, of Ladbury, England, landed two bright springers, of 15lb. and 14½lb.; Mr. R. H. Wilson had two, 28½lb. and 25lb.; Tom and Jack Grimes, fishing my water, two, 12lb. and 6lb.; D. Ellis, two, 13lb. and 11lb. Weather still wild, but fish showing in fair numbers.—S. J. HURLEY.

Shannon (Castleconnell).—On Doonass, Mr. G. C. Williams killed, 14th, one salmon, 43½lb.; 17th, two salmon, 11lb. and 14½lb. On Newgarden, Mr. Greenfield killed, 17th, one salmon, 18lb.; on the same fishery, Mr. F. Cooper killed, 18th, one salmon, 34lb. On the Castle fishery, Mr. E. T. Ingham killed one salmon, 21lb., on 11th. On the Worldsend, Mr. J. W. Stancliffe killed one salmon, 19½lb., on 13th. The weather has become very wintry.—JOHN ENRIGHT AND SON.

Tyrone Rivers.—The past week was a rather poor one on the Ballinderry, Blackwater, Mourne, &c. The weather still keeps cold, with frequent sleety showers.—J. A. B.

SEA FISHING.

Deal (The Pier).—There has been a slight improvement in pier fishing during the past week, though scarcely any sizeable fish have come to hand. Sunday found two local anglers—Gray and Glyn—at their accustomed posts, but their only catch was half a dozen very small flat fish. Monday did not witness much improvement in sport, for Messrs. Welch, Tapley, Filmer, and Bushnell could only muster half a score of dabs and pouting between them at the end of the day. Mr. Gray was early upon the scene on Tuesday morning, but only took two fish; while, during the forenoon, Mr. Bushnell and Mr. Filmer hooked and landed the same fish—a small swallow-tailed dab—three times in succession. Late in the afternoon Mr. Filmer secured a few nice dabs, much larger than any lately seen about here. Mr. T. T. Atkinson took half a dozen dabs in quick time on Wednesday, and Mr. Filmer had half a score of dabs and pouting in the course of the day. The water is in splendid colour, and some fair sport may reasonably be expected in the near future.—J. RICHARDSON (B.S.A.S.).

Eastbourne.—Some good sea fishing should shortly be had off the Sovereign Rocks. I hear that the professional fishermen are catching a few pout in their lobster and crab pots, which is a good omen for rod and line fishing. What is wanted is that someone should personally test the fishing ground with rod and line to see if the fish have arrived yet. Weather the last day or so has been nice and fine, and with its continuance some good sport should be had.—J. W. SODDY.

Plymouth.—We are having some good sport now with large pollack. They have come in very suddenly, and the fishermen who were prepared for the small springers have been losing their gear; in fact, some of the pollack have snapped off the traces of treble gut as if they were cotton. They seem to be all over the Sound at the back of the island, where the brigs lay inside, and also around their mooring spot outside the East Winter Buoy. It is well if you go after these fish to use strong gear and a cane tell-tale, for if you make your line fast you are bound to lose your gear. Some of the boats have been coming in with good catches of mackerel, but they are a long way out yet.—W. HEARDER (B.S.A.S.).

Southend and Leigh (April 20).—Last week's forecast as to the improvement of fishing has been amply borne out by the event. Things are undoubtedly better, and with the continuance of the splendid weather at present prevailing should still further improve. Many rods have been in evidence on the pier, and on April 16 I was pleased to see some familiar faces. I have to report the capture, on April 18, off the pier end (in a whitebait net), of a very fine conger. When the fish was landed a considerable portion of his tail was cut off, but judging from the weight of what was left, and the proportions of the slice sent to me, his live weight must have been well up to 40lb. These large congeners are very occasional visitants here. We could do with more of them. The sub-act of pier fishing has been brought before the corporation, and improved regulations suggested, but up to now without result. High water on April 23, 10 52 a.m.; barometer, 30.2 in.; steady; wind, W.N.W.; light; sea calm, weather clear, with brilliant sunshine. Fishing prospects favourable.—CHARLES HUSSEY (B.S.A.S.).

"HAVE you 'boned' this fish, my man?" "Well, mnm, it's the first time as I've been insulted, but I'd let yer know as I comes by my fish honest."

THE PRETTIEST WOMAN IN LONDON is said to be Miss Clara D., a young lady belonging to a very old English family. She is shortly to appear in a comedy—declares—at a West-end theatre in a new comedy by one of our leading dramatists. She is very wealthy, and her only reason for going on the stage is that she is reluctant to keep hidden away any longer her genius and beauty. These gifts of nature were meant for mankind, and it would be selfish to conceal them. Actuated by a similar motive, George Henry Camp writes to say that he has been cured of his rheumatism by Holloway's Ointment; while by the use of Holloway's Pills he keeps himself healthy in mind and body.

Angling Fixtures.

April 24.

Cambridge Heath Brothers: Visit.
Prince of Wales: Benefit concert.
Thames Re-stocking Association: Annual meeting.

April 25.

Gresham: Annual dinner.
Original Alexandra: Distribution.
Waggoners: Visit.

April 26.

Amicable Waltonians: Distribution.
Drayton Park: Smoking concert.

April 28.

Anglers' Benevolent Society: Meeting.

April 29.

Hearts of Oak: Supper.

April 30.—Stockwell: Outing to Southend.

May 1.—Original Alexandra: A.B.S. concert.
" 2.—Collingwood: Annual dinner and distribution.
" 3.—Cambridge Heath Brothers: Annual dinner.
" 4.—Sundial: Supper.
" 4.—United Brothers: Annual dinner.
" 8.—Globe: Supper and distribution.
" 8.—South Bermondsey Piscatorial: Annual dinner.
" 9.—Blackfriars: Supper.
" 9.—Firm and True: Distribution.
" 9.—Golden Barbel: Supper and distribution.
" 9.—Thames Re-stocking Association: Dinner.
" 10.—Clapham Strollers: Annual dinner and concert.

" 16.—Battersea Friendly: Annual dinner.
" 17.—Royal George: Supper and distribution.
" 30.—Islington Brothers: Distribution.
" 30.—Izaak Walton: Sea fishing outing.

Reports from Clubs

We beg to remind Secretaries that their Reports must reach us not later than **SIX o'clock on Thursday Evening.** Address "Editor, FISHING GAZETTE, St. Dunstan's House, Fetter-Lane, London," marked "CLUB REPORT" outside envelope.

Anglers' Association.—IMPORTANT NOTICE.—The "Angler's Guide," which is published by the above association, will shortly be going to press. Will secretaries please forward to me any alteration of the meeting night, houses, &c., since the last issue, so as to have it as perfect as possible.—R. GHURNEY.

Anglers' Benevolent Society.—Since my last report I beg to acknowledge with thanks the receipt of £3 8s. 6d. Harcourt, £2 2s. Plumstead, £1 13s. Izaak Walton, £1 9s. Prince Albert, 13s. 6d. Bermondsey Brothers, 13s. Hatcham Brothers' Angling Societies from their donation boxes. At the last meeting three applications were entertained; £12 1s. were granted, and two guinea Convalescent Home letters. The next committee meeting will take place on Friday, April 23, at 8.30.—R. GHURNEY.

Anglers' Association (No. 1 EASTERN DISTRICT) Visiting List.—The next return visit will be to the Cambridge Heath Brothers' A.S., the Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath, on Monday next, April 24, when I hope to see a good muster of brother anglers and friends.—G. MANNING.

Anglers' Association (No. 2 DISTRICT) Visiting List.—A most successful visit was paid to the North London A.S. on April 18, when the following thirteen societies were represented: Amicable Waltonians, Albion, Allason United Brothers, Convivial, Crown and Buckland, Clissold, Camden, Didden, Hoxton Brothers, North London, Original Clerkenwell Piscatorial, Phoenix, Wenlock. Mr. Bouffier, of the Phoenix, officiated as chairman. The following contributed to the harmony: Messrs. Broughton, Stretch, Welsh, Lazarus, Thomas, Mike O'Leary, Collins, Fuller, and Ravill. Mr. Stretch and his son did their best in getting the talent together.—BEN ABRAHAM.

Albion Brothers' Angling Society, Frampton Arms, Wells-street, Hackney.—Our meeting on the 19th was fairly well attended, when it was decided to have a concert in aid of the A.B.S. on May 22. Members please note it is the return visit of the Cambridge Heath Bros. on April 24.—C. J. KING.

Allason United Brothers' Angling Society, Dnke of Sussex, Uxbridge-street, Notting Hill Gate, W.—The delegates gave their report of the Anglers' Association, which was accepted. The fish auditors likewise gave their report of winners of past season. Everything seems ready for May 10. Messrs. Abrahams and Wheeler were at Southend-on-Sea and had some decent sport with flat-fish. Shall be pleased to receive prizes won in past season's list by Wednesday, 26th, and May 3.—BEN ABRAHAM.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, S.W.—It is decided to hold our annual dinner and distribution on May 16. I should feel obliged if gentlemen who have promised prizes will forward them as soon as possible before that date. Several alterations have taken place in our rules, notably to the standard of fish; several species have been increased. A satisfactory report of Central Association meeting was read by our delegate. Will all members please turn up in force on Tuesday next.—A. JENKINS.

Battersea Piscatorials, Lord Ranelagh, Peronastreet, Battersea.—On Wednesday last we held our general meeting, when some very important business was transacted, it being decided to shift our club to the above, which all secretaries please note. Will members owing contributions, &c., kindly clear the books.—T. TRINGHAM.

Blackfriars Angling Society, The Imperial, Southwark-street, S.E.—We had a good muster of members on Wednesday evening, and made final arrangements for snapper to take place on May 9, and I wish to inform brother anglers and friends that Mr. G. Shepherd (Host Bermondsey Brothers) has kindly consented to take the chair, and Mr. W. J. Wade (Central Association) the vice-chair. Mr. G. H. Howard, one of our oldest and respected members, has promised to attend if possible, and I anticipate a grand evening with plenty of talent.—J. WHEELHOUSE.

Bloomsbury Brothers' Angling Society, Rose and Crown, Broad-street, Bloomsbury.—A special general meeting is called for Wednesday next, April 26, when all members are requested to be in attendance by 9.30 p.m. for important business. This will also be audit night, Mr. J. Morrell and Mr. F. S. Pavett being the auditors appointed.—T. PATERNOSTER.

Brunswick Brothers' Angling Society, Cherry Tree, Brunswick-road, Bromley-by-Bow, E.—Mr. P. West occupied the chair at our meeting on Tuesday, 18th, when officers for the new year were elected, and several alterations made in the old rules. I hope all members will turn up in full force on Tuesday next to arrange the annual supper; also to consider the case of an old member who has been unable to follow his employment for the last three months.—F. RANDALL.

Cambridge Heath Brothers' Angling Society, The Good Intent, Mowlem-street, Bishop's-road, Cambridge Heath.—The next return visit on No. 1 Eastern District takes place at the above house on April 24, when all anglers are cordially invited. On the 18th, there was a strong muster of members, and it was decided to hold our annual dinner at the clubhouse on May 3; our worthy host, Mr. B. Williams, will supply the ground bait. I am pleased to say that Sir W. Bownaggre, Q.C., M.P., will preside, faced by Mr. H. Everett. Shall be pleased to receive prizes promised for last season.—P. E. LOFT.

Clapham Junction Angling Society, The Clarence, Winstanley-road, Clapham Junction, S.W.—Members please note that general meeting will take place on Wednesday, April 26, at nine o'clock sharp, when I hope all will be present on this occasion, as important business will be brought forward.—G. T. JAMESON.

Clapham Strollers' Angling Society, Alexandra Hotel, Clapham Common, S.W.—We held our annual dinner and concert at the above house on Wednesday, May 10. Any friends wishing to obtain tickets can do so on application to the secretary. A balance-sheet up to March 30 was also audited and passed, showing the club to be on a sound financial basis.—S. VIOLET.

Clerkenwell and District United Visiting List.—A successful visit was paid to the Dihden A.S. on Monday evening, Mr. Elton in the chair. The following seventeen societies were well represented—viz., Great Northern, Lincoln, St. John's, Eustonian, Bloomsbury Brothers, North London, Camden, Phoenix, Royal George, Midland, Queen's Piscatorials, Dihden, Harcourt, Brompton, Original Clerkenwell, Bostonians, and Hoxton Brothers. They had plenty of good talent. The next visit will be to the Harcourt A.S. (date later). We held our competition at Amberley on July 9. The concert in aid of the prize fund is left in the hands of a committee.

Clissold Angling Society, The Cricketers, Northwold-road, Stoke Newington, N.—On April 25 all working members are asked to attend a special meeting, as we have some important business to arrange. All members who wish their A.B.S. cards should apply at once.—T. FAULKNER.

Collingwood Angling Society, The Lord Nelson, Nelson-square, Blackfriars-road, S.E.—The result of our sea outing at Southend was as follows: Mr. Jarrett, first; Mr. Ball, second; Mr. Down, third. There were other prizes, but were not taken. Our fourth annual supper and prize distribution takes place at the above house on Tuesday, May 2. Tickets, price 3s. each, can be had at the clubhouse or of the secretary.—W. H. STAFFORD.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On April 18 a few members were present, when it was decided that the dinner should take place on June 4. Members are requested to communicate with the secretary if they intend to attend the same.—S. MALBY.

Dibdin Angling Society, St. Martin's Tavern, Pratt-street, N.W.—Our concert and visit on C.D.V. list, last Monday, was a great success. Seventeen clubs answered to roll call, all of whom, on behalf of the members of the D.A.S., allow me to thank most heartily for support shown us. Wednesday meeting very quiet; nothing of importance transpired.—JOHNNY EDWARDS.

Drayton Park Piscatorials, Stanley Arms, Landseer-road, Holloway-road, N., will hold their forty-fourth smoker at the Stanley Arms, Landseer-road, N., on Wednesday, April 26. Chair to be taken by Mr. A. W. Horsay, at 7.45 sharp. Pianist, A. Brooker.—GREG.

Firm and True Angling Society, Prince Regent, Beresford-street, Walworth.—At our last meeting some important business was transacted. Our annual prize distribution takes place on May 9. We shall have some good talent on this occasion. Will members please clear the books before the distribution night?—T. ROSSER.

Globe Angling Society, Earl Russell, Isledon-road, N.—We hold our twentieth annual supper and prize distribution on Monday, May 8. The chair will be taken by Mr. C. Ellis, and the vice by Mr. R. Sharpless. Supper on table at 8.30.—W. LAWRENCE.

Golden Barbel Angling Society, Sir Isaac Newton, Union-street, Middlesex Hospital.—Our annual supper and distribution of prizes takes place on May 9, when we shall be glad to see many friends. Our audit took place on the 18th inst., showing the club in a good financial state. Our member, A. Fowler, takes a benefit concert at the Windsor Castle, Edgware-road (Prince of Wales Angling Club), on Monday, April 24.—A. W. ELLINS.

Hearts of Oak Angling Society, Ye Olde Crown, Brick-lane, Bethnal Green.—I hope members will attend next Wednesday for special business. Our supper takes place on May 29; distribution of prizes the Monday following. Will members pay in promised prizes?—C. SMITH.

Highbury Angling Society, Globe Hotel, Upper TOLLINGTON-road, N.—Mr. T. A. Shaw has had a trout of 1lb. 14oz. from the club water during the week, and Mr. F. Berry two good trout, 6lb. 8½oz. (first medal of season) and 3lb. 14½oz., the two latter fish scoring in the challenge cup competition.—E. W.

Islington Brothers' Angling Society, Myddleton Arms, Canonbury-road.—On Tuesday last the minutes of the previous meeting were read and confirmed, when the steward reported in reference to the outing to Pardon on May 14, by brake. The distribution of prizes will take place on May 30, so will those members and friends who have kindly promised prizes please forward to the secretary as soon as possible.—J. H. HERBERT.

Izaak Walton Angling Society, Old King John's Head, Mansfield-street, Kingsland-road.—It has been arranged to have a sea fishing competition on April 30. Full particulars can be had at the clubhouse. Quarterly night, and the end of our financial year, occurs on Wednesday, May 3. Shall esteem it a favour if all members in arrears will attend and clear the books on or before that date.—H. B.

Jubilee Angling Society, Prince Arthur, Golborne-road, North Kensington.—Will members please attend next meeting night, if possible, to enable us to get our annual business settled.—G. BENCE.

Original Alexandra Angling Society, The Lamb, Three Colts-lane, opposite Bethnal Green Junction.—Our distribution of prizes will take place on Tuesday evening, April 25, at the clubhouse. Members and friends who have promised prizes please note the date. The third Bohemian concert this season, in aid of the A.B.S., will take place at the clubhouse on Monday, May 1.—E. BROCKETT.

Peckham Brothers' Angling Society, Windsor Castle, Cator-street, Peckham.—We hold our twenty-first annual dinner and distribution of prizes on Thursday, May 11. Members and friends who have promised prizes will greatly assist me by forwarding same to the clubhouse by May 5. On Tuesday, April 18, our worthy host presided over a very successful gathering at the Bermondsey Brothers.—G. HETHERINGTON.

Phoenix Angling Society, The Tavistock, Stihbing-street, N.W.—Our annual special general meeting is on Wednesday, April 26, and every member must attend, as we have to fix date of distribution, brake outing, and revise our rules for next season, &c.; also those members who have not been up lately will be able to make the acquaintance of our new landlord.—R. C.

Prince of Wales' Angling Society, Windsor Castle, Church-street, Edgware-road.—We distribute our annual prizes won during the season on Monday, May 15, during which I trust that the prizes promised will be handed in. I hope to see anglers and friends muster strongly on Monday next for the benefit concert on behalf of Mr. A. Fowler.

Royal George Angling Society, Queen's Arms, Bateman-street.—Our annual supper and distribution of prizes will take place on May 17 instead of May 24, as stated in my last report. Will secretaries kindly note the alteration of date? The price of supper ticket will be 3s. Members and friends requiring same can get them at the above address. Will members who have received post-cards kindly turn up next meeting night?—J. GIBBONS.

Royal Surrey Angling Society, The Sun, Boniface-street, Westminster Bridge-road.—A special meeting will be held on April 26, to decide when and where we shall have our annual dinner and prize distribution.—W. ANSTEV.

South Bermondsey Club Piscatorials' Institute, Rotherhithe New-road.—Our annual dinner takes place on May 8. Mr. Arthur Sutherland, entertainment secretary of the above, will supply the artistes. We have also arranged with Mr. W. Wilson, of Cleveland-street, W., the well-known caterer, who has supplied us on the last two occasions with every satisfaction.—J. H. DAVIES.

Stockwell Angling Society, Old Queen's Head, Stockwell-road, S.W.—At our meeting on Thursday, 13th inst., some important business was transacted, rules revised, &c., to the benefit of the members. It was also resolved to have an outing to Southend on April 30, and that a donation should be sent to the Camden A.S. in response to their charitable appeal.—THOS. LUCAS.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On April 18 the yearly balance-sheet was passed, showing the club to be in a sound position as regards finances; and anglers residing in the neighbourhood and wishing to join a club for the coming season can get particulars at clubhouse on Tuesday between nine and ten o'clock. The committee will meet on April 27 to arrange programme for the supper on May 4.—C. E. LOCK.

Twickenham Piscatorial Society, Black Dog, London-road, Twickenham.—At our weekly meeting on April 18, Mr. J. Hebblethwaite in the chair, three new members were elected, viz., Messrs. T. W. Gomm, W. J. Burne, and A. J. Blades. It was decided to hold, once a month, a special meeting for the discussion of some item

of a piscatorial nature, such as rods, floats, &c.—J. M. BROUGHAM.

United Brothers Angling Society, Druid's Head Tavern, Deptford.—The members of the above club will celebrate their sixteenth annual dinner on May 4, Mr. H. A. Merton, M.P., in the chair, and R. Lowes vice-chair. Members will please notice that the club night for the future is Thursday instead of Saturday.—H. TYLER.

Waggoners' Angling Society, White Lion, Albert Embankment.—We had a good meeting on the 11th, Mr. H. Walton in the chair. Some very important business was got through. We take a visit on the S.L.U.V.L. on Tuesday next, April 25, Mr. G. H. Shepherd (host of the Bermondsey Brothers) in the chair, when we anticipate a large gathering. Those societies who have not received notice, please accept this invitation.—H. C.

Walham Green and Chelsea Angling Society, Black Bull, Fulham-road, S.W.—Will members please show up next Wednesday in full force, for very important business? The club committee gave in their report, and an increase in other club prizes was passed by the meeting.—TIDLER.

Ye Olde Clapham Rovers' Angling Club, The Windmill, Clapham Park-road.—We had a good meeting at club on Tuesday, when our books were audited by Messrs. Wyatt and Taylor, with everything satisfactory, and leaving a good balance in hand. I hope to see all members next Tuesday to arrange for supper and distribution of prizes.—N. LINDIN.

BAKER'S PATENT DAPPING FLIES.

MESSRS. S. ALLOOCK AND Co., the wholesale fishing-tackle manufacturers, of Redditch, send us some samples of Mr. Baker's Patent Dapping Flies, which they have tried, and find very killing. They say: "If you can give a notice of the flies in your paper, we shall esteem it a great favour, as he is a fisherman of over thirty-five years' standing, and has killed a great quantity of trout with his Patent Dapping Flies."

We should be much obliged to Mr. Baker if he would kindly send us some account of his method of using these very taking-looking flies. Many of the specimens we should with great confidence fixat over a rising trout any where. At first sight they remind one of the detached-hody flies and larvae illustrated by Blacker in his "Art of Fly Making," but on closer inspection you see that they are made to represent, and very cleverly do represent, a fly impaled on a hook. For dapping they certainly are the best artificials we have ever seen, as the fly merely hangs in the bend of the hook, just as you would a natural fly, so when you push it through the bushes and drop it in front of a trout or chub he sees nothing of the hook. But we should very much like to try some of these patterns, and also standard patterns fixed up in the same way for use as in ordinary dry fly fishing. As well as hooks with single flies on them, there are some with double bodies and wings. Many of the patterns have a more natural look about them than flies dressed in the ordinary way or even with the fly in the head.

We can with confidence recommend anglers who can fish with fly to try Mr. Baker's patents.

Doffings by the Bay.

A REPRINT is to hand of the Earl of Howth's letter to the salmon angling community of Ireland, entitled "Ireland's Salmon Fisheries." His lordship holds very decided views on the decadence of salmon fishing in the emerald isle, and uses strong words in condemning the apathy of successive governments on this important subject. "Come and help us" is the burden of his cry, but it is not quite easy to see what help we on this side of St. George's Channel can give to the cause beyond sympathy and good wishes.

GOOD reports are to hand of the trout fishing in the river Coquet. At Easter time good baskets of thirty yellow trout were quite common. I am pleased to hear from Mr. J. A. Williams, the clerk of the Northumbrian Anglers' Federation, that the watching and protection of the river during the past three years, aided by judicious re-stocking, has borne good fruit, and that the state of the Coquet has undoubtedly improved.

VERY serious news is to hand of further troubles with our fishermen in Iceland, and the high-handed conduct of the Danish authorities certainly requires explanation. The French have recognised the danger, and a French man-of-war has been on the spot for some time to look after national interests. These are by no means so large as the English, and it is surely time our Government sent one, if not two gunboats to look after and protect British fishermen. Meetings have been held to impress this upon the powers that be, but the result of their representations is, to say the least, doubtful.

As briefly noticed last week, the terrible gale which raged recently wrought sad havoc to the fishing fleets. The loss in hard cash is considerably over £20,000, but worse than all, I am grieved to learn by later advices, human life has to be added to the mournful catalogue. The Mayors of Penzance and Lowestoft, assisted by the most

influential residents in their respective localities, are cordially co-operating with a view to a national appeal on behalf of the sufferers. The Lord Mayor of London has consented to open and support a fund. *Bis dat qui cito dat*, and a fund has been already started, of which Mr. W. E. T. Bolitho is treasurer. The editor of the *Cornish Telegraph* will receive subscriptions. Surely we who fish for our own sport and pleasure only can spare something for those who depend upon fish for a livelihood, and help to pay the terrible cost of this storm.

IT will be of interest to anglers residing in the districts of Batters, Clapham, Stockwell, Brixton, &c., to know that the L.B. and S.C.R. have, at the request of Mr. W. J. Wade, added Clapham Junction to the stations from which anglers' tickets can be obtained after June 15.

THE S.W. Railway have also added to the list Cobham from Clapham Junction, and Leatherhead and Cobham from Vauxhall and Hammersmith; also Leatherhead, Chertsey, and Egham from Richmond.

"RAMBLES IN KENT" was the title of a lantern lecture delivered on Tuesday evening last by Mr. W. J. Wade before the members and friends of the Bermondsey Brothers' A.S. at the Woolpack Tavern. The room was crowded to excess. Host G. H. Shepherd and Secretary Conn did their best to wool "pack" the meeting, and the word "success" was writ large. Mr. A. E. Clarke (host of the Peckham Brothers) presided. The lantern was admirably manipulated, and the views (which had all been photographed and made into slides by Mr. Wade) came out beautifully clear and distinct.

THE lecturer kept up a running fire as view after view appeared upon the screen, describing the beauties and fishing capabilities of the various places he had visited on angling intent, amongst which were Ramsgate, Deal, Margate, Dover, Broadstairs, Minster, Canterbury, Grove Ferry, Sturry, the fishing in the river Stour at the two latter places being particularly described, also Chilham, Sandwich, &c. A hearty vote of thanks was unanimously accorded to the lecturer on the motion of Mr. G. H. Shepherd, and his health drank with musical honours.

THEN the lantern was cleared, the screen removed, and more room made. (Mr. Shepherd, you must have a larger sack your wool to pack!) Then the band played, and right well. The artists were Miss Horton (who was in splendid voice and rendered her services gratuitously), Messrs. Harry Payne, Will Musgrave, J. Hobbs, J. Smith, and many other excellent singers. I understand it was kept going as late as possible, and that a substantial collection was made for the A.B.S. "Rambles in Bermondsey" will be the title of my paper before the Bermondsey Bantam's Boys (without a lantern).

AT Monday evening's meeting of the Piscatorial Society, Capt. Thorp, R.A., related the capture of a pike, which, when weighed by the gallant captain (not captor), scaled 42lb. It was "found" at Felbridge, near East Grinstead. The fish was in very poor condition. It appears that the mill dam broke, or the bank broke, or something broke, and the 42-pounder was left stranded high and dry. The fish is being set up, and will, for a short time, be on view at the Piscatorial Salon at the Holborn Restaurant.

MR. WILLIAM HOWLETT, of Newmarket, and Flint Cottage, Barton Mills, informs me that the trout fishing has improved in the Lark during the last few days. A brace of pretty trout were taken at Icklingham on the 15th. One good fish of nearly 4lb. was taken at Mildenhall on Tuesday, by Mr. Frank Large; a brace were taken near the Lock at Barton Mills, rather small, but in good condition. I had a long walk on Tuesday and Wednesday last, nearly all the length of the river, and I am well pleased with the number of trout I saw, also roach and dace, &c. There will be some good fishing now the navigation is opened to Temple Bridge. Gangs of barges laden with stone are going up and down, so that the bed of the river will soon get well dredged. Up to the present time, since the opening day (April 1), there has been over ten brace of good fish taken, so that, considering the weather, angling for trout cannot find much fault. Mr. Howes, at Bull Hotel, Barton Mills, has baits ready for his patrons.

FISHING on the river Lark at Barton Mills on Saturday and Monday last, Mr. W. Howes, of the Bull Hotel, caught three trout; the largest 5½lb., the others just over 2lb. He writes: "I am convinced that any good angler fly-fishing would have captured some of the beauties which I saw on Tuesday. I wish I was more experienced with the fly-rod." [All right, Mr. Howes, I've got my rods, I've got my flies, and I'll have some trout as well!]

WHILE talking of "Barton Mills" (this is not an advt., but a genuine tip), Mrs. Howes has a very comfortable, well furnished cottage, which she can let for 50s. a month. Everything in the garden—and in the house—is "all right." It is close to the "Bull" and the water.

MR. A. R. MATTHEWS was at the annual general meeting, re-elected honorary reporter to the Anglers' Association.

THE "ARCHITECTURAL REVIEW" for April is a truly magnificent number. "Disappearing London" is now a feature of this magazine, and the picture of King-street,

Westminster, is as clever as anything Mr. F. L. Emanuel has done. There is a remarkably interesting article on "The Home Doors of England," and another one on "The Church and Village in North Devon." The *Architectural Review* appeals to the general reader as well as to those connected with the arts and crafts.

THE T. A. N. for April is, as usual, bright, readable, and up to date. The portrait of an enthusiastic angler, Dr. J. W. Turrell, M.A., M.D., adorns the front page, and two columns of the doctor's experiences and opinions form interesting reading. Other good things are "A French Fishing Party," "Dorsetshire Jack Fishing," "Thames Trout Fishing," "Barbel Fishing," by the veteran, Mr. W. H. Brougham; but from cover to cover the T. A. N. is emphatically "all right."

ANOTHER little paper, the *Club Chronicle*, of the Hastings and St. Leonards A.S., also deserves notice. It contains a mass of notes interesting to members, club notices, and last but not least the continuation of Mr. Jardine's article on "Pike and Perch."

THE latest attraction at the Royal Aquarium is the great fight between Sharkey and McCoy, which was fought at New York, in January last. The films used in the Cineograph are so clear that the whole contest can be seen, and the machine works so steadily that no unpleasant vibration takes place. The general show is as good as ever.

THE annual meeting of the Thames Re-Stocking Association will be held on Monday, the 24th inst., at Carr's Restaurant, 265, Strand, W.C., at 8 p.m. The president, Mr. C. H. Cook ("John Bickerdyke"), will be present, and the committee trust that all anglers who are interested in the scheme for establishing a fish hatchery on the Thames will attend. The first annual dinner of the association will be held on May 9, at Carr's Restaurant. Tickets (4s. 6d. each) may be obtained from the hon. secretary, M. H. G. Hankins, Hampden House, Phoenix-street, N.W.

THE Twickenham Piscatorial are inaugurating a series of monthly meetings, to discuss rods, reels, lines, and floats, steam tugs, swans, punts, and boats. [The comps. made your "monthly" meetings "mother's" meeting. Jack, they're beginning to know you!]

I REGRET to hear that two of my fellow members of the B.S.A.S., who have been fishing at Southend, are now suffering from a severe attack of hepatico-cerebro-sistosis in the hyperisistal membrane of the anterior lobe of the dexter cerebellum, or some distressing malady of the sort, caused by an overdose of rosiner while attending the performance of "Naughty Rosina" at the Empire Theatre in that town. I know the cure for their complaint. Next time I see them afloat I shall beach 'em.

G. O. R. LUMMEY enquires if *Truth* and the *Fishing Gazette* come from the same office. Certainly not. *Truth* emanates from Carteret-street, Westminster, whilst, as all the world knows, the home of the *Fishing Gazette* is in Fetter-lane.

THE compiler of a new collection of "yarns," under the title of "Fish Stories" (London: Simpkin, Marshall, and Co., Ltd.), pays a high tribute, in his introduction, to the peculiar gifts of one of our old contributors. He says: "The fish liar is woefully lacking in imagination—he is not to be compared to liars in other branches of sport. There are one or two good story-tellers in America, but since the lamented death of Mr. T. E. Pritt, only one, so far as we know, in England, Mr. Carter Platts, the Angling Editor of the *Yorkshire Weekly Post*, whose ANGLING DONE HERE, and A FEW SMILES, are excellent examples of his works."

HERE is one of the genial "W. C. P.'s" yarns that the "Fish Stories" man presses into his work: "One of our cycling men did a bit of fishing in the river here the other day, and when he mounted his machine to return home the handle-bar was decorated with a handkerchief containing some remarkably fine eels. He didn't ride far before the tyre of his front wheel came off, and while he got off his iron steed to investigate the amount of the damage, one of the largest eels glided out of the handkerchief, and dropped on the groove of the wheel, which it completely encircled, and stuck there as though the berth suited it. Our friend was startled at first, but he is a practical man, and knows a good thing when he sees it. So, letting well alone, he stuck the tail of the eel in its mouth; and the greedy beggar, in trying to swallow itself, tightened more and more round the wheel, and the cyclist rode home on his new tyre. He says, for 'resilience' and 'go' the Dunlop pneumatic isn't in it with the 'patent eel tyre.' The only fault he can find is the fishy aroma imparted to the circumambient air when he goes for a spin on his machine. The eel is not dead yet, and, it is hoped, with careful using, may last throughout the season."

BY the way, readers of Mr. Carter Platts's side-splitter, "THE TUTTLEBURY TALES," which has already gone through five editions, will hail with delight the news that the publishers have in hand a companion volume to the "TALES," which will be issued shortly, under the title of "THE TUTTLEBURY TROUBLES." At present "W. C. P." is hard at work on a new illustrated sixpenny humorous annual, the first number of which will be published in

October, under the title of "Carter Platts's Rolling Year." From what I can hear about it, it will be crammed with the humorist's best efforts.

A COMMITTEE MEETING of the Kingston Piscatorial Society will be held at the Snn Hotel, on Tuesday next, to consider the revision of the rules. Members who have any suggestion which they would like to make in regard to them should send it to the hon. sec. before that date.

MR. GORDEN HOOPER, while trout fishing at Temple Lock, near Marlow, Bucks., on April 6, caught three jack, about 4lb. each, and also two chub, one about 4½lb., all of which were carefully returned none the worse for being caught.

MR. W. H. ROGERS, of Reading, writing under date of April 16, says: "A handsome trout of over 6lb. was taken this morning in Caversham weir pool, by the lock-keeper, Walter Knight."

THE following announcement has been received from Lewes signed C. H. Morris, hon. sec.: "Ouse Angling Preservation Society. A large number of rainbow trout having lately been put into the river, notice is hereby given that the following regulations are in force, for this year: 'All trout captured between the mills at Barcombe are to be returned to the river.' 'In order to encourage the increase of trout, the close time for pike does not apply to this stretch of water.'"

SEVERAL anglers would not recognise in our announcement of the death, which took place on April 13, his fifty-seventh birthday, of Mr. Henry William Cushing. It was, unfortunately, mis-spelt "Cnsping." After having been, for some fifteen years, associated with Italian and English opera, Mr. Cushing joined, in 1875, Sir Henry Irving's Lyceum company, of which he continued a member until his death. He visited the States, under Col. Mapleson, eighteen years ago, and has since been there three times with Sir H. Irving. His son, known as "Mr. Wilton Heriot," is the joint author with Mr. Mark Ambient of "A Little Ray of Sunshine," now being played at the Royalty Theatre. The funeral took place on Saturday last in Wandsworth Cemetery.

MR. F. HOLDEN, the energetic and popular manager of the Canterbury Theatre of Varieties, Westminster Bridge-road, sends a most interesting and artistic souvenir of the Easter company at that house of entertainment. It comprises a portrait of Mr. Adney Payne and a photographic group of all the *artistes* engaged. In the middle of the group is the serenely solemn face of Dan Leno, surrounded by a host of brother and sister entertainers, with a useful key to the likenesses. The list is so tempting that Mrs. Drag and I intend to make a "Canterbury Pilgrimage" at the earliest opportunity; but we shall not go in the orthodox way, "on ambling palfrey borne"—not much—a ha'penny bus will do us. Besides, we are neither of us fliers at equitation. Thank you, Mr. Holden.

THIS is a little "Debate" by "Kryptos":

A man, no friend of mine was he,
Was railing at the sport.
"No angler did I ever see
Behaving as he ought.
Roach-fishers I adjudge the worst
Before my notice brought!"
"Your words proclaim your lack of sense,"
I calmly told him then,
"For though I fear you're very dense
Nine cases out of ten,
You'll notice that the bait they use
Declares them gentle-men!"

A CORRESPONDENT sends the following: "A few days since, a young man, named Robert Walton, employed as engine cleaner at the sausage works of Mr. William Harris, of West Smithfield, bought a secondhand overcoat from an old Jew in the Holloway-road for 3s., and being rather long for him, his wife, on Monday afternoon, was employed removing the stitches at the bottom of the garment, in order to shorten it, when she came upon, sewn in the inner lining of the coat, six £5 Bank of England notes. The notes evidently, judging from their dirty condition, had been in their hiding place some considerable time, but how they got there remains a complete mystery. On the back of one of the notes was written, in red ink, 'Comedian, Charles Colley, 1892,' and on another, in pencil writing, was '1894, Ostend, Belgium.'"

BOY: "Is there any virtue in oysters, pa?" PA: "Yes, my boy, a lot." BOY: "And do they make those who eat them virtuous, pa?" PA: "Here! You run along and play, and don't ask silly questions."

THE *Globe* of Wednesday last contains a most interesting "turn-over" on "Tobacco Reminiscences," from the pen of Mr. Frederick Gale. Throughout it praises the fragrant weed most highly, and amongst its other good things is the following: "Very many of our great men have been constant smokers: Sir Isaac Newton, Izaak Walton, who recommends his disciples after laying down their ground bait to retire for a while and smoke a pipe of tobacco; Addison, Thackeray, Tennyson, Carlyle, George Bidder, Robert Stephenson, and Brunel all were inveterate smokers." To this list future generations will probably add the name of DRAGNET.

PISCATORIAL SOCIETY.

MR. E. McFEE presided over Monday's meeting, when there was a large gathering of members present. Sport, however, in the society's waters had been of the worst possible description, only one small fish having been taken at Uxbridge, and none on either the Kennet or Moor streams. Mr. E. M. Mayes had two trout on at the first named place, but, thanks to an absolutely pointless hook, failed to hold either. Mr. R. C. Blundell thought that the new water was very much later than the other portions of the Colne. There had been no rise of fly, and the fish would not feed. It was, in fact, a question whether it would not be advisable to postpone the opening of the trout season until May 1. Mr. R. Bradford, on the occasion of his visit there, had only caught "a half crown lunch at the Chequers, and an eightpenny tea at the Temple." Dr. C. S. Patterson varied the monotony of doleful tales of sport, or rather, lack of it, by mentioning that he had fished a private part of the Lambourn on Saturday, and had creeled eight brace of trout. He retained but two fish for *post-mortem* purposes, and discovered that one was full of flies and the other of water shrimp. The bigger fish were somewhat thin and lanky, but the smaller ones were in good condition. The doctor also said that he had seen a very fine Thames trout, which had been taken spinning in the Shiplake district, weighing 7lb. It was the finest specimen of a real old Thames fish he had ever looked at. Capt. A. H. Thorp gave particulars of the stranding, below a mill pool, of a huge 42lb. pike, which is referred to in another column. Mr. H. H. Brown read some amusing excerpts from a French paper, from which it appeared that the restrictions to spinning with a spoon bait in certain French rivers had been modified to the extent that anglers could employ it, provided they used a float with it! Again, in the glory of their power the three prefects of the Nord, pas de Calais, and Somme had issued a notice that trout fishing would be forbidden from April 15 to June 15. Of course the editor of *La Pêche Moderne* said a few words and sobbed his life out. "Sarcelle," in the *Field*, however, had written stating that a portion of this ukase had been removed, and that they were now going to fish. Mr. Lefèvre kindly translated some interesting extracts from the same journal for the benefit of the company. Several members who had been to Uxbridge for the first time spoke very highly of the water there. M. G. E. DE C.

BRITISH SEA ANGLERS' SOCIETY.

THE usual weekly meeting was held at the Holborn Restaurant on Wednesday, April 19, at 8 p.m., Mr. Edward McFEE in the chair. Members present reported poor sport. As previously announced, Mr. J. C. Wilcocks read his paper on "Sea Fishing at Shoreham." The lecturer briefly gave descriptions of the various baits used at this station. He specially recommended the soft crab, and recommended preserving them in the courcee or floating bait basket. Speaking of the sand eel, the lecturer recommended that two whitebait nets be licensed for catching whitebaits and sand eels in Shoreham Harbour, as the latter was the marvellous bait for pollack and bass. Speaking of the latter fish, the lecturer mentioned that very large specimens were to be taken up to 18lb., but that the largest he himself had killed was 14½lb. He then briefly described the best situations, times of tides, &c. As regards pollack, the lecturer pointed out that with living sand eel large quantities of these fish can be taken at the Billy Boy wreck. To obtain sand eels, the lecturer advised a jiggling arrangement of a triangle and a pipe lead, and mentioned that he had procured by this method forty one day for use as bait. Conger also, he mentioned, were to be taken on the rocks just off the mouth of the harbour. Red sea bream he had not met with in this district, although the black sea bream is very common. Good cod may also be taken on the rough ground close in shore. An interesting discussion took place on the paper, in which Messrs. Minchin, Wood, Mallet, Preston, Gardner, Linfoot, and the hon. sec. took part. A hearty vote of thanks was proposed from the chair to the lecturer, and carried by acclamation. Mr. Lewis asked for information about Skull and Baltimore, Irish fishing stations. Mr. Lane recommended Clacton as a good station for bass, which were in fine quantity round the pier in July. A vote of thanks to the chair closed the meeting.

CHARLES S. PATTERSON, Hon. Sec.

GRESHAM ANGLING SOCIETY.

AT an ordinary meeting Mr. A. J. Sanders occupied the chair. It was decided to at once remit the entrance fee to the National Angling Club's competition on Loch Leven, and it is the opportune moment in which nominations to represent the society at that competition can be taken. Members are requested to at once let the secretary know as to whether they intend to be present at the dinner or not, and also as to the number of tickets they will require. Dinner takes place next Tuesday, 6.30 for 7, at the above address, when C. H. Cook, Esq. ("John Bickerdyke"), will take the chair. Please rally round, Greshamites. Fishing reports: Mr. Close, two brace trout, Chesham, largest fish 1½lb., a beautiful well-fed fish; the other three were returned to the water. Mr. Eldred, one brace trout from Chesham, returned; Mr. Meyers, a fine trout from the Thames of 7lb.; Mr. Bridgman, one brace of trout from private waters, returned. Mr. A. W. Parker then gave us an admirable paper entitled, "Improvements in Sea Tackle." He described the growth of sea angling generally, and stated that this society was the pioneer of sea fishing with rod and line. He described the various methods used in catching fish in the early days of the society, in which he took a prominent part. He exhibited various kinds of

rods and tackle for fishing in and about the various sea-port towns of this seagirt isle. Several of these rods, and some of the tackle used with them, were made entirely to Mr. Parker's own idea. Mr. Parker is a great believer in using wire lines in preference to the hemp lines generally used. He is now having made some phosphor bronze twisted lines, and believes that in the future these will be the only lines used by rod anglers, because one can fish with so much lighter a lead than with the ordinary lines, thus making sea angling more pleasurable than of yore. He also recommended using a whalebone top to the rod. A lot of useful information was derived by the members present, and at the close of the paper a very hearty vote of thanks was accorded the lecturer for his most interesting and instructive paper. I should be glad to receive the name of any gentleman who would kindly offer to read a paper before the society, we have one or two vacant dates on the programme. The usual toasts and a hearty vote of thanks to the chair concluded a very pleasant evening.

ALEX. WRIGHT (Hon. Sec.).

ANGLERS' ASSOCIATION.

THE annual delegate meeting of this flourishing association was held on Monday night, under the presidency of Mr. Philip Geen, at the Foresters' Hall, Clerkenwell. There was a crowded attendance of delegates, a number being only able to find standing room. The statement of accounts and balance-sheet for the past year were presented by the auditors—Messrs. J. Bowles-West, R. G. Woodruff, and W. H. Barber—and printed copies of the same were distributed in the room. The expenditure, it appeared, had amounted to £492 4s. 6d., and among some items set forth were the following:

	£	s.	d.
By rent of Grand Junction Canal and four-			
teen other fisheries	113	5	4
„ Preservation, local water bailiffs' salaries	67	10	0
„ Nettings (Tottenham and Clissold Park)	94	16	10
„ Salaries	99	14	8

The receipts included 3712 railway privilege tickets at 2s.—£371 4s.

Mr. F. H. Sparling (West Green A.S.) proposed that the balance-sheet be passed. He said he thought it a very satisfactory one indeed, considering the large amount of expenditure in connection with netting matters, but notwithstanding that, they had a balance of £105 10s. 9½d. Mr. F. Thorling (St. John's) seconded the resolution with much pleasure. Discussion arose with reference to one or two documents which had not reached the auditors, but it was stated by those gentlemen, in reply to the chairman, that the balance-sheet was perfectly correct. Mr. J. B. Close (finance committee) suggested that it should be referred back, while accepting it as correct, to the auditors, and this was eventually agreed to. The association is leaving its old home at the Foresters' Hall, and a committee had been appointed to seek out some other suitable headquarters. Mr. A. J. Marriott (Waltonians) now stated that, as a result of their inquiries, they had met with a place which, he believed, would be very suitable for their meetings. That was the Cripple-gate Institute, in Golden-lane, Barbican. They had seen the room, which was a very well-lighted and spacious one. Mr. Frei stated that he had made inquiries as to the delegates smoking, and he had no doubt that the governors would agree to that. At any rate, they should want that matter satisfactorily settled before taking the room. The vice-president (Mr. W. H. Beckett) said he thought the institute was as close to Aldersgate-street Station as their present meeting place. Mr. F. Newton (Hoxton Brothers) detailed his efforts to find a suitable meeting house, but without result. The rent had been either too dear or the rooms were not in suitable positions. Mr. F. Thorling said that Mr. T. Keeble, of the Coffee Pot, Warwick-lane, on hearing that the association was leaving Foresters' Hall, had offered his house for the use of the association until such time as accommodation was found. The Chairman: I am sure that is very kind of Mr. Keeble. Eventually the matter was left in the hands of the original committee to deal with, and to take the institute room if suitable arrangements as to rent, meeting hours, smoking, &c., could be made. The hope was also expressed that the committee of the Anglers' Benevolent Society would meet at the institute. Mr. Beckett said in the selection of the new headquarters they must study delegates from north, east, south, and west, and he thought the position of the institute would be easy of access to all.

The election of officers then ensued, and resulted as follows: President, Mr. Philip Geen; vice-president, Mr. W. H. Beckett; hon. treasurer, Mr. A. Wright; trustees, Messrs. G. H. Field, G. Manning, and J. Jennings; secretary, Mr. R. Ghurney; hon. reporter, Mr. A. R. Matthews (*The Angler*), Tyler, Mr. Ben Abrahams; renting and preservation committee, Messrs. B. Abrahams, E. Clarke, S. Malby, A. A. Matthews, G. Norris, T. C. R. La Mond, F. H. Sparling, C. Ashmore, F. Westoby, F. Newton, T. Collins, and E. Rowles; finance committee, Messrs. J. B. Close, F. H. Sparling, J. P. West, and R. G. Woodruff; general committee, Messrs. W. H. Barber, E. Brockett, F. Castell, G. Chamberlain, E. Clarke, W. Ford, J. Gibbons, J. Harwood, E. Hunt, S. Jones, R. Murphy, S. Malby, F. Newton, G. Norris, F. H. Sparling, F. Thorling, J. P. West, R. G. Woodruff, E. Loft, C. Ashmore, E. Knight, F. Gray, T. R. C. La Mond, and G. Beaumont; visiting officers, Messrs. La Mond, Abrahams, Manning, Rowles, and Harris.

The Anglers' Benevolent Society Committee was also elected, Mr. J. B. Close being elected auditor.

With reference to the netting fund inaugurated by the association, the following resolution was passed: "That a

committee be appointed in order to formulate a scheme for the disposal of the netting fund, and that such scheme be laid before the delegates for their consideration." The committee will consist of Messrs. Wright, West, Barber, Thorling, Sparling, and Frei. Mr. W. H. Beckett, speaking in connection with this fund, stated that he had recently been present at the Plumstead Piscatorials' annual dinner, at which they had voted £2 15s. towards the fund, and also £2 2s. in aid of the funds of the Anglers' Benevolent Society, a statement which was received with loud applause.

Mr. Harwood (Sundial) remarked that it was usual at this time to make a grant to the T.A.P.S. Mr. Ghurney, in reply to the chairman, stated that up to then no application had been received from that society.

Mr. Albert Derry (Prince Albert Angling Society) handed to the secretary a petition, asking the L. and N.W.R. to issue privilege tickets from Willesden Junction, which, after being duly signed on behalf of the association, will be forwarded to the proper quarters.

Mr. J. W. Harris introduced to the notice of the delegates the case of a late member of the association whose privilege ticket had been forfeited six years ago for misuse. He had asked him to bring the matter forward, referring to the punishment he had experienced, and hoping that after that lapse of time, they might perhaps re-issue him his ticket. The feeling of the meeting appeared to be in favour of that course being adopted, providing the railway company was agreeable.

Several notices of motion have been handed in, and the meeting at a late hour was adjourned, a vote of thanks being accorded Mr. Geen for presiding.

THAMES RE-STOCKING ASSOCIATION.

AN important committee meeting of the above association was held at Carr's Restaurant, Strand, on April 14, Mr. C. H. Cook ("John Bickerdyke") presiding.

It was decided to hold the annual meeting on April 24, and the annual dinner on May 9. Tickets for the latter are to be 4s. 6d. each, and the committee resolved that none of the funds of the association (which are for re-stocking purposes) shall be spent for the purpose of entertainment.

Mr. C. H. Cook stated that he had had promises of assistance from Members of Parliament and others towards the proposed fish hatchery on the Thames. He thought it probable that if a hatchery was built sufficiently large to supply fish for the whole of the Thames, and not, as was once suggested, for a part of the river, the cost would be about £500. This would involve the permanent service of an experienced official to superintend the hatching of the ova and looking after and feed the fish, which would be placed in ponds until they were a respectable size. It would cost about £200 a year to keep the hatchery going. He had written to the up-river associations asking if they would join the T.R.A. in this matter. In return for any subscription that they might propose to forward they would be supplied to the full extent of their donation with fish from the hatchery. They would then get Thames hatched fish for the Thames. (Hear, hear.) He had seen the futility of little experiments, and if they undertook the work it must be on a big scale. He proposed that a council of the T.R.A. be formed especially to look after the interests of the Thames hatchery. The Hon. Justice Bucknill had promised to join and help them. The Hon. W. F. D. Smith, M.P., stated that he would be happy to join the council and would subscribe £5 a year to the funds. Mr. T. Skewes-Cox, M.P., for the Kingston Division of Surrey, wrote that the work which the T.R.A. had undertaken was of great interest to him, and he (Mr. Cook) was to signify in such a manner as he thought best Mr. Skewes-Cox's appreciation of the steps that were proposed to be taken with a view to the establishment of the hatchery for the Thames. Mr. W. G. Mount, M.P., had also written, wishing access to the scheme. Mr. R. A. Hermon Hodge, M.P., wrote that he was in favour of the hatchery scheme and would give an annual subscription. Mr. H. T. Clutton had also promised a guinea a year, and had sent his first donation. He (Mr. Cook) had also been endeavouring to get the Thames Angling Preservation Society to interest themselves in the matter, and had received the following letter from Mr. Higgins: "Your letter upon the question of fish culture in the Thames has been fully considered at a meeting of the executive, and I am desired to inform you that the society does not feel justified in making the promise you suggest as to supplying funds for the proposed hatchery. Experts like Buckland, Francis, Stephen Ponder, and others, years ago, raised substantial funds, devoted enormous energy and ample time, without appreciable effect, after years of expense and anxious thought and close application to the object in view." In reply to this, said Mr. Cook, I wrote as follows: "Thanks for your letter relating to the proposed fish hatchery. I may say at once I am well aware that the work carried on by Buckland, Ponder, and others showed very poor results; but there were good reasons for this. In the first place fish culture was comparatively little known in those days, and the mistake was made (for it has proved a mistake since) of placing in the Thames fry of salmon and trout. To continue the work on these lines has never been in my mind, at any rate. Fish culturists nowadays meet with the most brilliant success, and there is no more reason why a fish cultural establishment should not be as successful on the Thames as at Howietoun or at Crickmere. With a hatchery there would have to be ponds where the fish could be reared until they were of sufficient size to be turned into the river. It was, moreover, not at all our idea to deal simply with the *salmonidae*, but to rear coarse fish in large quantities. We should no doubt benefit by the mistakes made by the earlier fish-culturists." Mr.

Higgins replied that he would put this letter before the next meeting of the T.A.P.S. executive.

Mr. Cook, in replying to a vote of thanks, said that if they received support, not only would the hatchery be started but they would endeavour to purchase the land on which it was built, so as to make the hatchery free to the Thames. They would only then require sufficient annual subscriptions for the working expenses, and as fish would be given in return for these the hatchery would be self-supporting. These conditions having been complied with, the fish which remained on hand would be a considerable quantity, and these the T.R.A. would turn into different sections of the river itself. The exact locality of the hatchery could not yet be decided upon, but he would suggest somewhere in Mid-Thames, a mile or so up a Thames tributary, where it would be absolutely safe from Thames floods. (Hear, hear.)

Mr. Howlett then referred to the abolition of the cast net, and said he thought the honorary assistant river keepers had been unfairly dealt with, and that the proposal would abolish the whole of the honest river keepers on the Thames. He moved the following resolution:

"That a letter be sent to the Thames Conservancy stating that, in the opinion of this association, it should be left in the hands of the local associations to recommend those persons who can be trusted to be assistant river keepers, whether professionals or non-professionals, with the privilege of using a cast net, and that it would be better to deprive an undesirable river keeper of his deputation than to take away from all honorary assistant river keepers any of the small privileges they have in return for their services; also that this association has no knowledge of any honorary assistant river keeper using the cast net for improper purposes."

Mr. Amphlett entirely agreed with the resolution, although he had neither directly or indirectly anything to do with it being proposed at that meeting. He thought a great injustice had been done by taking this privilege, which was seldom, if ever, taken advantage of, from the honorary river keepers, who were, he believed, all men of honour, who could be trusted.

The resolution was carried unanimously, and the meeting closed.

HON. REPORTER.

CAXTONIAN ANGLERS' ANNUAL DINNER.

THE twenty-seventh annual dinner of the Society of Caxton Anglers was held at the Falcon, Gough-square, on Thursday, when a most enthusiastic gathering assembled to support the president of this ancient and respected society, Mr. W. Cate, who was in the chair.

Amongst those present were Messrs. Parker, Clarke, Carpenter, Brooks, Jackson, Dr. Patterson, G. H. Howard, Harrison, Walker, J. J. Chapman, Chapman, jun., F. H. Amphlett, D. Denniford, W. H. Cate, Hall, F. Hiller, Goadby, Spong, and Hardy.

After the toast of the Queen had been received, Mr. J. J. Chapman, who occupied the vice-chair, proposed "The Society of the Caxtonians and its President." He said they were a very happy society, having an excellent president, who had been amongst them for a number of years. The club still continued to prosper, and the officers were always ready to answer to the call of duty.

Mr. W. Cate, in response, said he took a great interest in the welfare of the society, and had always done so. He should also continue to do so, for the harmonious feelings which existed amongst the members made it a pleasure to be their president.

"Kindred Societies and Visitors" was proposed by Mr. W. H. Cate in very happy phrases, and

Dr. Patterson, in reply, said it was with mingled feelings that he rose to reply. The toast was kindred societies, but he was inclined to look upon the B.S.A.S. and the Caxtonians as one and the same, and not kindred societies. Few members of that society were not members of the British Sea Anglers' Society. He had heard a gentleman present speak of capturing a 4½ lb. trout in a tennis net, but perhaps he was not a member, and certainly could not be strictly called an "angler, although he might say that any Caxtonian ought to be proud of such a capture. He could only, in conclusion, return thanks for the kind way in which the toast had been proposed, and hoped that the words of the song would not prove true, and that this would not be, in the words of the last singer, the "Last, last Time we Meet."

Mr. W. Cate, in proposing "The Prize Winners," always hoped the new members would win. He generally took part in the outings, and he enjoyed them very much.

Mr. Brooks, in response, said he was glad to think that he, personally, had done better than in the previous year. That was probably because their genial president was not there. (Laughter.) Next year he would try hard for the silver cup. He hoped that their chairman would join all their competitions next year. (Hear, hear.)

Mr. F. Hiller said he was at the bottom of the list of

prize winners, but he thought that in the particular class of fish which he had caught he was not at the bottom. He thought Mr. Clarke was rather carping when he called a carp a chub. He was pleased to see Mr. Howard present, for he (Mr. Hiller) was very loyal to the *Fishing Gazette*, and sometimes saw some very funny stories in it. He regretted the absence of Mr. G. D. Deuchar, and he hoped they would send their congratulations to him with regard to his winning the silver cup.

Mr. W. H. Cate, in proposing "The Angling Press," said they were very pleased to see Mr. G. H. Howard and Mr. Amphlett present, the former representing the *Fishing Gazette*, and the latter the *Thames Angling News*. They were all glad to get an opportunity to go fishing, but when they were unable to do so they enjoyed reading the angling press. He could not say that all the stories that they told were true, but he believed that they did their best to educate them in the art in which they one and all indulged. (Hear, hear.)

Mr. Howard said this was an annual function that he had never missed. The society was still alive, and they had their dear old president and his son, Willie, still amongst them. He thought he ought to belong to the society—(laughter)—for there were some monster prizes—(laughter)—though he did not know whether he would ever be able to win any.

Mr. Amphlett said that he thanked them for their support of the T.R.A., and was glad to think that that support would continue.

Mr. J. J. Chapman proposed "The Hon. Secretary," and whom, he said, looked after their welfare and finances with great ability, and he wished him long life and happiness. He hoped that his services would always be at their disposal, for he was a most able secretary. The toast was accorded musical honours.

Mr. W. H. Cate, in response, said he was glad that he had such an excellent committee to work with, for all the business of the society and their competition arrangements were done with great consideration towards him. He thanked them heartily for their generosity.

The Chairman announced during the evening that the prizes had been won as follows: Mr. W. H. Cate, honorary secretary, wins the first prize in the jack competition, value £3 3s.; the first and second prizes for bream, value £1 1s. and 10s. 6d. respectively; the first prize for chub, value £1 1s.; and the first prize for roach, value £1 1s. Mr. Deuchar wins the club cup, value £5 5s. Mr. Brooks wins the second prize in the jack competition, value £2 2s.; and the first prize for jack, value £1 1s. Mr. Parker wins the first and second prizes for tench, value £1 1s. and 10s. 6d. respectively; and the second prize for jack, value 10s. 6d. Mr. Stevens wins the second prize in the roach competition, value £2 2s. Mr. Chapman wins the third prize in the roach competition, value £1 1s.; and the first prize for dace, value £1 1s.; and Mr. Hiller has won the second prize for roach, value 10s. 6d.

There was an excellent musical entertainment during the evening.

Notes from the North.

THE old finnock question, or, as it is called, the "great" finnock question, is still being fully, and in some cases, fiercely, discussed in the north. Columns upon columns are appearing in Aberdeen local papers, of letters, interviews, and statements concerning the matter.

The weather is still far from genial, while, at times, occasional showers of snow and hail make it anything but agreeable to be at the waterside. There has been no show of March Browns to speak of as yet, and trouting prospects are bleak in the extreme.

Ex Inspector Crnickshank, of the Dee Fishery Board, does not think that the period of spring frost of '95 has anything to do with the present salmon famine. Rather, the series of easterly winds and coast storms have played the deuce with the returns.

Mr. McLeod, chief bailiff on the Ugie, has been busy during the past week transporting his 30,000 trout fry to the upper waters. He is quite enthusiastic over this new departure of restocking with trout, his operations hitherto having been confined entirely to *Salmo salar*.

Inspector Duncan, of the Dee Fishery Board, is about to distribute his annual tribute of over a million salmon fry hatched out in the Drum hatchery, belonging to the Dee Fishery Board. Half of the stock will be kept in the rearing pond, and the other half taken to various parts of the river well inland.

Mr. David Smith, Feughside Inn, Banchory, has the Upper Blackball water, for May, June, and July, with

rights on the Feugh, and anyone on the look-out for early summer quarters could not do better than go there for a week or so.

The Duke of York left the Balmoral waters just as a fine head of fish was teeming into the pools. If he could time his visit to April, it would be certainly less risky, as regards a good head of fish being forward in these parts, and the chances are that the weather would be more acceptable than during the past two seasons.

The Duke uses one of Hardy's powerful split cane steel centre rods, and is an excellent all-round caster.

Mr. Wm. Davidson, Bucksburn, Aberdeen, was fined £6 4s. for having had in his possession an "unclean" salmon, and for having consigned it, without branding it, to Newcastle, where the case was tried last week. Mr. Davidson did not know that, when he sent his fish thus across the Border, he was breaking the laws of the land; although, had he only sent it as far as Edinburgh or Glasgow, there would have been no mistake.

The Aberdeen Salmon Company, who lease the tidal salmon nets, charge £1 for a licence to angle on their fishery, where an expert who knows the ground may occasionally make a basket of a half dozen, or, at most, a dozen, small finnock. Some of the conditions are, if anything, hard. No wading, no angling after 9 p.m. (even in summer), no bait, no minnow. These might be modified with advantage, and the 5s. licence restored, then the cry of the finnock angler would be heard no more.

Golf has, during the past week, been over-topping all other sport in the north. A grand tournament came off, on Friday and Saturday at Cruden Bay, which brought a great many sportsmen into these parts. Naturally, the Ugie and Ythan came in for a share of attention afterwards.

Among lady anglers angling on Deeside just now may be mentioned Mrs. and Miss Pickering, Kincardine Lodge, Mrs. Bateman and Mrs. Laming, Glentana; Miss Nicoll, Roscobhie; Mrs. Leslie, Potarch; Mrs. T. Turner, Farley Cairnton; and Miss Fortescue, Kingussie. Not a bad representation of the fair for one single river.

SPECIAL SCOTCH.

Provincial Notes

FROM BIRMINGHAM AND DISTRICT.

A very pleasing meeting was held on Friday evening last in the lecture hall at Bingley Hall, when the members of the Birmingham Association assembled to witness the distribution of the money prizes given by Mr. G. Stanley, the manager of the Trades' Exhibition, for the exhibits of specimen fish. Mr. T. Coles presided over the meeting, which was well attended, and comprised nearly the whole of the best anglers in the city. Mr. Coles, in opening the proceedings, said that he, together with others, had looked forward for years to see a public display of specimen fish such as had been got together. It would be an inducement for clubs and their members to preserve all good fish taken. Mr. Stanley had done much to induce the members of the association to place their fish on view by giving them a substantial sum for prizes, and also giving each exhibitor a free pass for the whole time the exhibition remained open. Mr. C. White, the hon. secretary, said that although the notice for getting the cases together had been so short he had exceeded all expectations, as, instead of getting about fifty cases, he had got together near upon 200 cases. A vote of thanks was given to Mr. Stanley for his kindness, to which he replied. A vote of thanks was also given to the chairman for presiding, and to the hon. secretary. For some time past the constant pollution of the river Penk has been a source of annoyance to the whole of the angling clubs in Wolverhampton, and also to the tenants of the farms through which the river runs. This matter was brought before the notice of the committee of the Provincial Angling Association at their late meeting at Kidderminster, and the secretary was instructed to write the clerk of the Staffordshire County Council upon the matter, which has been done. The Penk, at one time, was one of the best fish-producing streams in Staffordshire; but since the Wolverhampton Corporation have commenced their sewage operations at the Bamhurst Farm the river has become comparatively worthless in that portion above Penkridge. In October, 1897, all the fish from Coven Lawn to Penkridge were poisoned, among them being from 8000 to 10,000 stock fish, turned in at a very considerable expense by a Wolverhampton angling club.

EIGHTY-THREE SALMON

Taken on one of our SPECIAL SINGLE GUT CASTS, such as we are now selling at 8s. each, or 90s. per dozen.

Warranted to pull 8lb. dead weight dry.

TROUT CASTS, 3 yards long, 9d. each, 8s. per dozen.

" " " " " extra tapered, 10d. each, or 9s. per dozen.

A VERY LARGE SELECTION OF SPRING SALMON AND TROUT FLIES IN STOCK AT VERY MODERATE PRICES.

OGDEN and SCOTFORD, 19, LEICESTER SQUARE, LONDON, W.C.

And at CHELTENHAM.

FROM DERBYSHIRE.

During the week there has been an improvement in the weather, although it still remains cold, with sharp frosts in the night time. The streams are running in capital condition, and there is a fair sprinkling of anglers on the best known and favourite waters. The unfavourable weather of the past few weeks retarded improvement in the condition of the fish, and they suffered from the great scarcity of natural flies on the waters, which, no doubt, was caused by the severe and continuous cold. An improvement, however, is now taking place, and warm weather will bring the fish into good condition. Fly anglers, trollers, and bottom fishers have, within the last few days, been only moderately successful on any of the streams, and but small creels have, as a rule, been made. Visitors, so far, have not been numerous on any of the upper waters of the Derwent, and not much has been done by any of them. The Bamford and Sickleholme reaches have yielded a few good sized fish, and some moderately fair baskets have been made on the lengths by Hathersage and Grindleford. The Stoke and Calver waters, both private and open, have in places afforded a little sport; and on the Baslow and Chatsworth portions of the river, where anglers have been tolerably numerous, a few small creels have been made both by fly and bottom fishing, mostly on the Park lengths between Baslow and Beely Bridge. The Beely and Rowsley reaches have furnished a few brace of fish, but angling generally has been far from good throughout the Chatsworth district, as elsewhere. The Darley Dale and Matlock waters have yielded a few fish, but, practically, nothing much has been done either there or on the Cromford and Lea Hurst reaches. Bottom fishers on the lower lengths of the river, by Helmesford, Watstanwell, Ambergate, and Belper have on some days done fairly well; but no large baskets appear to have been made in any part of the river. A few anglers from a distance have been out on the Millersdale and Monsoldale lengths of the Wye, and some small lots of trout have been taken; but, on the whole, sport has been very disappointing. There has been a tolerably good number of visitors to the Bakewell, Haddon, and Rowsley waters; but only exceedingly moderate success has been met with by any of them.

FROM THE FEN DISTRICT (LINCOLNSHIRE).

The weather has been so unsettled during the past week that trout anglers have scarcely wetted a line. The streams, however, have been greatly benefited by the recent rains, and as soon as warm weather sets in successful sport should be obtained. At the time of writing, the meteorological conditions were of a more promising character; but it is still extremely cold, and five degrees of frost, which have been the prevailing element overnight twice this week, are not calculated to increase the number of flies, which are very backward for the time of year. Those who have yet caught any trout have done so by bottom fishing.

FROM HULL AND DISTRICT.

Mr. Waites, of the Driffield Hearts of Oak A.S., has taken a good fish in the upper waters, but the best brace scaled 2lb. 10oz. and 1lb. 14oz. respectively, taken by Mr. H. Whitfield, a member of the River Hull A.S. Mr. J. Mason took one at Weelferry that scaled 1lb. 5½oz., and Mr. J. Cheeseman also caught one at Dunsell that scaled 1lb. 7oz. Messrs. Amos and Smith's A.S. visited the river at Hull Bridge to fish their first match of the season, and did fairly well. The Royal Albert A.S. also fish their first match on the river at Weelferry. Mr. J. Wilkinson taking the first prize with 1lb. 10oz. The Red Lion A.S. held their first match, Mr. J. Hartley taking first prize. The Holderness drains and the bays on both sides of the river Humber are furnishing fair sport amongst flounders and eels during tide times, and odd trout have also been met with. The Izaak Walton A.S. opened their season at Patrington, on the Winestead Drain, Mr. A. Davis being first prize man with 2lb. 8½oz. The East Hull Brass Band A.S. also fished theirs at the same place, Mr. Frank Carle taking first prize with 1lb. 11½oz., Mr. J. Lawson second, 1lb. 10½oz., and Mr. T. Northern third, 1lb. 1½oz. There are now in Hull and district no less than eighty-four angling societies; but out of that number only about thirty-four of them are affiliated to the Hull Amalgamation; taking this into consideration, it is high time the anglers of Hull moved in the matter, and did something to strengthen the hands of the amalgamation. To-day (Saturday) the East Riding and the Kingston Angling Societies each fish their first match on the river Hull, the former at Weelferry, and the latter at Hull Bridge; and on Saturday next the Stoneferry A.S. fish a match on Minto Flatts, and the Victoria A.S. hold their annual open match on the river.

FROM THE LAKE DISTRICT.

On account of the wintry weather which has prevailed, only a few anglers have been out. Many of the rivers within the jurisdiction of the West Cumberland Fishery Board have benefited during the past month by the enlargement of some thousands of young trout into their waters. The board's head bailiff, acting under instructions, has distributed the fish as follows: About 6000 to Bootle, 4000 to St. Bees, 2000 in the Bleng, 2000 in the Mite, about 2000 in a tributary of the Esk at Boot, Eskdale, and about 6000 in the river Ehen. The distribution was successfully carried out, hardly a fish dying from the removal. The question of fish ponds for hatching *versus* the purchase of trout has been under consideration by the board, it being contended that young fish can be bought at a lower sum than that expended on the board's hatching ponds.

FROM LANCASHIRE.

The St. Helen's Angling Association have lately devoted a lot of time, trouble, and money to improving the stock of fish in their waters. The king carp turned into the

Eccleston Dam a few years ago are now being taken upwards of 6lb. weight. The Liverpool East End Angling Association are due on the Aln to fish a match for trout on April 23, when suitable prizes will be offered. The Nelson Club have decided to open the coarse fishing season with a match which will be open to the members of other clubs. The West Derby Club is doing well, and at every meeting enrolling new members. They are strong already. The Warrington Anglers' Association announce, in answer to repeated inquiries, that the fishing in the river Bollen recently acquired will not be open to any but their own members. The Brook Tavern Angling Society, Swinton, have become affiliated with the County Palatine Angling Association. This association wish it to be distinctly understood that their waters at Irlam and Cadishead are closed entirely until officially notified otherwise. The Ribbles has been in fair order for fly fishing, but catches have been small. On the Lune the cold weather has affected both it and its tributaries. Baskets in consequence have been light, but still these streams are reported as fishing better, and prospects for the future are brighter.

FROM MANCHESTER.

Last Saturday we received the fish won by the Levens-bulme representatives in the recent Wyresdale competition, comprising 1000 rainbow trout. Several members of the club met them at the station. The Beswick Angling Society have arranged for an interesting lot of matches, the first of which is fixed for July 16. The total of Mr. Selkie's record of pike for the past winter was 279 pike (weight, 1831lb.) retained, and 96 pike (weight, 360lb.) returned. The Lancaster Angling Society, Longsight, had a good muster at their last general meeting, and disposed of a lot of useful business. Owing to the illness of Mr. Standing, his paper on Izaak Walton had to be deferred. The Moss Side Social Angling Society had a splendid muster at their last meeting, which included visitors. The prizes won in the recent stocking competition were presented. At their next meeting the dates of the championship competition will come up for discussion. The improved state of the weather has tempted a few anglers to try their luck, but they have not met with much success.

FROM NOTTINGHAM.

There is nothing to report as regards angling on the Trent, which has undergone another exceptional change—perhaps for the best in so far as future rod fishing for salmon is concerned. Maybe the big waters experienced will bring up additional "springers." Poor old Stephen Dale, of St. John-street, late Coalpit Lane, in this city, has gone over to the majority. The deceased, in his eightieth year, expired at Burton-on-Trent, and was buried there on the 13th inst. He had a leading hand in the production and perfection of the Nottingham centre-pin winch, and his old-established business in the lace town (he was in business fifty years) descends upon the shoulders of his most enterprising grandson, Mr. Harry Dale, who, as a Nottingham fisherman, enjoys the respect of all the leading lights in the profession. The Nottingham Waltonians have celebrated, since my last, their half-yearly dinner at headquarters, Blue Ball Inn, Peck-lane. Host Rayson provided a grand repast, and at the subsequent proceedings Mr. J. Truman (president of the Shoulder of Mutton Association) presented the customary prizes. The chairman proposed the success of the society, and paid a compliment to the members for their enthusiasm for the club and on behalf of the sport in general. Mr. Frettingham (president), in responding, expressed the hope that the society would soon be able to boast the possession of a stretch of water of its own.

FROM SHEFFIELD.

In the Derwent, between Hathersage and Yorkshire Bridge, some fairly good sport has been obtained by adopting the upstream method. With worms several nice trout have been landed, and at Sickleholme also a moderate amount of sport. The conditions for bottom fishing in that portion of the Amber rented by the Sheffield Trout Anglers' Society have been of a first-class character, and, with maggots as baits, fishermen have fared very well indeed, many of the catches running up to four brace per rod. Locally the best sport still continues to be obtained in the Loxley, and, with hand-feeding worms, visitors to the stream near Low Bradfield have fared fairly well. Very little sport has been obtained in the Sheaf, and it would appear that the unfortunate affair which occurred on Feb. 18 has altogether spoilt fishing—at any rate, for the present season. On Monday, Tyzack, Sons, and Turner were summoned at the Sheffield Police Court for putting, or permitting to be put, certain liquid or solid stuff, namely, the off-scourings of a dam, into the Sheaf, a tributary of the Don and Ouse, to such an extent as to cause the water to kill or poison fish. After a lengthy argument the defendants were fined £2, including costs.

FROM WORCESTER AND DISTRICT.

A lot of rain fell in this district during the past seven days, which kept the Severn in a high and discoloured state. There must also have been much rain farther up the country, for the Teme has been swollen and much discoloured, and practically put a stop to angling. Some of the smaller streams have not been discoloured but improved, and in some of them sport has been very fair, a few brace of very nice trout having been taken. The water in both the Severn and Teme is running off fast, and clearing nicely, and by Saturday should be in good condition for angling; and if the cold, frosty nights we are having should give place to something more genial, sport should be good. It was hoped the rise in the Severn would have brought some salmon up the river, but such does not seem to be the case. I have only heard of two fish being taken by the Worcester nets and one by the Upton-on-Severn nets during the week, which shows the

paucity of fish in the middle part of the river, and as the price continues so high (4s. to 4s. 6d. per lb.), I presume there have not been many fish caught elsewhere.

FROM YORK AND DISTRICT.

On account of the cold, wintery character of the weather, and the flooded condition of the streams, anglers have had a quiet time since the middle of last week, when the prospects were suddenly marred by the return of easterly and northerly winds, which brought forty-eight hours' rain, with sleet and snow in places. Trout fishers have had their sport spoilt, very little having been done. Early this week the wind changed to the west and south-west, and the effect was soon perceptible in a more genial atmosphere. The trembling year, however, is as yet unconfirmed, and it is early to be sure that the north-east wind has really given place to the effusive southern breezes.

ANSWERS TO CORRESPONDENTS.

BRAMFORD.—The charge for fishing the Red Lion Hotel water, at Farningham, is 7s. 6d. per day. At Eynsford, the Plough Inn has now no water to let, as it has all been taken (including Sir W. Hart Dyke's water).

Correspondence

[We do not hold ourselves responsible for the opinions expressed by our Correspondents.]

THE EXTRAORDINARY CLOSE TIME FOR TROUT IN NORTHERN FRANCE.

DEAR MARSTON,—I have just heard that we have won our cause, and gained revocation of the absurd edict which stopped trout (and salmon) fishing in the Pas de Calais, from April 17 to June 17, and I hope to hear that the two other northern departments—the Nord and the Somme—have followed suit.—Yours very faithfully,

CHAS. A. PAYTON.

TROUT FISHING AND BRACING AIR WANTED.

DEAR SIR,—If "Surgeon" will try Killaloe, Ireland, he will find first-class trout fishing, bracing air, lake and mountain scenery. The dapping on Lough Derg will be at its best during May, and nowhere will there be better fishing. There is also a good hit of free salmon and trout fishing opposite my house. If he will write to me I will be glad to give him full particulars. I can give him first-class accommodation and highest references, if necessary.—Faithfully yours,

P. M. GRACE.

Ayle Vane, Killaloe.

DEAR SIR,—In reply to "Surgeon's" letter in *Fishing Gazette*, if he has never tried Bihury, up amidst the Cotswold Hills, I think it would be just the very place for him if the Swan is not full up then. It is very bracing, and the scenery around very beautiful. There is a nice show of trout in the hotel waters, one and a half miles in extent, some of it very private and secluded. He should write Mrs. Woodman if she could put him up. He can have plenty of references. There is good postal service and a wire in the village.—Yours faithfully,

F. LOCKWOOD.

Fairford, Glos.

SIR,—If "Surgeon" will send me his address I will tell him of a pleasant trouting holiday by the river Tweed, where he can have fishing over thirty miles of river—really good trout angling, large river, splendid scenery, and bracing mountain air—at very trifling expense, ten hours from town. This, I think, my fifth excursion to the place, and I hope to go again soon.—Yours truly,

Higham Hill Fishery,

WM. SMITH.

Walthamstow.

DEAR SIR,—In reply to "Surgeon's" letter, he will find both bracing air and trout fishing in abundance in the extensive moors belonging to the Earl of Feversham (north of Kirbymoorside railway station), in the valleys of Farnedale and Bransdale, on the upper reaches of the Dove and Hodge. Tickets are obtainable at Estate Office, Helmsley, 1s. per week, 3s. per month, less by half or whole season. May Fly and Grey Drake last over a month. A brother doctor (now departed) was in the habit of bringing several friends yearly, and making Kirbymoorside or the Inn on the moors a centre. Charges are moderate. The local Is Guide to Ryedale, sold at Smith's bookstall, gives map and further particulars, and shall be glad to assist with fuller information to a brother fisherman on direct application. Some of the farm houses also provide accommodation.

JOHN CRAVEN FRANK.

High Hall, Kirbymoorside.

DEAR SIR,—If "Surgeon" has not tried Bihury, up amidst the Cotswold Hills, for trouting in May, I think he would find all his requirements there, that is, if he is lucky enough to be able to get a rod on the Swan waters, nearly two miles in extent. The rods are limited in numbers, so that there is never any over-crowding, and there is a very fair show of trout.—Yours faithfully,

F. L.

SIR,—In reply to "Surgeon's" inquiry, in your last week's issue, as to where he could get trout fishing combined with bracing mountain air, let me suggest that he should try Carsphairn, in the Stewarty of Kirkcudbright. This is a small village about 700ft. above sea level, amongst the Galloway hills, the land of "the Raiders," and river or burn fishing can be had close at hand, and loch fishing about five miles off. The air is splendidly bracing, and if "Surgeon" cares to climb some of the higher hills he will be rewarded with a magnificent pano-

rama (if the day is at all clear), ranging from Ben Lomond on the one hand to the Cumberland hills on the other. The hotel, the Salutation (Mrs. Mitchell), is surprisingly comfortable, and the place can be easily reached in one day from London. Route: by 10.35 a.m. Scotch express from St. Pancras to Kilmarnock; there change for Ayr (train connects), and from Ayr to Dalmellington; thence drive ten miles to Carsphairn. The postal address is Carsphairn, by New Galloway, N.B. There is a daily post and a telegraph office. I shall be glad to give any other information if desired.—Yours faithfully,
22, Glebe-road, Kilmarnock. A. DALGLEISH.

BAKER'S PATENT DAPPING FLIES.

DEAR SIR,—As to the construction of the patent fly. The construction of the fly is such that it is an imitation of a natural fly impaled upon a hook at right angles as for dapping. In practice the fly rests upon the water in a natural position, and the hook being placed immediately above it, is not visible to a fish viewing the fly from below. The position of the hook also causes it to act more effectually than in the case of ordinary artificial flies when used for dapping, and the fly being moveable on the bend of the hook, slides out of the way of the barb when a fish is struck.

As to the use of the patent fly. It supersedes the use of natural flies which cannot always be obtained, and which are, moreover, prohibited in many waters in common with other natural baits. That, being an artificial fly, as much skill is required to fish successfully with it as in other forms of artificial fly fishing, inasmuch as it is used in an artistic and sportmanlike way if on the surface of the water, and requires as much patience and as dexterous a hand and eye in practice, and owing to the presence of bushes, roots, &c., greater judgment and circumspection in playing and landing a fish. By using the Patent Fly, the plan of resorting to minnow and worm under the plea of removing the large cannibalistic trout is obviated. Small fish need not be allowed to take the fly, and are not often accidentally caught, and owing to the smallness of the hook used, no injury is done to returned or escaping fish. It is not necessary to dry the fly so long as it is kept on the surface of the water. I would call your attention to the hook, which has been specially designed for this fly by Messrs. Allcock and Co., of Redditch, from whom the flies can be obtained wholesale.—Yours truly,
MESSRS. S. ALLCOCK AND CO.

"THE GREAT ZEBRA TROUT."

DEAR SIR,—I have seen this week, at Blackpool, a fish in the Aquarium labelled "the great zebra trout."

Having asked a number of my piscatorial friends if they know anything of the breed, and receiving a negative reply, I should esteem it a favour if you will kindly inform us through the columns of the *Fishing Gazette*, where the fish is a native of, and to what size it grows. The specimen I saw was a very fine fish, much larger than any *Levenensis* or *fario* I have ever seen.—Yours truly,
G. H. WARD.

[This fish is probably a cross between *fontinalis* and *fario*.]

TROUT FISHING IN THE BLACK FOREST.

DEAR SIR,—To Waldshut on the Rhine is not a far cry, and once at the latter place a half hour's drive lands the inquisitive traveller in a charming little Black Forest hotel, on the banks of the river Schluecht, a capital trout stream, fishable free for seven miles.

I have fished there all through the last three seasons, occasionally walking to the banks of the Rhine to grapple with heavier fish. The name of the hotel is Bad Brückhaus, distant one hour and a half from Zürich and Schaffhausen, and situated amid woods and vineyards.
S. LITLEDAL BENTLEY.

Grand Hotel, Hungaria, Budapest.

[The above is kindly sent us by a member of the Fly Fishers' Club. It appeared in the *New York Herald*, Paris edition.—ED. F. G.]

RE WIRE SEA LINES, &c.

DEAR SIR,—If your correspondent, R. A. Goodman, will send us his address, we shall be most pleased to post him our price list. Any information he desires we shall be pleased to give as far as lays in our power, regarding wire lines and our "big wheel" pulley. We beg to draw attention to the fact that our price list is sent post free to any one who applies for same.—Yours truly,
A. CARTER AND CO.

137, St. John Street-road, London, E.C.

GENTLES IN WINTER.

DEAR SIR,—The above subject is evidently of much interest to your readers. Mr. G. Nash evidently understands the proper feeding of gentles. The gentles fed on fish or lights are no good for ground baiting purposes in streamy waters, as they are instantly carried away out of the swim, and so do more harm than good. A maggot fed on beef or liver is more solid, and sinks like a shot. Liver gentles are of a fine yellow. Big flies produce big gentles, and the art of feeding the flies needs to be understood. By careful attention to this and to the arrangement of proper heating apparatus I can produce gentles in winter fully up to the summer average in size, having a house specially designed and built for the purpose. I shall be pleased to submit samples to your correspondents, and also, what is more important, samples of freshly laid ova, of which I have had a supply all through the winter. The liveliness of the gentle is of course mainly a matter of freshness and of temperature.—Yours truly,
PICKERSGILL.

44, Market-place, Koighley.

NETTING FUND.

DEAR SIR,—Since last report I beg to acknowledge the receipt, with thanks, of £2 15s. from the Plumstead Piscatorial.—Yours faithfully,

ALEX. WRIGHT (Hon. Treasurer).

JAPANESE FLIES AND FISHING.

DEAR SIR,—The articles lately published by you on Japanese fly fishing (Averill in *Forest and Stream*), interested me very much, especially as I believe I sent you, some seventeen or eighteen years ago, the first Japanese artificial flies you had seen, and they were, if I remember rightly, presented by you to the Fly Fishers' Club.

The photograph of the flies in your last issue is first class, and anyone seeing it will at once have an idea of what I also think the correct angle at which hackles should be placed, i.e., on Palmer and Bumble Flies.

I send you enclosed two or three flies tied for me by Max Walbran some years back. I have done well with these, especially on Welsh streams (fishing both wet and dry), and think the gold bead at head and tail an excellent thing—certainly so in coloured water.

There were in the collection I sent you one or two grubs with red or pink beads at head and tail, and which I found very killing when grayling fishing. These, I should think, were supposed to represent shrimp, or some other fresh-water insect. The last patterns I have unfortunately lost.

Some of the hair on which these flies were tied was of enormous strength and length, though very fine; other flies were tied on two or four twisted hairs. I never used such strong hair (that is strength combined with fineness) as that obtained from some Japanese stallion ponies. But in these days of fine gut, both drawn and undrawn, we have practically discarded hair, especially when fly fishing.—Yours truly,
A. C. DE BOINVILLE

[The flies Mr. A. C. de Boinville sends are very good, and Mr. Walbran credit; they would kill well on any moorland trout streams. We remember Mr. de Boinville sending us some Jap flies on hair many years ago.—ED.]

SWANS.

DEAR SIR,—I am now able to report that after protracted negotiations with the Lord Chamberlain's Office, his lordship, through the Comptroller of H.M. Household, the Hon. Sir Spencer Ponsonby Fane, G.C.B., has been pleased to issue instructions to Mr. Abnett, H.M. swankeeper, to make arrangements with the Vintners' and Dyers' Companies to take off fifty barren swans (if so many can be found) between Teddington Lock and Penton Hook. The birds to be housed after receiving two clear days' notice from our head river keeper, and to be replaced on the river when we hear that the ova has hatched. The cost will be 2s. per head per swan per week, besides the costs, &c., of the swankeeper and his assistants, strict account whereof is to be kept.

Up to time of writing, perch have not commenced to spawn, owing doubtless to the abnormally cold weather.

DEAR MR. MARSTON,—Our head keeper writes, April 18, that the barren swans are off, but that only forty-two have as yet been found. He is going, however, to obtain the correct numbers, and will report by whom they are housed locally between Teddington Lock and Staines.

Wire netting and stakes have been ordered to such an extent as may be necessary, and Douglas, Knight, and others will be engaged in placing same.

Should the warm turn in the weather of to-day continue, perch will soon be in full spawning condition. Am afraid, however, night frosts may retard the hatching out.—Yours faithfully,
H. W. HIGGINS, Hon. Sec.

Thames Angling Preservation Society.

HERTFORD ANGLING SOCIETY.

DEAR SIR,—I regret to say our society is at present in the same condition, as the waters have been the past two seasons very low; but there is certainly an improvement this year, and there should be better sport. Unfortunately, we are compelled to give up the subscription water, as our funds would not meet the expenses, but shall endeavour to find our friends some little sport when they visit us.—Yours truly,
W. WALLER.

HOW THAMES ASSISTANT RIVER KEEPERS ARE APPRECIATED.

DEAR SIR,—I was as much surprised as Mr. Amphlett to get a letter from the Thames Conservancy, informing me that in consequence of the misuse of cast nets by some persons not mentioned, the privilege of using a cast net was to be taken away from all assistant river keepers.

I gather from your editorial note that some misapprehension exists concerning the history of this matter. Not so many years ago practically anyone used a cast net of considerable size in the Thames. I myself have seen, in the neighbourhood of Henley, five large cast nets being worked in one afternoon, and all for poaching purposes. The worst offenders in this respect were the waterside loafers, so-called watermen, men on the border line between being watermen and professional fishermen, and, in a few cases, the professional fishermen themselves.

Later on the size of the cast net was judiciously diminished, and, it being felt most undesirable to allow anyone to use a cast net who pleased, the use of these nets was limited to assistant river keepers. This was intended to have, and did have, the effect of making the better class of professional fishermen become assistant river keepers, in addition to several private gentlemen, who very generously gave up some of their time to the unpleasant duties connected with the post.

Now, I understand, the professional fishermen, some of whom were among the original offenders in the using of cast nets, are to continue to use the net, while the public-

spirited men, who have been acting as assistant river keepers solely in the interests of Thames anglers, are to be debarred from this small privilege. The thing is almost in the nature of an insult. If on the T.A.P.S. water there are one or two persons who are abusing the privilege, then they have no business to be assistant river keepers, and they should be deprived of their deputations by the Thames Conservancy; but to cast this slur on all the assistant river keepers appears to me a very grave matter.

I have only, in conclusion, to say that I have no personal interest whatever in the use of the cast net, as I have never used one in the Thames, or, indeed, in any other river, and have no wish to do so. I hope, in the interest of that good feeling which should exist among all who are helping to improve the Thames fisheries, the T.A.P.S. Committee, and also the Thames Conservators, will see their way to reconsider this matter, and at once take steps to annul the warrants of assistant river keeper given to those persons (if any) who have been netting the Thames for bait for purposes of sale and profit.—Yours faithfully,
JOHN BICKERDYKE.

DEAR SIR,—In your issue of the 8th inst. I notice Mr. Amphlett has once more given vent to an instalment of his large stock of ill-will towards the T.A.P.S., and with something more, if possible, than his usual lack of justice and common sense in dealing with an institution whose chief fault possibly, in his eyes, is that it does not include his worthy self in its executive.

He complains that the society has robbed certain honorary officials of a privilege to which they, like Mr. Amphlett himself, attach very little value.

If any of these "robbed" honorary river keepers feel themselves aggrieved, it is very doubtful if they will appreciate Mr. A.'s advocacy of their cause. At any rate, as one who respects the intentions and appreciates the work of the T.A.P.S., I consider that Mr. A. has paid the old society an unintentional compliment by writing such a long letter on such an unreal grievance.

The withdrawal of the use of the cast net to these gentlemen (and I venture to say that all, or nearly all, are placed in the same position as Mr. A. himself, that they do not possess one) will not lose the society any of its friends and supporters as Mr. Amphlett predicts, and seems most ardently to desire.—I am, sir, yours faithfully,
WALTER BACK.

TROUT FISHING IN IRELAND—'WARE BULLS.

DEAR SIR,—Presuming on your well-known kindness and courtesy, I would be glad if you would kindly insert in your valuable paper one or two items of information that might prove interesting to English anglers. In the first place, then, to those who are enamoured of trout fishing, I can strongly recommend Newtownstewart, co. Tyrone, as one of the very best centres in Ireland, and can make this statement with safety, having fished over the whole country. Newtownstewart is within easy access of four fine rivers, the swift and broken waters of which leaven to an angler's eye the home of trout, and, in the proper season, of salmon, too. The scenery is good, and the air fine and bracing.

I got the very best and kindest treatment I received in Ireland at the Abercorn Arms Hotel, where the angler's minutest wants are attended to. The best fishing on these waters can only be had by wading. I killed, myself, although only a moderate angler, twenty-three nice trout in one evening in the early part of this month, and under unfavourable conditions on no day need the sportsman return with an empty creel.

In the second place, to those who prefer grilse or peal fishing, I know of no finer river than the Mulcaire, a tributary of the Shannon, and which can be fished from Limeick. I found Geary's Hotel, Thomas-street, very comfortable. Whilst fishing the Mulcaire one day in August of last year I had five grilse in my bag averaging 4lb. each. I crossed a stile, intending to fish higher up the stream, and had to pass near a herd of cattle, which, to my surprise, began to show signs of hostility, and the bull more so than any. Matters became so threatening that I began slowly to retreat to the stile; the bull must have guessed (if bulls guess) my intention, and made a furious charge. I then put on full steam, and got half-way up the stile, when "taurus" rather rudely assisted me over the other half, and I fell sprawling, but unhurt, on the other side.

I never before had such deep feelings of devotion as when I viewed the now harmless and irate monster on the safe side of that stile.

Whilst fishing the Eden, above Carlisle, for salmon, I met with a very uncommon incident. I killed a 10½lb. fish, and saw a much larger one rise further out in the stream. I now waded in deeper, and let out a few more yards of line, and made as strong a cast as I could; but suddenly found my Castleconnell rod smashed by a violent wrench behind. On looking round, I found I had firmly hooked a bullock at the root of the tail. I gave him plenty of line (upon compulsion), got out, and played the animal a good distance, when the beast threw up his hind legs and left me minus a splendid casting line and two flies. The bullock then swam the river. During the play of this odd fish the laughter of the pedestrians was great, and I was compelled to join them.

I went home dejected, and asked my wife to kindly examine the hind quarters of the herd, so as to locate my loss, but she declined. However, my first accident proved to me that I am possessed of sprinting powers of which before I had no idea; and the cause of the commotion amongst the cattle was the sight of a flaring red tie. So I would advise all anglers to avoid red ties and bullocks.—I am, dear sir, yours faithfully,
F. WARREN, B.A.
Dublin.

SATURDAY, APRIL 29TH, 1899.

THE NEW EDITION OF "DRY-FLY FISHING IN THEORY AND PRACTICE."*

THE last edition having long been out of print, we are glad to welcome a new and revised, and much cheaper edition of this classic of dry-fly fishing. The only sad thing about it is that it should be dedicated, not to George Selwyn Marryat personally, as the first edition was, but "to his memory"—a graceful tribute none the less. Nor could the author's references to his late friend in his preface to this edition easily be matched for genuine feeling and good taste.

It is interesting to know that many of the revisions and corrections in this edition were made by Mr. Marryat himself not long before his death, and that since then the author has consulted two of the best dry-fly fishermen of the day—Mr. N. Lloyd and Mr. W. H. Pope—and has incorporated in the present edition many valuable suggestions made by them.

As regards the particulars in which this edition differs from the earlier one, we cannot do better than quote Mr. Marryat's own words:

"A comparison of this with the original edition

will show that, although the alterations in the general scheme have been few, the revision of minor points and matters of detail has been most comprehensive. After all, success or non-success in dry-fly fishing is greatly dependent on matters of detail; and my chief aim and object have been to give the modern angler the benefit of any experience acquired during the last ten years, so as to bring this edition thoroughly up to date. Any real improvements in the manufacture of rods and tackle have been exhaustively treated, including the Lloyd Ferrule, as well as the valuable and practical suggestions of Mr. Hawksley in reference to testing rods. The early part of the chapter on selection of fly has, in view of experiments on the colour question, been entirely re-written, and in the later part it has been much improved by the addition of a number of new patterns which have been tried and found successful. The principles of playing a hooked fish in weedy places have been considered in the light of the experiments conducted in the first instance by Mr. Lloyd and checked by further experiments on the part of the author and many friends; and the chapter on *Autopsy* has been corrected and improved in details."

As regards the illustrations in this work, they are practically the same as in the first, and include the hand-coloured steel plates and the full page plates of the different casts sometimes used by dry-fly anglers, such as dry-switch, steeple, underhand, as well as the ordinary overhand cast used by most anglers in most cases.

These plates have scared some anglers off buying Mr. Halford's book, as they have glanced at them, and then said "what fearful work; life is too short to try to learn such terrific casting," whereas if they had read the book they would have seen that in the picture of the *dry switch* the length of line was only 10yds. from fly to reel; in all the other casts only about 12yds. to 15yds. were used, and the author refers to 10yds. to 15yds. as being the length for most people.

We think that Mr. Halford places too much reliance on the art of photography as controverting those writers who say that you should wait until the line is well extended behind you before making the forward cast. Mr. Halford says these writers say extended "in a straight line" behind you, but we do not remember any of them insisting quite on the "straight line." All they intended, of course, was that you should give the fly time behind before making the forward cast.

Then Mr. Halford says the line cannot be extended in a straight line behind you. "This position cannot in any style of casting with a line of appreciable length occur." But surely if this were correct you could not extend a fly in front of you, for the force and nature of the action sending the fly back is the same as that in sending it forward. If the line can never extend straight out behind you how does it happen that you often find your fly hitched up in the long grass, or in a bush or tree, in a straight line behind you, and to the full extent of your line behind you, so much so that you are pulled up short the instant you begin the forward cast? It is just because you have allowed a little too much time behind that your fly has dropped and hooked round that thistle as far behind you, as the fish you are trying for is in front of you. For these reasons we have never considered photographs of casting as having much more than a pictorial interest in most cases. Perhaps the cinematograph, which gives the whole movement, instead of a lightning flash part of it, may throw more light on this interesting point. But the fly fast round the twig 15yds. or 20yds. behind you, when you hoped to get it fast in the trout 15yds. or 20yds. in front of you, will always be a very stubborn fact to get over in considering this question.

IF THERE ARE NO FISH RISING SHOULD THE "DRY-FLY" MAN FISH?

This is a tremendous point in dry-fly ethics. In his first edition Mr. Halford said he thought it was "riding the hobby to death" never to fish except over rising fish, and said, "I for one am a strong advocate for floating a cocked fly over a likely place, even if no movement of a feeding fish has been seen there," and he describes likely places for so fishing.

In his new edition we are somewhat sorry to find he has cut out all about his being a strong

advocate for trying the dry fly in a likely place, and will only go so far as to say that: "If an angler on private or exceptionally well-stocked water sees a trout or grayling in position for feeding in a likely place, he is perhaps justified in floating a cocked fly over it."

We think most dry-fly anglers will agree with us that he would be fully justified in doing so—even if he only imagined the fish was there.

Just as there are High Churchmen, Broad Churchmen, and Low Churchmen, so there are High-dry-flymen, Broad-dry-flymen, and Low-dry-flymen.

The High-dry-flymen use only dry flies (cocked) over rising fish.

The Broad-dry-flymen use dry flies over rising fish, or where they expect a fish to rise.

The Low-dry-flymen use the Alexandra or a sunk alder on a dry fly water, if they cannot move fish with the dry fly.

They are all jolly good fellows, but the H. D. F. doesn't think a great deal of the B. D. F., and the B. D. F. thinks less of the L. D. F., and the L. D. F. thinks the other two are both B. F.'s (big flats, possibly).

Here a few words from Mr. Halford's book, which the beginner in dry-fly fishing ought to have engraved on a large brass plate and fastened on his creel:

"THE DRY-FLY ANGLER MUST EXPECT TO MISS AN ABNORMALLY LARGE PROPORTION OF RISES."

If our author had added, "therefore the dry-fly angler should carry an abnormally large whiskey flask," it would have been consoling and appropriate after such a damper. Mr. Halford does not tell us what a normal proportion of rises to miss would be, certainly as compared with the wet fly style the number of rises missed is far less in dry-fly fishing. Derbyshire anglers will agree with us that it is not quite correct to say that "in Derbyshire a few years back everyone fished downstream." We fished on the Derwent, Wye &c., thirty years ago, and fished and met many anglers who fished casting upstream, as recommended by Stewart, Wade, Ogden, and other writers forty and more years ago. For instance, the late James Ogden, who has many claims to be considered the father of dry-fly fishing, in describing how he introduced artificial dry-fly fishing on the Derbyshire Wye in 1865 says you should cast your fly upstream always, and keep below your fish.

"A SILENT ROD AND A WHISTLING LINE MEAN GOOD CASTING."

So said the late Mr. Marryat. Mr. Lloyd remarks in a footnote that he finds the rod always makes a noise if held so that the rings are in front. If, on the other hand, the rod is turned so that the rings lie above or underneath there is no sound from the rod, the line only being heard. Mr. Marryat often fished thus, which would account for his mistaken idea. We think it does not much matter which sings, and that at times both do, and at times neither. It depends on the wind, on the shape and make of the rings, on the nature of the line, as well, doubtless, as the position in which the rod is held and the force used in casting. Mr. G. M. Tod, in our columns many years ago, referred to the peculiar swish made by a good fly fisher.

"A FEEDING FISH SHOULD NEVER BE PASSED OVER."

This is another of Mr. Halford's maxims which the beginner should learn by heart. It does not matter how difficult the cast may be, try it if the fish is worth trying for. At the worst you leave a bit of gut and a fly behind; at the best you get a fish which, never tried for, is generally a good one.

Another good old maxim is, never to leave rising fish because you think you may do better elsewhere. Many an angler who has seen the fish begin rising has said to himself, "By George! those big fellows in Hine's Pool will be on now;" and hurries away from feeding fish, often only to find that those a mile higher up or down the stream are not feeding. The rise of fly is sometimes limited to a short stretch of water.

Although it is not in the least necessary to know one quarter, or one twentieth part for that matter, of all the "recipes and wrinkles" scattered so freely through Mr. Halford's invariably inte-

* DRY-FLY FISHING IN THEORY AND PRACTICE. B. Frederic M. Halford. Revised edition. London: Vinton and Co., Limited, 9, New Bridge-street, E.C.

resting pages—although it is quite unnecessary, we say, to know these and yet be a very good dry-fly fisherman, able to hold your own, as far as *killing fish goes*, with the best of them; still, there is no question, and can be no question, about the value of most of these rules. They are undoubtedly "correct tips;" but the bother of it is so few of us have leisure enough to carry them out. The fact is, that dry-fly fishing is not one quarter so difficult as anyone reading Mr. Halford's book would imagine. Trout in some of our rivers are well educated; but when Mr. Halford tells us to sit down and consider not only the probability of the fly dragging, but the general surroundings and the "*idiosyncrasies of the individual fish when feeding*," before attempting a cast, we can only say we fear life is too short for most of us to do so. Catch him first, and study his idiosyncrasies, *i.e.*, autopsy him afterwards, if you feel so disposed. For our own part, we regret to say, making autopsies of any sort has such a sickening effect that we would rather other people did it for us. And after all, what is the practical good of cutting open and making *post mortems* on trout? In ninety-nine cases out of a hundred you can tell the cause of death without that, and equally in ninety-nine cases out of a hundred it has no relation whatever to the contents of the deceased's stomach. The principal effect of an autopsy of a trout after you have had a good day's sport and a good dinner is to upset your own stomach, therefore we like to let others who have cast iron "innards" carry out these self-imposed investigations, which at times lead their devotees into error. For instance, on page 276, Mr. Halford says: "One often hears the expression 'splashing at sedge.' Do not believe it. Fish do not splash at sedge." In other words, they do not rise with any noise when feeding on sedge in the evenings. But what is one to believe, print or one's own eyes and ears? Many a time on an August or September evening have we seen the sedge flies coming down, and seen and heard the trout and grayling sucking them down with a noise like a cow pulling her hoof out of the mixen. On such occasions the grayling, especially the big fish, abandon their usual habit of returning to the bottom after rising and (especially if the water is at all deep) lie just under the surface, moving right and left like the trout to meet the flies. Fishing a short line to such fish rising under the bank just above you, with stoutish gut and a big Cinnamon Sedge, you can often hustle a good fish in the net before he knows what's up, by holding him hard and keeping his head on the surface.

It is interesting to note that the lovely 4lb. 9oz. trout which Mr. Halford presented to the Fly Fishers' Club, killed on a dark sedge one dark evening on the Test, was seen and weighed by Mr. Marryat, whose name is not mentioned in the first edition. After a most exciting description of his fight with this splendid fish Mr. Halford says:

"It was too dark to weigh it there and then, but on my way home I met my friend Marryat, who inquired as to my sport. I told him one fish over 2½lb., and another good one. To his inquiry 'How big?' I said 'Oh, about 4lb.' He said 'Let me see,' and added 'No, that is a well-conditioned fish, but it will not go 4lb.' However, when we reached home and weighed it, we found that, although a short fish, it was in such perfect condition as to turn the scale at and slightly above 4lb. 9oz."

Mr. Halford's directions for hooking, playing, and landing a trout will put the beginner into the best form if carefully followed out. We note that while Mr. Halford agrees with striking from the reel, which we believe we were the first to advocate in print, Mr. Pope thinks striking from the hand gives better immediate command over the fish, but qualifies it by saying "No doubt, when using very fine gut, it is safer to strike from the reel." It seems to us Mr. Pope gives himself away on this point, as if you are not using very fine gut there can be no fear of *smashing*.

A novelty in the way of playing a fish which has weeded you is described in this edition of Mr. Halford's book; it is based on practical experiments made by Mr. N. Lloyd and himself, and consists in taking the line in your fingers, and by "gentle hand playing," as it were, coaxing the fish out of the weeds, and once out of the weeds the fish "can be played with greater ease and certainty

by hand than by the rod, and that it is as easy to net the fish playing from the hand as from the rod." This sounds like sea fishing in the hand-line style. "It is only fair to add," says Mr. Halford, "that this plan, while uniformly successful on some days, seems to fail in nearly every case in others." On the whole, we should prefer to do the coaxing by pulling on the line gently with one hand, while holding the rod ready for a rush out in the other.

In conclusion we can only once again, as we have so often done in past years, recommend this charming and in every way interesting and admirable book to dry-fly anglers, and not only to dry-fly anglers but to all fly fishermen, for there is not a fly fishing stream in the whole world in which its most clear and practical directions may not be followed with advantage.

THE SOUTH COUNTRY TROUT STREAMS.*

"The trout fisher, like the landscape painter, harnts the loveliest places of the earth, and haunts them alone."
—TOM BROWN at OXFORD.

THIS appropriate quotation is on the title page of Mr. George A. B. Dewar's new and most welcome little book on our south country trout streams, a book which in our opinion cannot fail not only to interest but also to be of very great use to south country anglers. With this and

ON THE UPPER TEST.

["South Country Trout Streams."

(From Mr. Percy Buckman's Picture, by kind permission of Mr. Henry Hammans).

"The Angler's Diary" (edited by Mr. Irwin E. B. Cox, now, we are glad to say, M.P.), those who want to find some quiet fishing place from Kent to Cornwall ought not to have much difficulty, especially as the diary is arranged alphabetically, and Mr. Dewar's book has an excellent index.

In the preface, after thanking many gentlemen for information supplied to him, Mr. Dewar says: "Two things have especially struck me in the course of my inquiries into the condition and the characteristics of our south country trout streams. First, the large and, I am afraid, not decreasing number of fine waters which are subjected to the most objectionable forms of pollution, and, secondly, the lowering of the springs of various chalk streams by water companies and the like."

The only remedy for this unhappy state of many of our rivers is to educate the public generally to see that sewage and refuse from mills and factories ought never to be put into running or other waters. That the modern British sewage farm is a horrible fraud is proved by the condition of the Wandle below the Croydon sewage farm effluents, by the condition of the Lea at

Tottenham, the Stour below Canterbury; but it is sickening to go through the list, and the recent report of the Trent Board of Conservators shows a similar horrible state of affairs, salmon practically extinct, and the main river and its tributaries literally poisoned to death. The people who draw up the books used by our School Boards ought to appoint a committee to inquire into the condition of our rivers and streams, and report in the books supplied to the children: then the coming generation would demand reform.

In his opening chapter Mr. Dewar says that "it is a somewhat curious fact that a trout-fishing expedition, or holiday, commonly conveys the idea to the south country man, and more especially, perhaps, to the Londoner, of a trip to the North of England, to Wales, or Scotland, or even much farther afield." We venture to say that the thousands of south country anglers, and especially the Londoners, who fish in the hundreds of trout streams mentioned in this charming little book, will tell the author that his "curious fact" is only pure fancy; if Mr. Dewar had referred to a salmon-fishing expedition, or holiday, of course it would be different. The fact is, Mr. Dewar has a wonderfully amusing way of discovering things which exist only in his own imagination, or else have been common knowledge to everybody else for centuries. For instance, he "does not hesitate to assert" (p. 2) that "a good deal of the finest trout fishing in the United Kingdom is actually in, or hard by, the counties, or shires, of the

southern seaboard." If Mr. Dewar had said it is well known that the finest trout fishing to be had in these islands is to be had in our south country streams nobody who knows would have been surprised. For size, wariness, and gameness where can you beat the trout of our south country chalk streams?

We will not wade with Mr. Dewar deep into the oil bottle and its value. He says he "still ventures to hold the view that the fly can be made to float and kill without the oil." Who ever said it could not? What did we all do in the twenty or five-and-twenty antemaccassar years of dry fly fishing? Why, we worked three times as hard as was necessary, and on soaking wet days we had to stop indoors, instead of going out to fish dry, as now we can do.

However, let the galled angler wince, our feathers are unwrung (and don't want wringing, as they are oiled). Anyone who has ever seen, as we have often done, an artificial May Fly cast on a rough, wet day among waves, get pulled clean under water, and then come up and float like a duck, will never, as long as he lives, question the value of paraffin. Of course, some flies float better than others—some feathers are naturally oily, and, unless they have been treated with soda, will throw off the water better than others; but a little paraffin makes all wonderfully buoyant, and

* THE SOUTH COUNTRY TROUT STREAMS. By Geo. A. B. Dewar, Author of "The Book of the Dry Fly." Illustrated. London: Lawrence and Bullen Ltd. Being the new volume in the Angler's Library edited by Sir Herbert Maxwell, Bt., and F. G. Adabo.

we also find that moths will not attack flies which have been paraffined. The question as to whether the oil used should be odourless or not is purely a personal one for the angler. The fish don't mind the smell or flash point of the oil, it's the flash of the rod they object to. But accidents will happen and last season, in getting an oil bottle replenished at a cottage, the old lady upset some on the fish in our creel. If it had been "Dagonet's" "Tatcho," which is nicely scented, it would not have mattered so much. "Tatcho" is evidently an inflammable oil, highly scented with citron, and as such we recommend it to dry fly anglers, as a shilling bottle will last for months; and to test its nature soak a bit of paper in it, and then set fire to it, and it flares up like—paraffin. For this reason those who use it as a hair dressing should be very careful of fire.

To give our readers an idea of the scope of Mr. Dewar's book, it is only necessary to say that it deals in a more or less general, but always interesting, way with the streams of Kent, Surrey, Middlesex, Hertfordshire, Sussex, Bucks, Oxfordshire, Gloucestershire, Berkshire, Hampshire, Dorsetshire, Wiltshire, Somersetshire, Devonshire, and Cornwall.

One of the things Mr. Dewar mentions, viz., the "lessening in the number of natural flies" noticed on many rivers, he does not think is so widespread an evil as some anglers suppose, and he quotes Sir Humphry Davy as stating that he had observed a diminution of the number of flies in some rivers he had fished for the best part of half a century, and as Sir Humphry wrote over seventy years ago, Mr. Dewar has grounds for his inference that things are not so bad as some of us suppose. We are all too prone to praise the good old times at the expense of the present, but who would really care to go back to the old coach days when people in this country were hung, or branded, or transported for stealing a loaf or a pocket-handkerchief? All the same, there can be no doubt of the disappearance of the May Fly from many stretches of water where it was formerly plentiful, and we know stretches of the Test, Itchen, etc., where it is certain the variety and quantity of small fly is not what it was ten or twenty years ago. As Penton, the late Mr. T. J. Mann's admirable river keeper, says (and few have had better opportunities of observing): "The absence of fly grows less." Penton (who one morning landed for Mr. Mann four trout weighing 16lb., all killed on a small dark olive) means the reverse of what he says, but his quaint way of putting it emphasises the fact. He is one of the best river keepers we ever met (alas, now no longer able to do much active work), and the water under his care below Horsebridge for many years held the finest stock of trout, both for size, number, and quality, that we have ever seen, and when he commenced work on it early in the eighties, there were more pike than trout. At that time, and for some years, Mr. Mann bred his own trout, and it was not until he gave up doing so that the stock began to show signs of falling off.

We think few anglers will be disposed to question one statement of Mr. Dewar, viz., that in consequence of well sinking and abstraction of the natural flow of water in other ways, there is not nearly the same volume of water in many of our streams. The Darent is a notable instance, and some of the celebrated Hertfordshire trout streams threaten not to have enough water in them to cover a decent trout before long, and naturally nothing plays old Harry with a fishery so much as absence of water, except absence of fish.

A very pleasant chapter in Mr. Dewar's book is No. III., in which he describes a south country trout stream, its scenery and wild life; there is nothing affected about his love of streamland and its delights, nothing, perhaps, very new in his descriptions, but his style has the genuine ring, and, moreover, Mr. Dewar is able to make very happy contrasts between the rivers and the scenery of all the district he treats of, and of others outside it, very much of his descriptions being from personal experience. How better could the Mimram be touched off than in these few words: ". . . nor the excellent streams of Hertfordshire, such as the Mimram, or Maran, that can often hide itself behind a thin hedge, so as to be neither seen nor heard by one who passes by within a few yards, and knows nothing of its dashing two-pounders." All who have fished this

pretty stream will admit the truth of this little picture of it.
